[C.S., No. 117.]

PREFACE.

By the Constitution of the Commonwealth of Australia, the Commonwealth is empowered "to make laws for the peace, order, and good government of the Commonwealth, with respect to," *inter alia*, "Census and Statistics." In exercising the power so conferred, a "Census and Statistics Act" was passed in 1905, and in the year following the "Commonwealth Bureau of Census and Statistics" was created. The publication here presented is the fourth authoritative Year Book issued under the Federal Constitution.

This Year Book furnishes corrected statistics for the whole period of Australian settlement, viz., from 1788 to 1910. Wherever space has permitted, detailed statistics have been furnished for each year since Federation, viz., from 1901 to 1910. In the few instances where this has proved impracticable, reference will be necessary to Year Books Nos. 1, 2 and 3. The inclusion, as stated, of the tota available information in the more important branches of statistics enables this publication to be used wherever it is desired to make a comparative survey of the unfolding of this portion of the British Empire. Not only are the results given for the Commonwealth as a whole, but also for each State therein.

The general arrangement of the publication corresponds with that of previous issues, and is shewn in the synopsis on pp. xi. to xxvii. immediately following. This arrangement has been widely commended, and will be substantially adhered to in future issues.

In addition, however, to what may be called purely statistical matter, each issue contains special articles dealing at length with some particular subject or subjects of more or less permanent interest. To repeat these year after year would unduly increase the size of the publication. It was stated, therefore, in the preface to Year Book No. 1 that, as a rule, only a brief condensation of the special articles would appear in subsequent issues of the Year Book, or they might be omitted altogether. Consistently with this intention considerable changes will be found to have been made. In many cases the articles in Year Books Nos. 1, 2 and 3 have been reduced to synopses; in other cases matter has been wholly deleted, and new matter introduced in lieu thereof, and specially important subjects have been more exhaustively discussed. An index to such special articles, etc., as have been published only in previous issues of the Year Book has been compiled and is included herein (see page viii.)

M 1220 6

The present issue of the Year Book contains several new features of interest. Among these may be mentioned the section dealing with the Lakes of Australia, Seismology in Australia, particulars relating to the first year's operations under the Old Age Pensions Act, the schemes of organisation under the recent Defence Acts, and a comprehensive account of the Federal Capital movement. Among the various additions and improvements to the maps and graphs, the maps shewing the distribution of rainfall and the railway systems of the Commonwealth may be specially mentioned; four new maps relating to the Federal Capital Territory have also been included.

Through the co-operation of the various State Bureaux with the Commonwealth Bureau it has been possible to still further advance the accuracy, and in general the intrinsic value, of Australian Statistics, and the collection of data is being continually improved.

It has been found desirable to deal with the subject matter from a twofold, and to some extent, from a threefold aspect, viz.:—

(i.) The development of the individual States :
(ii.) The progress of Australia as a whole from the earliest times :
(iii.) The statistical comparison of Australia with other leading countries of the world :

this last, however, being somewhat restricted.

In the endeavour to supply reliable details of this character, considerable difficulties have been experienced, more particularly as regards the early years of Australian colonisation, and although assistance has been cordially rendered not only by the State Statistical Bureaux, but also by other State Departments that were in a position to help, the results obtained must in many cases be considered as roughly approximate only. No effort is spared, however, to embody the most reliable information available.

A feature of this publication is the use made of maps and diagrams. The changing boundaries of the various States, the course of exploration, the orography and geology of the territory, the distribution of the population of Australia, of its rainfall, etc., the development of its railway system, and similar facts can be properly appreciated only by the use of maps. In like manner the progress of events, the characteristics of growth and decline, can in general be grasped much more readily graphically than numerically. The diagram or "graph" is a direct picture in which the relative magnitudes are preserved and by which instantaneous comparisons of a wide range of facts are made possible at a glance. For the more accurate examinations of statistical data, however, numerical results are also given *in extenso*.

The development of Australia has been in many instances very remarkable, and this could be shewn only by tables and graphs dating back to its beginning in 1788. In most cases accurate data are not available for years much before 1860. In such cases, therefore, it seemed sufficient at present to give continuous results from that year onwards.

The great mass of material embodied in this Year Book has been carefully examined, but it would be idle to hope that all error has been avoided. The Commonwealth Statistician desires to express appreciation of the opportunity afforded him of perfecting the matter of the Year Book, by those who have been kind enough to point out defects or make suggestions.

The corresponding years indicated in various sections of this book do not always necessarily refer to the same period. Though the years specified ordinarily refer to the calendar years, in certain sections—*e.g.*, the sections on *Railways*, and on *Commonwealth, State, and Private Finance*—the years indicated generally refer to the financial years ended the 30th June. Again, as regards the section on *Agricultural Production*, the year ordinarily ends on the 31st March, while in the section on *Local Government* the financial years of local bodies in the several States end at various dates. The precise period for which returns are given is indicated where necessary.

Recent information or returns which have come to hand since the various Sections were sent to press, may be found in the Appendix, p. 1186 *et seq.*

In conclusion, the Commonwealth Statistician desires to express his cordial thanks to the State Statisticians, and to the responsible officers of the various Commonwealth and State Departments, who have kindly, and often at considerable trouble, supplied all desired information.

G. H. KNIBBS,
Commonwealth Statistician.

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,
1*st May*, 1911.

INDEX TO SPECIAL ARTICLES, ETC., APPEARING IN PREVIOUS ISSUES.

These articles have appeared in former issues of the Commonwealth Year Book, but, owing to exigencies of space, they are not included in this publication.

NOTE.—The Roman figures indicate the number of the Year Book to which reference refers.

2. Graphs of Total Population 155
3. Graphs for Commonwealth of Male and Female Population 156
4. Graphs for each State of Male and Female Population 156
5. Graphs of Natural Increase of Population, Commonwealth and States 156
6. Graphs shewing Net Increase of Population 165
7. Graphs shewing Masculinity of Population, C'wealth and States ... 165

SECTION V.—VITAL STATISTICS.

§ 1. Births

PAGE

1. Male and Female Births, 1901 to 1909 166
2. Total Births, 1901 to 1909 166
3. Birth Rates, 1901 to 1909 167
4. Birth Rates of various Countries ... 168
5. Masculinity at Birth 168
6. Ex-nuptiality of Births 169
7. Multiple Births 171
8. Ages of Parents 171
9. Birthplaces of Parents... 173
10. Occupations of Fathers 174
11. Mothers' Age, Duration of Marriage, and Issue 176
12. Interval between Marriage and First Birth 178

§ 2. Marriages

1. Marriages, 1901 to 1909 179
2. Marriage Rates, 1901 to 1909 180
3. Marriage Rates in various Countries 180
4. Age at Marriage 180
5. Previous Conjugal Condition ... 182
6. Birthplaces of Persons Married ... 183
7. Occupations and Ages of Bridegrooms 183
8. Fertility of Marriages 184
9. Registration of Marriages 184
10. Mark Signatures 185

§ 3. Deaths

1. Male and Female Deaths, 1901 to 1909 186
2. Male and Female Death Rates, 1909 187
3. Death Rates of various Countries ... 187
4. Total Deaths, 1901 to 1909 187
5. Crude Death Rates, 1901 to 1909 ... 188
6. Male and Female Death Rates, 1901 to 1909 188
7. Infantile Death Rate 188
8. Deaths in Age Groups, 1901 to 1909 ... 190
9. Deaths at Single Ages and in Age Groups, 1909 191
10. Deaths of Centenarians, 1909 ... 192
11. Length of Residence in the Commonwealth of Persons who died in 1903 193
12. Birthplaces of Persons who died in 1909 194
13. Occupations of Male Persons who died in 1909 195
14. Index of Mortality 196
15. Causes of Death 198
16. Certification of Deaths 203
17. Deaths from Special Causes 204
18. Causes of Death in Classes 219
19. Age at Death of Married Males and Females, and Issue 219
20. Age at Marriage of Males and Females, and Issue 220
21. Duration of Life after Marriage of Males and Females 220
22. Birthplaces of Married Males and Females, and Issue 221
23. Occupations of Married Males, and Issue 221

§ 4. Graphical Representation of Vital Statistics

1. General 222
2. Graphs of Annual Births, Commonwealth and States 223
3. Graphs of Annual Marriages, Commonwealth and States 224
4. Graphs of Annual Deaths, Commonwealth and States 224
5. Graphs of Annual Birth, Death, and Marriage Rates and Rates of Natural Increase—Commonwealth 225
6. Graphs of Annual Birth Rates—States 226
7. Graphs of Annual Death Rates—States 226

SECTION VI.—LAND TENURE AND SETTLEMENT.

§ 1. Introduction and Early History

1. Introduction 235
2. First Grants of Land in New South Wales, 1789 235
3. Grants of Town Allotments in Sydney, 1811 236

7. Care needed in Comparing Clips ... 353
8. Wool-producing Countries in Southern Hemisphere 353
9. England's Importation of Wool ... 354
10. The Wool Market 354

§ 6. Hides and Sheepskins
1. Extent of Trade 355
2. Sheepskins with Wool 355
3. Sheepskins without Wool 355
4. Hides... 357

§ 7. Graphical Representation of Pastoral Production
1. General 358
2. Horses 358
3. Cattle 358
4. Sheep 358
5. Pigs 358

SECTION VIII.—AGRICULTURAL PRODUCTION

§ 1. Introductory
1. Early Attempts at Agriculture ... 361
2. The First Sowing 361
3. Discovery of Suitable Agricul. Land 361

§ 2. Progress of Agriculture
1. Early Records 361
2. Progress of Cultivation since 1860 ... 362
3. Relation to Population 363
4. Relation to Total Area... 363
5. Artificially-sown Grasses 363

§ 3. Relative Importance of Crops
1. Various Crops 364
2. Relative Areas of Crops in States ... 365
3. Acreage of Principal Crops, Cwlth. 365

§ 4. Wheat — PAGE

1. Progress of Wheat-growing 366
2. Australian & Foreign Wheat Yields 368
3. Wheat Crops of the World 369
4. Prices of Wheat 369
5. Imports, Exports of Wheat & Flour 370
6. Value of the Wheat Crop 374

§ 5. Oats

1. Progress of Cultivation 374
2. Total Yield 375
3. Average Yield 376
4. Relation to Population 376
5. Value of Oat Crop 376
6. Imports and Exports 376
7. Oatmeal, etc. 377
8. Comparisons with other Countries 377
9. Comparison of Yields 377
10. Interstate Trade 378
11. Price of Oats 378

§ 6. Maize

1. States Growing Maize 378
2. Area under Maize 378
3. Total Yield 379
4. Average Yield 379
5 Value of Maize Crop 380
6. Relation to Population 380
7. Oversea Imports and Exports ... 380
8. Prepared Maize 381
9. Maize-growing in other Countries... 381
10. Interstate Trade in Maize 381
11. Price of Maize 382

§ 7. Barley

1. Area under Barley 382
2. Malting and other Barley 382
3. Total Yield... 383
4. Value of Barley Crop 383
5. Relation to Population 383
6. Commonwealth Imports & Exports 384
7. C'wealth Imports & Exports of Malt 384
8. Interstate Trade in Barley and Malt 385
9. Comparison with other Countries... 386
10. Average Yield 386
11. Price of Barley 386

§ 8. Other Grain and Pulse Crops 387

§ 9. Potatoes

1. Area 387
2. Total Yield 387
3. Average Yield per Acre 388
4. Value of Potato Crop 388
5. Relation to Population 389
6. Commonwealth Imports & Exports 389
7. Interstate Trade in Potatoes ... 389
8. Comparison with other Countries... 390

§ 10. Other Root and Tuber Crops

1. Nature and Extent 390
2. Commonwealth Imports & Exports 390
3. Interstate Trade 391

§ 11. Hay

1. Nature and Extent 391
2. Kinds of Hay 392
3. Total Yield 393
4. Value of Hay Crop 393
5. Average Yield per Acre 393
6. Relation to Population 394
7. Oversea Imports and Exports ... 394
8. Interstate Trade in Hay and Chaff 394
9. Hay Production in other Countries 395

§ 12. Green Forage

1. Nature and Extent 395
2. Value of Green Forage Crops ... 396
3 Relation to Population 396

§ 13. Sugar Cane — PAGE

1. Area 396
2. Productive and Unproductive Cane 397
3. Yield of Cane 397
4. Relation to Population 397
5. Quality of Cane 398
6. Sugar Bounties 398
7. Cost of Bounties 399
8. Collection of Sugar Excise 399
9. Production by White and Black Labour 399
10. Imports and Exports of Sugar ... 400
11. Interstate Trade in Sugar 400

§ 14. Vineyards

1. Nature and Extent 401
2. Wine Production 402
3. Relation to Population 402
4. Imports and Exports 403
5. Interstate Trade 403
6. Other Viticultural Products... ... 404

§ 15. Orchards and Fruit Gardens

1. Nature and Extent 405
2. Relation to Population 405
3. Commonwealth Imports & Exports 406
4. Interstate Trade 407
5. Jams and Jellies 410
6. Preserved Fruit 410

§ 16. Minor Crops

1. Nature and Extent 411
2. Market Gardens 411
3. Grass Seed 411
4. Tobacco 411
5. Hops 412
6. Millet 412
7. Nurseries 412
8. Cotton 412
9. Coffee 412
10. Other Crops 413

§ 17. Bounties on Agricultural Products

1. General 413

§ 18. Fertilisers

1. General 414
2. Fertilisers Acts 414
3. Imports 415
4. Exports 416
5. Statistics of Use of Fertilisers ... 416
6. Local Production of Fertilisers ... 417
7. Benefits Derived from the Use of Fertilisers 417

§ 19. Ensilage

1. Value to Stockowners 418
2. Government Assistance in the Production of Ensilage 418
3. Quantity made 418

§ 20. Agricultural Colleges and Experimental Farms

1. Introduction 419
2. New South Wales 420
3. Victoria 423
4. Queensland 425
5. South Australia 427
6. Western Australia 428
7. Tasmania 429

§ 21. Government Loans to Farmers

1. Introduction 430
2. Particulars of Transactions in each State 430
3. New South Wales 431
4. Victoria 432
5. Queensland 434
6. South Australia 435
7. Western Australia 436
8. Tasmania 437

§ 22. Graphical Representation

1. Areas of Principal Crops 438
2. Production 441

SECTION IX.—FARMYARD AND DAIRY PRODUCTION.

§ 1. Introductory PAGE

1. General 443
2. State Supervision of Industry ... 443
3. Mixed Farming 445
4. Factory System 445
5. Butter and Cheese Factories ... 446

§ 2. Milk, Butter, and Cheese

1. Dairy Herds 446
2. Milk 446
3. Butter and Cheese 447
4. Concentrated Milk 447
5. Oversea Trade in Milk, Butter, and Cheese 447
6. Interstate Trade in Milk, Butter, and Cheese 448
7. Local Consumption of Butter and Cheese 449

§ 3. Pigs, Bacon, etc.

1. Pigs 450
2. Bacon and Ham 450
3. Oversea Trade in Pig Products ... 450
4. Interstate Trade in Pig Products ... 451
5. Local Consumption of Bacon and Ham 452

§ 4. Poultry Farming PAGE

1. Development of the Industry ... 453
2. Production of Poultry 454
3. Oversea Trade in Poultry Products 454
4. Interstate Trade in Poultry Products 455

§ 5. Bee Farming

1. The Bee Farming Industry 455
2. Production of Honey and Beeswax 456
3. Oversea Trade in Bee Products ... 457
4. Interstate Trade in Bee Products... 457

§ 6. Summary of Australian Farmyard and Dairy Products Exported, 1905 to 1909 458

§ 7. British Imports of Dairy Products

1. Value of Britain's Imports of Dairy Products 458
2. Butter 458
3. Cheese 459
4. Bacon and Ham 459
5. Pork 459
6. Other Products 459

§ 8. Graphical Representation of Dairy Production 459

SECTION X.—FORESTS, FORESTRY, AND FORESTAL PRODUCTS.

§ 1. The Forests of Australia

1. Extent of Forests 460
2. Characteristics of State Forest Areas 461
3. Distribution of Timber in the Commonwealth generally 463
4. Distribution of Timber in N.Z. ... 464

§ 2. Forestry

1. Objects 464
2. Forestry Departments 464
3. Sylvicultural Nurseries and Plantations 466
4. A Forest School 468

§ 3. Commercial Uses of Principal Australian Timbers 468

§ 4. Forestal Industries and Production

1. Timber 471
2. Forest Produce 471

§ 5. Oversea Trade

1. Imports 472
2. Exports 472

SECTION XI.—FISHERIES AND PISCICULTURE.

§ 1. Commercial Fisheries

1. Early Fishing Excursions of Malays 477
2. Fish Stocks 477
3. Economic Fisheries 477
4. Lake and River Fishing 477
5. Distribution of Supplies 477
6. Oyster Fisheries 478
7. Pearl-shelling 478

§ 2. Fisheries Statistics

1. Estimates of the Commonwealth ... 479
2. States Fisheries Statistics 481

§ 3. Oversea Trade in Fish 484

§ 4. Development of the Fishing Industry

1. Transport and Marketing 485
2. Experiment and Culture 485

§ 5. The Commonwealth Department of Fisheries

1. The Federal Council of Australasia 487
2. Commonwealth Investigations ... 487
3. Scope of the Inquiry 487
4. The F.I.S. "Endeavour" 487
5. The "Endeavour's" Cruises 488
6. Results 488
7. Treatment & Disposal of the Catch 488
8. Possibility and Scope for future Development 489

§ 6. Fish Preserving 489

SECTION XII.—MINES AND MINING.

§ 1. The Mineral Wealth of Australia PAGE

1. Place of Mining in Australian Development 490
2. Extent of Mineral Wealth 490
3. Value of Production during 1909 ... 490
4. Total Production to end of 1909 ... 491

(A) METALS

§ 2. Gold

1. Discovery of Gold in various States 492
2. Production of Gold at various Periods 494
3. Changes in Relative Positions of States as Gold Producers 496
4. Methods of Gold Mining adopted in each State 496
5. Remarkable Masses of Gold 500
6. Modes of Occurrence of Gold in Aust. 500
7. Place of Commonwealth in the World's Gold Production 502

§ 3. Platinum and the Platinoid Metals

1. Platinum 503
2. Osmium, Iridium, etc. 503

§ 4. Silver

1. Discovery in each State 503
2. Development of Silver Mining ... 504
3. Chief Centres of Silver Production 506
4. World's Production of Silver ... 508
5. Prices of Silver 508
6. Employment in Silver Mining ... 508

§ 5. Copper

1. Production of Copper 509
2. History 509
3. Price of Copper 511
4. Relationship to World's Production 512
5. Employment in Copper Mining ... 512

§ 6. Tin

1. Production of Tin 512
2. History 513
3. World's Production of Tin 514
4. Prices of Tin 514
5. Employment in Tin Mining 514

§ 7. Zinc

1. Production of Zinc 515

§ 8. Iron

1. General 516
2. History 516

§ 9. Other Metals

1. Aluminium 519
2. Antimony 519
3. Arsenic 519
4. Barium 519
5. Bismuth 520
6. Chromium 520
7. Carnotite 520
8. Cobalt 520
9. Lead 520
10. Mercury 520
11. Manganese 521
12. Molybdenum 521
13. Radium 521
14. Tungsten 521
15. Tantalum 522

(B) NON-METALLIC MINERALS

§ 10. Coal

1. Historical 522
2. Production of Coal 522
3. Distribution and Quantity of Coal in each State 524
4. Production of Coal various Countries 528
5. Export of Coal 528
6. Consumption of Coal in Australia ... 528
7. Price of Coal 528
8. Price of Coal in other Countries ... 531
9. Employment and Accidents in Coal Mining 531

§ 11. Coke

1. Production of Coke 532

§ 12. Oil Shale and Mineral Oils

1. Production of Shale 533
2. Export of Shale 534
3. Shale Oils Bounties 534

§ 13. Other Non-metallic Minerals

1. Alunite 534
2. Asbestos 534
3 Clays and Pigments 535
4. Coorongite 535
5. Graphite 535
6. Gypsum 535
7. Tripolite or Diatomaceous Earth ... 535
8. Salt 536
9. Natural Manures 536

§ 14. Gems and Gemstones

1. Diamonds 536
2. Sapphires 537
3. Precious Opal 537
4 Other Gems 537

§ 15. Numbers Engaged, Wages Paid, and Accidents in Mining

1. Total Employment in Mining ... 537
2. Wages Paid in Mining 537
3. Accidents in Mining, 1909 540

§ 16. State Aid to Mining

1. Introduction 540
2. New South Wales 540
3. Victoria 541
4. Queensland 543
5. South Australia 543
6. Northern Territory 544
7. Western Australia 544
8. Tasmania 547

SECTION XIII.—MANUFACTURING INDUSTRIES.

§ 1. General

1. Industrial Progress 548
2. Defects in Industrial Statistics ... 548
3. Classification of Manufacturing Industries 550

§ 2. Number of Manufactories

1. General 551
2. Use of Mechanical Power 553

§ 3. Number Employed in Aust. Factories

1. Total Number Employed 553
2. Classification of Number Employed in Factories in Commonwealth, 1904 to 1909 554
3. Classification of Number Employed in each State, according to Class of Industry, 1909 555
4. Classification of Number Employed according to Nature of Employment, 1909 556
5. Classification of Factories according to number of Hands Employed, 1909 556
6. Outworkers 557

§ 4. Sex Distribution in Factories PAGE

1. Employment of Females in Factories 557
2. Distribution of Employees according to Sex, 1905 to 1909 558
3. Rate of Increase for each Sex ... 559
4. Increasing Ratio of Female Employment in Factories 560
5. Employment of Females in Particular Industries, 1909 560

§ 5. Child Labour in Factories

1. Conditions of Child Labour 561
2. Average Number of Children Employed in Factories, 1905 to 1909 ... 561
3. Industries Employing Child Labour 562
4. Apprenticeship 563

§ 6. Amount of Wages Paid and Value of Production

1. Introduction 563
2. Amounts of Salaries and Wages Paid, 1909 563
3. Value of Raw Material used in Factories, 1909 565
4. Total Value of Output of Manufacturing Industries, 1909 565
5. Value of Production of Manufacturing Industries, 1909 566

§ 7. Land, Buildings, Plant and Machinery

1. General 568
2. Value of Land and Buildings ... 568
3. Value of Plant and Machinery ... 571

8. Individual Industries PAGE

1. General 572
2. Tanning Industry 573
3. Soap and Candle Factories 574
4. Saw Mills, etc. 575
5. Agricultural Implement Factories 575
6. Engineering, Ironworks, and Foundries 576
7. Railway Carriages & Rolling Stock, Railway & Tramway Workshops... 576
8. Smelting Works 577
9. Bacon-curing Factories 577
10. Butter, Cheese, and Condensed Milk Factories 578
11. Meat and Fish Preserving, Ice and Refrigerating Works 579
12. Biscuit Manufactories 580
13. Jam and Fruit Preserving, Pickles, Sauces, and Vinegar Manufactories 580
14. Confectionery 581
15. Flour Mills 581
16. Sugar Mills 582
17. Sugar Refineries 583
18. Breweries 583
19. Distilleries 584
20. Tobacco, Cigars, and Cigarettes ... 584
21. Woollen and Tweed Mills 586
22. Boots and Shoes 586
23. Hats and Caps 587
24. Coach and Wagon Building Works 588
25. Furniture and Cabinet Making and Billiard Table Making 589
26. Electric Light and Power Works ... 589
27. Gas and Coke Works 589

SECTION XIV.—WATER CONSERVATION AND IRRIGATION.

§ 1. Water Supply Works

1. General 591
2. The Goldfields Water Supply of Western Australia 591
3. The Mines Water Supply Branch ... 592

§ 2. Artesian Wells

1. General 592
2. New South Wales 594
3. Victoria 595
4. Queensland 596
5. South Australia 597
6. Western Australia 598

§ 3. Irrigation Plants

1. General 598
2. New South Wales 598
3. Victoria 600
4. Queensland 602
5. South Australia 602
6. Conflicting Interests 603

SECTION XV.—COMMERCE.

§ 1. Introductory

1. General 605
2. Constitutional Powers of Commonwealth in regard to Commerce ... 605

§ 2. Commonwealth Commercial Legislation

1. Customs Act 1901 607
2. Customs Tariff Act 1902 607
3. Sea Carriage of Goods Act 607
4. Secret Commission Act 1905 608
5. Commerce (Trade Descriptions) Act 1905 609
6. Aust. Industries Preservation Act 1906 609
7. Customs Tariff 1906 609
8. Customs Tariff (South African Preference) 1906 609
9. Australian Industries Preservation Act 1907 610
10. Customs Tariff 1908 610
11. Customs Tariff Amendment Act 1908 610
12. Australian Industries Preservation Act 1909 610
13. Customs (Interstate Accounts) Act 1910 610
14. Australian Industries Preservation Act 1910 610
15. Customs Act 1910 610
16. Customs Tariff 1910 611

§ 3. Method of Recording Imports and Exports

1. Value of Imports 611
2. Value of Exports 611
3. Records of Past Years 611
4. Vessels (Ships) Imported & Exported 611
5. Ships' Stores 611

§ 4. Oversea Trade

1. Total Oversea Trade 612
2. Ratio between Exports and Imports 614

§ 5. Direction of Trade

1. Country of Shipment and Country of Origin 614
2. Direct Imports according to Country of Shipment 615
3. Imports from the United Kingdom 617
4. Imports Shipped from Brit. Poss. 618
5. Principal Impt's from Brit. Poss., 1909 618
6. Imports from Foreign Countries ... 619
7. Principal Imports from For'n Count. 619
8. Direction of Exports 620
9. Exports to the United Kingdom ... 622
10. Exports to British Possessions ... 623
11. Principal Exports to British Possessions, 1909 623
12. Exports to Foreign Countries ... 624
13. Principal Exports to Foreign Countries 624

§ 6. Development of Export Trade to Eastern Countries PAGE

1. Trade with Eastern Countries ... 625

§ 7. Trade of Commonwealth since Federation

1. Classified Summary of Australian Trade 632

§ 8. Movements of Specie and Bullion

1. Specie and Bullion 635
2. Imports of Bullion and Specie ... 635
3. Exports of Bullion and Specie ... 636

§ 9. Effects of Prices on the Values of Exports

1. Significance of Price in Totals ... 636
2. Effect of Prices 637
3. Influence of Quantity and Price on Total Increased Value of Exports 637

§ 10. External Trade of Australia and other Countries

1. Essentials of Comparisons 638
2. "Special Trade" of various Countries 639
3. External Trade as a Measure of Prosperity 639
4. Australian Trade Evidence of Prosperity 640

§ 11. Trade of the United Kingdom with Australia. PAGE

1. General 640
2. Proportion of Trade from U.K. 641
3. Significance of Increase of Trade with other Countries 646
4. Preferential Tariff 646
5. Effect of Preference 648
6. General Conclusions as to Preference 656
7. Preferential Tariff of New Zealand 657
8. „ „ South Africa 658
9. „ „ Canada ... 661
10. Preferential Tariff Comparisons ... 661
11. South African Preference 662

§ 12. Imports of Dutiable and Free Goods

1. Classified Statement of Imports ... 662
2. Comparative Rates of Duty 663

§ 13. Trade of the Individual States of the Commonwealth

1. Character of Data 664
2. Record of Transhipments 664
3. Adjustment of Data 665
4. Abolition of Interstate Records ... 665
5. Trade of States 665

SECTION XVI.—SHIPPING.

1. General

1. Legislation 668
2. Record of Shipping before Federation 668
3. Shipping since Federation 669
4. Difficulties of Comparisons of Total Shipping 669
5. Present System of Record 669

§ 2. Oversea Shipping

1. Total Oversea Shipping 669
2. Comparison with other Countries ... 670
3. Shipping Communication with various Countries 670
4. General Trend of Shipping 673
5. Nationality of Oversea Shipping ... 677
6. Tonnage in Ballast 680

§ 3. Shipping of Ports

1. Shipping at Ports 681

§ 4. Vessels Built and Registered

1. Vessels Registered 682
2. Vessels Built 682

§ 5. Interstate Shipping

1. Total Vessels and Tonnage 682
2. Total Interstate Movement of Shipping 685
3. Vessels engaged solely in Interstate Trade 685
4. Interstate and Coastal Services ... 686
5. Lighthouses and Lights on the Coast of the Commonwealth ... 686
6. Ports of the Commonwealth ... 686

§ 6. Shipwrecks 687

SECTION XVII.—ROADS AND RAILWAYS.

§ 1. Roads and Bridges

1. Introduction 688
2. Expenditure on Roads and Bridges 688
3. New South Wales 689
4. Victoria 691
5. Queensland 692
6. South Australia 692
7. Western Australia 693
8. Tasmania 695

§ 2. Railways

(A) GENERAL—

1. Improvements in Railway Statistics 696
2. Railway Communication in the Commonwealth 696
3. Mileage open for Traffic 697
4. Comparative Mileage of State-owned and Private Lines, 1910 ... 668
5. Comparative Railway Facilities in Different States, 1910 698
6. Classification of Lines according to Gauge, 1909-10 698

(B) GOVERNMENT RAILWAYS—

1. Mileage Open, 1901 to 1910 700
2. Non-conformity of Gauge 700
3. Interstate Communication 701
4. Unification of Gauge 702
5. Average Mileage Worked, Train-miles Run, Number of Passenger Journeys, and Tonnage of Goods and Live Stock carried on Government Railways, 1901 to 1910 ... 703
6. Length and Gauge of Railway System in each State... 704
7. Administration & Control of Gov. Rls. 707

PAGE

8. Lines under Construction & Authorised and Proposed Lines 709
9. Cost of Construction and Equipment of Government Railways ... 711
10. Gross Revenue, Total per Average Mile Worked, & per Train-mile Run 715
11. Coaching, Goods, and Miscellaneous Receipts 715
12. Coaching Traffic Receipts per Average Mile Worked, per Passenger Train-mile, and per Passenger Journey 717
13. Goods and Live-stock Traffic Receipts per Mile Worked, per Goods Train-mile and per Ton carried ... 718
14. Working Expenses 719
15. Distribution of Working Expenses 721
16. Net Revenue, Total and per Cent. of Capital Cost 721
17. Traffic Conditions 723
18. Passenger-mileage and Ton-mileage 725
19. Interest Returned on Capital Expenditure... 729
20. Passenger Fares and Goods Rates ... 730
21. Numbers and Description of Rolling-stock, 1910 733
22. Number of Railway Employees ... 734
23. Accidents—Numbers of Killed and Injured 735

(C) GRAPHICAL REPRESENTATION OF RAILWAY DEVELOPMENT—

1. General 735
2. Capital Cost and Mileage Open ... 735

PAGE

3. Cost per Mile Open 736
4. Gross Revenue 736
5. Working Expenses and Net Revenue 736
6. Percentage of Working Expenses to Gross Revenue 736
7. Percentage of Net Revenue on Capital Cost 736
8. General Indications of Graphs ... 736

(D) PRIVATE RAILWAYS—

1. Total Mileage Open, 1910 737
2. Classification of Private Railways, 1909-10 738
3. New South Wales 745
4. Victoria 745
5. Queensland 745
6. South Australia 746
7. Western Australia 746
8. Tasmania 746
9. Operations of Private Railways, 1909 747

§ 3. Tramways

1. General 748
2. New South Wales 748
3. Victoria 752
4. Queensland 754
5. South Australia 755
6. Western Australia 756

CORRIGENDA.

Page 189, seventh line, for "46,981" read "46,980."

,, 399, fourth line, for "seven" read "eight"; fifth and seventh lines, for "1908-9" read "1909-10."

,, 412, fourth line, for "1908-9" read "1909-10."

,, 432, heading of table, substitute (*) for (†) for 1906, and (†) for (*) for 1907, 1908, and 1909.

,, 509, first part of table, South Australia, last column, for "114,019" read "5776," and Commonwealth total, for "154,859" read "46,616."

,, 591, tenth line from bottom of page, for "conduct" read "conduit."

,, 703, seventh line from bottom of page, after "at head of page" insert "700."

,, 769, first line, for "1910" read "1911."

,, 808, line before second table, for "1909" read "1910."

,, 814 to 819.—Owing to the fact that the finally adjusted Commonwealth Financial returns for 1909-10 did not come to hand until after the chapter dealing with Commonwealth Finance had been printed off, certain amendments necessary in the tables of classified expenditure could not be effected. The amended figures have consequently been inserted in full on pages 1191-2 of the Appendix hereto.

,, 834, second table, 1908 figures, for "*841,227" read "1,023,629," and for "20,245,485" read "20,427,887"; 1909 figures, for "1,508,783" read "1,508,883," and for "22,732,065" read "22,732,165"; and omit note at foot of table.

,, 897, twelfth line, for "our" read "four."

,, 935, first table, last figure second last column, for "368,978" read "368,678."

,, 968, last line, for "five" read "six."

OFFICIAL STATISTICS.

COMMONWEALTH OF AUSTRALIA YEAR BOOK, 1910,

AND EARLIER YEARS.

SECTION I.

STATISTICAL ORGANISATION AND SOURCES OF INFORMATION.

§ 1. Introduction.

1. **Development of Australian Statistics.**—In the first issue of the Commonwealth Official Year Book (No. 1, 1901-1907), an account was given of the origin and development of the statistical methods of Australia from the earliest times to the organisation of the Commonwealth Bureau of Census and Statistics; *vide* pp. 1 to 16 therein. It will suffice to mention here that statistical compilation in Australia originated in the necessity of producing "Blue Books" for the information of the Home Government. The granting of Responsible Government extended the field of statistics required to be collected, and changed somewhat the administrative arrangements for statistical compilation. Certain branches, for example, were early relegated to the various Registrars-General. Finance was ordinarily dealt with by the Treasuries; Trade, by the Customs Departments; and in general each department prepared statistics for itself. Owing to this, State Statistical Departments came ultimately to be organised largely as collecting agencies of official and general information. The effort of each State, however, was independent. A short historical sketch was given in Year Book No. 1, pp. 2 to 5, showing how each State Bureau, and that of New Zealand, actually developed, and a brief reference was made to the publications issued by the various Bureaux.

Although even from the earliest times the desirableness of uniformity in statistical compilation was recognised, and some effort was also made to bring it about, it was practically inevitable, in the absence of any co-ordinating authority, that divergencies of technique should arise, and that these divergencies should introduce difficulties in the way of so combining State statistics, as to get a satisfactory statistic for Australia as a whole. Individualising tendencies were only very partially combated by the various conferences of State Statisticians, namely, in 1861, 1875, 1890, 1900, 1902, and 1903.

(i.) *Creation of the Commonwealth Bureau of Census and Statistics.* Constitutionally matters relating to "Census and Statistics" belong to the Commonwealth, and in the year 1906 the Commonwealth Bureau of Census and Statistics was created under the authority of the Census and Statistics Act of 1905, the provisions of which were stated *in extenso* in Year Book No. 1, pp. 8 to 11. The Act deals with administration, with the taking of the census, with the collection of statistics generally, and with the obligations of the public to conform to the requirements of the Act itself. Prior to the creation of the Commonwealth Bureau, it was nearly always difficult, and often impossible, to combine the statistics of the several States, because the basis and whole technique of collection were fixed practically without regard to the necessities of compilation for Australia as a whole.

(ii.) *Statistical Conference, 1906.* It became evident that this state of things could no longer continue, and a conference under the presidency of the Commonwealth Statistician, attended by statistical representatives of each State and New Zealand, was held in November and December, 1906, for the purpose of devising a scheme under which statistical collection would become satisfactory for the study of the affairs of the Commonwealth, as well as those of its constituent parts. It was recognised that the statistical organisation should be such as to secure the following advantages, viz.:—

(i.) Identity of categories under which the facts are to be collated.
(ii.) Substantial identity in the method of collection.
(iii.) Uniformity in the scheme of presenting the facts collected.
(iv.) Simultaneity of collection where possible.

An account of the *personnel* of the conference, of the more salient points of the Commonwealth Statistician's address, and a *resumé* of the conference resolutions are given in Year Book No. 1, pp. 13-16. The main features of these resolutions were as follows:—

(i.) In the interests alike of each State and the Commonwealth the collection and compilation of statistical information by the State Statistical Bureaux should be co-extensive, and, within the limits indicated by the adopted forms, uniform in respect of method, order, and date of compilation; and each State Bureau should be equipped so as to make it possible to respond to this demand.

(ii.) Excepting in the case of information confidentially collected, or compilation confidentially made for the State or Commonwealth Governments, the whole of the statistical information in each Statistical Bureau should be immediately available to the Commonwealth or State Statisticians.

(iii.) In order to secure uniformity in the compilation and interpretation of statistical data, a complete scheme of instructions should be drafted by the Commonwealth Statistician for general adoption.

(iv.) The classification of causes of death prepared by the International Institute of Statistics should be adopted.[1]

(v.) A quinquennial enumeration of population is necessary, owing to the rapid movement of population in Australia.

(vi.) A monthly record of Interstate Trade should be furnished.

(vii.) Statistics of production should be so published as never to disclose the operations of individual establishments, and, in general, in order to engender the necessary confidence in the minds of informants as to the strictly impersonal nature of statistical inquiries, and so secure readiness to furnish accurate information, the customary statistical practice of maintaining absolute secrecy should, under no circumstances, be departed from.

---

1. The Commonwealth Statistician translated the necessary nosological classification, and it was published early in 1907.

(viii.) Statistical publications of the Commonwealth and States should, as far as possible, be of uniform sizes, and uniform as to order of subject matter.

(ix.) Trade statistics should be published for each calendar year, classified under categories, and in statistics of export the State of origin should be shewn.

(x.) All questions of mathematical method, mode of determining means, etc., shall be decided for all States by the Commonwealth Statistician.

Effect is gradually being given to these resolutions as opportunity offers. The question of the desirability of continuing, or otherwise, the State Bureaux was left in abeyance with a view to seeing how far satisfactory results could be secured by co-operation.

2. **Sources of Information.**—(i.) *State Statistical Bureaux.* The information supplied by the State Statistical Bureaux is now collected and arranged under a common method, and according to uniform categories. The State Bureaux, therefore, have a double function, viz., they collect—(*a*) for their immediate requirements as States, and (*b*) as integral parts of the Commonwealth. The collections are made—(i.) by the police, (ii.) by special collectors, (iii.) by direct demand for returns, and (iv.) by compilation from official departmental reports.

(ii.) *Commonwealth and State Departments.* All statistical compilations of Commonwealth and State Departments are forwarded as soon as published, and occasionally in manuscript prior to publication, to the "Commonwealth Bureau of Census and Statistics," for the purpose of facilitating official statistical compilation on behalf of the Commonwealth. This matter is more fully referred to in § 2, hereinafter, *q.v.*

(iii.) *Scientific and Technical Experts.* The services of scientific and technical experts are requisitioned where necessary, so that the whole of the information published under the auspices of the Commonwealth will be as authoritative and accurate as it is possible to make it.

(iv.) *Authority conferred on State Statisticians.* Where their Governments have formally entered into the necessary arrangements, the State Statisticians have been duly constituted as officers under the Commonwealth Census and Statistics Act.

(v.) *Supply of Information to the Commonwealth Statistician.* The Census and Statistics Act enacts, under penalty, that when persons are required by the Commonwealth Statistician so to do, they shall furnish him with information in any matters relating to population, vital, social, and industrial affairs; relating to employment and non-employment; to imports and exports, both oversea and interstate; to postal and telegraphic matters; to factories, mines, and any other productive industries, including agricultural, horticultural, viticultural, dairying, and pastoral; to banking, insurance, and finance; to railways, tramways, shipping, and transport generally; to land tenure, and occupancy generally; as well as to any additional matters which may be prescribed by regulation. Apart from rendering returns on the proper form, every person is required to answer all questions asked him by the Statistician or other officer authorised by the Statistician, in regard to any branch of statistics required by the Act to be collected. In order to facilitate inquiries "the Statistician or any officer authorised in writing by him may, at any time during working hours, enter any factory, mine, workshop, or place where persons are employed, and may inspect any part of it, and all plant and machinery used in connection with it, and may make such inquiries as are necessary" for the requisite information, and penalties are prescribed for hindering the Statistician or his authorised officers in the execution of their duty.

3. **Maintenance of Secrecy.**—It is desirable that it should be publicly recognised that accurate information supplied to a statistical office under promise of secrecy can never, under any circumstances, be used against the individual supplying it, and under

no circumstance whatever will the Statistician disclose to any authority the affairs of individuals or of individual businesses, or of small groups of businesses, where, through inference, the affairs of an individual business would be virtually disclosed. In this connection it may be pointed out that the following resolutions of the 1906 Conference of Statisticians have been accepted by the Commonwealth and State Governments, viz.:—

(i.) That in conformity with statistical practice, and for the purpose of engendering the necessary confidence in the minds of informants as to the strictly impersonal nature of statistical inquiries, and of thus securing increased readiness on their part to supply correct information, through which alone statistical accuracy is attainable, it is desirable that the details of the statistics of production should in no case be so published as to reveal the operations of individual establishments.

(ii.) That it is further desirable that information obtained under promise of secrecy, express or implied, should not, under any circumstances, be divulged.

A statistical office is, in respect of the affairs of individuals, and of individual businesses, an office in which absolute secrecy is maintained. Its inquiries are invariably impersonal, and it should be publicly known that no other Government department, as, for example, Customs, Excise, or Taxation either Land or Income, can, under any circumstances whatever, make use of the statistical departments in order to acquire detailed information otherwise unavailable. All persons may therefore feel assured that they may render correct information without regard to any possible ulterior consequences.

4. **Accuracy Essential.**—It is needless to add that it is important that statistical information should be perfectly accurate, and any person who knowingly makes, on any form or document filled up or supplied, or in answer to any question asked him under the authority of the Census and Statistics Act, any statement which is untrue in any material particular, is liable to a penalty of £50. It is regrettable that census and other statistical results contain intrinsic evidence of deliberate misstatements. For example, the statement of age in census papers is often erroneous, probably, amongst other reasons, because it is not recognised that accurate data are essential for the preparation of the valuable tables necessary for forming judgments in various matters, for example, deducing the probability of life for both sexes at each age, or for determining the premium payments which a safe life insurance policy ought to require.

§ 2. Statistical Publications of Australia.

1. **Introductory.**—The official statistical publications of Australia may be divided bibliographically into two main divisions, viz.:—(1) Commonwealth publications dealing both individually and collectively with the several States of the Commonwealth, and (2) State publications dealing with individual States only. Besides these there are a large number of publications issued regularly, which, though not wholly statistical, necessarily contain a considerable amount of statistical information. These are included in the lists given hereunder, which are revised to 30th November, 1910.

2. **Commonwealth Publications.**—Commonwealth publications may be grouped under two heads, viz.:—(i.) Publications issued by the Commonwealth Statistician, and (ii.) Departmental Reports and Papers.

(i.) *Publications issued by the Commonwealth Statistician.* The following is a list of statistical publications issued from the Commonwealth Bureau of Census and Statistics since its inauguration and up to the 30th November, 1910:—

Finance—Bulletin No. 1, 1901 to 1907.
Bulletin No. 2, 1901 to 1908.
Bulletin No. 3, 1901 to 1909.

Population and Vital Statistics—Bulletin No. 1, Determination of the Population of Australia, 1901 to 1906.
Bulletin No. 2, Commonwealth Demography, 1901 to 1906.
Bulletin No. 7, Commonwealth Demography, 1901 to 1907.
Bulletin No. 13, Commonwealth Demography, 1901 to 1908.
Bulletin No. 19, Commonwealth Demography, 1901 to 1909.
Bulletins Nos. 3 to 6, 9 to 12, 15 to 18, 21, and 22, Vital Statistics, issued quarterly, 1907, 1908, 1909, and first and second quarters of 1910.
Bulletin No. 8, Vital Statistics for year 1907.
Bulletin No. 14, Vital Statistics for year 1908.
Bulletin No. 20, Vital Statistics for year 1909.
The Nomenclature of Diseases and of Causes of Death, 1907. New Edition, 1910.

Production—Bulletin No. 1, 1901 to 1906.
Bulletin No. 2, 1901 to 1907.
Bulletin No. 3, 1901 to 1908.

Professional Papers—The Classification of Diseases and Causes of Death, from the standpoint of the Statistician.
Census Taking—C. H. Wickens, A.I.A.
On the Influence of Infantile Mortality on Birthrate (2 papers).
On the Statistical opportunities of the Medical Profession.
Tuberculosis Duration Frequency Curves, and the number of existing cases ultimately fatal.
The Problems of Statistics.
The Evolution and Significance of the Census.

Railway Statistics—Report on the Desirability of Improved Statistics of Government Railways in Australia, February, 1909.

Shipping—Shipping and Oversea Migration for 1906.
Shipping and Oversea Migration for 1907.
Shipping and Oversea Migration for 1908.
Shipping and Oversea Migration for 1909.

Social Insurance—Report to the Hon. the Minister of Trade and Customs.

Superannuation for the Commonwealth Public Service—Report to the Hon. the Minister of Home Affairs.

The Australian Commonwealth—Its Resources and Production, 1908. New Edition, 1910.

Trade and Customs—Trade, Customs, and Excise Revenue for 1906.
Trade, Customs, and Excise Revenue for 1907.
Trade, Customs, and Excise Revenue for 1908.
Trade, Customs, and Excise Revenue for 1909.
Trade, Shipping, and Oversea Migration—Bulletins Nos. 1 to 45, issued monthly, commencing January, 1907.

Transport and Communication—Bulletin No. 1, 1901 to 1906.
Bulletin No. 2, 1901 to 1908.
Bulletin No. 3, 1901 to 1909.

Social Statistics—Bulletin No. 1, 1907.
Bulletin No. 2, 1908.

Year Book of the Commonwealth—No. 1, 1901 to 1907.
No. 2, 1901 to 1908.
No. 3, 1901 to 1909.

(ii.) *Commonwealth Parliamentary and Departmental Reports and Papers.* The following official reports and papers containing statistical matter have been issued since the inauguration of the Commonwealth:—

British New Guinea, Reports for 1904-5 to 1908-9.
Budget, 1901-2 to 1909-10.
Commonwealth Meteorologist. Climate and Meteorology of Australia; Bulletin 1 to 5; Rainfall Maps of Australia; Monthly Meteorological Reports, commencing January 1910.
Contract Immigrants Act 1905 and Immigration Restriction Acts 1901-5; Returns for Years 1902 to 1909.
Director of Naval Forces; Report for 1906.
Electoral Statistics of Commonwealth Elections; 1903, 1906, and 1910.
Estimates; 1901-2 to 1910-11.
Fisheries; Reports of the Director on Fishing Experiments carried out by the F.T.S. "Endeavour."
Handbooks of the Territory of Papua.
Inspector-General of Military Forces; Reports, 1905 to 1907.
Memorandum on Australian Military Defence and its progress since Federation.
Memorandum on the Defence of Australia, by Field-Marshal Lord Kitchener.
Military Board; Reports, 1905 and 1906.
Naturalisation Act 1903; Returns.
Patent Statistics; 1904 to 1910.
Parliamentary Papers (miscellaneous); Reports of Committees, Commissions, Conferences, etc.
Postmaster-General's Department; Statement of Business transacted and details of Receipts and Expenditure, 1907 and 1908.
Public Service Commissioner; Reports, 1901-4, 1905, 1906, and 1907, and Public Service Lists, 1903 to 1910.
Representation Act 1905; Returns.
Trade and Customs Returns, 1903 to 1905; compiled by the New South Wales Government Statistician for the Minister for Customs.
Treasurer's Statements and Reports of Auditor-General, 1901-2 to 1908-9.
Treasury Statements of Receipts and Expenditure, issued quarterly in the *Commonwealth Gazette*.

3. **State Publications.**—The chief statistical publications of each State issued since Federation may be most conveniently grouped under the following heads, viz.:—(*a*) Publications issued by the Government Statist, (*b*) parliamentary and departmental reports and papers, and (*c*) reports and statements of local and public bodies. These are set out hereunder for each State:—

(i.) **New South Wales.**—(*a*) *Publications by Government Statistician:*—

The Wealth and Progress of New South Wales, 1900-1.
The Seven Colonies of Australasia, 1901-2.
A Statistical Account of Australia and New Zealand, 1902-3, 1903-4.
The Official Year Book of New South Wales, 1904-5, 1905-6, 1907-8, 1908-9.
Six States of Australia and New Zealand (annual statistics), 1901 to 1905.
Monthly Statistical Bulletin, 1905 to October 1910.
Statistical Registers, 1901 to 1908, and 1909 (parts).
Census of New South Wales, 1901.
Vital Statistics, 1901 to 1909.
Agricultural and Live-stock Statistics, 1901 to 1910.
Statistical View of the Progress of New South Wales during 50 years, 1856 to 1906.
Friendly Societies' Experience, New South Wales, 1900-1908.
Comparative Legislation relating to the Industrial Classes.

(*b*) *Departmental Papers*:—

Annual Reports of—

Australian Museum
Board of Public Health
Chief Medical Officer
Commissioner of Railways
Comptroller-General of Prisons
Director of Botanical Gardens and Domains
Department of Agriculture
Department of Crown Lands
Department of Mines and Agriculture
Department of Police
Department of Public Works
Fisheries Board
Forestries Branch
Government Savings Bank
Inspector-General of Insane
Inspector under Factories and Shops Acts.
Labour Commissioners
Leprosy Board
Minister of Public Instruction
National Art Gallery
Pharmacy Board
Public Library
Public Service Board
Registrar of Friendly Societies, Building Societies, and Trade Unions
Registrar-General
State Children's Relief Board
Superintendent of Carpenterian Reformat'ry
University of Sydney
Western Land Board.

The Estimates.

Parliamentary Papers (miscellaneous); Reports of Committees, Commissions, Conferences, etc.

Public Accounts and Report of the Auditor-General.

(*c*) *Reports and Statements of Local Bodies*:—

Annual Statements of Municipalities
Fire Brigades Board
Hospitals
Hunter District Water Supply and Sewerage Board
Metropolitan Board of Water Supply and Sewerage
Sydney Harbour Trust
Town Clerk of the City of Sydney.

(ii.) **Victoria.**—(*a*) *Publications by the Government Statist*:—

Statistical Registers, 1901 to 1908, and 1909 (parts).
The Victorian Year Books, 1902 to 1908-9, and 1909-10 (parts).
Quarterly Statistical Abstracts, 1904 to 30th June, 1910.
Quarterly Returns of Vital Statistics, 1901 to 30th September, 1910.
Monthly Returns of Oversea Imports and Exports, 1901 to May, 1910.
Statistics of Manufactories, Works, etc., 1901 to 1909.
Agricultural Statistics, 1900-1 to 1909-10.
Australasian Statistics, 1901-2, with Summaries for Previous Years.
The First Fifty Years of Responsible Government in Victoria, 1856 to 1906.
Census of Victoria, 1901.

(*b*) *Departmental Papers*:—

Accounts of the Trustees of Agricultural Colleges and the Council of Agricultural Education.

Annual Reports of—

Actuary for Friendly Societies on Trade Unions
Board for the Protection of Aborigines
Board of Public Health
Chief Inspector of Explosives
Commissioner of Crown Lands and Survey
Conservator of Forests
Council of Judges
Department of Agriculture
Government Astronomer
Inspector of Charitable Institutions
Inspector of Factories, Workrooms and Shops
Inspector-General of the Insane
Inspector of Neglected Children and Reformatory Schools
Inspector-General of Penal Establishments and Gaols
Inspector-General of Savings Banks
Lands Purchase and Management Board
Licenses Reduction Board
Marine Board of Victoria
Minister of Public Instruction

Public Service Commissioner
Registrar of Friendly Societies
Railway Commissioners
Secretary for Mines
State Rivers and Water Supply Commission
Trustees of the Public Library, Museums, and National Gallery
Vice-Chancellor of Melbourne University.

The Budget.
Returns under the Banks and Currency Act 1890, the Companies Act 1890, and the Electric Light and Power Act 1896.
Parliamentary Papers (miscellaneous); Reports of Committees, Commissions, Conferences, etc.
Statement of Expenditure under the Constitution Statute.
The Estimates.
Treasurer's Statement and Report of the Auditor-General.

(*c*) *Reports of Local Bodies*:—

Annual Reports of the Melbourne Harbour Trust Commission
Annual Reports of the Fire Brigades Board
Annual Statements of Municipal and Shire Councils
Geelong Municipal Waterworks Trust
Hospitals
Statement of Accounts of the Melbourne and Metropolitan Board of Works.

(iii.) **Queensland.**—(*a*) *Publications by Government Statistician and Registrar-General*:—

The Queensland Official Year Book, 1901.
The Census of 1901.
A.B.C. of Queensland Statistics, 1905 to 1910.
Vital Statistics, 1901 to 1909.
Statistical Registers, 1901 to 1909.

SECTION II.

DISCOVERY, COLONISATION, AND FEDERATION OF AUSTRALIA.

§ 1. Early Knowledge of Australia.

1. **Introduction.**—It is proposed to give here only a brief summary of the more important facts relating to the early history of Australian discovery. A more complete account of this subject, together with bibliographical references thereto, may be found in Year Book No. 1 (pp. 44 to 51).

2. **Early Tradition.**—It would appear that there was an early Chaldean tradition as to the existence of an Austral land to the south of India. Rumours to that effect in course of time found their way to Europe, and were probably spread by voyagers from Indian seas, more especially by the Greek soldiers who accompanied Alexander the Great [B.C. 356-323] to India. References to this *Terra Australis* are found in the works of Ælianus [A.D. 205-234], Manilius [probably a contemporary of Augustus or Tiberius Cæsar], and Ptolemy [A.D. 107-161]. The precise period at which Australia was first discovered by Europeans is not known. In some of the maps of the first period of the Middle Ages there is evidence which might warrant the supposition of the knowledge of the existence of a *Terra Australis*, while a less indefinite idea of the Austral land appears in the maps and manuscripts of the fourteenth and fifteenth centuries.

3. **Discovery of Australia.**—The Venetian traveller, Marco Polo [1254-1324], and Nicolo de' Conti [*circa* 1440], refer to a land called *Java Major*, which there is little doubt was Australia. On the Mappamundi in the British Museum, of not later date than 1489, there is a coast-line which can be none other than the west coast of Australia. Martin Behaim's globe, the oldest known globe extant, constructed in 1492, also shews part of Australia's coast-line, and a wooden globe in Paris bears an inscription to the effect that the *Terra Australis* was discovered in 1499. It is possible, however, that this term was also applied to the regions now known as Terra del Fuego, so that but little weight can be attached to this reference.

Collingridge states that the French navigator DeGonneville who was supposed to have landed on the shores of Western Australia in 1503 never reached there.

In the Dauphin map [about 1530-1536] Australia is referred to as *Jave la Grande*.

(i.) *Arab Expeditions.* It is stated that the Arabs had come to Australia long before the Portuguese, the Spanish, or the Dutch, and that remnants of their visits in the shape of funeral monuments have been discovered in Western Australia. The continent figures also on their primitive 13th century maps, and the Portuguese are alleged to have utilised the information contained in such maps.

(ii.) *Spanish and Portuguese Expeditions.* The last decade of the fifteenth century and the commencement of the sixteenth saw numerous expeditions equipped in the ports of Spain and Portugal for the purpose of exploiting the new world. The Portuguese

rounded the southernmost Cape of Africa, which became known as the Cape of Good Hope, and pushed eastward. The Spaniards, relying on the scientific conclusion that the world was spherical, attempted to get to the east by deliberately starting out west, Magalhaens by so doing reaching the Philippine Islands in 1521. It would appear, however, that for some reason all definite information regarding the *Terra Australis* was suppressed.

It may be mentioned that in 1606, de Quiros, on reaching the island that has retained the name of Espiritu Santo (the largest island of the New Hebrides group) thought that he had come to this great land of the South, and therefore named the group *La Austrialia del Espiritu Santo*. De Torres, who was with him, passed through the straits which now bear his name, and proceeded to the Philippine Islands, thus marking the close of Spanish activity in the work of Australian discovery.

The claims to discovery urged on behalf of the Portuguese Godinho de Eredia in 1601 are rejected by Collingridge, who states that they were based on a spurious chart.

(iii.) *Discoveries by the Dutch.* With the decline of Portuguese and Spanish naval supremacy came the opportunity of the Dutch for discovery. It must not be forgotten however, that the Dutch were very prone to adopt Portuguese and Spanish charts, which when altered, made it appear as if the Dutch were the actual discoverers. Cornelius Wytfliet's map, of which there was an English edition, published at Louvain in 1597, and which indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria, was taken from a Portuguese or Spanish source. The following often quoted passage, which occurs in Wytfliet's "*Descriptionis Ptolemaicae Augmentum*," is therefore simply a translation of some Portuguese or Spanish text. "The *Australis Terra* is the most southern of all lands. It is separated from New Guinea by a narrow strait. Its shores are hitherto but little known, since, after one voyage and another, that route has been deserted and seldom is the country visited, unless when sailors are driven there by storms. The *Australis Terra* begins at one or two degrees from the equator, and is maintained by some to be so great an extent that, if it were thoroughly explored, it would be regarded as a fifth part of the world."

The Dutch East India Company, in 1605, sent the *Duyfken* from Bantam to explore the Islands of New Guinea. During March in the following year the *Duyfken* coasted along the southern shores of New Guinea but never penetrated into the Gulf of Carpentaria as is generally supposed. Dirck Hartog, in the *Eendracht* in 1616, sailed along a considerable part of the west coast.

In 1618, a Dutch vessel called the *Mauritius* touched near the North-West Cape, and discovered the *Willems Rivier* (probably the Ashburton) in lat. 21° 45′ S., and in the following year a fleet of eleven vessels, under the command of Frederik Houtman, in the *Dordrecht*, discovered the reef off the west coast, now known as *Houtman's Abrolhos*.

In 1622 the Dutch vessel *Leeuwin* rounded the Cape at the south-west of the continent which now bears that name, and in 1623 the Dutch vessels *Pera* and *Arnhem* discovered Arnhem Land, the peninsula on the western side of the Gulf of Carpentaria, which was so named in compliment to Peter Carpenter, Governor to the Dutch East India Company.

In 1627, Francis Thysz, commander of the *Gulde Zeepaerd*, with Pieter Nuyts of the Dutch Council of Seventeen, on board, was driven out of his course along a portion of the shore of the Great Australian Bight. In 1628, De Witt, commander of the *Vianen*, discovered land on the north-west, viz., in about latitude 21° S. The *Batavia*, commanded by Francis Pelsart, was wrecked on the western coast of Australia in 1629. Pelsart was the first to carry to Europe an authentic account of the west coast of Australia, which, however, he described in the most unfavourable terms. Gerrit Pool, commanding the yachts *Amsterdam* and *Wesel*, visited the Gulf of Carpentaria in 1636.

Abel Janszoon Tasman, in command of two vessels, the *Heemskirk* and *Zeehaen*, set out in 1642 to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand. In his second voyage in 1644, Tasman visited the northern

coasts of Australia, but made no discoveries of importance. The period of Dutch discoveries may be said to have ended with Tasman's second voyage, and, with the decline of Dutch maritime power, their interest in Australian discovery vanished. It may, however, be pointed out that William de Vlamingh landed at the mouth of the Swan River at the end of 1696, and in 1705 a Dutch exploring squadron under Martin van Delft visited and named parts of the north-west coast of Australia.

4. **Discoveries by the English.**—English enterprise was early shewn, viz., by Sir William Courteen petitioning James I., in 1624, for the privilege of erecting colonies in the *Terra Australis*, a petition which probably was not granted. The north-western shores of Australia were first visited by William Dampier, in the *Cygnet*, in 1688. In describing the country Dampier stated that he was certain that it joined neither Asia, Africa, nor America. In 1699 he again visited Australia, in command of H.M.S. *Roebuck*, and on his return to England published an account in which a description is given of trees, flowers, birds, and reptiles observed, and of encounters with natives.

It was a question at the end of the seventeenth century whether Tasmania and New Zealand were parts of Australia, or whether they were separated from it, but themselves formed part of a great Antarctic Continent. Lieutenant James Cook's first voyage, though primarily undertaken for the purpose of observing the transit of Venus from Otaheite, had also for its objective to ascertain whether the unexplored part of the southern hemisphere be only an immense mass of water or contain another continent. In command of H.M.S. *Endeavour*, a barque of 370 tons burthen, carrying about eighty-five persons, and accompanied by Sir Joseph Banks, Dr. Solander the naturalist, Green the astronomer, draughtsmen, and servants, Cook, after observing the transit of Venus at Otaheite, turned towards New Zealand, sighting that land on the 8th October, 1769,[1] in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic continent nor with Australia, and took formal possession thereof in the name of the British Crown. On the 20th April, 1770,[1] at 6 a.m., Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards, Botany Bay was discovered on the 29th April, 1770.[1] The *Endeavour* dropped anchor, and Cook landed on the following day. On the 2nd May, 1770,[1] a seaman named Sutherland died and was taken ashore to be buried; he was probably the first British subject buried on Australian soil. Cook sailed along the coast in a northerly direction for nearly 1600 miles, until the 12th June, 1770,[1] when the *Endeavour* was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months, and the *Endeavour* then again set her course to the north, sailing through Torres Straits and anchoring in the Downs on the 14th June, 1771.[1] In 1772 Cook was put in command of the ships *Resolution* and *Adventure*, with a view of ascertaining whether a great southern continent existed, and having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on the 14th February, 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance to be made

---

1. *Correct dates* of Lieutenant Cook's Log. After the 180° meridian of longitude had been passed, and owing to no allowance having been made for westing, the various log-books of this voyage are in error one day as to dates. Thus those in Lieut. Cook's private log, in his official log, in Gunner Forwood's, Pickersgill's, Clerke's, Wilkinson's, and Bootie's Journals, in the Palliser copy of Cook's log, and in Wharton's publication, all need correction by adding one day to the date given: that is the 19th should read the 20th, etc. The anonymous log, doubtless Green's, is erroneously supposed by the author of the "Historical Records of New South Wales" to have been corrected for westing, see the foot-note on page 269 therein. The facts are as follows:—What was known as "*ship time*" began a day earlier than under the present system of astronomical reckoning, that is to say, Jan. 1 began at noon Dec. 31. The "*astronomical day*," however, was a whole day later than the *ship's day*: thus what would be assigned to the 24th in Cook's Journal would appear in Green's Journal as the 23rd. (See "Captain Cook's Journal," 1768-71, by Captain W. J. L. Wharton, R.N., F.R.S., London, 1893, preface pp. xii., xiii.) There can be no doubt as to the need of the correction in the dates, since on reaching Batavia the log reads:—"Wednesday 10th, according to our reckoning, but by the people here Thursday 11th." (Op. Cit., pp. 352-3.) Attention was drawn to this matter by Mr. P. de Jersey Grut in the "Argus," Melbourne, May 15, 18 and 22, 1907.

was the existence of a channel between Tasmania and Australia. This was discovered by Flinders and Bass in 1798.

The most complete examination of the early history of discovery in the region of Australia is the "Critical, Documentary, and Historical Investigation concerning the Priority of Discovery in Australasia by Europeans before the Arrival of Lieut. James Cook in the *Endeavour* in the year 1770," by George Collingridge, Esquire. 4to, pp. 376, +xv. Sydney, 1895.

§ 2. The Taking Possession of Australia.

1. **Annexation of Eastern Part of Australia, 1770.**—Although representatives of the nations mentioned in the previous section, landed, or claim to have landed on the shores of Australia on various occasions during the sixteenth and seventeenth centuries, it was not until the 23rd August, 1770, that the history of Australia was brought into definite political connection with western civilisation. It was on that date that Captain Cook took possession "of the whole eastern coast, from lat. 38° to this place, lat. 10½° S., in right of His Majesty King George the Third." Cook, however, proclaimed British sovereignty only over what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian Continent and Tasmania was not taken until the 26th January, 1788. It was on this last date that Captain Phillip's commission, first issued to him on the 12th October, 1786, and amplified on the 2nd April, 1787, was read to the people whom he had brought with him in the "First Fleet."

A full historical account of the period referred to may be found in the "Historical Records of New South Wales," vol. I., parts 1 and 2.

2. **Original Extent of New South Wales.**—The commission appointed Phillip "Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south, and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south."

Although in November, 1769, Captain Cook had taken possession of the North Island of New Zealand, and in January, 1770, also of the South Island, it is a matter of doubt whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the "islands adjacent in the Pacific Ocean." The facts that under the Supreme Court Act (Imperial) of 1823 British residents in New Zealand were brought under the jurisdiction of the court at Sydney, while in 1839 there was a proposal on the part of the British Government to appoint a Consul in New Zealand, would leave this an open question, as nothing more than extra-territorial jurisdiction may have been intended. Various hoistings of flags notwithstanding, New Zealand does not appear to have unequivocally become British territory until 1840. In that year, on the 29th January, Captain Hobson arrived at the Bay of Islands. On the following day he read the commission, which extended the boundaries of the colony of New South Wales so as to embrace and comprehend the Islands of New Zealand. On the 5th February the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on the 21st May, British sovereignty over the Islands of New Zealand was explicitly proclaimed. From that date until the 3rd May, 1841, New Zealand was indubitably a dependency of New South Wales.

3. **Annexation of Western Australia, 1829.**—In June, 1825, Lieut.-General Sir R. Darling, then Governor of New South Wales, sent Major Lockyer, with a party numbering about 75, to found a settlement at King George III. Sound. The expedition sailed from Sydney on the 9th November, 1826, and landed at the Sound on the 26th December following and hoisted the British flag. The settlement was at first governed from Sydney, but on the 7th March, 1831, it was removed to the Swan River Settlement, and the convict portion of the population removed to Van Diemen's Land. In 1826 Captain James Stirling was sent in H.M.S. *Success* on special service in connection with the removal of the penal settlement from Melville Island, and was authorised to explore part of Western Australia. A party from this vessel explored the Swan River on the 8th March, and King George's Sound was reached on the 2nd April. In consequence of the favourable report made by Captain Stirling, the Imperial Government decided to establish a colony at Swan River. Captain Stirling was accordingly despatched as Lieutenant-Governor with a party of intending settlers in the *Parmelia*, and in the following month H.M.S. *Challenger*, under Captain Fremantle, was sent off from the Cape of Good Hope. On the 2nd May, 1829, Captain Fremantle hoisted the British flag on the south head of the Swan River, and took possession of "all that part of New Holland which is not included within the territory of New South Wales," and in the following month the *Parmelia* arrived off Garden Island. Thus, before the middle of 1829 the whole territory, now known as the Commonwealth of Australia, had been constituted a dependency of the United Kingdom.

For a fuller account of the discovery and annexation of Western Australia reference may be made to the Western Australian Year Book, 1905. Part I.

§ 3. The Creation of the Several Colonies.

1. **New South Wales as Original Colony.**—From what has been said, the mainland of Australia was, in Governor Phillip's commission of 1786, originally as shewn on map No. 1, that is, it was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that Van Diemen's Land—the present State of Tasmania —was actually joined to the mainland, and it was not till 1798 that the contrary was known. In that year, by sailing through Bass Straits, Flinders proved that it was an island. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included, although Cook's annexation was not properly given effect to until 1840, was thus :

	Square Miles.
Australia, east of 135° longitude east	1,454,312
Van Diemen's Land	26,215
New Zealand	104,471
Total	1,584,998

The western part of Australia, not then annexed, comprised originally 1,494,054 square miles.

2. **Separation of Van Diemen's Land, 1825.**—In 1825, Van Diemen's Land, as Tasmania was then called, was politically separated from New South Wales, being constituted a separate colony on the 14th June of that year. This reduced the area of New South Wales and its territorial dependencies by 26,215 square miles, that is, to 1,558,783 square miles.

3. **Extension of New South Wales Westward, 1827.**—In 1827 the western or inland boundary of New South Wales was extended westward to the 129th meridian,[1] thus

1. See "The Annotated Constitution of the Australian Commonwealth," by Quick and Garran, 1901, page 35.

increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,917 square miles, or excluding also New Zealand, 1,972,446 square miles.

4. **Western Australia constituted a Colony, 1829.**—The territory annexed by Captain Fremantle in 1829, viz., "all that part of New Holland which is not included within the territory of New South Wales," extended eastward to the 129th meridian, and comprised 975,920 square miles. The constitution of this area into the Colony of Western Australia, now one of the six States of the Commonwealth, was the consequence of Fremantle's Act. By it the annexation of the whole of the Continent of Australia by the British Crown was completed. The Australian colonies at this time were as indicated in the following table, and illustrated by map No. 2:—

Colony.	Date of Annexation.	Date of Creation.	Date of First Permanent Settlement.	Area. Square Miles.
New South Wales (including New Zealand)	1770	1786	1788	2,076,917
Van Diemen's Land ...		1825	1803	26,215
Western Australia	1829	1829	1829	975,920

5. **Creation of South Australia as a Province, 1836.**—On the 15th August, 1834, the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a "province," and towards the end of the year 1836 settlement took place. The first governor, Captain Hindmarsh, R.N., arrived at Holdfast Bay on the 28th December, 1836, and on the same day the new colony was officially proclaimed. The new colony embraced 309,850 square miles of territory, which, lying south of the 26th parallel of south latitude, and between the 141st and 132nd meridians of east longitude, was up to that time included within the territory of New South Wales, as will be seen on reference to map No. 3. Thus the area of New South Wales and New Zealand was reduced to 1,767,067 square miles.

6. **Separation of New Zealand, 1840.**—New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales, was, by letters patent of the 16th November of that year, constituted a separate colony under the powers of the Act 3 and 4 Vic., cap. 62, of the 7th August, 1840. Proclamation of the separation was made on the 3rd May, 1841. The area of the colony is 104,471 square miles, and its position in reference to Australia is shewn on map No. 4. This separation reduced the political territory of New South Wales to 1,662,596 square miles. See map No. 3.

7. **The Colony of Northern Australia, 1847.**[1]—In the year 1846, at the time when the British Government had begun to feel nonplussed by the question of the transportation of convicts, an attempt was made by Mr. Gladstone, then Colonial Secretary, to establish a purely penal colony, without free settlers (at least at the outset), to be called Northern Australia. This colony did not succeed in securing a permanent place on the map, though its intended metropolis was successfully established and still bears Mr. Gladstone's name. The new colony comprised such of the territories of the colony of New South Wales as lay to the northward of latitude 26° S. Sir Charles Fitzroy, then Governor of New South Wales, was by letters patent appointed Governor of Northern Australia, the actual administration being left in the hands of a Superintendent, who was to be implicitly guided by instructions from the Governor. At the same time Northern Australia was constituted a perfectly distinct colony under a distinct Government, although the authority which the Secretary of State for the Colonies would other-

1. See "The Gladstone Colony," J. F. Hogan, M.P., T. Fisher Unwin, London; 1898.

wise exercise had been deputed in the first instance to the Governor of New South Wales. In the *London Gazette* of the 8th May, 1846, Colonel Barney, R.E., was appointed Lietenant-Governor of Northern Australia, and on the 25th January, 1847, he reached Port Curtis, accompanied by other public officers of the new colony. On the 30th January the ceremony of swearing in the officials of Northern Australia was proceeded with, and on the same day the first *Government Gazette* of the new colony was issued in manuscript. This gazette contained a formal proclamation to the effect that all the land lying to the north of latitude 26° S. should thereafter be known as Northern Australia, and specified the names of the members of the Executive and Legislative Councils of the new colony. The headquarters of the Superintendent and other officials was established at Gladstone, though no other steps appear to have been taken towards securing a permanent settlement. In July, 1846, when Earl Grey succeeded Mr. Gladstone as Secretary of State for the Colonies, one of his first official steps was the complete reversal of the policy of his predecessor with respect to the founding of the new colony of Northern Australia, and by a despatch dated the 15th November, 1846, Sir Charles Fitzroy was informed that the letters patent under which the new colony was constituted had been revoked. This news was received at Gladstone on the 15th April, 1847, and on the 9th May following the settlement was broken up. The territories comprised in the Colony of Northern Australia then reverted to New South Wales.

8. **Separation of Victoria, 1851.**—In 1851, what was known as the "Port Phillip District" of New South Wales, was constituted the Colony of Victoria, "bounded on the north and north-east by a straight line drawn from Cape Howe to the nearest source of the River Murray, and thence by the course of that river to the eastern boundary of the colony of South Australia." The area of the new colony is 87,884 square miles, and its separate existence took effect from the 1st July, 1851, upon the issuing of the writs for the first election of elective members of the Legislative Council; this reduced the territory of New South Wales to 1,574,712 square miles, as indicated on map No. 4.

9. **Separation of Queensland, 1859.**—The northern squatting districts of Moreton, Darling Downs, Burnett, Wide Bay, Maranoa, Leichhardt, and Port Curtis, together with the reputed county of Stanley, were granted an independent administration and formed into a distinct colony under the name of Queensland, by letters patent dated the 6th June, 1859, although separation from New South Wales was not consummated until the 10th December of the same year, upon the assumption of office of the first Governor. The territory originally comprised in the new colony was described in the letters patent as being so much of the colony of New South Wales as lies northwards of a line commencing on the sea coast at Point Danger, in latitude about 28° 8′ south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the MacIntyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean. In Year Book No. 1 it was stated that the western boundary of the new colony was defined by the letters patent of the 6th June, 1859, as being "the 141st meridian of longitude from the 29th to the 26th parallel, and thence the 138th meridian north to the Gulf of Carpentaria." Further investigations have, however, shewn that this statement is incorrect, and that the western boundary was not specifically defined at all. The western limits of the new colony were, however, defined by inference from the fact that its area comprised the territory to the northward of a line extending as far west as the 141st meridian of east longitude, *i.e.*, the 141st meridian was the western boundary. The area of the new colony thus constituted was 554,300 square miles. By this separation the remaining territory of New South Wales was divided into two parts, viz., one of 310,372 square miles, the present State, and another of 710,040 square miles, of which 116,200 square miles is now a part of Queensland, 523,620 square miles is the Northern Territory, and 70,220 square miles is now a part of South Australia. These facts are shewn on map No. 5.

10. **No further Creation of Colonies.**—Since the separation of Queensland, no other creation of colonies has taken place in Australia, though the boundaries of New South Wales, Queensland, and South Australia were altered later. The dates of foundation of the Australasian colonies, and their areas at the close of 1859, were therefore as hereunder:—

DATES OF FOUNDATION OF AUSTRALASIAN COLONIES AND AREAS AS AT END OF 1859.

Colony.	Date of Annexation.	Date of Creation.	Date of First Permanent Settlement.	Area. Square Miles.
New South Wales	1770	1786	1788	1,020,412
Tasmania	1770	1825	1803	26,215
South Australia	1770	1834	1836	309,850
Victoria	1770	1851	1834	87,884
Queensland	1770	1859	1824	554,300
Western Australia	1829	1829	1829	975,920
New Zealand	1840	1841	1814	104,471[1]

1. By proclamation dated 10th June, 1901, the area of the Dominion was increased by 280 square miles, making it now 104,751 square miles, by the inclusion of the Cook Group and other islands.

11. **The Changing Boundaries of the Colonies.**—When, on the 15th August, 1834, the Imperial Government constituted the province of South Australia, there lay between its western boundary and the eastern boundary of Western Australia (as proclaimed by Fremantle in 1829) a strip of country south of the 26th parallel of south latitude, and between the 132nd and 129th meridians of east longitude, legally included within the territory of New South Wales. The area of this territory, frequently but improperly referred to as "No Man's Land," has been calculated to cover approximately 70,220 square miles.[1] On the 10th October, 1861, by the authority of the Imperial Act 24 and 25 Vic., cap. 44, the western boundary of South Australia was extended so as to cover this strip, and to coincide with the eastern boundary of Western Australia—the 129th meridian. By letters patent dated the 13th March, 1861, forwarded by the Colonial Secretary to the Governor of Queensland on the 12th April, 1862, the area of Queensland was increased by the annexation of "so much of the colony of New South Wales as lies to the northward of the 26th parallel of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria." The area of South Australia was therefore increased by 70,220 square miles, and became 380,070 square miles, while the area of Queensland, increased by 116,200 square miles, became 670,500 square miles. The territories of these two States thus became as represented in map No. 6. Nearly two years after this accession of territory, viz., on the 6th July, 1863, the Northern Territory, containing 523,620 square miles—also formerly a part of New South Wales[2]—was, by letters patent, brought under the jurisdiction of South Australia, whose area was thus increased to 903,690 square miles; whilst that of New South Wales was diminished by these additions to South Australia, and by the separation of the colonies of New Zealand, Victoria and Queensland, till its area became only 310,372 square miles. The territories of Tasmania, Western Australia, and the three other separated colonies, with the exception of some minor islands added to Queensland, remain as originally fixed.[3]

1. The calculation has been made in this Bureau. The area has usually been left unstated in references to the territory, but when approximations have been given the margin of error seems to have been somewhat large.

2. A military post had been formed on Melville Island in 1825. This was transferred about 1827 to Raffles Bay, and some years later to Port Essington. The settlement at Port Essington was, like its predecessors, under the command of Sir Gordon Bremer, and was designed, in addition, as a harbour of refuge for distressed vessels. It was finally abandoned in 1849.

3. The facts and maps here given are in substantial though not in complete accordance with the illustrated statement shewing the subdivision of Australia between 1787 and 1863, issued by the Department of Lands, Sydney, 1904.

12. **Australasia, 1863 to 1900.**—The immense area generally known as Australasia had thus, by 1863, been divided into seven distinct colonies, the areas of which are shewn below.

From the 1st January, 1901, the colonies mentioned above, with the exception of New Zealand, have become federated under the name of the "Commonwealth of Australia," the designation of "Colonies" being at the same time changed into that of "States." The total area of the Commonwealth is, therefore, 2,974,581 square miles: the dates of creation and the areas of the separate colonies, as determined on the final adjustment of their boundaries, are shewn in the following table:—

DATES OF CREATION AND AREAS OF THE SEVERAL COLONIES.

Colony.	Year of Formation into Separate Colony.	Present Area in Square Miles.	Colony.	Year of Formation into Separate Colony.	Present Area in Square Miles.
New South Wales ...	1786	310,372	New Zealand ...	1841	104,751
Tasmania	1825	26,215	Victoria	1851	87,884
Western Australia ...	1829	975,920	Queensland ...	1859	670,500
South Australia (proper)[1]	1834	380,070	Northern Territory[1]	1863	523,620

Commonwealth ... ... 2,974,581 square miles.
Australasia ... ... 3,079,332 square miles.

1. South Australia with the Northern Territory is 903,690 square miles.

13. **British New Guinea or Papua.**—Under the administration of the Commonwealth, but not included in it, is British New Guinea or *Papua*, finally annexed by the British Government in 1884. This territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on the 1st September, 1906, under the authority of the Papua Act (Commonwealth) of 16th November, 1905. The area of Papua is about 90,540 square miles. More extended reference to this dependency of the Commonwealth will be found in Section xxix.

14. **Proposed Transfer of the Northern Territory to the Commonwealth.**—On the 7th December, 1907, the Commonwealth and the State of South Australia entered into an agreement for the surrender to and acceptance by the Commonwealth of the Northern Territory, subject to approval by the Parliaments of the Commonwealth and the State. By the Northern Territory Surrender Act 1907, this agreement was approved by the South Australian Parliament, and in July, 1909, a Bill was introduced into the Commonwealth House of Representatives for the purpose of ratifying the agreement referred to.[1] The most important provisions of the Bill were:—(*a*) That the Northern Territory is declared to be accepted by the Commonwealth as a territory under the authority of the Commonwealth, by the name of the Northern Territory of Australia. (*b*) That the Commonwealth should assume responsibility for the State loans in respect of the Northern Territory (the amount of which loans on the 30th June, 1909, was £2,748,062) by annually reimbursing the State the amount of interest paid in connection with Northern Territory loans, by providing a sinking fund to pay off such loans on maturity, and by paying off the deficit in respect of the Northern Territory. (*c*) That the Commonwealth should construct a transcontinental railway from Pine Creek southwards to a point on the northern boundary of South Australia. (*d*) That the Commonwealth should, at the time of the acquisition of the Territory, purchase from South Australia the railway from Port Augusta to Oodnadatta, and (*e*) that the Commonwealth should construct a railway from a point on the Port Augusta railway to connect with the other

1. In August, 1910, the Bill was introduced in the Senate of the new Commonwealth Parliament under the title of The Northern Territory Acceptance Act 1910

part of the transcontinental railway at a point on the northern boundary of South Australia.

According to official returns the following statement shews what the amount of capital invested by the Commonwealth in connection with the Northern Territory would be :—

AMOUNT OF CAPITAL PROPOSED TO BE INVESTED BY COMMONWEALTH IN NORTHERN TERRITORY.

Particulars.	Public Debt at 30th June, 1909.	Deficit.	Cost of Port Augusta to Oodnadatta Railway.	Estimated cost of Pine Creek to Oodnadatta Railway.	Total.
Amount	£2,748,062	£779,734	£2,242,343	£4,500,000	£10,270,139

During the first year or two after the completion of the transcontinental railway the annual expenditure would be approximately as follows :—

ESTIMATED AMOUNT OF ANNUAL EXPENDITURE ON NORTHERN TERRITORY BY COMMONWEALTH.

Particulars.	Deficit on Northern Territory.	Deficit and Sinking Fund, on Railway, Port Augusta to Oodnadatta.	Interest on Cost of Pine Creek to Port Augusta Railway.	Total.
Amount	£158,439	£77,694	£157,500	£393,633

§ 4. The Exploration of Australia.

1. **Introduction.**—A fairly complete, though brief, account of the Exploration of Australia was given in Year Book No. 2 (pp. 20 to 39). It is proposed to give here only a brief summary of the more important facts relating to the subject. Maps shewing the progress of Australian exploration may be found on page 35 hereof.

2. **Eastern Australia.**—The first steps towards the exploration of New South Wales were taken by Captain Phillip and his officers, who, during 1788 and the years immediately following, made a number of excursions in the neighbourhood of Port Jackson, to Broken Bay, and along the Hawkesbury and Nepean Rivers.

(i.) *French Voyages of Exploration, 1788 to 1802.* Towards the close of the 18th century the French, who were supposed to covet territory in Australia, sent out several exploring expeditions. In 1788 two vessels under the command of La Pérouse put into Botany Bay to refit. In 1792 the French Admiral D'Entrecasteaux was in Australian waters with two vessels and discovered and named several places on the Tasmanian coasts. In 1800 an expedition, sent out by the French Republic, examined parts of the coasts of Van Diemen's Land and South Australia. It was chiefly in consequence of rumours to the effect that the French intended to establish a colony in Australia, that steps were taken by the British to form settlements at various places on the Australian coasts.

(ii.) *Bass and Flinders, 1796 to 1803.* In 1796 and 1797 Bass and Flinders explored the coast in a southerly direction from Port Jackson as far as Western Port. In 1798 Bass, accompanied by Flinders and eight seamen, circumnavigated the island of Tasmania, thus proving the existence of the straits which now bear his name. In 1801

Flinders again came to Australia in command of H.M.S. *Investigator*, which was the first vessel to completely circumnavigate the Australian continent.

(iii.) *Discovery of Port Phillip, 1802.* On the 5th January, 1802, Lieutenant Murray, who had been sent out to trace the coast between Point Schanck and Cape Otway, sighted the entrance to Port Phillip, which he did not, however, enter, owing to stress of weather, until the 15th February. Shortly afterwards Flinders entered Port Phillip, and in 1803 Charles Robbins explored the Yarra for some miles above the present site of Melbourne.

(iv.) *The Blue Mountains Crossed, 1813.* In 1813 Gregory Blaxland succeeded in effecting a passage over the Blue Mountains, which had previously proved an inaccessible barrier to all attempts to extend the infant colony in a westerly direction. G. W. Evans, following on Blaxland's tracks, soon penetrated further inland and discovered and named the Fish, Campbell, Macquarie, and Lachlan Rivers. In 1817 and 1818 John Oxley, Allan Cunningham, Charles Frazer, and others explored a considerable part of the Lachlan and Macquarie Rivers, and discovered and named the Castlereagh River, the Arbuthnot Range, the Liverpool Plains, the Hastings River, and Port Macquarie.

(v.) *Hamilton Hume, 1814 to 1824.* In 1816 Hamilton Hume, who two years previously had explored the country round Berrima, discovered and named the Goulburn Plains and Lake Bathurst. In 1824, accompanied by William Hilton Hovell, Hume, starting off from Lake George, reached the Murrumbidgee and sighted the Snowy Mountains. On the 16th December, 1824, he reached the Southern Ocean at the spot where Geelong now stands. This expedition had a great and immediate influence on the extension of Australian settlement.

(vi.) *Allan Cunningham, 1817 to 1829.* In 1823 Cunningham, who had accompanied Oxley in 1817, discovered and named Pandora's Pass, leading to the Liverpool Plains from the Upper Hunter, and in 1827 he discovered the Darling Downs.

(vii.) *Charles Sturt, 1828 to 1830.* In 1828 the Darling River was discovered by Sturt, who in the following year explored the Murray River, tracing it to its mouth at Lake Alexandrina in Encounter Bay. Sturt thus connected his overland journey with the discoveries of Flinders and other coastal explorers. In the meantime discovery on the Australian coasts had been followed up by Captains Wickham and Stokes in H.M.S. *Beagle*.

(viii.) *Sir Thomas Mitchell, 1831 to 1846.* In 1831 Mitchell discovered the lower courses of the Peel (Namoi), Gwydir, and Dumaresq Rivers, and identified the Upper Darling. Two years later he explored the country between the Bogan and Macquarie Rivers, and in 1835 he traced the Darling 300 miles down from Bourke. In 1836 he ascended the Murray and Loddon Rivers and discovered the Avoca, the Campaspe, and the Wimmera Rivers, reaching the coast near Cape Northumberland. On his return journey Mitchell visited Portland Bay, where he found the Henty family established, and ascending Mount Macedon, he saw and identified Port Phillip. In 1845 and 1846 Mitchell again set out, accompanied by Edmund B. Kennedy, and explored the Narran, Balonne, and Culgoa Rivers. Ascending the Balonne, he turned westward, exploring the Maranoa and the Warrego. Proceeding to the north he then discovered the Belyando and the Barcoo Rivers.

(ix.) *McMillan, Strzelecki, Leslie and Russell, 1839 to 1841.* In the meantime other explorers had been on the field and had made numerous discoveries. In 1839 and 1840 Angus McMillan discovered and named Lake Victoria, the Nicholson, Mitchell, and Macallister Rivers, and explored the country as far as the Latrobe River. In 1840 Strzelecki discovered Mount Kosciusko, the Latrobe River, and Lake King. In 1840 and 1841 Patrick Leslie and Stuart Russell explored the Condamine River.

(x.) *Leichhardt, 1844 to 1845.* In 1844 and 1845 Ludwig Leichhardt made a number of discoveries. Leaving the Condamine River he discovered the Dawson River, Peak

Downs, the Planet and Comet Rivers, and Zamia Creek. Later on he found and named the Mackenzie, Isaacs, Suttor, Burdekin, Lynd, Mitchell, Leichhardt, Nicholson, McArthur and Roper Rivers, and after exploring part of the coast of the Gulf of Carpentaria, reached the settlement of Victoria at Port Essington. In 1848 Leichhardt equipped another expedition and set out from the Cogoon. No sure clue as to his fate or as to the fate of his companions has ever come to light.

(xi.) *Kennedy, 1847 to 1848.* In 1848 Edmund Kennedy, who had accompanied Mitchell in 1845 and 1846, and who had further explored the Barcoo and Victoria Rivers in 1847, attempted to make his way up the eastern coast of Cape York Peninsula. After great hardships he reached the Escape River, where he was murdered by the blacks.

(xii.) *A. C. Gregory, 1846 to 1858.* A. C. Gregory's earliest explorations were in Western Australia, where in 1846 he discovered Lake Moore. In 1855 Gregory explored the Fitzmaurice and Victoria Rivers and Sturt's Creek. He examined the Gilbert River and its tributaries, and made his way in a westerly direction across to Brisbane. In 1858 Gregory explored the districts near the Barcoo and Thompson Rivers, Strzelecki's Creek, and Lake Blanche.

(xiii.) *Later Exploration of the North East, 1859 to 1872.* After Kennedy's ill-fated expedition the main portion of Eastern Australia was fairly well known. Certain parts of what is now Queensland, however, still remained unexplored. These were examined by G. E. Dalrymple in 1859, by Frederick Walker in 1862, by Frank and Alec Jardine in 1864, and by William Hann in 1872. Hann discovered the Tate, Walsh, Palmer and Normanby Rivers. This expedition practically completed the exploration of Eastern Australia. The gold discoveries on the Palmer River, in Queensland, following soon after, led to a considerable amount of minor exploration being carried out by prospectors, whose labours are, however, unrecorded.

3. **Central Australia.**—In 1836 Colonel Light surveyed the shores of St. Vincent's Gulf, and selected the sight for the settlement at Adelaide. In the same year Mitchell (see 1, viii. *ante*) had succeeded in travelling overland from the Darling to Cape Northumberland, and the settlers found little difficulty in driving stock from various parts of New South Wales to the new country. A great deal of minor exploration was done by these pioneers, the first of whom to lead the way across to the Port Phillip settlement with sheep in 1837 was Charles Bonney. In 1838 the overlanding of stock was extended to Adelaide by Joseph Hawdon.

(i.) *Eyre, 1838 to 1841.* In 1841 Edward John Eyre, who had previously discovered Lake Hindmarsh, and had explored the country to the north-east of Spencer's Gulf, succeeded, after great hardship, in reaching Albany overland from Adelaide. After this expedition settlers soon spread in a northerly direction from Adelaide, and various expeditions in search of grazing country were carried out by these pioneers.

(ii.) *Sturt's Later Explorations, 1844 to 1845.* In 1844 Charles Sturt, whose explorations in eastern Australia have already been referred to (see para. 2. vii. *ante*), set off from the Darling on an expedition to reach the centre of the continent. He reached his furthest point in latitude 24° 30′ S. and longitude 137° 58′ E. in September, 1845, and, after enduring great privations, was compelled to retreat through want of water.

(iii.) *Stuart, 1858 to 1862.* John MacDouall Stuart accompanied Captain Sturt on his last expedition as draughtsman. After minor explorations in the vicinity of Lake Eyre, Stuart made an unsuccessful attempt to cross the continent from south to north in 1860. After discovering the Frew, Fincke, and Stevenson Creeks, Chambers Pillar, and the McDonnell Range, he camped at the centre of Australia on the 22nd April, 1860. In the following year Stuart was placed in command of an expedition equipped by the South Australian Government, and succeeded in crossing the continent, reaching the sea at Chambers Bay on the 25th July, 1862.

(iv.) *Burke and Wills Expedition, 1860 to 1861.* In 1860 Robert O'Hara Burke and William Wills led an expedition northward from Melbourne to explore the country to the Gulf of Carpentaria. Through their arrangements having miscarried both Burke and Wills perished in the bush, after having crossed the continent and returned to their depôt at Fort Wills, only to find it deserted. Various relief expeditions were sent out, and among them may be specially mentioned Howitt's Relief Expedition, the Queensland Relief Expeditions under Walker and Landsborough, and the South Australian Relief Party under McKinlay. Though the actual work of exploration carried out by the Burke and Wills expedition was unimportant, the discoveries made by the relief parties sent out were of great value in opening up Central Australia.

(v.) *Giles, 1872 to 1876.* In 1872 Ernest Giles discovered Lake Amadeus and Mount Olga. In the same year and again in the following he made unsuccessful attempts to force his way through the deserts to the settlements of Western Australia. In 1875 Giles, accompanied by W. H. Tietkins, set off from Beltana, and after making his way in the vicinity of latitude 30° S., to the settled districts of Western Australia, returned to the Peake telegraph station by way of the Murchison, Gascoyne, and Ashburton Rivers.

(vi.) *Later Explorations.* Other explorations in Central Australia were carried out by Major Warburton (1873), W. C. Gosse (1873), W. O. Hodgkinson (1875), Nathaniel Buchanan (1878), Frank Scarr (1878), Ernest Favenc (1878-83), H. V. Barclay (1877), A. Johns and P. Saunders (1876), David Lindsay (1883), H. Stockdale (1884), W. H. Tietkins (1889), A. Searcy (1882-96), and Hubbe (1896).

4. **Western Australia.**—In 1791 George Vancouver, in command of H.M.S. *Discovery*, found and named St. George's Sound. On the 26th December, 1826, Major Lockyer, with a detachment of soldiers, landed at King George's Sound to form a settlement, under instructions from Sir Ralph Darling, then Governor of New South Wales. The settlement was established in order to forestall the French, who, it was rumoured, intended to occupy the harbour. Early in 1827 Captain James Stirling and Charles Frazer examined and reported upon the Swan River districts with a view to forming a settlement there. In 1829 Captain Fremantle landed at the mouth of the Swan River and took possession of the country. A month later Stirling arrived with the first settlers.

(i.) *Early Explorers.* In November, 1829, Alexander Collie and Lieutenant Preston explored the coast between Cockburn Sound and Géographe Bay, and in the following month Dr. J. B. Wilson, R.N., discovered and named the Denmark River.

In 1830 John Septimus Roe explored the country in the neighbourhood of Cape Naturaliste and between the Collie and Preston Rivers, and in 1835 examined the districts between the headwaters of the Kalgan and Hay Rivers. In 1836 and 1839 Roe explored the country north and east of Perth, and in 1848 traced the course of the Pallinup River for some distance.

Other early explorers in the West were Ensign R. Dale (1830), Captain Bannister (1831), W. K. Shenton (1831), J. G. Bussell (1831), Lieutenant Preston (1831), Alexander Collie (1832), F. Whitfield (1833), A. Hillman (1833), G. F. Moore (1834), and Lieutenant Bunbury (1836).

(ii.) *Grey, 1837 to 1839.* In 1837 Captain (afterwards Sir) George Grey discovered and traced the Glenelg River. In 1839 he explored the country between the Williams and Leschenault Rivers, and later succeeded in making his way along the coast from the mouth of the Gascoyne River to Perth.

(iii.) *F. T. Gregory, 1857 to 1861.* In 1857 and 1858 Frank T. Gregory examined the upper reaches of the Murchison River and reached the Gascoyne River, which he descended to its mouth, whence he made his way to Perth. In 1861 Gregory explored the north-western districts, discovering the Fortescue, Ashburton, Shaw, De Grey, and Oakover Rivers.

(iv.) *Sir John Forrest, 1869 to 1883.* In 1869 John (now Sir John) Forrest penetrated to the east some distance past Mount Margaret and discovered Lake Barlee. In 1870 he succeeded in making his way from Perth to Adelaide via Esperance Bay, Israelite Bay, and Eucla, and in 1874, accompanied by his brother Alexander and four others, he crossed from Geraldton to the overland telegraph line near Peake Station. In 1883 Forrest explored a large portion of the Kimberley Division, Cambridge Gulf and the lower part of the Ord River.

(v.) *Alexander Forrest, 1871 to 1879.* In 1879 Alexander Forrest, who had previously accompanied his brother on two expeditions, made his way from the De Grey River to the Daly Waters Station on the overland telegraph line, via Beagle Bay, the King Leopold Range, Nicholson Plains, and the Ord and Victoria Rivers.

(vi.) *L. A. Wells, 1892 to 1897.* In 1892 Wells examined practically the whole of the still unexplored districts between Giles' track of 1876 and Forrest's route of 1874, and in 1896 and 1897 he explored the country between the East Murchison and Fitzroy Rivers.

(vii.) *Later Explorations in Western Australia.* During the latter part of the 19th century various expeditions were sent out to explore those parts of Western Australia (chiefly in the north-western districts) which still remained unknown. Those whose names are connected with the later exploration of Western Australia are :—David Carnegie (1896-7), who discovered a practical stock route between Kimberley and Coolgardie ; W. Carr-Boyd (1883-96), who explored the country near the Rawlinson Ranges and made several excursions between the southern goldfields of Western Australia and the South Australian border ; H. F. Johnston, G. R. Turner, and E. T. Hardman (1884), who discovered the Mary and Elvire Rivers ; F. S. Brockman, Charles Crossland, Gibb Maitland, and Dr. F. M. House (1901), who explored the extreme north of the State ; F. H. Hann (1896-1907), who made various excursions in the north-west and between Laverton and Oodnadatta.

(viii.) *Other Explorers.* Other explorers whose names are connected with the exploration of Western Australia are :—George Eliot, who, in 1839, explored the country between the Williams and Leschenault ; William Nairne Clark, who, in 1841, discovered immense jarrah and karri forests in the south-west ; R. H. Bland (1842) ; H. Landor (1842) ; Lieutenant Helpmann (1844) ; Captain H. M. Denham (1858) ; B. D. Clarkson, C. E. and A. Dempster, and C. Harper (1861) ; C. C. Hunt and Ridley (1863) ; R. J. and T. C. Sholl (1865) ; A. McRae (1866) ; Philip Saunders and Adam Johns (1876) ; H. Stockdale (1884) ; H. Anstey (1887) ; F. Newman and W. P. Goddard (1890) ; J. H. Rowe (1895); C. A. Burrows and A. Mason (1896) ; Hugh Russell (1897) ; and John Muir (1901).

§ 5. The Constitutions of the States.[1]

1. **Introduction.**—The subject of "General Government" is dealt with in Section XXV. of this Book, but it has been thought desirable to here give a brief statement of the constitutional history of Australia, with a view to shewing how the present Constitutions of the States have been built up.

2. **Early Constitutional History.**—The earliest statute relating to Australia was passed in the year 1784, for the purpose of empowering the King in Council to appoint places in Australia to which convicts might be transported. By an Order in Council dated the 6th December, 1786, His Majesty's "territory of New South Wales, situated on the east part of New Holland," was appointed such a place. Captain Phillip, who was appointed the first Governor and Vice-Admiral of the territory, was empowered by

1. See "The Annotated Constitution of the Australian Commonwealth," Quick and Garran ; Jenks' "Government of Victoria" ; Rusden's "History of Australia."

his commission and letters patent to make ordinances for the good government of the settlement. By an Act passed in 1787 authority was given for the establishment of a court of criminal jurisdiction at Sydney. In the early days of settlement the Governor's power was almost absolute, and his rule virtually despotic, tempered by his own discretion and by the knowledge that he was responsible to the Imperial authorities for any maladministration. By Acts passed in 1819, 1821, and 1822, the Governor was given limited powers to impose local taxation in the shape of Customs duties on spirits, tobacco, and other goods imported into the Colony.

(i.) *The First Constitutional Charter.* In 1823 an Act was passed authorising the creation of a Council, consisting of from five to seven persons charged with certain legislative powers of a limited character. This was the first constitutional charter of Australia, and was later improved and amended by an Act passed in 1828, and applying both to New South Wales and to Van Diemen's Land, which had been politically separated in 1825.

(ii.) *First Representative Legislature.* In 1842 an important measure was passed by the Imperial Government, establishing, for the first time in Australia, a Legislature partly, but not wholly, representative in character. It was enacted that there should be within the colony of New South Wales a Legislative Council, to consist of thirty-six members, twelve of whom were to be nominated by the Sovereign and twenty-four elected by the inhabitants of the colony. The Act contained provisions defining the legislative functions of the Council, and regulated the giving or withholding of the Royal assent to Bills passed by the Council. This Act did not grant responsible government to New South Wales; the heads of the Departments and other public officers continued to hold their offices at the pleasure of the Crown, as represented by the Governor. The new Council was opened by Sir George Gipps, on the 1st August, 1843.

(iii.) *The Australian Colonies Government Act 1850.* The next important Act relating to representative government in Australia is the Australian Colonies Government Act, passed in 1850. The two main objects of this Act were (*a*) the separation of the Port Phillip District from New South Wales, and (*b*) the establishment of an improved system of government in all the Australian colonies. For New South Wales, for the separated Victoria, for Van Diemen's Land, and for South Australia, similar Legislatures were prescribed. The general provisions of the Act provided that the existing Legislature in New South Wales should decide the number of members of which a new Council was to consist in that colony, and should perform the same task for Victoria. On the issue of the writs for the first election in Victoria, separation was to be deemed complete. One-third of the number of members of the Council in each Colony was to be nominated by the Crown. The existing Legislatures in Van Diemen's Land and South Australia were to decide as to the number of members in the new Council in each, but they were not to exceed twenty-four. Power was given to the Governor and Legislative Council in each colony to alter the qualifications of electors and members as fixed by the Act, or to establish, instead of the Legislative Council, a Council and a House of Representatives, or other separate Legislative Houses, to be appointed or elected by such persons and in such manner as should be determined, and to vest in such Houses the powers and functions of the old Council. The powers and functions of the Councils under this Act were as follows:—(*a*) To make laws for the peace, order, and good government of the colony; (*b*) to impose taxation, including the imposition of Customs duties; and (*c*) to appropriate to the public service the whole of the public revenue arising from taxes, duties, rates, and imposts. The restrictions on the powers and functions of the Councils were as follows:—(*a*) That no such law should be repugnant to the law of England, (*b*) that no such law should interfere with the sale and appropriation of Crown lands, (*c*) that no Customs duties of a differential character should be imposed, and (*d*) that it should not be lawful for the Council to pass any Bill appropriating to the public service any sum of money for any purpose unless the Governor should have previously recommended that provision for such appropriation be made.

3. **The Constitution of New South Wales.**—After the Act just referred to had been proclaimed, an Electoral Bill for New South Wales was passed increasing the number of members of the Council from thirty-six to fifty-four, of whom thirty-six were to be elective and eighteen nominee members. The extraordinary increase in the wealth and prosperity of the colony owing to the discovery of gold, soon imparted new and unforeseen features to its political and social conditions. In 1851 a remonstrance was despatched by the Legislative Council of New South Wales to the Secretary of State for the Colonies, in which objection was taken to the form of Constitution which the Imperial authorities proposed to grant under the Act of 1850, on the grounds (*a*) that it did not place the control of all revenue and taxation entirely in the hands of the Colonial Legislature, (*b*) that all offices of trust and emolument should be filled by the Governor and Executive Council, unfettered by instructions from the Secretary of State for the Colonies, and (*c*) that plenary powers of legislation should be conferred on the Colonial Legislature. In 1852 the Secretary of State for the Colonies, in a despatch to the Governor of New South Wales, promised to give effect to the wishes of the Legislative Council, and suggested that the Legislative Council should proceed to frame a Constitution resembling that of Canada and based on a bi-cameral Legislature. A select committee of the Council was accordingly appointed to draft a Constitution, and as a result of the deliberations of this body the new Constitution was, on the 21st December, 1853, adopted by the Council and transmitted to the Secretary of State for the Colonies. As it contained provisions in excess of the powers conferred by the Act of 1850, the Bill could not receive the Royal assent, but had to be introduced into the Imperial Parliament. With some amendments the Bill was passed by the Imperial Government and received the Royal assent on the 16th July, 1855. It is now known as the New South Wales Constitution Act 1855, and under its provisions a fully responsible system of government was granted. The entire management and control of Crown lands was conferred on the New South Wales Parliament, while the provisions of former Acts respecting the allowance and disallowance of Bills were preserved. Subject to the provisions of the Act, power to make laws amending the Constitution was given to the New South Wales Parliament. The first Parliament, under the new Constitution, was opened by Sir William T. Denison, on the 22nd May, 1856. The Constitution was amended by Acts passed in 1857, 1884 and 1890, these Acts being repealed and consolidated by the Constitution Amendment Act of 1902. The last amending Act was passed in 1908.

4. **The Constitution of Victoria.**—After the proclamation of the Australian Colonies Government Act of 1850, the old Legislative Council of New South Wales met on the 28th March, 1851, for the purpose of making electoral and judicial arrangements required to bring the new Act into force in Victoria. Two Acts were passed specially concerning Victoria. The first provided for the continuation of the powers and functions of all public officers resident within the Port Phillip District until removed or reappointed by the Government of Victoria. The other Act provided that the Legislative Council of Victoria should consist of thirty members, ten nominee and twenty elective. On the 1st July, 1851, writs for the election of the elective members of the new Legislative Council of Victoria were issued and separation became complete. On the 15th July Mr. La Trobe was appointed the first Lieutenant-Governor of the colony. The powers and functions of the new Council were, under the Act of 1850, similar to those of the reorganised Legislative Council of New South Wales. The next important stage in the constitutional history of Victoria was that which was consummated by the attainment of a fully responsible system of government. Reference has already been made to the rapid advance in the population, wealth, and material prosperity of Australia consequent on the discovery of gold, and to the lead taken by the Legislature of New South Wales in the movement for an extension of constitutional power. In 1853 a despatch, similar to that received by the Governor of New South Wales (see above), was received by the Lieutenant-Governor of Victoria from the Secretary of State for the Colonies. A Constitution was drafted by a committee of the Legislative Council, and it was embodied in a Bill which was passed and reserved for the Queen's assent on the 28th March, 1854.

This Bill contained clauses similar to those of the New South Wales Bill relating to the assent of the Governor to bills and the Sovereign's power to disallow the same; to the sale and appropriation of Crown lands; and to the amendment of the Constitution by the Victorian Parliament. As the new Constitution contained provisions beyond those authorised by the Act of 1850 a special Enabling Act was necessary. The Bill was passed and assented to on the 16th July, 1855, and the new Constitution was proclaimed on the 23rd November following. Several amendments have since been made, chiefly with reference to the term of membership and the qualifications of members and electors. The last amending Act was passed in 1903.

5. **The Constitution of Queensland.**—As part of New South Wales, the Moreton Bay District enjoyed the benefits of responsible government under the Constitution Act of 1855. For electoral purposes the district was, in 1856, divided into eight electorates, returning nine members to the Legislative Assembly of New South Wales.

By an act passed in 1842 the Queen was empowered to erect into a separate colony any part of the territory of New South Wales lying to the northward of 26° south latitute, which was altered by the Australian Colonies Government Act 1850 to 30° south latitude. By the New South Wales Constitution Act 1855 the power previously granted to alter the northern boundary of New South Wales was distinctly preserved, and Her Majesty was authorised, by letters patent, to erect into a separate colony any territory which might be so separated. It was further enacted that Her Majesty, either by such letters patent or by Order in Council, might make provision for the government of any such new colony, and for the establishment of a Legislature therein, in manner as nearly resembling the form of government and legislature established in New South Wales as the circumstances of the new colony would permit. The separation was effected by letters patent dated the 6th June, 1859, and the Constitution of the new colony was embodied in an Order in Council of the same date.

The Order in Council provided that there should be within the colony of Queensland a Legislative Council and a Legislative Assembly, with the advice and consent of which Her Majesty should have power to make laws for the peace, welfare, and good government of the colony in all cases whatsoever. The powers and functions granted to this Legislature were substantially the same as those granted to New South Wales and Victoria under their respective Constitution Acts, and similar restrictions were imposed. The first Parliament under the new Constitution was convened on the 29th May, 1859. There have been several amendments of the Constitution, the dates of the amending Acts being as follows:—1867, 1871, 1874, 1890, 1896, and 1905.

6. **The Constitution of South Australia.**—The creation of South Australia as a Province has already been referred to above (see p. 19.) In the exercise of the provisions of the Act by which the Province was created, a governor, a judge, seven commissioners, and other officials were appointed. The Governor, with the concurrence of the Chief Justice, the Colonial Secretary, and the Advocate-General, or two of them, was authorised to make laws and impose taxes. The control of the Crown lands was placed in the hands of the Commissioners. In 1841 the settlement being involved in financial difficulties, a loan was advanced by the British Government. Under an Act passed in 1842 the system of government was remodelled; the colonisation commissioners were abolished, and the Province became a Crown colony. The Queen was empowered to constitute a nominated Legislative Council, consisting of the Governor and seven other persons resident in the colony, with power to make laws for the good government thereof. This system of government continued in force until the inauguration of a new scheme under the provisions of the Australian Colonies Government Act 1850, referred to above.

In 1853 the Legislative Council of South Australia, in pursuance of the powers conferred by the Act of 1850, passed a Bill to establish a bi-cameral Legislature for South Australia. The Royal assent was, however, refused on the grounds that the Bill contained a provision limiting the right of the Crown in respect to the disallowance of Bills, which provision was in excess of the powers conferred by the Act of 1850. In 1855 a

new Legislative Council, partly elective and partly nominee, having been duly constituted, a second Bill, based on the Tasmanian Constitution Bill, to create a bi-cameral Legislature, was passed and duly received the Royal assent in 1856. This Act, known as the South Australian Constitution Act 1856, confers no legislative powers except by reference to the Act of 1850. In order to ascertain the principal legislative powers and functions of the Parliament of South Australia reference must therefore be made to the Australian Colonies Government Act 1850, defining the legislative powers and functions of the Council for which it was substituted (see p. 28). The first session of the new Parliament commenced on the 22nd April, 1857, during the Governorship of Sir Richard Graves McDonnell.

The legislative powers of the South Australian Parliament have been considerably enlarged by several Imperial Acts. In 1855 an Act was passed authorising the Legislature of each of the Australian colonies to sell, dispose of, and legislate with reference to Crown lands in the colony. In 1865 the Colonial Laws Validity Act removed the common law restriction which prevented colonial legislators from passing any law repugnant to the law of England. In 1873 the prohibition contained in the Australian Colonies Government Act 1850 was, by the Australian Colonies Duties Act, abolished as far as intercolonial duties were concerned. There have been a large number of amendments to the Constitution, the dates of the amending Acts being as follows :—1870, 1872, 1873, 1876, 1881, 1882, 1887, 1888, 1889, 1890, 1892, 1893, 1894, 1896, 1899, 1901, and 1902.

7. **Constitution of Western Australia.**—In 1829 the first Imperial Act relating to the Government of Western Australia was passed. By that Act the King in Council was empowered to make and constitute, and to authorise any three or more persons resident within the settlements to make and constitute laws, institutions, and ordinances for the peace, order, and good government of the settlements in Western Australia. By an Order in Council dated the 1st November, 1830, the first Executive Council was constituted, while in the following year a Legislative Council, which consisted at first solely of members of the Executive Council, was formed. This system of government remained unaltered for many years, though the number of members of both Councils was increased from time to time. In August, 1870, the nominee Legislative Council was dissolved and writs were issued (under the Australian Colonies Government Act 1850, the provisions of which did not apply to Western Australia until that colony was able to defray its own expenses) for the election of a Council to consist of twelve elected and six nominated members. These numbers were again increased from time to time until the last Legislative Council under the old form of government, which expired on the 21st October, 1890, consisted of twenty-six members, of whom four were official members, five were nominees of the Crown, and seventeen were elected by the different constituencies. As far back as 1873 a movement was commenced in Western Australia for responsible government as it existed in the eastern colonies. In 1889 the Legislative Council was dissolved and a general election took place, the principal question being the introduction of responsible government. A resolution in favour of the change was passed by the new Council without dissent, and a Constitution providing for the creation of a bi-cameral Legislature was accordingly drafted. In August, 1890, an enabling Bill received the Royal assent, and responsible government was proclaimed in the colony on the 21st October, 1890. Under this Act the Legislative Council was a nominative chamber, subject to the provision that after the expiration of six years, or as soon as the colony acquired a population of 60,000, the Council should be constituted by election. The first Parliament under the new Constitution met on the 30th December, 1890. On the 18th July, 1893, the population of the colony being then over 60,000, the Legislature of Western Australia passed an Act to amend the Constitution, abolishing the nominee Council and substituting one elected by the qualified inhabitants of the colony. The present Constitution of Western Australia differs but little from those of the other States of the Commonwealth. It has been amended by Acts passed in 1893, 1894, 1896, 1899, and 1900.

8. **Constitution of Tasmania.**—Under an Order in Council dated the 14th June, 1825, and made in pursuance of the provisions of an Act passed in 1823, Van Diemen's Land, as it was officially known until the year 1853,[1] was separated from New South Wales and was proclaimed a separate colony. A Lieutenant-Governor was appointed, and an Executive and a Legislative Council were called into existence, the latter being on the same model as that introduced into the other colonies at the earliest stages of their constitutional progress. It was not until the Imperial Act of 1850 was passed, that a system of representative government was introduced into Tasmania. The provisions of that Act have already been briefly indicated (see p. 28) and will not be here repeated. A Constitution Bill was drafted and passed by the Legislative Council, and was assented to and proclaimed on the 24th October, 1856.

The Constitution of South Australia was based upon that of Tasmania, and the remarks made above with reference to the Constitution of the former State apply equally to the Constitution of the latter State.

The first Parliament under the new Constitution was opened on the 2nd December, 1856. The Constitution has been amended by Acts passed in 1870, 1884, 1885, 1890, 1900, 1903, and 1906.

9. **Enlarged Legislative Powers.**—The legislative powers and functions of the Parliaments of the States of the Commonwealth are in fact larger than they appear in the face of the Constitution Acts, inasmuch as contributory powers have been granted from time to time by Imperial Statutes. It is not within the scope of this work to enter into a consideration of the provisions of these Statutes. Among them, however, in addition to those already referred to (see "Constitution of South Australia" above), the following may be mentioned:—

Admiralty Offences (Colonial) Act 1860
Army Act 1881
Coinage Offences (Colonies) Act 1851
Colonial Copyright Act 1847
Colonial Marriages Act 1865
Colonial Naval Defence Act 1865
Extradition Acts 1870
Merchant Shipping Act 1894
Naturalisation Act 1870

10. **Reservation of Bills.**—The reservation of Bills passed by the Legislature of any State was formerly dealt with both by the instructions given to the State Governors and by various State Constitution Acts. The Australian States Constitution Act 1907 amended the law with respect to the reservation of Bills, and provided that the following Bills must be reserved for the signification of His Majesty's pleasure thereon, viz.:—Any Bill which (*a*) alters the Constitution of the Legislature of the State, or (*b*) affects the salary of the Governor of the State, or (*c*) is, under any Act of the Legislature of the State passed after the passing of the Australian States Constitution Act 1907, or under any provision contained in the Bill itself, required to be reserved. The Act does not, however, affect the reservation of Bills in accordance with any instructions given to the Governor of a State by His Majesty.

§ 6. The Federal Movement in Australia.

1. **Early Stages in the Federal Movement.**—A summary is given in Year Book No. 1 (pp. 17 to 21) of the "Federal Movement in Australia" from its earliest inception to its consummation. Only a synopsis of this will be given here.

Notwithstanding that, owing to the circumstances of their growth, the initial tendency in Australia was naturally toward the individualistic evolution of the several settlements, from the earliest period there was a clear recognition of the importance of intercolonial

1. In the year 1853, on the acquiescence of the Imperial Government in the cessation of transportation (finally abolished in 1857, by 20 and 21 Vic. c. 3), the name Tasmania was generally and voluntarily adopted instead of Van Diemen's Land. (See Quick and Garran's "Annotated Constitution of the Australian Commonwealth," p. 61.) It is interesting to note however, that the name Tasmania was applied to the island at a much earlier date, E.S in Godwin's "Emigrant's Guide to Van Diemen's Land, more properly called Tasmania." Published in 1823.

reciprocity. Governor Fitzroy, in 1846, and Earl Grey, in 1847, saw that there were questions which affected "Australia collectively, the regulation of which in some uniform manner, and by some single authority, may be essential to the welfare of them all," and a "central legislative authority for the whole of the Australian colonies" was actually contemplated. Even as far back as 1849, a Privy Council Committee recommended a uniform tariff, and the constituting of one of the Governors as Governor-General of Australia, Sir Charles Fitzroy being actually appointed as "Governor-General of all Her Majesty's Australian Possessions." The office, however, was nominal rather than actual, and expired in 1861. Dr. Lang's idea of "a great federation of all the colonies of Australia" was put forward in 1852, and a Victorian committee in 1853 advocated the value of the General Assembly of Delegates for the whole of Australia.

The need of union was urged by the *Sydney Morning Herald* in 1854, and, though in 1857 Wentworth sought to bring about the creation of a Federal Assembly, an "Enabling Bill" which was drafted turned out to be unacceptable to Her Majesty's Government. In the same year Mr. (afterwards Sir) Charles Gavan Duffy secured the appointment of a select committee of the Victorian Legislative Assembly to consider the necessity of a federal union of the Australasian colonies. The need for such union was unanimously affirmed, the general opinion being that it should not be longer delayed. In the same year a select committee of the New South Wales Legislative Council also considered this question, fully recognising that antagonisms and jealousies were likely to arise through delay.

Union was in a fair way toward realisation when the advent of the Cowper Administration destroyed all chance of attaining it, owing to the antagonism of Mr. Cowper and Mr. (afterwards Sir) James Martin. South Australia, also in the same year, and Queensland in 1859, were both unfavourable to the federal scheme. A second attempt by Mr. Duffy to bring about a conference in 1860 failed also.

Tariff differences, however, compelled political attention to the matter, and in 1862 correspondence was opened up by South Australia regarding tariff uniformity. By means of intercolonial conferences between 1863 and 1880 some degree of uniformity in legislation and a measure of concerted administration were realised. In March, 1867, Mr. (afterwards Sir) Henry Parkes expressed himself as follows:—". . . . The time has arrived when these colonies should be united by some federal bond. . . . There are questions projecting themselves . . . which cannot be dealt with by . . . individual Governments. . . . I believe it will lead to a permanent federal understanding." A Bill passed, however, was shelved by the Home Government.

2. **The Federal Council.**—The conference of November, December, 1880, and January, 1881, recommended the creation of a Federal Council, believing that the time had not arrived for a Federal Constitution with a Federal Parliament. Up till 1883, however, every effort proved abortive, but in November of that year a convention, at which the seven colonies and Fiji were represented, met in Sydney. A Bill to establish a Federal Council for Australasia, drafted by Mr. (now Sir) Samuel Griffith, was, after some modification by a committee of the convention, adopted. In July and August, 1884, the Crown was addressed, praying for the enactment of a Federal Council Act. New South Wales and New Zealand, however, held aloof, the view of Sir Henry Parkes being that a "council" would impede the way for a sure and solid federation. The Bill introduced by the Earl of Derby in the House of Lords on the 23rd April, 1885, became law on the 14th August as "The Federal Council of Australasia Act 1885." The Council's career, however, soon shewed that it could not hope to be effective, and it met for the last time in January, 1899.

3. **Formative Stages of the Federal Movement.**—So far Australia has happily enjoyed peace, but as early as 1878 the necessity for federal defence was vividly brought into Australian consciousness, and arrangements for naval protection were entered into with the Imperial Government. These were ratified by the Australasian Naval Force Act. Queensland, however, did not come into line until as late as 1891.

Early in 1889 Sir Henry Parkes had confidentially suggested to Mr. Duncan Gillies the necessity for a Federal Parliament and Executive. Unable to accept the latter's suggestion that New South Wales should give its adhesion to the Federal Council, the former statesman urged the institution of "a National Convention for the purpose of devising and reporting upon an adequate scheme of Federal Government." This led to the Melbourne Conference of 6th February, 1890. It was at the banquet on this occasion that, in proposing "A United Australasia," Mr. James Service pointed out that the tariff question was "a lion in the path," which federationists must either slay, or by which they must be slain; in the reply to which Sir Henry Parkes made use of his historic phrase, *the crimson thread of kinship runs through us all.* Certain elements of doubt being expressed as to the motives underlying the movement, Sir Henry Parkes said:—"We desire to enter upon this work of Federation without making any condition to the advantage of ourselves, without any stipulation whatever, with a perfect preparedness to leave the proposed convention free to devise its own scheme, and, if a central Parliament comes into existence, with a perfect reliance upon its justice, upon its wisdom, and upon its honour. . . . . I think . . . an overwhelming majority of my countrymen . . . will approve of the grand step . . . of uniting all the colonies under one form of beneficent government, and under one national flag."

The first National Australasian Convention, under Sir Henry Parkes' presidency, was convened on the 2nd March, 1891, all the colonies and New Zealand being represented. The Bill then drafted was considered by the Parliaments of New South Wales, Victoria, South Australia, and Tasmania, but not by those of Queensland, Western Australia, and New Zealand, and though the parliamentary process of dealing with the matter failed, federal sentiment was strengthening. The collapse of the "land boom" had made apparent how intimately the interests of each colony are related; and the dangers of disunion became impressively obvious. The Australian Natives' Association took up the federal cause with enthusiasm, Federation leagues were established, the issues were widely and intelligently discussed. The late Sir George Dibbs' unification scheme helped to make the issue a real one.

At the Conference of Premiers at Hobart on the 29th January, 1895, it was agreed that federation "was the great and pressing question of Australian politics," and that "the framing of a Federal Constitution" was an urgent duty. The resuscitation of the whole matter led to the passing of Enabling Acts. In New South Wales the Act received the Royal assent on the 23rd December, 1895; South Australia anticipated this by three days; the Tasmanian Bill was passed on the 10th January, 1896, the Victorian on the 7th March, 1896; Western Australia fell into line on the 27th October. The "People's Federal Convention," held at Bathurst, N.S.W., in November, 1896, gave a considerable impulse to the movement; to wait longer for Queensland was considered unnecessary, and the 4th March, 1897, was fixed as the date for the election of federal representatives for New South Wales, Victoria, South Australia, and Tasmania. Western Australia followed suit and on the 22nd March the representatives met at Adelaide.

The discussions made it evident that the federal point of view had advanced considerably. Constitutional, Finance, and Judiciary Committees were appointed, and a Bill drafted. This, reported to the Convention on the 22nd April, was adopted on the following day, and the Convention adjourned till September. The Parliaments of New South Wales, Victoria, South Australia, Tasmania, and Western Australia discussed the question before the Sydney Session of the Convention, which opened on the 2nd September, 1897. The business of the Convention involved the general reconsideration of the whole Bill, and the consideration of no less than 286 suggested amendments. This work gave a definitive character to that of the Melbourne Session of 1898, extending from the 20th January to the 17th March, the necessity of reaching a final decision giving to its deliberations corresponding weight.

4. **Votes on the Question of Federating.**—Eleven weeks after this last convention, the first popular vote was taken on Federation in New South Wales, Victoria, South Australia, and Tasmania. Though the decision was overwhelming in favour of Federation

PROGRESS OF AUSTRALIAN EXPLORATION.

The above maps compiled by Mr. E. Favenc shew decennially the progress of discovery from 1808 to 1888. The dark shade shews the area of unexplored territory.

tion in three of the States, and there was a distinct majority in its favour in New South Wales, the majority was legally insufficient. On the 22nd January, 1899, the Premiers of the six colonies met at Melbourne in a conference initiated by the Right Honourable G. H. Reid, P.C., and seven amendments were made in the Bill. This step virtually effected the solution of the few outstanding difficulties which could in any way be regarded as fundamental.

On the occasion of the second popular vote Queensland also joined in, and the general majority in favour of Federation was more than doubled, that for New South Wales itself having been more than quadrupled when compared with the first vote. The following table shews the two results:—

VOTES FOR AND AGAINST FEDERATION.

Votes.		N.S.W.	Victoria.	Sth. Aust.	Tas.	Qld.	TOTALS.
1st Vote	For Federation ...	71,595	100,520	35,800	11,797	—	**219,712**
	Against ,, ...	66,228	22,099	17,320	2,716	—	**108,363**
	Majority	5,367	78,421	18,480	9,081	—	**111,349**
2nd Vote	For Federation ...	107,420	152,653	65,990	13,437	38,488	**377,988**
	Against ,, ...	82,741	9,805	17,053	791	30,996	**141,386**
	Majority	24,679	142,848	48,937	12,646	7,492	**236,602**

5. **Enactment of the Constitution.**—The Secretary of State for the Colonies (the Right Honourable Joseph Chamberlain) expressed the hope on the 22nd December, 1899, that a delegation of the federating colonies would visit England on the occasion of the submission of the Commonwealth Bill to the Imperial Parliament. The delegation consisted of Mr. (now Sir) Edmund Barton (N.S.W.), Mr. Alfred Deakin (Vic.), Mr. C. C. Kingston (S.A.), Sir P. O. Fysh (Tas.), and later Mr. S. H. Parker was appointed delegate for Western Australia and Mr. W. P. Reeves for New Zealand. After discussion as to whether there should be some modification in the Bill, it was introduced into the House of Commons on the 14th May; the second reading was moved on the 21st of the same month; the discussion in committee commenced on the 18th June; and the Royal assent was given on the 9th July, 1900.

On the 31st July a referendum in Western Australia on the question of federating gave the result:—For, 44,800; against, 19,691; that is to say, a majority of 25,109 in favour of union. On the 21st August both Houses of Parliament in that State passed addresses praying that it might be included as an original State of the Commonwealth.

On the 17th September, 1900, Her Majesty Queen Victoria signed the proclamation declaring that on and after the first day of January, 1901, the people of New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia should be united in a Federal Commonwealth, under the name of the Commonwealth of Australia.

§ 7. Creation of the Commonwealth.

1. **The Act.**—The Commonwealth of Australia Constitution Act, 63 and 64 Vic., Chapter 12, namely, an Act to constitute the Commonwealth of Australia, which, as already stated, received the Royal assent on the 9th July, 1900, is given in Year Book No. 1 *in extenso* (pp. 21 to 37). The division of the Constitution is as follows:—

Chapter I.—The Parliament:—
- Part I.—General.
- Part II.—The Senate.
- Part III.—The House of Representatives.
- Part IV.—Both Houses of Parliament.
- Part V.—Powers of the Parliament.

Chapter II.—The Executive Government.
Chapter III.—The Judicature.
Chapter IV.—Finance and Trade.
Chapter V.—The States.
Chapter VI.—New States.
Chapter VII.—Miscellaneous.
Chapter VIII.—Alteration of the Constitution.
The Schedule.

2. **Summary of the Commonwealth Constitution.**—These chapters may be summarised as follows :—

CHAPTER I.—THE PARLIAMENT.

PART I.—GENERAL (SECTIONS 1 TO 6).

The legislative power of the Commonwealth is vested in the Federal Parliament consisting of the Sovereign, the Senate, and the House of Representatives. A Governor-General, appointed by the King, represents His Majesty in the Commonwealth, and exercises, subject to the Constitution, such powers and functions as His Majesty is pleased to assign to him. The salary of the Governor-General is fixed at £10,000 per annum until otherwise provided by Parliament. The Governor-General may appoint the times for holding the sessions of Parliament; he may prorogue Parliament, and may dissolve the House of Representatives.

PART II.—THE SENATE (SECTIONS 7 TO 23).

Until Parliament otherwise provides, there are to be six senators for each original State, chosen by the people of the State voting as one electorate. Equal representation of the original States must be maintained, and no original State may have less than six senators. The senators are chosen for a term of six years. The qualification for electors of senators is the same as the qualification for electors of members of the House of Representatives. Provision is made whereby half the senators for each State vacate their seats at the expiration of three years in the case of the election of a new Senate. The qualifications of a senator are the same as those of a member of the House of Representatives. The place of a senator becomes vacant if he fails to attend the meetings of the Senate, without permission, for two consecutive months of any session. At least one-third of the whole number of senators must be present in order to constitute a meeting of the Senate. Under the provisions of the Senate Elections Act 1907, a senator cannot receive his powers and privileges until the end of the June following his election.

PART III.—THE HOUSE OF REPRESENTATIVES (SECTIONS 24 TO 40).

The number of members of the House of Representatives is, as nearly as practicable, twice the number of senators, and the numbers of members elected in the several States are in proportion to the respective populations of the States, unless otherwise determined by Parliament. The House is elected for three years, but may be sooner dissolved by the Governor-General. Until Parliament otherwise provides, qualifications for membership are as follows:—(*a*) Members must be of the full age of twenty-one years, must be qualified for the franchise of the House, and must have been resident within the Commonwealth for at least three years, and (*b*) must be natural-born British subjects or for at least five years naturalised under a law of the United Kingdom, or of a colony which has become or becomes a State, or of the Commonwealth, or of a State. A member vacates his seat if he fails to attend the meetings of the House, without permission, for two consecutive months in any session. Until Parliament otherwise provided, the qualification for the franchise of the House of Representatives was in each State the same as that for the franchise of the more numerous House of Parliament in the State, but each elector could vote only once.[1]

PART IV.—BOTH HOUSES OF PARLIAMENT (SECTIONS 41 TO 50).

Any adult person who is qualified to vote at elections for the more numerous House of Parliament of a State cannot be prevented by any law of the Commonwealth from voting at elections for either of the Commonwealth Houses of Parliament. A person subject to certain disqualifications, such as being attainted of treason, being an undischarged bankrupt, holding an office of profit under the Crown (except as a Minister of State or as an officer or member of the naval or military forces of the Commonwealth), or

1. The franchise qualification was determined by the Commonwealth Franchise Act, 1902.

having a pecuniary interest in any agreement with the Commonwealth Public Service (except as a member of a company), may not be elected or sit as a member of either House. Until the Parliament otherwise provided, each senator and each member of the House of Representatives received an allowance of £400 a year.[2] The powers and privileges of members of both Houses are as declared by Parliament, and until declared are the same as those of the Commons House of Parliament of the United Kingdom. Each House may make rules and orders with respect to—(*a*) The mode in which its powers, privileges, and immunities may be exercised and upheld, and (*b*) the order and conduct of its business and proceedings, either separately or jointly with the other House.

PART V.—POWERS OF THE PARLIAMENT (SECTIONS 51 TO 60).

The Commonwealth Parliament has, subject to the Constitution, power to make laws for the peace, order, and good government of the Commonwealth with respect to—

(i.) Trade and commerce with other countries, and among the States :
(ii.) Taxation ; but so as not to discriminate between States or parts of States :
(iii.) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth :
(iv.) Borrowing money on the public credit of the Commonwealth :
(v.) Postal, telegraphic, telephonic, and other like services :
(vi.) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth :
(vii.) Lighthouses, lightships, beacons and buoys :
(viii.) Astronomical and meteorological observations :
(ix.) Quarantine :
(x.) Fisheries in Australian waters beyond territorial limits :
(xi.) Census and statistics :
(xii.) Currency, coinage, and legal tender :
(xiii.) Banking, other than State banking ; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money :
(xiv.) Insurance, other than State insurance ; also State insurance extending beyond the limits of the State concerned :
(xv.) Weights and measures :
(xvi.) Bills of exchange and promissory notes :
(xvii.) Bankruptcy and insolvency :
(xviii.) Copyrights, patents of inventions and designs, and trade marks :
(xix.) Naturalisation and aliens :
(xx.) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth :
(xxi.) Marriage :
(xxii.) Divorce and matrimonial causes ; and in relation thereto, parental rights, and the custody and guardianship of infants :
xxiii.) Invalid and old-age pensions :
(xxiv.) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the Courts of the States :
(xxv.) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States :
(xxvi.) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws :
(xxvii.) Immigration and emigration :
(xxviii.) The influx of criminals :
(xxix.) External affairs :
(xxx.) The relations of the Commonwealth with the islands of the Pacific :

2. By the Parliamentary Allowances Act 1907, assented to on the 28th August, the amount of the allowance was increased to £600 a year.

(xxxi.) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws :

(xxxii.) The control of railways with respect to transport for the naval and military purposes of the Commonwealth :

(xxxiii.) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State :

(xxxiv.) Railway construction and extension in any State with the consent of that State :

(xxxv.) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State :

(xxxvi.) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides :

(xxxvii.) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law :

(xxxviii.) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia :

(xxxix.) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

The Parliament has also, subject to the Constitution, exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

(i.) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes :

(ii.) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth :

(iii.) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

Proposed laws appropriating revenue or moneys, or imposing taxation, may not originate in the Senate, and the Senate may not amend proposed laws either (*a*) imposing taxation, (*b*) appropriating money for the ordinary annual services of the Government, or (*c*) so as to increase any proposed charge or burden on the people.

If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution may not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number

of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by proclamation, shall annul the law from the day when the disallowance is so made known.

CHAPTER II.—THE EXECUTIVE GOVERNMENT (SECTIONS 61 TO 70).

The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of the Constitution, and the laws of the Commonwealth.

The Executive Council advises the Governor-General in the government of the Commonwealth, and the members of the Council are chosen and summoned by the Governor-General and sworn as Executive Councillors, and hold office during his pleasure. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish. Such officers hold office during the pleasure of the Governor-General. They are members of the Federal Executive Council, and are the Queen's Ministers of State for the Commonwealth. After the first general election no Minister of State may hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives. Until the Parliament otherwise provides, the Ministers of State may not exceed seven in number, and their joint salaries may not exceed £12,000 a year. The command-in-chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Sovereign's representative, while the appointment and removal of all officers of the Executive Government is vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth :—[1]

Posts, telegraphs, and telephones :	Lighthouses, lightships, beacons, and buoys :
Naval and military defence :	Quarantine.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

CHAPTER III.—THE JUDICATURE (SECTIONS 71 TO 80).

The judicial power of the Commonwealth is vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes. The Justices of the High Court and of the other courts created by the Parliament—

1. As to departments transferred and dates of transfer, see Section XIX.—COMMONWEALTH FINANCE, § 1, 2, hereafter.

(i.) Are to be appointed by the Governor-General in Council :

(ii.) May not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity :

(iii.) May receive such remuneration as the Parliament may fix ; but the remuneration shall not be diminished during their continuance in office.

The High Court has jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

(i.) Of any Justice or Justices exercising the original jurisdiction of the High Court :

(ii.) Of any other federal court, or court exercising federal jurisdiction ; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council :

(iii.) Of the Interstate Commission, but as to questions of law only :

and the judgment of the High Court in all such cases is final and conclusive.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States are applicable to appeals from them to the High Court.

No appeal may be made to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court has original jurisdiction in all matters :—(i.) Arising under any treaty : (ii.) Affecting consuls or other representatives of other countries : (iii.) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party : (iv.) Between States, or between residents of different States, or between a State and a resident of another State : (v.) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth ; while Parliament may make laws conferring original jurisdiction on the High Court in any matter—(i.) Arising under the Constitution or under any laws made by the Parliament : (ii.) Of Admiralty and maritime jurisdiction : (iii.) Relating to the same subject matter claimed under the laws of different States.

CHAPTER IV.—FINANCE AND TRADE (SECTIONS 81 TO 105).

On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, passed to the Executive Government of the Commonwealth. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth is to be applied annually by the Commonwealth towards its expenditure. The balance, in accordance with the Constitution, is to be paid to the several States, or applied to the payment of interest on debts of the several States taken over by the Commonwealth.[2]

Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth, and on the imposition of such duties, trade, commerce, and intercourse among the States shall be absolutely free,[1] and the power of the Commonwealth Parliament to impose duties of customs and excise, and to grant bounties on the production or export of goods, shall become exclusive.

1. Uniform customs duties were imposed by the Customs Tariff Act 1902 (see Section XV. COMMERCE, § 2, hereafter).

2. This is known as the Braddon clause. The Surplus Revenue Act 1910 provides for the termination of this clause as from the 31st December, 1910, and for the payment to the States of twenty-five shillings per annum per head of population until the 30th June, 1920, or thereafter, until Parliament otherwise provides, subject to certain adjustments for the year ended 30th June, 1911. For further information see Section XIX. hereinafter.

Until the imposition of uniform duties of customs it was provided that—

(i.) The Commonwealth should credit to each State the revenues collected therein by the Commonwealth.

(ii.) The Commonwealth should debit to each State—(*a*) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance as at the time of transfer, of any department transferred from the State to the Commonwealth. (*b*) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.

(iii.) The Commonwealth should pay to each State month by month the balance (if any) in favour of the State.

During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—(i.) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State: (ii.) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth, and during a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.[1]

The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to the State Government railways. The Commonwealth may not, however, by any law or regulation of trade, commerce, or revenue give preference to one State over another, nor by any law or regulation of trade or commerce abridge the right of a State to the reasonable use of rivers for conservation or irrigation.

CHAPTER V.—THE STATES (SECTIONS 106 TO 120).

The Constitution of each State of the Commonwealth, subject to the Constitution, continues as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State. Every power of the Parliament of a Colony which has become or becomes a State, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continues as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, and every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, subject to the Constitution, continues in force in the State; and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State has such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

When a law of a State is inconsistent with a law of the Commonwealth, the latter prevails, and the former, to the extent of the inconsistency, is invalid.

The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State becomes subject to the exclusive jurisdiction of the Commonwealth.

After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

1. See note 2 on the preceding page.

CHAPTER VI.—NEW STATES (SECTIONS 121 TO 124).

The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

CHAPTER VII.—MISCELLANEOUS (SECTIONS 125 TO 127).

The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney. Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor. The Parliament shall sit at Melbourne until it meet at the seat of Government.

The Queen may authorise the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth.

CHAPTER VIII.—ALTERATION OF THE CONSTITUTION (SECTION 128).[1]

The Constitution may not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law must be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote is taken in such manner as the Parliament prescribes. And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it is presented to the Governor-General for the Queen's assent.

---

1. The Constitution has been altered by the following Acts:—The Referendum (Constitution Alteration) Act 1906; The Constitution Alteration (Senate Election) 1906 Acts.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, can become law unless the majority of the electors voting in that State approve the proposed law.

3. **The Royal Proclamation.**—The preceding Act received the Royal assent on the 9th July, 1900. This made it lawful (see Sec. 3) to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on the 17th September, 1900, constituted the Commonwealth as from the 1st January, 1901: it reads as follows :—

BY THE QUEEN. A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign intituled, "An Act to constitute the Commonwealth of *Australia*," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One Year after the passing of this Act, the people of *New South Wales*, *Victoria*, *South Australia*, *Queensland*, and *Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales*, *Victoria*, *South Australia*, *Queensland*, *Tasmania*, and *Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

§ 8. Commonwealth Legislation.

1. **The Commonwealth Parliaments.**—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the late Earl of Hopetoun, Governor-General. It was opened on the 9th May by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King; the Rt. Hon. Sir Edmund Barton, P.C., G.C.M.G., K.C., being Prime Minister. It was dissolved on the 23rd November, 1903. The second Parliament was convened on the 2nd March, 1904, by His Excellency the Rt. Hon. Baron Northcote, G.C.M.G., G.C.I.E., C.B.; the Hon. Alfred Deakin being Prime Minister. The third session closed on the 12th October, 1906, and Parliament was dissolved on the 8th November, 1906. The third Parliament was convened on the 20th February, 1907, and met on that day and the following day only. It was prorogued on the 22nd February, the prorogation eventually extending to the 3rd July, 1907, on which day the second session commenced. The second session was prorogued on the 11th June, 1908, to the 15th July following, and

finally to the 16th September, 1908, when it met for the despatch of business; the third session commenced on that day. The third session was prorogued on the 15th December, 1908, the prorogation finally extending to the 26th May, 1909, when the fourth and last session of the third Parliament commenced. This Parliament expired by effluxion of time on 26th January, 1910. The first session of the fourth Parliament was commenced on 1st July, 1910, and was on 29th November of that year prorogued until 7th February, 1911. The Debates of these Parliaments will be found in Volumes I. to XLVIV. of the Parliamentary Debates, as follows:—

2. **The Several Administrations.**—The following tabular statements shew the names of the several Governors-General, and the constitution of the Ministries which have directed the administration of the affairs of the Commonwealth since its creation:—

(*a*) GOVERNORS-GENERAL.

Rt. Hon. EARL OF HOPETOUN, P.C., K.T., G.C.M.G., G.C.V.O. Sworn 1st January, 1901; recalled 9th May, 1902, left Melbourne 2nd July, 1902.

Rt. Hon. HALLAM BARON TENNYSON, G.C.M.G. (Act. Governor-General). Sworn 17th July, 1902.

Rt. Hon. HALLAM BARON TENNYSON, G.C.M.G. (Governor-General). Sworn 9th January, 1903; recalled 21st January, 1904.

Rt. Hon. HENRY STAFFORD BARON NORTHCOTE, G.C.M.G., G.C.I.E., C.B. Sworn 21st January, 1904; recalled 8th September, 1908.

Rt. Hon. WILLIAM HUMBLE EARL OF DUDLEY, P.C., G.C.M.G., G.C.V.O., etc. Sworn 9th September, 1908.

(*b*) BARTON ADMINISTRATION, 1st January, 1901, to 23rd September, 1903.

DEPARTMENTS.	MINISTERS.
External Affairs	Rt. Hon. SIR EDMUND BARTON, P.C., G.C.M.G., K.C.
Attorney-General	Hon. ALFRED DEAKIN.
Home Affairs	Hon. SIR WILLIAM JOHN LYNE, K.C.M.G. (to 7/8/'03). Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G. (from 7/8/'03).
Treasury	Rt. Hon. SIR GEORGE TURNER, P.C., K.C.M.G.
Trade and Customs	Rt. Hon. CHARLES CAMERON KINGSTON, P.C., K.C. (resigned 24/7/'03. Hon. SIR WILLIAM JOHN LYNE, K.C.M.G. (from 7/8/'03).
Defence	The Hon. SIR JAMES ROBERT DICKSON, K.C.M.G. (died 10/1/'01). Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G. (7/1/'01 to 7/8/'03). Hon. JAMES GEORGE DRAKE (from 7/8/'03).
Postmaster-General	Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G. (to 17/1/'01). Hon. JAMES GEORGE DRAKE (5/2/'01 to 7/8/'03). Hon. SIR PHILIP OAKLEY FYSH, K.C.M.G. (from 7/8/'03).
Vice-President Executive C'ncil	Hon. RICHARD EDWARD O'CONNOR, K.C.
Without Portfolio	Hon. N. E. LEWIS (to 23/4/'01). Hon. SIR PHILIP OAKLEY FYSH, K.C.M.G. (26/4/'01 to 7/8/'03).

(*c*) DEAKIN ADMINISTRATION, 24th September, 1903, to 26th April, 1904.

DEPARTMENTS.	MINISTERS.
External Affairs	Hon. ALFRED DEAKIN.
Trade and Customs	Hon. SIR WILLIAM JOHN LYNE, K.C.M.G.
Treasury	Rt. Hon. SIR GEORGE TURNER, P.C., K.C.M.G.
Home Affairs	Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G.
Attorney-General	Hon. JAMES GEORGE DRAKE.
Postmaster-General	Hon. SIR PHILIP OAKLEY FYSH, K.C.M.G.
Defence	Hon. AUSTIN CHAPMAN.
Vice-President Executive C'ncil	Hon. THOMAS PLAYFORD.

(*d*) WATSON ADMINISTRATION, 27th April to 17th August, 1904.

DEPARTMENTS.	MINISTERS.
Treasurer	Hon. JOHN CHRISTIAN WATSON.
External Affairs	Hon. WILLIAM MORRIS HUGHES.
Attorney-General	Hon. HENRY BOURNES HIGGINS, K.C.
Home Affairs	Hon. EGERTON LEE BATCHELOR.
Trade and Customs	Hon. ANDREW FISHER.
Defence	Hon. ANDERSON DAWSON.
Postmaster-General	Hon. HUGH MAHON.
Vice-President Executive C'ncil	Hon. GREGOR MCGREGOR.

(*e*) REID-MCLEAN ADMINISTRATION, 18th August, 1904, to 4th July, 1905.

DEPARTMENTS.	MINISTERS
External Affairs	Rt. Hon. GEORGE HOUSTOUN REID, P.C., K.C.
Trade and Customs	Hon. ALLAN MCLEAN.
Attorney-General	Hon. SIR JOSIAH HENRY SYMON, K.C.M.G., K.C
Treasury	Rt. Hon. SIR GEORGE TURNER, P.C., K.C.M.G.
Home Affairs	Hon. DUGALD THOMSON.
Defence	Hon. JAMES WHITESIDE MCCAY.
Postmaster-General	HON. SYDNEY SMITH
Vice-President Executive C'ncil	Hon. JAMES GEORGE DRAKE.

(*f*) SECOND DEAKIN ADMINISTRATION, 5th July, 1905, to 12th November, 1908.

DEPARTMENTS.	MINISTERS.
External Affairs	Hon. ALFRED DEAKIN.
Attorney-General	Hon. ISAAC ALFRED ISAACS, K.C. (to 11/10/'06). Hon. LITTLETON ERNEST GROOM (from 12/10/'06).
Trade and Customs	Hon. SIR WILLIAM JOHN LYNE, K.C.M.G. (to 29/7/'07). Hon. AUSTIN CHAPMAN (from 30/7/'07).
Treasurer	Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G. (to 29/7/'07). Hon. SIR WILLIAM JOHN LYNE (from 30/7/'07).
Postmaster-General	Hon. AUSTIN CHAPMAN (to 29/7/'07). Hon. SAMUEL MAUGER (from 30/7/'07).
Defence	Hon. THOMAS PLAYFORD (to 23/1/'07). Hon. THOMAS THOMSON EWING (from 24/1/'07).
Home Affairs	Hon. LITTLETON ERNEST GROOM (to 11/10/'06). Hon. THOMAS THOMSON EWING (from 12/10/'06 to 23/1/'07). Hon. JOHN HENRY KEATING (from 24/1/'07).
Vice-President Executive C'ncil	Hon. THOMAS THOMSON EWING (to 11/10/'06). Hon. JOHN HENRY KEATING (from 12/10/'06 to 19/2/'07). Hon. ROBERT WALLACE BEST (from 20/2/'07).
Honorary Minister	Hon. J. H. KEATING (from 5/7/'05 to 11/10/'06). Hon. S. MAUGER (from 12/10/'06 to 29/7/'07). Hon. J. HUME COOK (from 28/1/08).

(*g*) FISHER ADMINISTRATION, 13th November, 1908, to 2nd June, 1909.

DEPARTMENTS.	MINISTERS.
Treasurer	Hon. ANDREW FISHER.
Attorney-General	Hon. WILLIAM MORRIS HUGHES.
External Affairs	Hon. EGERTON LEE BATCHELOR.
Home Affairs	Hon. HUGH MAHON.
Postmaster-General	Hon. JOSIAH THOMAS.
Defence	Hon. GEORGE FOSTER PEARCE.
Trade and Customs	Hon. FRANK GWYNNE TUDOR.
Vice-President Executive C'ncil	Hon. GREGOR MCGREGOR.
Honorary Minister	Hon. JAMES HUTCHINSON.

(*h*) DEAKIN-COOK ADMINISTRATION, 2nd June, 1909, to 29th April, 1910.

DEPARTMENTS.	MINISTERS.
Prime Minister (without P'tfolio)	Hon. ALFRED DEAKIN.
Defence	Hon. JOSEPH COOK.
Treasurer	Rt. Hon. SIR JOHN FORREST, P.C., G.C.M.G.
Trade and Customs	Hon. SIR ROBERT WALLACE BEST, K.C.M.G.
External Affairs	Hon. LITTLETON ERNEST GROOM.
Attorney-General	Hon. PATRICK MCMAHON GLYNN.
Postmaster-General	Hon. SIR JOHN QUICK.
Home Affairs	Hon. GEORGE WARBURTON FULLER.
Vice-President Executive C'ncil	Hon. EDWARD DAVIS MILLEN.
Honorary Minister	Colonel The Hon. JUSTIN FOX GREENLAW FOXTON, C.M.G.

	Constitution Alteration (State Debts) Act 1909.

* Acts whose short titles are printed in italics with a * have been repealed or have expired.

SECTION III.

PHYSIOGRAPHY.

§ 1. General Description of Australia.

1. **Geographical Position.**—The Australian Commonwealth includes Australia proper lying in the Southern Hemisphere, an island continent, and Tasmania, in all an area of about 2,974,581 square miles, the mainland alone containing about 2,948,366 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9′ E. and 153° 39′ E., while its northern and southern limits are the parallels of latitude 10° 41′ S. and 39° 8′ S., or including Tasmania, 43° 39′ S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean and Bass Strait.[1]

(i.) *Tropical and Temperate Regions.* Of the total area of Australia the lesser portion lies within the tropics. Assuming, as is usual, that the latitude of the Tropic of Capricorn is 23° 30′ S.[2], the areas within the tropical and temperate zones are approximately as follows :—

AREAS OF TROPICAL AND TEMPERATE REGIONS
OF STATES WITHIN TROPICS.

Areas.	Queensland.	Northern Territory.	Western Australia.	Total.
	Sq. miles.	Sq. miles.	Sq. miles.	Sq. miles.
Within Tropical Zone	359,000	426,320	364,000	1,149,320
Within Temperate Zone	311,500	97,300	611,920	1,020,720
Ratio of Tropical part to whole State	0.535	0.814	0.373	0.530
Ratio of Temperate part to whole State ...	0.465	0.186	0.627	0.470

Thus the tropical part is roughly about one-half (0.530) of the three territories mentioned above, or about five-thirteenths of the whole Commonwealth (0.386). See hereafter Meteorology 9.

2. **Area of Australia compared with that of other Countries.**—That the area of Australia is greater than that of the United States of America, that it is four-fifths of that of Canada, that it is more than one-fourth of the area of the whole of the British Empire, that it is nearly three-fourths of the whole area of Europe, that it is about 25 times as large as any one of the following, viz., the United Kingdom, Hungary, Norway, Italy, the Transvaal, and Ecuador, are facts which are not always adequately realised. It is this great size, taken together with the fact of the limited population, that gives to the problems of Australian development their unique character, and its clear comprehension is essential in any attempt to understand those problems.

1. The extreme points are "Steep Point" on the west, "Cape Byron" on the east, "Cape York" on the north, "Wilson's Promontory" on the south, or, if Tasmania be included, "South East Cape." The limits, according to the 1903-4 edition of "A Statistical Account of Australia and New Zealand," p. 2, and, according to Volume XXV. of the "Encyclopædia Britannica," p. 787, are respectively 113° 5′ E., 153° 16′ E., 10° 39′ S., and 39° 11½′ S., but these figures are obviously defective.

2. Its correct value for 1910.0 is 23° 27′ 3″.58, and it decreases about 0″.47 per annum.

The relative magnitudes may be appreciated by a reference to the following table, which shews how large Australia is compared with the countries referred to, or *vice versa*. Thus, to take line 1, we see that Europe is about $1\frac{3}{10}$ times (1.29775) as large as Australia, or that Australia is about three-quarters (more accurately 0.77) of the area of Europe.

SIZE OF AUSTRALIA

IN COMPARISON WITH THAT OF OTHER COUNTRIES.

Commonwealth of Australia ... 2,974,581 square miles.

3. **Relative Size of Political Subdivisions.**—As already stated, Australia is divided into six States, the areas of which, in relation to one another and to the total of Australia, are shewn in the following table :—

RELATIVE SIZES OF STATES AND COMMONWEALTH.

State.	Area.	Ratio which the Area of each State bears to that of other States and Commonwealth.						
		N.S.W.	Victoria.	Q'land.	S.A. (Total.)	W. Aust.	Tas.	C'wlth.
	Sq. miles.							
N.S.W. ...	310,372	1.000	3.532	0.463	0.344	0.518	11.840	0.104
Victoria ...	87,884	0.283	1.000	0.131	0.097	0.090	3.352	0.030
Queensland	670,500	2.160	7.629	1.000	0.742	0.687	25.577	0.225
S.A. (total)	903,690	2.912	10.283	1.348	1.000	0.926	34.472	0.304
S.A. (proper)	(380,070)	(1.225)	(4.325)	(0.567)	(0.421)	(0.389)	(14.498)	(0.128)
N. Terr. ...	(523,620)	(1.687)	(5.958)	(0.781)	(0.579)	(0.537)	(19.974)	(0.176)
W. Aust. ...	975,920	3.144	11.105	1.455	1.080	1.000	37.228	0.328
Tasmania ...	26,215	0.085	0.298	0.039	0.029	0.027	1.000	0.009
Total ...	2,974,581	9.584	33.847	4.436	3.292	3.048	113.469	1.000

Thus, looking at the top line, New South Wales is seen to be over three-and-a-half times as large as Victoria (3.532) and less than one-half the size of Queensland (0.463); or again, looking at the bottom line, the Commonwealth is shewn to be more than nine-and-a-half times as large as New South Wales (9.584), and nearly thirty-four times as large as Victoria (33.847).

These relative magnitudes are shewn in the small diagram below. It may be added that Papua (or British New Guinea), with its area of 90,540 square miles, is 0.030 of the area of the Commonwealth.

4. **Coastal Configuration.**—There are no striking features in the configuration of the coast: the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The York Peninsula on the extreme north is the only other remarkable feature in the outline. In Year Book No. 1 an enumeration of the features of the coast-line of Australia was given (see pp. 60 to 68).

(i.) *Coast-line.* The lengths of coast-line, exclusive of minor indentations, both of each State and of the whole continent, are shewn in the following table:—

SQUARE MILES OF TERRITORY PER MILE OF COAST-LINE.

STATES AND CONTINENT.

State.	Coast-line.	Area ÷ Coast-line.	State.	Coast-line.	Area ÷ Coast-line.
	Miles.	Sq. miles.		Miles.	Sq. miles.
New South Wales...	700	443	South Australia ...	1,540	247
Victoria	680	129	Western Australia	4,350	224
Queensland ...	3,000	223	Continent[1] ...	11,310	261
Northern Territory	1,040	503	Tasmania ...	900	29

1 Area 2,948,366 square miles.

For the entire Commonwealth this gives a coast-line of 12,210 miles, and an average of 244 square miles for one mile of coast-line. According to Strelbitski, Europe has only 75 square miles of area to each mile of coast-line, and, according to recent figures, England and Wales have only one-third of this, viz., 25 square miles.

(ii.) *Historical Significance of Coastal Names.* It is interesting to trace the voyages of some of the early navigators by the names bestowed by them on various coastal features—thus Dutch names are found on various points of the Western Australian coast, in Nuyts' Archipelago, in the Northern Territory, and in the Gulf of Carpentaria; Captain Cook can be followed along the coasts of New South Wales and Queensland; Flinders' track is easily recognised from Sydney southwards, as far as Cape Catastrophe, by the numerous Lincolnshire names bestowed by him; and the French navigators of the end of the eighteenth and the beginning of the nineteenth century have left their names all along the Western Australian, South Australian, and Tasmanian coasts.

5. **Geographical Features of Australia.**—As indicated in the preceding issues of this Year Book, it is intended each year to give fairly complete information concerning some special geographical element. Thus No. 1 Year Book, pp. 60-68, contains an enumeration of Coastal features, No. 2, pp. 66-77, deals with Hydrology, and No. 3, pp. 59-72, with Orography. In the present issue the Lakes of Australia constitute the special feature treated. An orographical or vertical relief map of Australia will be found on page 85.

2. Lakes of the Commonwealth.

1. **General.**—The following section contains the latest available official information concerning the lakes of each State. It will, of course, be understood that both the area and depth of the mainland lakes are subject to considerable variation according to the season.

2. **New South Wales.**—(i.) *Introductory.* The accompanying information regarding the lakes of New South Wales has been compiled from particulars supplied by the Lands Department of that State. The name, position, area, etc., of each of the lakes will be found in the tabular statement on pp. 62 *et seq.*

Where the space in columns has not been filled in, the information is not obtainable.

The letters in the column headed "Geological character" refer to classification adopted in (iv.) following. An explanation of the numbers and signs attached to the names of the lakes in the table will be found in the accompanying notes.

(ii.) *Flora of the Lakes of New South Wales.* As a botanical survey of the Lakes of New South Wales has never been undertaken information relating to their characteristic flora is necessarily incomplete.

With regard to the coastal or estuarine lakes containing either salt or brackish water, the low-lying margins are commonly the habitat of a "Swamp Oak," *Casuarina glauca*, the trees often extending for a short distance into the water.

Lake George—In 1898 the water was high in the shallow lake, but rapidly receding, and wherever the water receded a dense green carpet appeared of a creeping Chenopodium, determined by Professor Murr as *Chenopodium glaucum L. var. ambiguum*, a small salt-bush, and considered valuable as a fodder for sheep.

Lake Oxley lies at the foot of Mount Oxley, and is filled only perhaps once in 10 years. In 1883 it was a smooth plain of white clay, with the sharply defined shore of a lake. A special feature of this plain was the "Cane-grass," *Glyceria ramigera*, F.v.M.,

a bamboo-like grass often 10 feet high, which studded the plain. The "Lignum Scrub," *Muehlenbeckia cunninghami*, (F.v.M.), grows in many of these clay-pans, but is absent at Lake Oxley.

The *Tuggerah Lakes*, consisting of three lakes known as the Entrance, Middle, and Upper lakes, are brackish and slightly affected by the ocean tides. They are very shallow and are much overgrown with *Ruppia* or *Zostera*. The principal shore plants are :—

Banksia integrifolia, B. serrata, Eupomatia laurina, Alsophia cooperi, Scolopia brownii, Euroschinus falcatus, Casuarina glauca, Duboisia myoporoides, Cryptocarya glaucescens, Rhodomyrtus psidioides, Endiandra sieberi, Monotoca elliptica, Wilkia macrophylla, Trochocarpa laurina, Phyllanthus ferdinandi, Alphitonia excelsa, Cryptocarya australis, Rhus rhodanthema, Panax elegans, Diploglottis cunninghami, Livistona australis, Festuca littoralis, Spinifex hirsuta, Zoysia pungens, Mesembryanthemum æquilaterale, Convolvulus erubescens, Senecio australis.

Lake Cargelligo is a large area of impounded water, which, after a copious rainfall, possesses considerable depth, and floods over large areas of low land at its entrance. In times of drought it becomes very shallow, and dries up sufficiently to allow sedges and annual grasses to grow, when it becomes a favourite spot for cattle to graze over while other places are destitute of fodder. The following plants are characteristic of the vegetation in and around the lake :—

Vallisneria spiralis grows profusely when the water is present, and attracts numbers of wild ducks and swans: when the water recedes cattle feed upon this vegetation to advantage.

Potamogeton obtusifolius, Damasonium australe, Philydrum lanuginosum, Lemna trisulca. These are the principal water plants.

The plants on the extreme edge of the lake are :—*Heliotropium curassavicum, Atriplex semibaccata, Cyperus vaginatus, C. eragrostic, Lepturus cylindricus.*

On the drier ground such plants as *Eucalyptus bicolor* and *E. rostrata* are the predominant trees; *E. melliodora, E. melanophloia, E. hemiphloia var. albens*, and *E. conica* are fairly plentiful.

Principal wattles—*Acacia pendula, A. salicina, A. decurrens, A. harpophylla*, and *A. juniperina.*

Fodder plants, &c.—*Mesembryanthemum australe, Zygophyllum fruticulosum, Clianthus dampieri, Swainsona galegifolia, Glyceria ramigera, Danthonia penicellata, Themeda forskalli, &c.*

Introduced plants (weeds)—*Lantana camara, Rosa rubiginosa, Ricinus communis, Datura stramonium, D. tatula, Solanum sodomœum.*

Hordeum murinum is the principal grass for fodder purposes.

(iii.) *Fauna of the Lakes of New South Wales.* The Lakes of the State may be grouped zoologically into

(*a*) The Coast Lagoons such as Lake Illawarra,
(*b*) The Lakes of the Western Plains of which Lake Menindie is an example, and
(*c*) The Lakes of the Kosciusko Highlands, of which the Blue Lake is the most famous.

Lake George and *Lake Bathurst* are anomalous lakes which run dry at intervals, and cannot therefore contain a permanent fauna.

The coast lakes which regularly or temporarily communicate with the sea, have the usual estuarine fauna, not to be distinguished from that of the mouths of the Clarence, Hunter, and Hawkesbury Rivers. All are more or less brackish and shallow. Their mud or sandy floors are carpeted with such vegetation as *Poseidonia* and *Zostera*. A large proportion of the fish supply of the State comes from the lakes. Large quantities of mullet (*Mugilidæ*), whiting (*Sillaginidæ*), bream (*Chrysophrys australis*), blackfish

(*Girella tricuspidata*), flathead (*Platycephalidæ*), and flatfish *Pleuronectidæ*), are caught annually and forwarded to the Sydney markets. The Crustacea are represented by the prawn (*Metapenaeus macleayi*), the swimming crab (*Portunus pelagicus*), the mangrove crab (*Scylla servata*), and the mud crabs (*Hellocius cordiformis, Sesarma crythrodactyla*, and *Chasmagnathus lævis*

Characteristic molluscs are the cockle (*Arca trapezia*), the oyster (*Ostrea mordax*), the whelk (*Pyrazus perculeus*), with species of *Tapes, Taparium, Tellina*, and *Salinator*

The fauna of the western lakes and billabongs still awaits a thorough examination. In favorable seasons they are thronged with numerous animals, which in dry weather either die, seek refuge in the mud, or remain in a state of suspended animation. Among the higher forms of life may be noted the fresh water catfishes (*Copidoglanis tandanus*, and *C. obscurus*), golden perch (*Plectroplites ambiguus*), macquarie perch (*Macquaria australasica*), and the murray cod (*Oligorus macquariensis*). The bay-bream (*Dorosoma erebi*) occurs in plenty in the lagoons.

Several kinds of frogs (*Limnodynastes dorsalis, Chiroleptes platycephalus and Notaden bennetti*) chorus in rainy weather. The Crustacea are represented by forms of *Apus, Estheria, Limnadopsis, Astacopsis*, and perhaps *Potamon*. Pond snails and mussels (*Melania, Vivipara, Isadora and Unio*) are common mollusca.

Far more peculiar and of greater scientific interest are the Kosciusko Lakes, viz., the Blue Lake, Lake Albina, Lake Cootapatamba, the Club Lake and Hedley Tarn. These are situated at an elevation of over 6000 feet and are all enclosed by moraine dams left by vanished glaciers. Their fauna is related in the first instance to that of Tasmania, and in a wider sense to that of New Zealand, South America, and Antarctica: as a rule the species are restricted to the Australian Alps. This fauna has not yet been exhaustively investigated, but various expeditions from the Australian Museum have partly explored it. The fish that swims the highest in Australia is *Galaxias findlayi:* a rare and remarkable crustacean is *Phreatoicus australis. Annelids* (worms) discovered in the Blue Lake are *Tubifex davidi, Branchiura pleuretheca*, and *Phreodrilaides notabilis.*

(iv.) *Geological Character and Probable Origin of the Lakes of New South Wales.* From the lists it will be seen that there are a great number of so-called lakes in the Southern and New England Tablelands with regard to which no information is available. Probably many of these occupy basins due to geological disturbance, but as it would be misleading to class them under that heading they are placed under the general heading of "Lakes occupying local depressions in areas of drainage" (*c*). The only lakes with regard to which any definite information as to the geological cause is available, are Guyra Lagoon (Crater Lake), Lake George (a lake occupying a faulted area), and Lake Bathurst.

The classification adopted is admittedly unsatisfactory, but it appears to be the best under the circumstances :—

(A) Coastal Lakes or Lagoons, caused by the formation of bars and banks of river silt and the joint action of tides and prevailing winds.

(B) Shallow Lakes found along the courses of rivers, more especially the Murray and Darling Systems, and formed by the building up of flood barriers and plains.

(C) Lakes of the Western and Central areas formed by the filling of local depressions. In flood there is direct connection between (*b*) and (*c*) of the Paroo River System and Ana-branches.

(D) Lakes of the Kosciusko Highlands, due to the formation of barriers of moraine material.

(E) Special Lakes due to distinct geological causes :—Lake George, Lake Bathurst, and Guyra Lagoon.

LAKES OF NEW SOUTH WALES.

Name of Lake.	Position.	Approx. Area.	Greatest Length.		Greatest Breadth.		Maximum Depth.	Average Depth.	Geological Character.

* Origin doubtful.

NOTES.

a After the first 10 chains from the shore all these lakes are practically flat bottomed, so that the average depth is very little less than the greatest depth.

b Lakes of the Ana Branch and Teryawynia Creek Systems. The lower lakes of the first-mentioned system, those situated on Avoca, Bunneringa and Lake Victoria Holdings, are controlled by a private trust constituted of the lessees of these holdings. Under this trust no water (the supply is overflow by way of connecting channels in times of flood from the Ana Branch) is allowed to enter these lakes until the water of the Ana Branch meets that of the Darling at or near their lower confluence, a very rare occurrence.

Similarly with the Teryawynia Creek System. A private trust, constituted of the lessees of Teryawynia, Albemarle, and Tolarno Holdings, controls the intake to these lakes. A large dam and regulator have been constructed on the Teryawynia Creek at its offtake from the Talyawalka Creek. The regulator is kept shut until the Talyawalka water meets that of the Darling at or near their lower confluence. It is questionable if it will ever be opened again. The lakes with water therein constantly receding are looked upon as death traps for stock, and again from a grazing point of view these lakes are considered more valuable in a dry state than if holding water. This system only fills at intervals of 20 years and the lessees have expressed the determination to keep the lakes permanently dry.

c Referring to the lakes on the Lower Murrumbidgee, a large number, notably Paika, Pinaru, Dundomalee, Pitarpunga, and Muckee, with, in the near future, Ganaway and Tori, are and will be kept dry by means of dams across their influent channels, the dry bed of these lakes being looked upon as more valuable for grazing purposes than as storage for water. Within the area of Paika Lake there is a very prolific irrigated area.

d None of the lakes marked thus is filled annually, and many of them are supplied only at long intervals after flood waters have receded. Probably not one retains over 8 feet of water and in numerous instances the depth is very much less.

e No water in ordinary seasons.

g Generally dry.

h Only retains water for short periods.

i Only has water after high flood.

k No average.

l Dry.

(1) Generally dry, fills from the Niemur River.

(2) Very deep, fed by snow springs; presumably old volcanic craters.

(3) Large clay pan filled from surrounding hills by drain from the Bulloo overflow when in flood. Water yellow, fresh when full, brackish when low, good for stock. Often dry.

(4) Probably fills from Talywalka Creek in very high floods.

(5) Alienated, often dry for years.

(6) Reserved, often dry for years.

(7) Only fills after heavy Darling floods.

(8) Large shallow clay pan filled from surrounding country, yellow, good stock water when full.

(9) Fills with drainage from surrounding hilly country.

(10) Coastal.

(11) Clay pan filled from surrounding hills; shallow, yellow water, fresh when full, good for stock. Not permanent.

(12) Filled only in wet seasons or high Willandra floods. Merely regarded as a plain.

(13) Generally contains water, local catchment, alienated to Pultaney Main (Part of Portion 18).

(14) Only looked upon as a plain.

(15) Reserved.

(16) Fills from Lachlan and Murrumbidgee in very high floods.

(17) Fills via Talywalka and Teryaweynia in times of high flood in Darling River.

(18) One of a chain of lakes, Myall, Boolambayt, and Broadwater, connected with Port Stephens by Myall River. Remarkable for its scenery, and abounding in fish.

(19) Popular health and pleasure resort, noted for its beauty and diversity of scenery, and abounding in fish. The entrance is deep enough to allow vessels of considerable tonnage to enter and ply upon its waters.

(20) Noted for its scenery and abounding with fish.

(21) Partly alienated, often dry for years.

(22) Fills from flood waters of Lachlan River.

(23) Not permanent; shallow, filled only in wet seasons.

(24) Fills through Ballogath by artificial channel in times of high flood.

(25) This lake is filled annually owing to an artificial channel and low banks.

(26) Fills from surrounding country, generally contains clear water which is brackish and fit for stock when full.

(27) Three shallow lagoons; alienated.

(28) Originally filled by overflow from the Lachlan River, later by the construction of a weir on the river and the improvement of the channel therefrom to the lake, and by the construction also of embankments, floodgates, etc., Lake Cargelligo is not a permanent sheet of water, and is filled in flood times and stored until the summer months when the Lachlan River ceases running. Water is then allowed to run out of the lake till there is an average depth of about 5 feet, when the floodgates are closed. Two-thirds of this surplus water is allowed to run down the Lachlan and one-third down Willandra Creek. The latter proceeding is effected by a weir (the Willanthry), about 40 miles from Cargelligo, on the Lachlan River. Fish and game abound in and on the lake, and it is an ideal sheet of water for skiff racing and shallow centre-board sailing. The Works Department propose to raise the embankments, etc., 3 feet, and so double the present capacity of the lake.

(29) The water of this lake is generally brackish. Its outlet to the Pacific becomes periodically choked up by a sandbank. During this time it is quite safe and practicable to ride or drive along the barrier of sand which effectually excludes all tides from the lake. Whilst this position lasts the water loses its salinity, but never becomes quite fresh. Should local rainfall be heavy, causing an unusual flow from back lands into the lake, the waters become sufficiently fresh to affect the life and quality of the oysters cultivated on the foreshores. A very heavy downfall locally is generally followed by an outburst through the sandy bar. More often than not the outburst is hastened by local residents using shovels to give the impounded water a start. After such outbursts the lake again becomes tidal and salt for a period, but gradually the silting up process sets in again. The lake is not navigable.

(30) Fills by natural channels and overflow from Menindie Lake in times of high flood.

(31) Terranora and Cobaki Broadwater form the western estuary of the Tweed River and cover an area affected by tides of about 3½ square miles and a watershed of 48 square miles. Terranora Broadwater has a maximum depth of 5 or 6 feet in places, but parts are dry at low water. The average depth at low water average spring tides would not exceed 12 or 18 inches.

Practically the whole of Cobaki Broadwater is dry at low tide except in the channel, where the greatest depth is about 3 feet and the average about 18 inches.

Recently the Public Works Department has had channels cut through Terranora Broadwater to a depth of 6 feet at low tide and 50 feet wide. A dredge is now at work cutting a channel 40 feet wide and 6 feet deep up Cobaki Broadwater, and this will probably be completed in about 18 months' time. The completed channels are navigable for droghers of about 50 or 60 tons, and allow of sugar cane being carried in punts to the mill.

(32) Filled in abnormal seasons by local creeks, will last two or three years. Sandstorms have choked the main channel, and its chief supply is now diverted.

(33) Sandstorms have so filled its feeding channel that its main source of supply is cut off.

(34) Generally dry; local catchment connected by natural channels with Lake Yanga, but a rise of about 7 feet near the centre of channel and corresponding fall further on prevents it from filling. Within W.R.2979 and Yanga, 18th Section Lease.

(35) Within W.R.2013, 44,075, and 44,076.

(36) Fills from overflow from Ana Branch in times of high floods. Questionable if water will ever again reach it.

(37) Local catchment, generally contains water, fit for stock when full and brackish.

(38) Fills by Paroo flood waters, will last 12 months.

(39) Partly alienated, partly reserved. Sometimes dry.

(40) Dry. Filled only in wet seasons from run off of surrounding high country. Not permanent, shallow.

(41) The area of the lake when full is about 40,000 acres, but the area under water is continually changing according to the season and annual rainfall. The average area submerged would probably not exceed 15,000 acres per annum, and taking the last 15 years only the area would be considerably less.

The lake was at one time timbered with gum trees in places, interspersed with "Coba" or "Cooba." These trees have been dead many years, and apparently were killed by the water, an indication that for many years previously the lake bed could not have remained under water for periods of any great length. There are similar green trees along the edge of the lake at the present time, and it is noted that they only stand in water for short periods with long intervals between. Brackish water can be obtained by boring into the lake bed, which consists of stiff clay, and is of considerable depth. The lake is not permanent, and affords good pasture over a large area in dry seasons. The bed of the lake is lower than the bank of the Lachlan River at Jemalong. The waters of the lake are replenished chiefly from the Lachlan River and the Bland Creek when in flood.

(42) This lake is slightly affected by tides when the mouth of Cudgen Creek is open, but it is more often blocked by sand, and at its best, this entrance is impossible for shipping.

(43) Yellow clay pan. Local catchment, fit for stock when full, brackish when low.

(44) Broad shallow clay pan, occasionally dry.

(45) Fills from overflow of Talyawalka Creek in times of high floods.

(46) Filled by Kerribree Creek in flood and also has local catchment. Generally contains good stock water, brackish when low.

(47) Filled by high Paroo flood, will last 9 months.

(48) Local catchment, thick brackish water when low, suitable for stock when full, cane grass swamp.

(49) One of the Ana Branch system of lakes, which only fills at wide intervals.

(50) One of the Teryawynia Creek System.

(51) Filled by Willandra flood waters.

(52) Generally dry, local catchment. Dry at present and covered with grass.

(53) Broad shallow lagoon periodically covered with water.

(54) Water is not allowed to reach this lake. A dam erected by Crown lessees keeps the flood water out.

(55) Alienated. Sometimes dry.

(56) Fills from the surrounding hills, generally contains water, good and fresh when full, brackish when low.

(57) Now kept dry by a dam across its feeding channel.

(58) Generally dry, fills from the Murray.

(59) Generally dry; fills from the Murray.

(60) Fills from flood waters of Murray.

(61) Generally dry, fills from the Murray, joins Lake Wollare.

(62) This is in reality a big swamp, which holds water only in wet seasons. During 4 years out of every 5 it is held under grazing leases, affording excellent pasturage.

(63) Not alienated. Often dry for years.

(64) Not permanent.

(65) Old clay pan, partially filled up with sand hummocks.

(66) Filled by Darling floods. Will last 6 months.

(67) Generally dry, fills from Lake Condoulpe.

(68) Reserved. Tourist Resort.

(69) Always dry.

(70) The deepest portion is surrounded to the extent of about half a mile by low swamp lands which gradually merge into the lake. Its water is, generally speaking, fresh; it has two outlets indirectly leading into the Pacific, one is Cathie Creek, a shallow, sluggish body of water connecting with the lake of that name. The other is through the lake swamp, thence by Kooloonbung Creek, which flows into Hastings River near Port Macquarie; this creek is a sluggish swampy body of fresh water for part of its course, but a dam erected many years ago in Port Macquarie has influenced its flow, and has excluded tidal waters. The lake is not used for navigation, but its depth is possibly sufficient to carry light draught vessels.

(71) Only gets a supply about once in 20 years. Fills from Darling River flood waters.

(72) Fairly permanent, local catchment.

(73) Local catchment, good stock water when full, often dry, shallow clay pan, brackish water when low.

(74) Filled with Paroo flood waters. Will last an ordinary season.

(75) Large salt clay pan filled about once every 30 years when Kerribree Creek overflows. Contains shallow water when full, evaporation very great.

(76) Generally dry, local catchment.

(77) Within alienated portions 61, 62, and 64.

(78) Generally dry except for small hole in south-east corner.
(79) Generally dry, local catchment, within Tara 18th Section Lease.
(80) Fair water supply, but frequently dry, local catchment, partly within alienated portion 77.
(81) Water not allowed to flow into it.
(82) Reserved, sometimes dry.
(83) A natural extension to Lake Cargelligo. Since the construction of dams on the latter it is now dry and is good grazing country. Partly within Sp. Ls. 07.7, 07.8, 07.9, 07.10.
(84) Partly within Sp. Ls. 08.6 and 08.7. A natural extension of Lake Cargelligo. It used to fill from the Lachlan overflow through that lake. Owing to the construction of dams on Lake Cargelligo it is now dry and is good grazing country providing excellent grass.
(85) Not permanent, only a plain filled by Lachlan flood waters.
(86) Generally dry, local catchment, within alienated portion 19.
(87) Filled in wet seasons only.
(88) Within South Thoronga 18th Section Lease.
(89) Filled by Bunker Creek, lasts an ordinary season.
(90) Filled only in high Lachlan floods brought down Willandra billabong.
(91) Of late years generally dry, fills quickly after rain and empties quickly.
(92) Only looked upon as a plain. Water kept out by a dam on Paika Creek.
(93) Partly reserved. Often dry for years.
(94) Filled with Paroo flood waters.
(95) Coastal, often dry.
(96) This lake is filled by the Narran River in flood and overflows into the Bokhara River. Evaporation very great, often dry.
(97) Fills from Stephen's Creek.
(98) Local catchment. Good brackish stock water when full, salt when low.
(99) Fills with local rainfall.
(100) Very shallow clay pan, land alienated and useless for storage area.
(101) Fills very rarely, is a debouchure of Mount Brown Creek.
(102) Fills from Packsaddle Creek at very wide intervals.
(103) Filled by Darling floods down Talywalka,-will last 6 months.
(104) Permanent water, fills from the Murray. Poon Boon station is on the shore of this lake.
(105) Permanent water, fills from the Murray.
(106) The lake is tidal and salt. It has an outlet into Camden Haven Inlet, thence a short distance by that inlet to the Pacific. It is a clear sheet of water and its shores are readily approachable by solid land. It is fed from inland by Heron's Creek and Queen's Lake River, and is navigable and regularly used for punting timber by vessels drawing from 3 to 4 feet.
(107) In 1894 a regatta was held on this lagoon, but of late years the depth has gradually decreased. It has never been known to overflow.
(108) When full after heavy rain about 10 feet deep at most, sinks rapidly to a normal of about 5 feet greatest depth. Catchment small, and occasionally lake is dry. Surrounding country of a rather sandy character and thickly timbered. This lake has been a great resort of wild-fowl, but closer settlement is to some extent driving them away.
(109) Alienated, dry, this lake is fresh when full.
(110) Alienated, often dry.
(111) Permanent, fills from the Murrumbidgee River, fairly picturesque, within W.R. 3021. Reserve 44162 for preservation of game, set apart for preservation of birds and partly within Tara 18th Section Lease.
(112) Dry except for occasional rain water. No other water since 1870 floods.
(113) Permanent water, fills from the Murray, within W.R. 1960.
(114) Popular health and pleasure resort, noted for beauty and diversity of scenery; abounding with fish.
(115) Fills through Merrimageel Creek from Lachlan River.
(116) A swamp, generally dry within C. and W.R. 2591.
(117) Excellent breeding ground for fish.
(118) Filled by local creeks, will last 12 months. Through sandstorm diversions takes practically all the Worrominta Creek water.
(119) Alienated.
(120) Fairly picturesque, practically permanent, being last dry in 1897. Fills from Murray River (nearest point of which is distant 3 miles), water commencing to flow in when the river is 10 ft. 9 in. high at Swan Hill. In the future this lake may be very useful for storage purposes in connection with any Murray River water conservation scheme. It is covered by W.R. 2109 and is surrounded by "Murray Downs" freehold lands.
(121) Only a plain, but gets water at wide intervals.
(122) Filled by Yancowinna and local creeks after exceptionally heavy rain. Has a large, quick catchment. Ulenia and Yantara Lakes, which are joined together, were filled only once from 1881 to 1896, viz., in 1885, and replenished by a foot or so a few times. The lake is not permanent, evaporation is great, average annual rainfall about 8 inches.
(123) Broad shallow clay pan, rarely flooded in late years, but in 1870 covered to a depth of from 10 to 18 feet.
(124) Shallow clay pan, last year 2 to 3 feet of water stored.
(125) Fills from Murrumbidgee River.
(126) Generally dry, fills from the Murray, within W.R. 2964.
(127) Permanent, filled by Paroo flood waters.
(128) Good, quick local catchment, good stock water.
(129) Fills with run off from surrounding high country, holding capacity improved by a low dam at mouth of effluent creek.
(130) Permanent water, fills from the Murray, within W.R. 1957, joins Lake Goonimur.
(131) Supply channel blocked, not allowed to fill, now used for grazing, excellent grass, partly within W.R. 2977 and T.S.R. 11411, within Poon Boon 18th Section Lease.
(132) Fills from overflow in high Darling floods. Practically empties as waters recede.
(133) Local catchment, often dry, good stock water.
(134) Fills from the Murrumbidgee River. Yanga Station is situated on the shores of this lake. Within W.R. 3020, Reserve 44155 for preservation of game, and Yanga 18th Section Lease.
(135) Often dry.
(136) These are not lakes in a geographical sense, but lagoons connected with the ocean.

3. **Victoria.**—The accompanying information regarding the lakes of Victoria has been furnished by the Survey Branch of the Department of Lands.

(*1.*) *Flora of Victorian Lakes.* The Victorian lakes, owing to variety of conditions such as altitude, depth, geological surroundings, area, etc., have different floras. Salt, brackish, and fresh water types exist, but these are linked by gradations which render the drawing of a hard and fast line of demarcation between types practically impossible, yet the salt marsh of the plain and the mountain tarn are remote and distinct.

The salt lakes may be divided into two groups, viz., inland and estuarine. The former are situated in the western and north-western parts of the State, those of the west occupying basins probably formed by the subsidence of the roof of cavities in the volcanic plain, and those of the north-west are said to be due to saucer-like depressions once filled by river overflow and since replenished, some of them by rainfall and direct surface drainage, and others by streams which flow through them. Many of these northern and western lakes become areas of dried mud or salt pans in summer time.

The estuarine or Gippsland lakes are a series brought into being by the reclamation of a portion of the sea through the formation first of the ridge behind the Ninety-mile Beach by sea and wind agencies, and the subsequent deposition of river silt on the landward side. Continued deposition is decreasing the area of these lakes, which are the remnants of a once large open lagoon. Of those forming individual lakes, one (Lake Wellington) is already isolated except for the river outlet at the eastern end. The arboreal vegetation of the inland lake margins in the western and northern districts is scanty, and is more in evidence near the inlets of creek water, while salaceous plants occupy the immediate margin, and when dry those basins of less saline nature carry a growth of salty-flavoured herbage which is relished by cattle and valued as fodder. Redgum, tea-trees, and other shrubby growths may be found in the vicinity. The vegetation of the Gippsland estuarine lakes varies from the southern mangrove of the muddy shores and flats, and marine weeds of the tidal mouth, to the fringing myrtaceous shrubs and other tea-trees, eucalyptus, etc., which creep down to the water's edge in the comparatively or absolutely fresh water parts towards the river mouths within the estuary.

Of fresh water lakes there are those of natural and artificial origin, and these are scattered throughout the State. The most rare is the mountain tarn. At about 3000 feet altitude a landslip on Mount Wellington, in Gippsland, has blocked a small, steep valley, and the cold, deep water (Lake Karng) is held by steep, rocky walls, from which conspicuous littoral flora is absent.

Another land-locked, fresh water body is the Yan Yean Reservoir, which occupies the site of an old marsh amongst silurian hills of the lowlands at an elevation of only 519 feet above sea level, an embankment having been thrown across a narrow outlet from a considerable drainage area. The surface of this lake—the supply to which is augmented by diverted mountain drainage—approximates to 1360 acres at high level. The depth is 24 feet in parts. The surrounding arboreal vegetation is partly native eucalyptus, banksia, but largely consists of pinus insignis, with many shrubs, native and exotic, interspersed, while a continuous carpet of native kangaroo grass shelters an abundance of native herbaceous and small shrubby plants. The margin of the bays is marked by a growth of sedges, rushes, and reeds, while a variety of water weeds extend across the shallow inlets, and require periodical cutting. Microscopic forms are abundant. Generally speaking, the Yan Yean Reservoir has a richer littoral and purely aquatic vegetation than any other Victorian lake.

Other fresh water lakes are those of the south-western plains, with visible or secret outlets and fresh or slightly brackish water, but these for the most part are poorly vegetated owing to the low banks and the exposure to strong winds, while the geological conditions which result in almost treeless plains as an environment, together with the instability of the water level, do not permit of tree growths at the margins.

Lake Wendouree, at Ballarat, is a shallow, fresh water lake, the area being sheltered physiographically and also by liberal planting of introduced and native trees with which city improvements have surrounded it. The water weeds grow so luxuriantly here as to require special weed cutting to keep the tracks clear for the small pleasure steamers.

Another type of freshwater lake is that resulting from former meanderings of rivers such as the Murray and the Goulburn in their lower reaches across the tertiary plains : portions of old courses, mostly curved in sinuous or horse-shoe pattern, and cut off by silting up when the streams were diverted into new natural channels, the old reaches becoming lagoons or billabongs of considerable extent. The banks of these bear finely developed Eucalyptus rostrata ; large areas along the Murray being reserved as forest land. Other plants (many myrtaceous trees and shrubs) luxuriate there, and smaller plants find shelter among these, while water weeds are in abundance.

Finally, there is a type of lake—small, deep, and almost devoid of vegetation —occupying the old craters of volcanic mounts. Such is Tower Hill Lake at Koroit, in the Western district, where the hollow formed by the falling in of the scoriæ and tuff has filled with water of unknown depth.

(*2.*) *Fauna of the Victorian Lakes.* For the purpose here required the fauna of the Victorian lakes may be roughly divided into three districts, viz : - The Tidal Lakes and Inlets, the Western District Lakes, and the Northern District and Mallee.

Only the more numerous varieties are mentioned below, the list not being in any way exhaustive, and with few exceptions, the species mentioned in one district are to be found in the other two in more or less numbers.

(*a*) *The Tidal Lakes and Inlets* consist principally of the Gippsland Lakes, Lake Tyers, and Mallacoota Inlet. In the vicinity of these lakes native bear, opossum, wallaby and kangaroo may be seen, and at Mallacoota Inlet platypi are perhaps more numerous than elsewhere. Aquatic birds are chiefly the black swan, coot, musk and black duck, and gull, all of which are plentiful. Other birds in these localities are the laughing jackass, magpie, sulphur-crested, leach black, and gang-gang cockatoo, bell-miner, native companion, nankeen heron, crow-shrike, honey eater, hawk, robin, king and pennant parrot, satin bower birds, and wren. The emu is occasionally seen, but the lyre-bird is rarely met with.

(*b*) *Western District Lakes* comprise those lakes in the South Western portion of Victoria and are very numerous in the vicinity of Colac and Camperdown, the largest being Lake Corangamite.

Bandicoot and native cats are occasionally to be seen. The birds that haunt the waters of these lakes are ducks, swans, coot, water-fowl and mountain duck. In the district generally are to be found the magpie, parrot, ground-lark, snipe and plover.

In many places in this district the remains of the extinct diprotodon have been found.

(*c*) *Northern District and Mallee.* Lake Hindmarsh, Albacutya, Tyrrell, Lonsdale and Kow Swamp are among the chief natural depressions in this district. The three

first named are frequently dry and in time of drought may so remain for years. Bird and other life is then very scarce.

The black swan, waterfowl, musk and black duck, coot, black cormorant, white and straw-necked ibis, moorhen and marsh tern frequent the lakes and marshes. The mallee fowl, native companion, nankeen heron, yellow-legged spoonbill, magpie, laughing jackass, hawk, galah, cockatoo and wren are also met with. Wedge-tailed eagles and the emu are occasionally to be found.

(*3*) *Geological Characteristics.* In regard to their geological characteristics, the lakes of Victoria may be divided into four classes, viz.:—(i.) Lakes in basalt plains, (ii.) Lakes in Wimmera and adjoining districts, (iii.) The Gippsland lakes, and (iv.) Lakes formed by flood plains of rivers.

(i.) *Lakes in the Basalt Plains.* Most of these have no streams entering them, and the basalt is of late tertiary age. They may be classified as follows:—

(A) Shallow lakes in hollows due to irregularities in the original volcanic surface, to erosion by wind, or to both; generally small, and irregular in shape. Many of them become dry in summer and are liable to remain so for protracted periods. These lakes are very abundant in the Western District.

(B) Deeper lakes occupying calderas or craters; more or less circular as a rule. The calderas mark the sites of volcanic explosion and possibly have been deepened by the sinking of their floors. There are few if any lakes occupying true craters in Victoria.

(C) Lakes filling subsided areas which have resulted from the adjustment of the surface to the new conditions following the transference of large quantities of rock from underground to the surface in the form of lava flow (basalt).

(ii.) *Lakes in the Wimmera and Adjoining Districts.* The basins are formed in sedimentary rocks of late tertiary age. The lakes are generally shallow, many of them being little more than swamps, and they may become dry for considerable periods. They may be grouped as follows:—

(A) Basins formed by subsidence due to the removal by solution of the underlying limestone or by wind erosion, or by both.

(B) Expansions of rivers caused by the blocking up of shallow valleys by silt or wind-blown material; some caused or assisted by wind erosion.

(iii.) *The Gippsland Lakes.* These have resulted from the growth of the land seawards, owing to the deposition of silt from the Gippsland rivers, combined with the action of the tides, which sweep eastwards along the coast and deflect the river mouths in that direction. The rocks are of tertiary and recent age and the action is still in progress.

(iv.) *Lakes formed by Flood Plains.* These lakes, formed by the building up of flood plains by the rivers, are situated principally near the Murray.

(*4*) *Names, Positions, and Special Features of Victorian Lakes.* The subjoined statement gives particulars in tabular form of Victorian lakes. The numbers attached to the names of some of the lakes in this statement refer to the footnotes at the end of the table. The letters (*f*), (*s*), and (*b*) given in the second column of the table indicate that the lake referred to is either fresh, salt, or brackish. The reference signs given in the column dealing with geological characteristics and probable origin refer to the articulation figures and letters of the preceding paragraph (*3*) hereof, and have the meanings given thereunder.

Yerang	Karkarooc, 44 miles N.W. of Lake Tyrrell (*f*)	160	—	55	—	35	6	(iv)

NOTES.

(1) Practically dry for several years up to 1909, now receiving overflow from Lake Hindmarsh (1910). Height above sea level, 210 feet.

(2) Ornamental lake, contains English perch (brown and golden) and carp.

(3) 450 feet above sea level.

(4) Enclosed in a ring of hills, 520 feet above sea level. A remarkable feature about this lake is that, although separated from Lake Gnotuk (depth 103 feet) by less than half-a-mile, its surface level is 140 feet higher, and the water, though brackish, is fit for stock, whilst Lake Gnotuk is quite salt. Lake Bullen Merri is supplied by underground springs, &c., and discharges into Lake Gnotuk. This explains the difference in salinity, one having a discharge and the other not. Both supply and discharge are underground.

(5) Now (1910) about 8 feet deep. Fairly flat basin. 438 feet above sea level.

(6) 1270 feet above sea level, occasionally dry, usually contains from 4 to 6 feet of water. English perch, carp and eels.

(7) 367 feet above sea level.

(8) 494 feet above sea level.

(9) Shallow. Barwon River runs through to coast at Barwon Head. Bar at entrance. Navigable by small crafts only. Contains mullet and bream (migratory).

(10) 380 feet above sea level.

(11) Contains English perch and eels.

(12) 380 feet above sea level. See note against Lake Bullen Merri.

(13) Artificial lake made for water supply purposes. Capacity 5,650,000,000 gallons. Masonry and concrete dam. Contains Murray cod, Murray perch (golden, silver and Macquarie) and black fish.

(14) This lake, now full (1910), dries up frequently. 277 feet above sea level.

(15) On Mount Wellington, caused by landslip.

(16) 400 feet above sea level.

(17) Artificial lake.

(18) Most important of the Gippsland lakes; average depth, 21 feet. Receives the waters of the Mitchell, Nicholson, and Tambo Rivers, all of which are navigable for some miles up stream. The Gippsland Lakes include Lakes Wellington, Victoria, King, and Reeve, and all inlets and channels. Except on eastern shore of Lake King, the borders are flat, with abrupt sandy rises, in places attaining a height in some cases of 150 feet. The entrance opposite Kalimna is an artificial one, and was opened in July, 1889. The old or natural inlet of the lakes, situated about two miles to the eastward, is now non-existent, having been filled up by drifting sands. A sand bar exists across the entrance, with a depth of about 14 feet at low water. This limits the navigability of the lakes to vessels of comparatively small tonnage. Range of tides at springs, about 3 feet. Numerous wharves and jetties abound on the shores of these lakes, the principal ones being at Bairnsdale and Sale. A regular service of lake steamers plies to and from these towns, and from Bairnsdale there is a coastal service to Melbourne.

(19) Timber weir, impounds 11,150,000,000 gallons of water.

(20) Artificial lake, impounds 3,812,000,000 gallons of water.

(21) Contains English perch and English trout.

(22) 1328 feet above sea level. Contains English perch and English trout.

(23) Water supply reservoir, impounds 12,380,000,000 gallons. Contains English perch, English trout, and Murray perch.

(24) Divided into two portions, called upper and lower lakes; connected by a narrow passage about one mile long. Sand bar at entrance to lakes, with 3 or 4 feet over it at low water. There is also an inner bar stretching from Captain's Point, over which there is not more than 2 feet at low water. Navigation of this entrance is extremely hazardous, and a good personal knowledge of the locality, combined with great caution, is necessary. A sinuous channel about 13 feet deep communicates with the strait connecting the upper and lower lakes. The strait is about 1000 feet wide, with deep water. Bold, rocky, timber-covered slopes characterise the shores of the lake and river banks. Mullet, skipjack, schnapper, bream, flathead, whiting, garfish, sea trout, and ludrick are found in this lake.

(25) Artificial water supply reservoir, impounds 20,856,000,000 gallons. Contains English perch and English trout.

(26) 2374 feet above sea level, now practically dry.

(27) Occasional shoals of mullet and bream.

(28) Crater 150 feet deep.

(29) One of the Gippsland Lakes. See remarks against Lake King. Contains bream, mullet, whiting, sea trout, sea perch, garfish and ludrick.

(30) Contains mullet, bream and sea perch.

(31) Contains mullet, bream and sea perch.

(32) For Mallee Water Supply, impounds 180,000,000 gallons.

(33) The entrance to Lake Tyers is generally barred across during dry seasons by a sand bank, but after heavy rains the bank is broken, forming one or two channels to the sea. This entrance is not fit for navigation. A settlement for the education and religious instruction of the aborigines is formed on the northern shore of the lake. Contains mullet, bream, sea perch and ludrick.

(34) Usually dry. Can hold from 10 to 15 feet of water. 118 feet above sea level.

(35) Artificial lake, impounds 4,100,000,000 cubic feet of water. Contains English perch and trout.

(36) One of the Gippsland Lakes, average depth about 18 feet. See general note against Lake King. Contains mullet, bream, sea perch and ludrick.

(37) Artificial water supply reservoir. Impounds 60,000,000,000 gallons. Contains English trout, Murray cod and Murray perch.

(38) Impounds 6,560,000,000 gallons. Contains English perch and trout.

(39) One of the Gippsland Lakes. Averages 8 feet in depth at low water. See general remarks against Lake King.

(40) Contains English perch, trout, carp and tench.

(41) Contains mullet, bream, sea perch and ludrick.

(42) Principal reservoir for Melbourne water supply. Impounds 6,400,000,000 gallons. Contains English perch, trout, carp and tench.

4. Queensland.—The tabular statement giving information regarding Queensland lakes has been furnished by the Survey Office of the Lands Department of Queensland. With regard to the lakes in the interior it may be noted that they are nearly all shallow and mostly waterless in dry seasons.

* In wet seasons. † Sometimes covers hundreds of sq. miles. ‡ Uncertain.

(1) Partly dry in summer. (2) Navigable for boats of 50 tons. (3) Navigable for river boats of 200 tons; bed uneven. (4) Highest flood 60 feet above sea level. (5) Volcanic. (6) Occasionally dry. (7) Sometimes dry. (8) Overflow of Cooper's Creek. (9) Not permanent. (10) Partly navigable. (11) Fresh during floods, occasionally dry. (12) Permanent. (13) Part of Herbert River. (14) Partly dry in summer; contains fresh springs. (15) Occasionally dry; salt when low. (16) Dry in summer.

6. **Western Australia.**—Strictly speaking there are in Western Australia only a few lakes of small size, scattered along the coast, west of the Darling Range. The so-called lakes of the interior are merely immense clay-pans or salt marshes, covered with a few inches of water after heavy rains. The accompanying schedule, prepared from information supplied by the Lands Department of Western Australia, gives the whole of the available information in regard to the lakes of this State.

LAKES OF WESTERN AUSTRALIA.

Lake.	Greatest Length.	Greatest Breadth.	Approximate Area.	Geographical Position.

7. **Tasmania.**—(i.) *General.* The tabular statement given below on the authority of the Tasmanian Lands Department shews particulars of the principal lakes in Tasmania; there are, however, a large number of other lakes of smaller dimensions. Those shewn are situated near the middle of Tasmania and towards the south-east end of a basaltic tableland, which stretches away from the district of Bothwell north-westerly to Mount Bischoff. The lake district is confined to a radius of about 30 miles, and commands an elevation ranging from 2700 feet at Lake Sorell to 3800 feet above sea level at the Great Lake. The lakes form the source of all the more important rivers (with the exception of the Tamar) in the island, viz.:—the Mersey, Forth, Leven, Pieman, King, Gordon and Derwent rivers. The lakes are all freshwater and are becoming well stocked with English and Californian trout; they form natural breeding grounds for swan and wild duck of various kinds. None of the lakes are of crater formation.

(ii.) *Names, Positions, and Special Features of Tasmanian Lakes.* The subjoined statement gives particulars of the principal lakes in Tasmania. With the exception of Lake St. Clair, whose greatest depth is 550 feet, the Tasmanian lakes are shallow, ranging from 6 to about 20 feet in depth.

PRINCIPAL LAKES IN TASMANIA.

Name.	Area in Acres.	Length. Miles.	Breadth. Miles.	Special Remarks. (See Footnote.)
Great Lake	28,400	12	7	(1)
St. Clair	9,500	$8\frac{3}{4}$	$2\frac{3}{4}$	(2)
Echo	7,400	$6\frac{1}{2}$	$3\frac{1}{4}$	—
Arthur	9,000	4	3	—
Woods	2,500	3	$1\frac{3}{4}$	—
Sorell	12,200	5	6	(3)
Crescent	4,000	$3\frac{1}{2}$	$2\frac{1}{2}$	(3)

(1). The Great Lake, which is a favoured resort of tourists, is accessible by vehicle from the railway stations at Apsley, Parattah, and Tunbridge, and is distant 48 miles from the two first-named places, and 41½ miles from the last-named.

(2). Lake St. Clair, from which the River Derwent takes its rise, is about 120 miles from Hobart by road, and 80 miles from the Macquarie Plains railway station. It stretches along the eastern base of Mount Olympus, and is fringed by a dense growth of mountain foliage.

(3). Lakes Sorell and Crescent lie along the routes to Great Lake, being 24 miles from Parattah and 13½ miles from Tunbridge.

§ 3. The Fauna of Australia.

1. **Introduction.**—An authoritative article describing in some detail the principal features of the Fauna of Australia was given in Year Books No. 1 (see pp. 103 to 109) and No. 2 (see pp. 111 to 117), while a synoptical statement appeared in No. 3 (see pp. 73 to 76). Considerations of space will, however, preclude the inclusion in this issue of more than a passing reference to the subject.

§ 4. The Flora of Australia.

1. **Introduction.**—In Year Books No. 1 (see pp. 109 to 114) and No. 2 (see pp. 117 to 122) a fairly complete though brief account was given of the Flora of Australia, and in Year Book No. 3 similiar information in a greatly condensed form will be found on pp. 76 to 78. Space in this issue will not permit of more than a mere reference to preceding volumes.

§ 5. Seismology in Australia.

1. **Introduction.**—The following brief notes regarding the present position of Seismology in Australia have been compiled from data furnished by the Government Astronomer of Victoria (P. Baracchi, Esquire) and the Director of the private observatory attached to Riverview College (Revd. E. Pigot, S.J.), Sydney.

2. **Seismological Installations at State Observatories.**—(i.) *Introductory.* At the present time no State organised service exists in Australia to undertake the work of obtaining earthquake records from localities outside the capitals. According to the latest report of the Committee on Seismology, however, it would not be difficult to recruit a number of voluntary observers in each State, to report seismic phenomena in accordance with a uniform plan. These observers need not necessarily be supplied with any special instrumental equipment.

(ii.) *Sydney Observatory.*—The records at this institution are obtained by means of a Milne seismograph. During the year 1907, 96 tremors were experienced, of which 68 were under 1 mm. amplitude, and in 1908, 82 tremors were recorded, of which 60 were less than 1 mm. amplitude. More than 70 per cent. of the total disturbances recorded were, therefore, only thickenings of the light line.

(iii.) *Melbourne Observatory.*—This observatory possesses a Milne horizontal pendulum, which is located in an underground room in the main building, and records photographically. The average period of the boom ranges from 16″ to 17″, the time scale being 60 minutes per hour, and the angular value of an amplitude of 1 mm. on the records is 0.4″. As is the case with the Sydney Observatory, all seismograms have been measured, classified, and arranged in appropriate records.

(iv.) *Adelaide Observatory.*—A Milne horizontal pendulum seismograph was erected at this Observatory in 1908. The seismograph, which is of the latest pattern, has been set up with the boom in the meridian, the free end of the boom being to the north.

(v.) *Perth Observatory.*—The seismograph at this institution was erected in 1901, and is of the Milne horizontal pendulum type. It is mounted on brick pillars with a marble table-top, the pendulum pointing due north. The pillars rest on a concrete floor about 8 feet underground and 200 feet above sea level. Observations are regularly arranged and classified, and the results sent every six months to the British Association.

(vi.) *Riverview College Observatory, Sydney.*—The seismological cellar (half underground) is situated in a secluded portion of the College grounds remote from any artificial source of vibration. There are three seismometers, each mounted on massive concrete piers with rock foundations. Of the two Wiechert instruments, No. 1 is a 1000 Kilo horizontal seismometer, with astatic pendulum, and E.W. and N.S. Components; and No. 2 is an 80 Kilo vertical seismometer. These were installed early in 1909. A third instrument of the Wiechert pattern was to be erected early in 1910. The Mainka instrument is a horizontal seismometer, with bifilar conical pendulum, and E.W. and N.S. components. The Observatory publishes monthly bulletins giving full records of earth movements.

3. **Publication of Records.**—The Secretary of the Seismological Committee of the British Association collects and publishes the seismic records obtained at observatories in every part of the world (including Australia), and an International Seismological Association also deals with similar records.

4. **Seismic Disturbances in Australia.**—The local earth tremors recorded in Australia have, so far, been of a very minor character, and at no time has there been an earthquake shock of sufficient intensity to cause loss of life or extensive damage to property.

§ 6. The Geology of Australia.

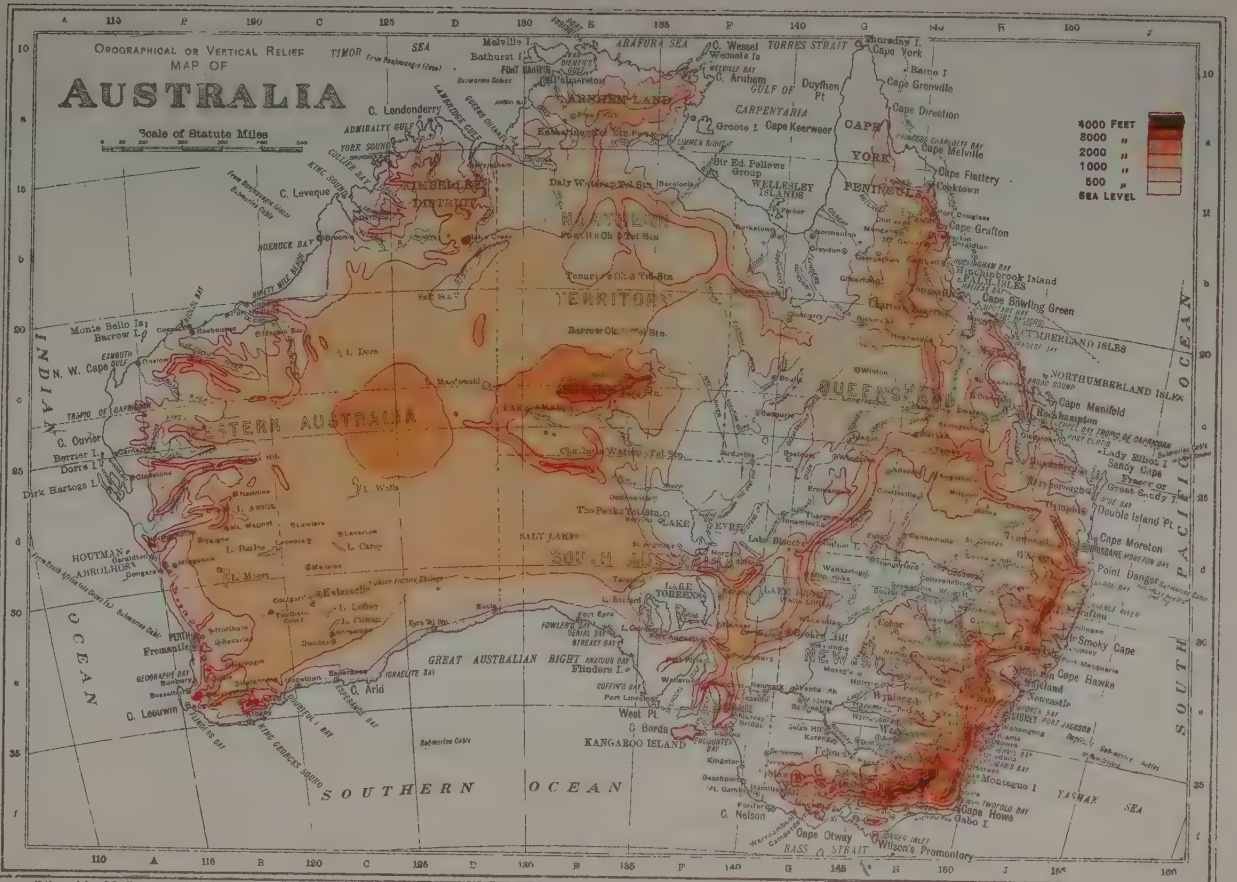
1. **General.**—Independent and authoritative sketches of the geology of each State were given in Year Books No. 1 (see pp. 73 to 103) and No. 2 (see pp. 78 to 111). Want of space has precluded the insertion of these sketches in the present issue of the Year Book, and it has not been considered possible to give anything like a sufficient account of the geology of Australia by presenting here a mere condensation of these sketches. Reference must, therefore, be made to either Year Book No. 1 or No. 2, *ut supra*.

2. **Geological Map of Australia.**—The map of the Geology of Australia on page 86, shews the geographical distribution of the more important geological systems and formations.

§ 7. Climate and Meteorology of Australia.[1]

1. **Introductory.**—In preceding Year Books some account was given of the history of Australian meteorology, including reference to the development of magnetic observations and the equipment for the determination of various climatological records. (See Year Book 3, pp. 79, 80). Space will not permit of the inclusion of this matter in the present issue.

2. **Creation of the Commonwealth Bureau of Meteorology.**—By Chapter 1, Part 5, Section 51, sub-section viii. of the Commonwealth Constitution it is enacted that "Parliament shall, subject to this constitution, have powers to make laws for the peace, order, and good government of the Commonwealth with respect to, *inter alia*, meteorological observations." The Meteorological Act of 1906 was assented to on the 28th August, 1906, and enacts that—The Commonwealth Meteorologist may, subject to the regulations and to the directions of the Minister, be charged with any of the following duties:—



(*a*) The taking and recording of meteorological observations.
(*b*) The forecasting of weather.
(*c*) The issue of storm warnings.
(*d*) The display of weather and flood signals.
(*e*) The display of frost and cold wave signals.
(*f*) The distribution of meteorological information.
(*g*) Such other duties as are prescribed to give effect to the provisions of this Act.

The Governor-General may enter into an arrangement with the Governor of any State in respect of all or any of the following matters:—

(*a*) The transfer to the Commonwealth, on such terms as are agreed upon, of any observatory and the instruments, books, registers, records, and documents used or kept in connection therewith.
(*b*) The taking and recording of meteorological observations by State officers.
(*c*) The interchange of meteorological information between the Commonwealth and State authorities.
(*d*) Any matters incidental to any of the matters above specified or desirable or convenient to be arranged or provided for for the purpose of efficiently and economically carrying out this Act.

The Governor-General may enter into any arrangement with the Governments of other countries or any of them for the interchange of meteorological information and any matter incidental thereto between such Governments and the Commonwealth.

The Governor-General may make regulations prescribing all matters necessary or desirable to be prescribed for carrying out or giving effect to this Act.

H. A. Hunt, Esquire, F.R.M.S., was appointed Commonwealth Meteorologist, and entered upon his duties on the 1st January, 1907.

3. **Meteorological Conference.**— Under the presidency of the Commonwealth Meteorologist, a conference of meteorologists was held in the Conference-room of the Bureau of Census and Statistics during the period from the 20th to the 23rd May, 1907, when the following questions were discussed, viz.:—

(i.) The range of practical meteorological observation to be at once undertaken.
(ii.) The expansion of meteorological work to be undertaken in the future.
(iii.) The extent of purely scientific investigations, the undertaking of which is desirable in the interests of meteorology.
(iv.) Meteorological records, reports, and publications.
(v.) Maritime meteorology.
(vi.) The relation of river observation to flood forecasting.
(vii.) The co-operation of the Commonwealth and States Departments.

4. **Organisation of Meteorological Bureau.**—The Central Bureau premises are situated at the corner of Victoria and Drummond Streets, Carlton, Melbourne. Observations are carried on at this site, and also within the Royal Society's grounds, which afford a better exposure for the instruments. Divisional offices are also maintained in the capitals of each of the other States. The central Bureau is divided into five sub-departments, each being under the immediate supervision of assistants, whose duties are distributed as follows:—

Weather predictions, storm warnings, summaries of current weather, and management of the Central Bureau.

Divisional Bureaux and observing stations.

Climatological work and records of the Commonwealth.

Daily observations, entry of same into ledgers, reduction tables for various elements, distribution and collection of information with respect to the maritime branch of the service.

Instrumental stock, standardising and satisfactory working of all instruments before distribution to the observing stations throughout the Commonwealth.

The five assistants have been drawn from the different States, where they held leading positions in the meteorological services prior to the advent of federal control. They now constitute a daily forecast board, presided over by the Commonwealth Meteorologist. The observations made at the chief meteorological stations are telegraphed to the Central Bureau, where they are plotted on charts and discussed by the Board. The results of its deliberations are then wired to the divisional Bureaux, where they are amplified or modified in the light of the latest local indications, and then distributed to the settled districts of the respective States.

5. **Publications, etc.**—The following have been issued daily, viz.:—(i.) Weather charts. (ii.) Rainfall maps. (iii.) Bulletins, Victorian and Interstate, shewing pressure, temperature, wind, rain, cloud extent, and weather.

The Bulletins of Climatology are as follow:—(*a*) Bulletin No. 1.—A general discussion of the climate and meteorology of Australia, illustrated by one map and diagrams.

(*b*) Bulletin No. 2.—A discussion of the rainfall over Australia during the ten years (1897-1906) compared with the normal, illustrated by one map.

Bulletin No. 3.—Notes and statistics of the remarkable flood rains over south-eastern Australia during the winter of 1909, illustrated by five maps and diagrams.

Bulletin No. 4.—A discussion of the monthly and seasonal rainfall over Australia, illustrated by one map and diagram.

Bulletin No. 5.—An investigation into the possibility of forecasting the approximate winter rainfall for Northern Victoria, illustrated by two diagrams.

Commencing with January, 1910, the "Australian Monthly Weather Report," containing statistical records from representative selected stations, with rain maps and diagrams, etc., is being published. It is proposed to publish in an annual volume of meteorological statistics, complete rainfall and other climatological data.

6. **General Description of Australia.**—In the general description of Australia, page 53, it is pointed out that a considerable portion (0.530) of three States of the Australian Commonwealth is north of the tropic of Capricorn, that is to say, within the States of Queensland, the Northern Territory and Western Australia, no less than 1,149,320[1] square miles belong to the tropical zone, and 1,020,720 to the temperate zone. The whole area of the Commonwealth within the temperate zone, however, is 1,825,261[2] square miles, thus the tropical part is about 0.386, or about five-thirteenths of the whole, or the "temperate" region is half as large again as the "tropical" (more accurately 1.509). By reason of its insular geographical position, and the absence of striking physical features, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe; and latitude for latitude Australia is, on the whole, more temperate.

The altitudes of the surface of Australia range up to a little over 7300 feet, hence its climate embraces a great many features, from the characteristically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the great Dividing Range.

While on the coast the rainfall is often abundant and the atmosphere moist, in some portions of the interior the rainfall is very limited, and the atmosphere dry. The distribution of forest, as might be expected, and its climatic influence, is consequently very variable. In the interior there are on the one hand fine belts of trees, on the other there are large areas which are treeless, and where the air is hot and parched in summer. Again, on the coast, even as far south as latitude 35°, the vegetation is tropical in its luxuriousness and also somewhat so in character. Climatologically, therefore, Australia may be said to present a great variety of features. The various climatological characteristics will be referred to in detail.

7. **Meteorological Divisions.**—The Commonwealth Meteorologist has divided Australia, for climatological and meteorological purposes, into five divisions. The boundaries between these may be thus defined:—(*a*) Between divisions I. and II.,

---

1. In the article "Australia" in the Encyclopædia Britannica, Vol. XXX., p. 796, this area is given as 1,145,000 square miles.

2. Given as 1,801,700 square miles in the work above quoted, where, however, the statistics are said "to refer only to the continental States of the Federation, not to Tasmania."

the boundary between South and Western Australia, viz., the 129th meridian of east longitude; (*b*) between divisions II. and III., starting at the Gulf of Carpentaria, along the Norman River to Normanton, thence a straight line to Wilcannia on the Darling River, New South Wales; (*c*) between divisions II. and IV., from Wilcannia along the Darling River to its junction with the Murray; (*d*) between divisions II. and V., from the junction of the Darling and Murray Rivers, along the latter to Encounter Bay; (*e*) between divisions III. and IV., starting at Wilcannia, along the Darling, Barwon, and Dumaresq Rivers to the Great Dividing Range, and along that range and along the watershed between the Clarence and Richmond Rivers to Evans Head on the east coast of Australia; (*f*) between divisions IV. and V., from the junction of the Darling and Murray Rivers along the latter to its junction with the Murrumbidgee, along the Murrumbidgee to the Tumut River, and along the Tumut River to Tumut, thence a straight line to Cape Howe; (*g*) division V. includes Tasmania.

The populations included within these boundaries on 30th June, 1907, may be taken approximately as follows:—

Division	I.	II.	III.	IV.	V.
Population	260,000	481,000	537,000	1,369,000	1,511,000

In these divisions the order in which the capitals occur is as follows:—(i.) Perth, (ii.) Adelaide, (iii.) Brisbane, (iv.) Sydney, (v.) Melbourne, (vi.) Hobart, and for that reason the climatological and meteorological statistics will be set forth in the indicated order in this publication.

(i.) *Special Climatological Stations.* The latitudes, longitudes, and altitudes of special stations, the climatological features of which are graphically represented hereinafter, are as follows:—

SPECIAL CLIMATOLOGICAL STATIONS.

Locality.	Height above Sea Level.	Latitude. S.		Longitude. E.		Locality.	Height above Sea Level.	Latitude. S.		Longitude. E.	
	Feet.	deg.	min.	deg.	min.		Feet.	deg.	min.	deg.	min.
Perth	197	31	57	115	51	Port Darwin ...	97	12	28	130	51
Adelaide ...	140	34	56	138	35	Daly Waters ...	700	16	16	133	23
Brisbane ...	137	27	28	153	2	Alice Springs ...	1926	23	38	133	37
Sydney	146	33	52	151	12	Dubbo ...	863	32	18	148	35
Melbourne ...	91	37	50	144	59	Laverton ...	1530	28	40	122	23
Hobart	160	42	53	147	20	Coolgardie ...	1402	30	57	121	10

8. **Temperatures.**—In respect of Australian temperatures generally it may be pointed out that the isotherm for 70° Fahrenheit extends in South America and South Africa as far south as latitude 33°, while in Australia it reaches only as far south as latitude 30°, thus shewing that, on the whole, Australia has a more temperate climate when compared latitude for latitude with places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included in the comparison, for in the United States the 70° isotherm extends in several of the western States as far north as latitude 41°. In Europe the same isotherm reaches almost to the southern shores of Spain, passing, however, afterwards along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia nearly the whole of the land area south of latitude 40° N. has a higher isothermal value than 70°.

The extreme range of shade temperatures in summer and winter in a very large part of Australia amounts to probably only 81°. In Siberia, in Asia, the similar range is no less than 171°, and in North America 153°, or approximately double the Australian range.

Along the northern shores of the Australian continent the temperatures are very equable. At Port Darwin, for example, the difference in the means for the hottest and coldest months is only 8.7°, and the extreme readings for the year, that is, the highest maximum in the hottest month and the lowest reading in the coldest month, shew a difference of under 50°.

Coming southward the extreme range of temperature increases gradually on the coast, and in a more pronounced way inland.

The detailed temperature results for the several capitals of the States of Australia are shewn in the Climatological Tables hereinafter. It will suffice here to briefly refer to special features.

(i.) *Perth.* Meteorological observations were taken in the Perth Botanical Gardens as far back as 1876, but since the conditions surrounding the instruments and the situation of the station relative to Perth cannot be regarded as quite satisfactory, the more exact climate history of Perth did not properly commence until 1897, when the present Observatory was established. During the period 1897 to 1909, the mean annual shade temperature of Perth was 64°, about a degree higher than that for Sydney and Adelaide, over 5° higher than that for Melbourne, and 10° above that for Hobart, but, on the other hand, 5° below that for Brisbane. The average temperature for the month of January is 73.6°, and for July 55.0°.

The extreme maximum shade record of 107.9° was registered in December, 1904, and the lowest minimum shade temperature was 35.3°, in August, 1908.

(ii.) *Adelaide.* In Adelaide the climate is drier and more sunny than in the other capitals, and, consequently, radiation is less hindered. The extremes of heat are consequently somewhat more marked, especially in the summer months. The mean shade temperature for January is 74.2°, and February 73.9°, and that of July 51.5°. Records of the temperature having reached 100° exist for each of the six summer months from October to March, and of having exceeded 110° exist for each of those months with the exception of March and October. The highest record of shade temperature in Adelaide is 116.3°, registered in January, 1858, and the lowest 32.0°, a range of 84.3°. The freezing point has only once been reached by the shade temperature thermometers, notwithstanding the fact that records have been kept for fifty-two years. Frosts have, however, occurred on the grass (four feet below the shade thermometers) at various times between the beginning of April and the end of November.

(iii.) *Brisbane.* In Brisbane the monthly mean shade temperature ranges from 77.2° in January to 58.0° in July, a difference of 19.2°. The extremes have varied from 108.9° in January to 36.1° in July, viz., through a range of 72.8°.

(iv.) *Sydney.* In Sydney the highest monthly mean is 71.6°, recorded in January, while the lowest, again in July, is 52.3°, giving a range of 19.3°.

The extremes of shade temperature recorded at Sydney over a period of half a century are 108.5° in January, 1896, and 35.9° in July, 1890, *i.e.*, a range of 72.6°.

(v.) *Melbourne.* In Melbourne the January mean shade temperature averages 67.4°, and that of July 48.5°, the highest reading ever recorded being 111.2° in January, 1862, and the lowest 27.0° in July, 1869.

(vi.) *Hobart.* The mean temperature for the hottest month at Hobart is 62.0° in January, and that of the coldest 45.8°, in July, the highest reading ever recorded being 105.2° in December, 1897, and the lowest 27.7°, nearly a degree higher than the lowest experienced in Melbourne.

(vii.) *Hottest and Coldest Parts.* A comparison of the temperatures recorded at coast and inland stations shews that, in Australia as in other continents, the range increases with increasing distance from the coast.

In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds 120° in the shade, and during the dry winters the major portion of the country to the south of the tropics is subject to ground frosts. An exact knowledge of temperature disposition cannot be determined until the interior becomes more settled, but from data procurable, it would appear that the hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer sometimes exceeds 100° for days, and even weeks continuously. The coldest part of the Commonwealth is the extreme south-east of New South Wales and extreme east of Victoria, namely, the region of the Australian Alps. Here the temperature seldom, if ever, reaches 100° even in the hottest of seasons.

In Tasmania also, although occasionally hot winds may cross the Straits and cause the temperature to rise to 100° in the low-lying parts, yet the island as a whole enjoys a most moderate and equable range of temperature throughout the year.

(viii.) *Monthly Maximum and Minimum Temperatures.* The mean monthly maximum and minimum temperatures can be best shewn by means of graphs, which exhibit the nature of the fluctuation for each for the entire year. In the diagram (on page 103) for nine representative places in Australia, the upper heavy curves shew the mean maximum, the lower heavy curves the mean minimum temperatures based upon daily observations. On the same diagram the thin curves shew the relative humidities (see next paragraph).

9. **Relative Humidity.**—Next after temperature the degree of humidity may be regarded as of great importance as an element of climate; and the characteristic differences of relative humidity between the various capitals of Australia call for special remark. For nine representative places the variations of humidity are shewn on the graph on page 103, which gives results based upon daily observations of the greatest and least humidity. Hitherto difficulties have been experienced in many parts of Australia in obtaining satisfactory observations for a continuous period of any length. For this reason it has been thought expedient to refer to the record of humidity at first order stations only, where the results are thoroughly reliable. Throughout, the degree of humidity given will be what is known as *relative humidity*, that is, the percentage of aqueous vapour actually existing to the total possible if the atmosphere were saturated.

(i.) *Perth.* At Perth the mean annual humidity at 9 a.m. is 63; the greatest monthly mean is 83, and is in June, and the lowest 45, in January.

(ii.) *Adelaide.* At Adelaide the mean annual humidity is only 56; the mean monthly humidity has been as low as 33 in January and December, and as high as 87 in July.

(iii.) *Brisbane.* In Brisbane the mean annual humidity is 68; the lowest monthly mean recorded is 47, and is in September, and the highest 85 in the months of March and May.

(iv.) *Sydney.* In Sydney the mean annual humidity is 73; the greatest monthly average, which occurred in May, 1889, the wettest month on record during the last forty years, was 90, while the lowest monthly mean, 55, occurred in the month of October, 1867.

(v.) *Melbourne.* The mean annual humidity derived from the 9 a.m. 3 p.m. and 9 p.m. observations in Melbourne is 71; the greatest monthly average 88, in June and July, 1888, and the lowest 49, in December, 1908.

(vi.) *Hobart.* Hobart's mean annual humidity is 71, the highest 92, in June, and the lowest 51, in February.

From the above results, it is seen that, in respect of relative humidity, Sydney has the first place, while Hobart, Melbourne, Brisbane, Perth, and Adelaide follow in the order stated, Adelaide being the driest. The graphs on page 103 shew the annual variations in humidity. It will be observed that the *relative* humidity is ordinarily but not invariably great when the temperature is low.

10. **Evaporation.**—The rate and quantity of evaporation in any territory is influenced by the prevailing temperature, and by atmospheric humidity, pressure and movement. In Australia the question is of perhaps more than ordinary importance; since in its drier regions water has often to be conserved in "tanks"[1] and dams. The magnitude of the economic loss by evaporation will be appreciated from the following records, which have been obtained from either jacketed tanks sunk into the ground, or in the case of Laverton (W.A.) from a jacketed vessel (8 inches in diameter) exposed on the surface.

The average total evaporation at Sydney is 37.42 inches; at Melbourne, 38.40 inches; at Adelaide, 54.63 inches; and at Perth, 65.87 inches, these results being based respectively upon 46, 37, 39, and 10 years' observations. For Brisbane the result is 85.37 inches, based upon 8 years' observations only, and determined by means of Piché's tube evaporimeter.

In the interior of New South Wales the annual evaporation is as high as 84 inches; in Central Australia at Alice Springs the average for 19 years is 97.44 inches; at Coolgardie, Western Australia, the mean for eleven years is 86.43 inches, and at Laverton, in the same State, the yearly amount derived from the last 4 years is 145.32 inches, or over 12 feet.

(i.) *Monthly Evaporation Curves.* The curves shewing the mean monthly evaporation in various parts of the Commonwealth will disclose how characteristically different are the amounts for the several months in different localities. The evaporation for characteristic places is shewn on diagram shewing also rainfalls (see page 104).

(ii.) *Loss by Evaporation.* In the interior of Australia the possible evaporation is often greater than the actual rainfall. Since, therefore, the loss by evaporation depends largely on the exposed area, tanks and dams so designed that the surface shall be a minimum are advantageous. Similarly, the more protected from the direct rays of the sun and from winds, by means of suitable tree planting, the less will be the loss by evaporation: these matters are of more than ordinary concern in the drier districts of Australia.

11. **Rainfall.**—As even a casual reference to climatological maps, indicating the distribution of rainfall and prevailing direction of wind, would clearly shew, the rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by the physiographical features generally.

Australia lies within the zone of the south-east and westerly trade winds. The southern limit of the south-east trade strikes the eastern shores at about 30° south latitude. Hence we find that, with very few exceptions, the heaviest rains of the Australian continent are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains, upon which the rain-laden winds blow, from the New South Wales northern border to Thursday Island. The converse effect is exemplified on the north-west coast of Western Australia from the summer south-east trade winds. Here the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly trade winds, which skirt the southern shores, are responsible for the very reliable, although generally light, rains enjoyed by the south-western portion of Western Australia, by the south-eastern agricultural areas of South Australia, by a great part of Victoria, and by the whole of Tasmania.

---

1. In Australia artificial storage ponds or reservoirs are called "tanks."

(i.) *Factors determining Distribution and Intensity of Rainfall.* The distribution and intensity of rainfall in the interior of the continent, and also to some extent in the areas already mentioned, are governed by the seasonal peculiarities of three distinct atmospheric control systems, the most important of which is, undoubtedly, the anti-cyclonic stream. This stream, which girdles the earth and embraces approximately the region between 15° and 40° south latitude, breaks up into vast elliptically-shaped bodies of circulating atmosphere, measuring frequently 3000 miles in their major and 2000 miles in their minor axes. In passing over Australia from west to east, these great bodies of circulating air cause moist-laden winds to sweep across the continent from the surrounding oceans. The front-circulation brings in winds from the Southern Ocean, and the rear-circulation those from the equatorial seas.

The rain-invoking agent second in order of importance because of its reliability is the well-known "V-shaped depression." The sphere of operation of this latter disturbance is ordinarily the southern half of the continent, although occasionally it may extend its influence to tropical latitudes. The western half of this type of disturbance, with a southerly wind circulation, is the portion from which rain is most frequently to be expected, but occasionally good falls of rain, attended with electrical manifestations, are liberated from the warm eastern portion.

The third agent associated with the production of rain is the tropical depression more popularly known as the "monsoonal depression." This disturbance may be in active evidence for a succession of seasons, and then be conspicuously absent for a number of years, thus raising the question whether, after all, it can be regarded as in any way a distinctive feature of Australian meteorology.

When these disturbances are actively operative in the production of rain, the effect on the country generally, and the economic results for the succeeding season, are very pronounced. The interior of the continent becomes transformed. The plains, which ordinarily have so profound an effect on the heat winds of the summer, are deluged with rain, and respond immediately with an astonishingly luxurious growth of grass and herbage. The air is both tempered in heat, and loses its dryness for considerable periods after their visitations.

The distribution of rain by monsoonal disturbances is, however, very capricious in comparison with that precipitated by the southern "depressions." During some seasons the whole of the northern half of the continent will benefit to a fairly uniform degree, at another time some special region will be favoured. A remarkable example of this peculiarity occurred in 1902, for when monsoonal rains were copiously falling over the major portion of Western Australia, the eastern half of the continent was suffering from severe drought conditions.

During other seasons, tongue-shaped regions extending southwards from the northern shores of the continent will be particularly favoured in regard to rain. These regions may extend to the interior of Western Australia, and simultaneously others may occur in the Central Territory, in Western Queensland, and in the interior of New South Wales.

It is thus obvious that different parts of the continent are mainly dependent upon forms of atmospheric disturbances for what may be called their fundamental rains, and since there is a seasonal tendency for a particular class of storms to predominate, it rarely happens that any year passes in which the rains are universally good. Again, the condition of drought can hardly affect the whole of the continent at the same time. Nevertheless a more than ordinarily fortunate condition in one part of the continent ordinarily implies drought conditions in another, or *vice-versâ*. Thus in New South Wales, monsoonal rains, so beneficial to its north-western districts, rarely extend during the same season to coastal areas, or to Southern Riverina. For this reason it may happen occasionally that sheep may with advantage be sent 500 or 600 miles from the coast for feed and water. Should the southern or antarctic low-pressures be the predominating influence, the country to the south of the Murrumbidgee River is benefit-

ing at the expense of the remainder of the State. A good coastal season ordinarily depends upon an anticyclonic control; when such exists, the country west of the table-lands usually wants water.

A good season for Australia as a whole is dependent upon many circumstances. Not only must the main rain-giving storms be well represented, but other favourable conditions must also coexist. The general rate of translation of the atmosphere across the continent is a factor of the utmost importance. Another is the latitude the cyclones and anti-cyclones are moving in, and, further, the daily or periodic surgings of high and low pressures to and from the equator are also factors of considerable moment.

(ii.) *Time of Rainfall.* Monsoonal rains affect the northern parts of the continent in the summer months, and may continue with diminishing energy for nearly six months of the year. As they penetrate into higher latitudes the period of action is delayed, but is not shortened, though the quantities of the fall materially lessen. Ant-arctic rains are experienced during the winter months of the year, the resultant quantities being reliable and consistently regular. The heaviest totals from this source are precipitated on the west coast of Tasmania. Thus at Mount Lyell the total for one year exceeded 140 inches, and even the average is 115.93 inches.

Anticyclonic rains occur at all times of the year, but more markedly from March to September. They benefit particularly the southern area of the continent, and are responsible for many of the heaviest rainfalls and floods on the coastal districts of New South Wales.

(iii.) *Wettest and Driest Regions.* The wettest known place in Australia is Geraldton, on the north-east coast of Queensland, where the average rainfall for 23 years is no less than 147.78 inches, the maximum yearly total being 211.24 inches and the minimum 69.87 inches. The difference of range between these extremes is 141.37 inches.

The driest known part of the continent is about the Lake Eyre district in South Australia (the only part of the continent below sea level), where the annual average is but 5 inches, and where it rarely exceeds 10 inches for the twelve months.

The inland districts of Western Australia have until recent years been regarded as the driest part of Australia, but authentic observations taken during the past decade at settled districts in the east of that State shew that the annual average is from 10 to 12 inches.

(iv.) *Quantities and Distribution of Rainfall generally.* The departure from the normal rainfall increases greatly and progressively from the southern to the northern shores of the continent, and similarly also at all parts of the continent, subject to capricious monsoonal rains, as the comparisons hereunder will shew. The general distribution is best seen from the map on page 107, shewing the areas subject to average annual rainfalls lying between certain limits. The areas so defined are shewn in the following table:—

DISTRIBUTION OF AVERAGE RAINFALL.

Average Annual Rainfall.	N.S.W.	Victoria.	Queensland.	South Aust.	Northe'n Territ'y.	Western Aust.	Tasmania.	Commonwealth.
	sqr. mls.	sqr. mls.	sqr. mls.	sqr. mls.	sqr. mls.	sqr. mls.	sqr. mls.	sqr. mls.
Under 10 inches	79,629	nil	126,390	309,196	153,226	417,896	nil	1,086,337
10—20 ,,	118,685	36,241	251,150	57,025	181,298	397,416	nil	1,041,815
20—30 ,,	76,217	38,794	175,390	13,257	88,505	109,481	4,242	505,886
30—40 ,,	24,685	8,072	67,310	370	16,765	37,498	7,397	162,097
Over 40 ,,	11,156	4,777	50,260	222	83,826	13,629	14,576	178,446
Total area ...	310,372	87,884	670,500	380,070	523,620	975,920	26,215	2,974,581

Referring first to the southern capitals, it may be noted that the average at Melbourne from 66 years' records is 26.15 inches; the maximum 44.25, and minimum 15.61; the range therefore is 28.64 inches. At Adelaide the average determined from seventy years' totals is 21.10, the maximum 30.87, the minimum 13.43, and the range therefore 17.44 inches. At Hobart 23.36 inches is the average annual rainfall, 40.67 is the highest total for one year, 13.43 is the lowest; thus 27.24 inches is the extreme range. The average for Perth is 33.44 inches, 46.73 being the maximum and 20.48 inches the minimum; the range is therefore 26.25 inches. These figures appear to constitute an exception to the general rule, but it should be mentioned as a possible explanation that records have there been taken only since 1876, whereas the records at the other cities date from 1840 or thereabouts.

Continuing the comparison of rainfall figures, Sydney's average annual total is 48.28 inches, its maximum 82.81 in 1860, and minimum 21.48 in 1849, thus the range is 61.33 inches. At Brisbane the disparities are greater still. There the average is 46.94 inches —a trifle lower than that of Sydney—the annual maximum was 88.26 inches in 1893, the minimum 16.17 inches in 1902, and the range therefore 62.09 inches.

In order to shew how the rainfall is distributed throughout the year in various parts of the continent, the figures of representative towns have been selected. Port Darwin, typical of the Northern Territory, shews that in that region nearly the whole of the rainfall occurs in the summer months, while little or nothing falls in the middle of the year. The figures of Perth, as representing the south-western part of the continent, are the reverse, for while the summer months are dry, the winter ones are very wet. In Melbourne and Hobart the rain is fairly well distributed throughout the twelve months, with a maximum in October in the former, and in November in the latter. The records at Alice Springs and Daly Waters indicate that in the central parts of Australia the wettest months are in the summer and autumn. In Queensland, as in the Northern Territory, the heaviest rains fall in the summer months, but good averages are also maintained during the other seasons.

On the coast of New South Wales, the first six months of the year are the wettest, with slight excesses in April and July; the averages during the last six months are fair and moderately uniform. In general it may be said that one-fourth of the area of the continent, principally in the eastern and northern parts, enjoys an annual average rainfall of from 20 to 50 inches, the remaining three-fourths receiving generally from 10 to 15 inches.

(v.) *Curves of Rainfall and Evaporation.* The relative amounts of rainfall and evaporation at different times through the year are best seen by referring to the graphs for a number of characteristic places. It will be recognised at once how large is the evaporation when water is fully exposed to the direct rays of the sun, and to wind, etc.

(vi.) *Tables of Rainfall.* The table of rainfall for a long period of years for each of the various Australian capitals affords information as to the variability of the fall in successive years, and the list of the more remarkable falls furnishes information as to what may be expected on particular occasions.

13. **Snowfall.**—Light snow has been known to fall even as far north, occasionally, as latitude 31° S., and from the western to the eastern shores of the continent. During exceptional seasons it has fallen simultaneously over two-thirds of the State of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter snow covers the ground to a great extent on the Australian Alps for several months, where also the temperature falls below zero Fahrenheit during the night, and in the ravines around Kosciusko and similar localities the snow never entirely disappears.

The antarctic "V"-shaped disturbances are always associated with our most pronounced and extensive snowfalls. The depressions on such occasions are very steep in the vertical area, and the apexes are unusually sharp-pointed and protrude into very low latitudes, sometimes even to the tropics.

14. **Hail.**—Hail falls throughout Australia most frequently along the southern shores of the continent, and in the summer months. The size of the hailstones generally increases with distance from the coast, a fact which lends strong support to the theory that hail is brought about by ascending currents. Rarely does a summer pass without some station experiencing a fall of stones exceeding in size an ordinary hen-egg, and many riddled sheets of light-gauge galvanised iron bear evidence of the weight and penetrating power of the stones.

Hail storms occur most frequently in Australia when the barometric readings indicate a flat and unstable condition of pressure. They are invariably associated with

tornadoes or tornadic tendencies, and on the east coast the clouds from which the stones fall are generally of a remarkable sepia-coloured tint.

15. **Barometric Pressures.**—The mean annual barometric pressure in Australia varies from 29.88 inches on the north coast to 30.06 inches over the central and southern parts of the continent. In January the mean pressure ranges from 29.76 inches in the northern and central areas to 29.94 and 29.95 inches in the southern. The July mean pressure ranges from 29.97 inches at Port Darwin to 30.18 at Alice Springs. Barometer readings, corrected to mean sea-level, have, under anticyclonic conditions in the interior of the continent, ranged from 30.81 inches to as low as 28.44 inches. This lowest record was registered at Townsville during a hurricane on the 9th March, 1903. The mean annual fluctuations of barometric pressure for the capitals of Australia are shewn on page 105.

16. **Wind.**—(i.) *Trade Winds.* The two distinctive wind currents in Australia are, as previously stated, the south-east and westerly trade winds. As the belt of the earth's atmosphere in which they blow apparently follows the sun's ecliptic path north and south of the equator, so the area of the continent affected by these winds varies at different seasons of the year. During the summer months the anticyclonic belt travels in very high latitudes, thereby bringing the south-east trade winds as far south as 30° south latitude. The westerly trade winds are forced a considerable distance to the south of Australia, and are very rarely in evidence in the hot months. When the sun passes to the north of the equator, the south-east trade winds follow it, and only operate to the north of the tropics for the greater part of the winter. The westerly winds, by the same force, are brought into lower latitudes during the same period of the year. They sweep across the southern areas of the continent from the Leeuwin to Cape Howe, and during some seasons are remarkably persistent and strong. They occasionally penetrate to almost tropical latitudes, and though usually cold and dusty inland, are of the greatest service to the country, for being rain-bearing winds, moisture is by their agency precipitated over vast areas in the south of the continent.

(ii.) *Land and Sea Breezes.* The prevailing winds second in order of importance are the land and sea breezes. These generally blow at right angles to the coast-line in their early stages, but are deflected to the north and south in the middle and later periods of the blows.

On the east coast the sea breezes which come in from the north-east, when in full force, frequently reach the velocity of a gale during the afternoon in the summer months, the maximum hourly velocity, ordinarily attained about 3 p.m., not unfrequently attaining a rate of 35 to 40 miles per hour. This wind, although strong, is usually shallow in depth, and does not ordinarily penetrate more than 9 or 12 miles inland.

The land breezes on the east coast blow out from a south-westerly direction during the night.

On the western shores of the continent the directions are reversed. The sea breezes come in from the south-west, and the land breezes blow out from the north-east.

(iii.) *Inland Winds.* Inland, the direction of the prevailing winds is largely regulated by the seasonal changes of pressure, so disposed as to cause the winds to radiate spirally outwards from the centre of the continent during the winter months, and to circulate spirally from the seaboard to the centre of Australia during the summer months.

(iv.) *Prevailing Direction at the State Capitals.* In *Perth*, southerly is the prevailing direction for November to February inclusive, and north-north-easterly for the mid-winter months.

In *Adelaide* the summer winds are from the south-west and south, and in the winter from north-east to north.

In *Brisbane*, south-east winds are in evidence all the year round, but more especially during the months January, February, March and April.

In *Sydney* from May to September the prevailing direction is westerly, and for the remaining seven months north-easterly.

Melbourne winter winds are from north-west to north-east, and those of the summer from south-west to south-east.

At *Hobart* the prevailing direction for the year is from north-west.

Over the greater part of Australia January is the most windy month, *i.e.*, is the month when the winds are strongest on the average, though the most violent wind storms occur at other times during the year, the time varying with the latitude.

17. **Cyclones and Storms.**—(i.) *General.* The "elements" in Australia are ordinarily peaceful, and although severe cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months the southern shores of the continent are subject to cyclonic storms, evolved from the V-shaped depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Straits, including the coast-line of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these cyclones are experienced in their northern half, that is, in that part of them which has a north-westerly to a south-westerly circulation.

Occasionally the north-east coast of Queensland is visited by hurricanes from the north-east tropics. During the first three months of the year these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve of south-westerly direction. Only a small percentage, however, reach Australia, the majority recurving in their path before reaching New Caledonia.

Anemometrical records for these storms do not exist, but the fact that towns visited by them have been greatly damaged indicates that the velocity must be very great. Fortunately the area covered by these storms is very small when compared with the southern cyclones, and the region affected during an individual visitation is very limited. The heaviest blows are experienced to the west of the vortex with south-east to south-west winds.

(ii.) *Severe Cyclones.* Very severe cyclones, popularly known as "Willy Willies," are peculiar to the north-west coast of Western Australia from the months of December to March inclusive. They apparently originate in the ocean, in the vicinity of the Cambridge Gulf, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive, causing great havoc amongst the pearl-fishers. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the interior of Western Australia from similar storms.

Cyclones occasionally develop from incipient monsoonal low-pressures in the interior of the continent. Their formation is apparently materially assisted by the advancing high-pressures to the west of them, for they seldom or never appear without this accompaniment. The velocity and duration of the resultant gales, too, have a distinct relation to the magnitude of pressure in the anticyclones. Evidence of excess of high pressures on such occasions indicates severe gales in the cyclones, and in the case of moderate pressures, moderate gales.

These cyclones do not attain their severest phases until they reach the seaboard. The most violent winds occur in the south-western quadrant, with south-west to south-east winds. The area affected on the coast-line is not usually very great. During the visitation of one of these storms, about 500 miles in diameter, in July, 1903, a strip of

land, only 80 miles in extent, was affected. But so severe was the gale within this region that steamers of from 8000 to 10,000 tons, leaving Port Jackson, were buffeted and tossed about like corks by the turbulent sea. Notwithstanding this, vessels 200 miles to the east lay becalmed and had no indication of the violent atmospheric upheaval relatively so near.

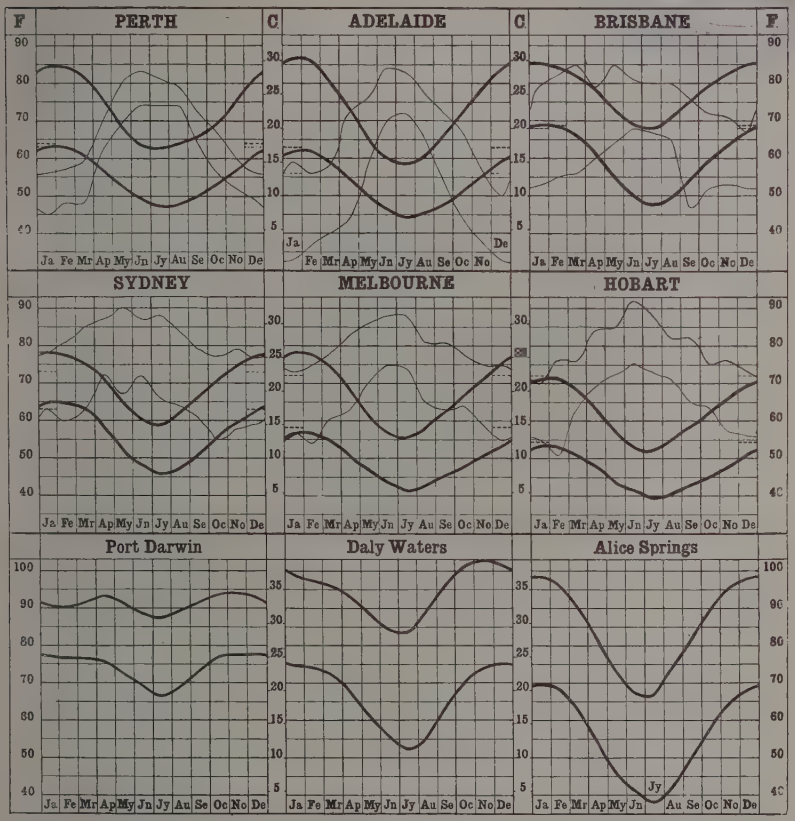
Though storms of this type may occur at any time of the year, they are more frequent during the months of August and September. The velocity of the wind has on one occasion reached the rate of 120 miles per hour.

(iii.) *Southerly Bursters.* The "Southerly Burster" is a characteristic feature of the eastern part of Australia. It is a cool, or cold, wind peculiar to the coastal districts of New South Wales, south of latitude 30°. In a modified form, however, it also appears in the interior of that State, in Victoria, and the western districts of Queensland.

The "Southerly Bursters" invariably follow periods of hot weather, and are a great relief to the population settled over the favoured areas. They occur in all months from August to May inclusive, but most frequently in November. The preceding winds in the early and late summer months are from a north-westerly, and in the midsummer months from a north-easterly direction. A rise in the barometer always takes place before their advent, but no relation has been established between the time this rise begins and the moment of the arrival of the wind itself, neither is there any apparent connection between the velocity of the wind and the rate of gradient of the barometric rise, notwithstanding that records of nearly fifteen hundred "Bursters," extending over a period of forty years, have been analysed with a view of ascertaining if such a connection could be established. All that can be said is that, should the rise be sharp and rapid, the life of the blow will be short, while a slow and gradual one indicates a long and steady blow from the south, after the initial "Burster" has passed. "Southerly Bursters" are usually first noted on the extreme south coast, and travel northward at a rate of 20 miles an hour. The rate of translation has ordinarily no definite relation to the velocity attained by the wind itself.

"Bursters" frequently occur simultaneously at several places along the seaboard, and occasionally they have been known to progress down the coast from north to south. While they may arrive at any time during the day or night, the interval between sundown and midnight is that in which they ordinarily occur.

This type of storm is usually associated with "V"-shaped depressions, but occasionally a condition of relatively high barometric pressures in Victoria will induce their occurrence. It is most frequent during seasons of sporadic rains, and very rare during good years in the interior. In the summer of 1890, the year of the great Darling River flood, only sixteen visitations occurred, and even these were of a very mild character. The series of good years in the interior of Australia, since 1903, has been remarkable for the small annual number of "southerly bursters."



The greatest number ever experienced in a single summer was sixty-two, the average being thirty-two.

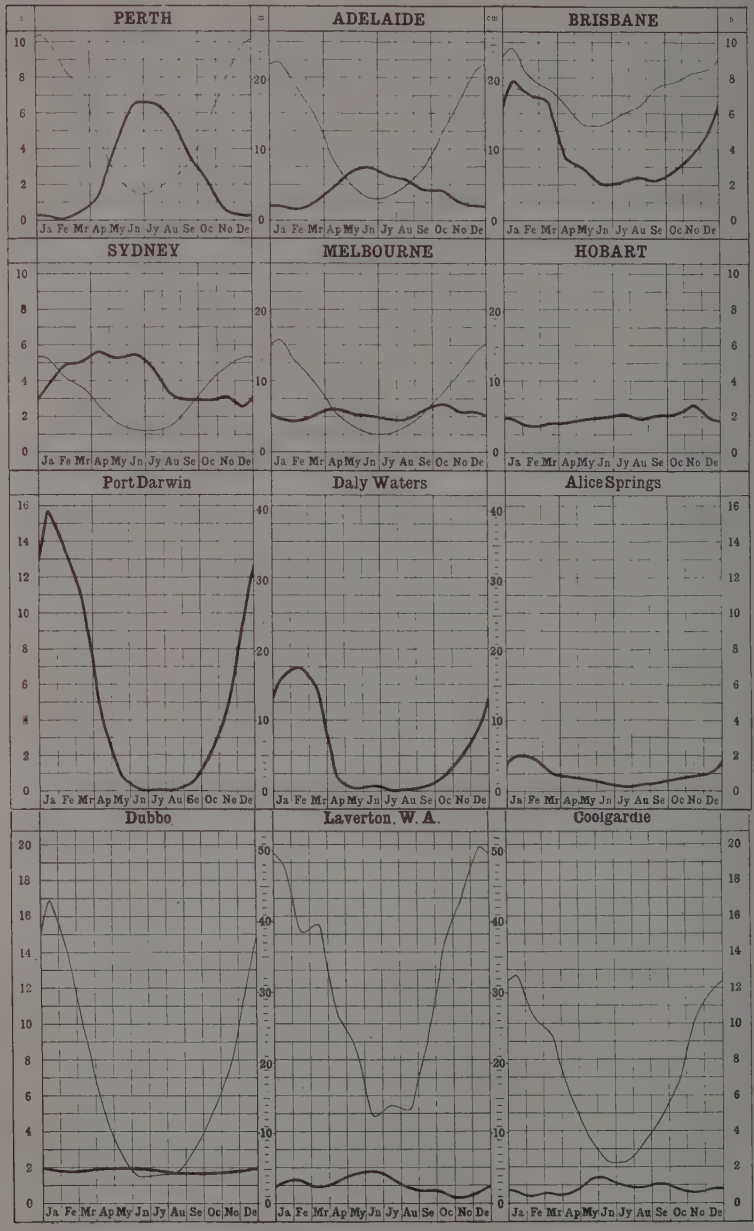
In the months of December and January they are usually short lived, and two may occur within the twenty-four hours. In the early and late summer months the intervening periods of warm weather are longer, and the winds are longer sustained, the energy being supplied from the more pronounced high pressures prevailing at these seasons of the year. The velocity varies from a rate of a few miles an hour to over 80 miles per hour, the maximum puffs occurring about an hour after the arrival of the burster. During recent years there has been a falling-off both in their number and strength, the reason for which is not yet understood, but it is suspected that the gradual extension of the agricultural and pastoral industries to the interior of the country may be one of the causes of the change.

Winds of a like character, and possibly derived from similar atmospheric actions and conditions, are—

In Europe—"The Bora," a sharp, cold north-east wind, which blows from the Croatian and Illyrian Mountains along the coast of Dalmatia from Trieste southward;

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN MAXIMUM AND MINIMUM TEMPERATURE AND HUMIDITY IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

Explanation of the Graphs of Temperature and Humidity.—In the above graphs, in which the heavy lines denote 'temperature' and the thin lines 'humidity,' the fluctuations of mean temperature and mean humidity are shewn throughout the year. These curves are plotted from the data given in the Climatological Tables hereinafter. The temperatures are shewn in degrees Fahrenheit, the inner columns giving the corresponding values in Centigrade degrees. Humidities have not been obtained for Port Darwin, Daly Waters, and Alice Springs.



For the thin lines the degree numbers represent relative humidities, or the actual percentages of actual saturation on the total for the respective temperatures.

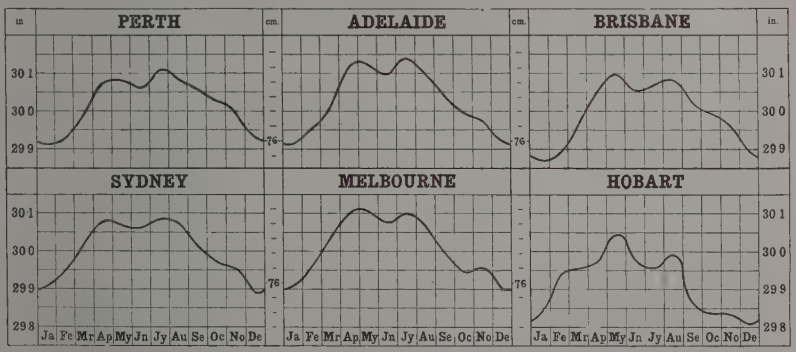
In both cases the upper line represents the mean of the maximum, and the lower line the mean of the minimum results; thus the curves also shew the progression of the range between maximum and minimum temperatures throughout the year.

Interpretation of the Graphs.—The curves denote mean monthly values. Thus, taking, for example, the temperature graphs for Perth, the mean readings of the maximum and minimum temperatures for a number of years on 1st January would give respectively about 83° Fahr. and 62° Fahr. Thus the mean range of temperature on that date is the difference, viz., 21°. Similarly, observations about 1st June would give respectively about 66° Fahr. and 51° Fahr., or a range of 15°.

In a similar manner it will be seen that the mean of the greatest humidities, say on 31st March, is about 64 and the mean of the least humidities 55; in other words, at Perth, the degree of saturation of the atmosphere by aqueous vapour ranges on 31st March between 64 % and 55 %.

GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN RAINFALL AND MEAN EVAPORATION IN SEVERAL PARTS OF THE COMMONWEALTH OF AUSTRALIA.

(For Explanation see next page.)



Explanation of the Graphs of Rainfall and Evaporation.—On the preceding graphs thick lines denote rainfall and thin lines evaporation, and shew the fluctuation of the mean rate of fall *per month* throughout the year. The results, plotted from the Climatological Tables hereinafter, are shewn in inches (see the outer columns), and the corresponding metric scale (centimetres) is shewn in the two inner columns. The evaporation is not given for Hobart, Port Darwin, Daly Waters, and Alice Springs.

Interpretation of the Graphs.—The distance for any date from the zero line to the curve, represents the average number of inches, reckoned as per month, of rainfall at that date. Thus, taking the curves for Adelaide, on the 1st January the rain falls on the average at the rate of about four-fifths of an inch per month, or, say, at the rate of about 9½ inches per year. In the middle of June it falls at the rate of nearly 3 inches per month, or, say, at the rate of about 36 inches per year. At Dubbo the evaporation is at the rate of nearly 17 inches per month about the middle of January, and only about 1½ inches at the middle of June.

TABLE SHEWING MEAN ANNUAL RAINFALL AND EVAPORATION IN INCHES OF THE PLACES SHEWN ON PRECEDING PAGE, AND REPRESENTED BY THE GRAPHS.

—	Rainfall.	Evaporation.	—	Rainfall.	Evaporation.
Perth ...	33.44	65.87	Port Darwin ...	61.49	—

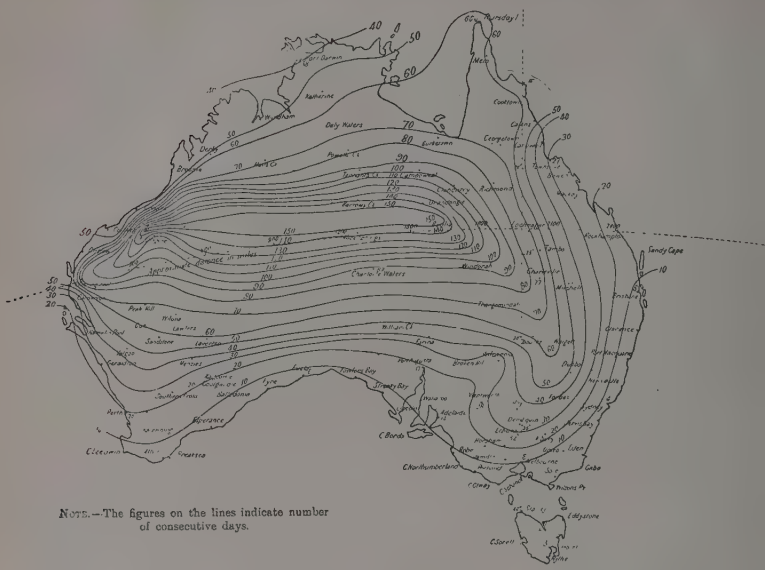
Hobart ...	23.36	—	Coolgardie ...	9.08	86.43



GRAPHS SHEWING ANNUAL FLUCTUATIONS OF MEAN BAROMETRIC PRESSURE FOR THE CAPITALS OF THE COMMONWEALTH OF AUSTRALIA.

Explanation of the Graphs of Barometric Pressure.—On the above graphs the lines representing the yearly fluctuation of barometric pressure at the capital cities are means for long periods, and are plotted from the Climatological Tables given hereinafter. The pressures are shewn in inches on about 2½ times the natural scale, and the corresponding pressures in centimetres are also shewn in the two inner columns, in which each division represents one millimetre.

Interpretation of the Barometric Graphs.—Taking the Brisbane graph for purposes of illustration, it will be seen that the mean pressure on 1st January is about 29.93 inches, and there are maxima in the middle of May and August of about 30.15 and 30.14 respectively. The double maxima appear clearly on each graph.

RAINFALL OF AUSTRALIA.

The above map has been prepared from a chart shewing the isohyets (curves of equal mean annual rainfall) for every 10 inches for Australia, and compiled from the most recent information.

AUSTRALIA
— AND —
TASMANIA

Showing the mean monthly distribution of Rainfall in percentages of the average annual

From map published by authority under the direction of H A Hunt Commonwealth Meteorologist

— NOTE —

The vertical side of each of the small squares of the graphs equals 2 per cent For convenience Tasmania has been placed in the centre of the map; it of course comes within the zone of winter rains. The large figures on the graphs indicate the number of Years record at the station indicated and the small sloping figures denote the average annual rainfall for that period

and the "Mistral," a violent northerly wind which blows from France to the Gulf of Lyons.

In North America, the "Northers" of Texas have similar characteristics, and in South America "The Pampero," a cold and strong southerly wind which blows over the Pampas of Argentina, is almost identical with the "Southerly Bursters." The "Tehuantepec" winds that blow on the Pacific side of Central America are also very similar.

All parts of Australia are subject during the summer months to hot, desiccating winds, of two kinds. The most common and general class are associated with low-pressure isobars. The more rare and local hot winds are caused by the heating of descending air on the lee-side of mountains. In Victoria the former class are known as "Brick Fielders," a name originally applied to the "Southerly Bursters" in Sydney, because of the dust they raised from the brickfields to the south of the city. When the goldfields were discovered in Victoria the miners hailing from Sydney gave the name to the dusty winds from the opposite quarter.

The hot winds on the south-eastern littoral are analogous to the "Chinook" winds which blow at the eastern foot of the Rocky Mountains; to the "Fœhn" winds of the Alpine Valleys; and to the "North-Westers" of the Canterbury Plains in the Middle Island of New Zealand.

18. **Influences affecting Australian Climate.**—Australian history does not cover a sufficient period, nor is the country sufficiently occupied, to ascertain whether or not the advance of settlement has materially affected the climate as a whole. Local changes therein, however, have taken place, a fact which suggests that settlement and the treatment of the land have a distinct effect on local conditions. For example, the mean temperature of Sydney shews a rise of two-tenths of a degree during the last twenty years, a change probably brought about by the great growth of residential and manufacturing buildings within the city and in the surrounding suburbs during that period. Again, low-lying lands on the north coast of New South Wales, that originally were seldom subject to frosts, have with the denudation of the surrounding hills from forests experienced annual visitations, the probable explanation being that, through the absence of trees, the cold air of the high lands now flows, unchecked and untempered, down the sides of the hills to the valleys and lower lands.

It is pointed out by Abercromby,[1] as shewing the influence of irrigation on climate, that "Before the Suez Canal was made, the desert through which it is cut was said to be rainless; now since the Bitter Lakes have been filled up with water, rain falls on an average eight days in the year at Ismailia." And in the United States, General A. W. Greely[2] says, concerning "Heat Waves," "It seems possible that the frequency and intensity of such visitations have diminished on the Pacific coast, since Tennant's record of hot days (classing as such those on which the temperature rose to 80° or above, at San Francisco) indicates that their annual number has very materially diminished since 1859. For seven years prior to 1859 such days averaged thirteen yearly, and since that time, up to 1871, the average yearly number is but four. The immense quantity of land placed under irrigation and the vast increase in vegetation are obvious reasons why there should be some diminution in this respect."

(i.) *Influences of Forests on Climate.* As already indicated, forests doubtless exercise a great influence on local climate, and hence, to the extent that forestal undertakings will allow, the weather can be controlled by human agency. The direct action of forests is an equalising one; thus, especially in equatorial regions and during the warmest portion of the year, they considerably reduce the mean temperature of the air. They also reduce the diurnal extremes of their shade temperatures, by altering the extent of radiating surface, by evaporation, and by checking the movement of air. While decreasing

1. "Seas and Skies," Hon. Ralph Abercromby. 8vo, London, 1888, p. 30.
2. "American Weather." 8vo, London, 1888, p. 253.

evaporation from the ground, they increase the relative humidity. Vegetation greatly diminishes the rate of flow-off of rain, and the washing away of surface soil. Thus, when a region is protected by trees, steadier water supply is ensured, and the rainfall is better conserved. In regions of snowfall the supply of water to rivers is similarly regulated, and without this and the sheltering influence of ravines and "gullies," watercourses supplied mainly by melting snow would be subject to alternate periods of flooding and dryness. This is borne out in the inland rivers. Thus, the River Murray, which has never been known to run dry, derives its steadiness of flow mainly through the causes above indicated.

(ii.) *Direct Influences of Forest on Rainfall.* Whether forests have a direct influence on rainfall is a debatable question, some authorities alleging that precipitation is undoubtedly induced by forests, while others contend the opposite. According to Dr. Hann, observations have been made in India and Germany which support the idea that the destruction of trees has had a most deteriorating effect upon the climate.[1] In the Cordilleras, clouds with rain falling from them can be seen hanging over forests, while over contiguous lands covered with shrubs or used for agriculture the sky is blue and the sun is shining.

In America the influence of forests on the rainfall is still debated, but in Europe authorities contend that forests encourage frequent rainfalls. Hann states that a surface which keeps the air moist and cool, and from which there is as great an evaporation as takes place from extended forests, must have a tendency to increase the amount and frequency of precipitation, as contrasted with an open country which is dry, but over which conditions are otherwise similar.

Obviously the settlement of this very important question is difficult. Observations would have to be taken, with different treatments of the land, over very extended periods. Sufficient evidence exists, however, to establish that, even if the rainfall has not increased, the beneficial effect of forest lands in tempering the effects of the climate is more than sufficient to disclose the importance of their protection and extension. Curtis, in a paper read before the Meteorological Congress in 1893, sets forth important evidence of the ill-effects on orchard and wheat country of the felling of trees for the timber trade.

In Michigan, where half a century ago peach trees flourished and were rarely injured by cold, the crops have now nearly disappeared, owing to the removal by timbermen of the shelter afforded by the forests. In Northern Kansas, too, from the same cause, the growing of peaches has been largely abandoned. Many of the South Californian citrus fruit-growers protect their orchards from the destructive effects of wind by the judicious planting of eucalyptus and other trees.

It is the rapid rate of evaporation (says Dr. Fernow), induced by both hot and cold winds, which injures crops and makes life uncomfortable on the plains. Whether the forest aids in increasing precipitation there may be doubt, but nobody can say that it does not check the winds and the rapid evaporation due to them.

Trees as wind-breaks have been successfully planted in central parts of the United States, and there is no reason why similar experiments should not be successful in many parts of our treeless interior. The belts should be planted at right angles to the direction of the prevailing parching winds, and if not more than half a mile apart will afford shelter to the enclosed areas.[2]

19. **Comparison of Rainfalls and Temperatures.**—For the purpose of comparison the following lists of rainfalls and temperatures are given for various important cities throughout the world, for the site of the federal capital, and for the capitals of the Australian States :—

SECTION IV.

POPULATION.

§ 1. Special Characteristics of Commonwealth Population.

1. **Sex Distribution.**—In respect of the relative proportions of the sexes in its population, Australia has, since the first settlement of the continent in 1788, differed materially from the older countries of the world. In the latter, the populations have, in general, grown by natural increase, and their composition usually reflects that fact, the numbers of males and females being in most countries approximately equal, with a more or less marked tendency, however, for the females to slightly exceed the males. The excess of females arises from a variety of causes, amongst which may be mentioned—(*a*) higher rate of mortality amongst males; (*b*) greater propensity on the part of males to travel; (*c*) the effects of war; (*d*) employment of males in the army, navy, and mercantile marine; (*e*) preponderance of males amongst emigrants. On the other hand, the last-mentioned cause has tended naturally to produce an excess of males in Australia, since the majority of those emigrating to Australia have been males. The circumstances under which the colonisation of Australia was first undertaken, and the remoteness of this country from Europe, have combined to accentuate this feature.

There is little doubt that the continent presented few attractions to the explorers who visited its shores, mainly on the west and north, during the sixteenth, seventeenth, and early part of the eighteenth centuries, and it was only when the Declaration of Independence of the United States, in 1776, closed to the British prison authorities the North American plantations, which had previously been used as receptacles for the deportation of convicts, that the overcrowding of the gaols caused them to consider the advisability of converting the great southern continent into a convict settlement. This idea was put into practice in 1787, when the first consignment left England, arriving in Sydney Cove on 26th January, 1788. Reports concerning the number of persons actually landed are conflicting, but it appears that the total may be set down approximately at 1035, including the military. Details as to the sexes are not available, but the males must have largely preponderated. Indeed, nearly nine years later, on the 31st December, 1796, in a total population of 4100, there were 257 males to every 100 females.

The subsequent progress of Australia resulting from extensive mineral discoveries and the development of its great natural resources, pastoral, agricultural, forestal, etc., have tended to attract male rather than female immigrants, particularly in view of the distance from the principal centres of European population. Even at the end of 1909, after more than 120 years of settlement, there were 111 males to each 100 females, and this notwithstanding the equalising tendency due to additions to the population by means of births and to deductions therefrom by the deaths of immigrants.

The terms "masculinity" and "femininity" have been used to express the proportion of the sexes in any group, the former indicating the ratio of males to females, the latter the reciprocal of this, viz., the ratio of females to males. The term "masculinity" is that which has been adopted by the Commonwealth Bureau of Census and Statistics,

and the masculinity of any group is usually expressed numerically as the number of males to each 100 females. The masculinity of the population of the Commonwealth at intervals of five years from 1800 to 1905, and also for the years 1906, 1907, 1908, and 1909 is as follows :—

MASCULINITY OF THE COMMONWEALTH POPULATION, 1800 to 1909.

Year.	Number of Males to each 100 Females.	Year.	Number of Males to each 100 Females.	Year.	Number of Males to each 100 Females.
1800	263.05	1845	163.38	1890	116.06
1805	233.35	1850	143.20	1895	113.41
1810	190.53	1855	145.48	1900	110.55
1815	188.84	1860	140.15	1905	111.23
1820	243.71	1865	125.38	1906	111.70
1825	329.77	1870	121.10	1907	111.48
1830	308.30	1875	118.25	1908	111.31
1835	260.71	1880	117.28	1909	111.46
1840	201.75	1885	118.33		

The curious inequalities of the increases in the number of males and in the number of females for the Commonwealth as a whole, and for the individual States respectively, will be seen by referring to the graphs on pages 158 and 159.

The significance of the rates of masculinity shewn in the above table will perhaps be better understood by a comparison with the corresponding information for other countries. This has been made in the next table, which shews, for some of the principal countries of the world for which such particulars are available, the masculinity of the population according to the most recent statistics :—

MASCULINITY OF THE POPULATION OF VARIOUS COUNTRIES.

Country.	Year.	No. of Males to each 100 Females.	Country.	Year.	No. of Males to each 100 Females.
New Zealand	1909	112.52	Ireland	1901	97.40
Australia	1909	111.46	Prussia	1905	97.38
India (Feudatory States)	1901	106.02	Russia (European) ...	1897	97.18
Servia	1905	105.87	German Empire	1905	97.17
Canada	1901	105.04	France	1901	96.85
United States of America	1900	104.87	Austria	1900	96.65
Rumania	1899	103.30	Sweden	1908	95.67
British India	1901	103.26	Spain	1900	95.36
Japan	1908	102.05	Scotland	1901	94.58
Poland (Russian) ...	1897	101.42	Denmark	1906	94 52
Greece	1907	101.37	Norway	1900	94.37
Belgium	1900	98.70	England and Wales ...	1901	93.63
Netherlands	1908	98.59	Portugal	1900	91.53

2. **Age Distribution.**—The causes which operated to bring about an excess of males in the population of the Commonwealth have been equally effective in rendering the age distribution essentially different from that of older countries. The majority of the immigrants, whether male or female, were in the prime of life, and as the Australian birth-rate in earlier years was a comparatively high one, the effect produced is a population in which the number of young and middle-aged persons is somewhat above, and the number for advanced ages somewhat below the normal.

Thus in the Commonwealth at the Census of 31st March, 1901, the age distribution of the population was as shewn in the table hereunder ; that for England and Wales is given also for the sake of comparison :—

AGE DISTRIBUTION OF POPULATION.

COMMONWEALTH AND ENGLAND AND WALES, AT CENSUS OF 31ST MARCH, 1901.

Age Group.	Population of Commonwealth.	Percentage on Total Population.	Population of England and Wales.	Percentage on Total Population.
Under 15	1,325,323	35.12	10,545,739	32.42
15 and under 65 ...	2,297,689	60.88	20,464,351	62.91
65 and upwards ...	150,789	4.00	1,517,753	4.67
Total	3,773,801	100.00	32,527,843	100.00

During the past 40 years, the age distribution of the Australian population has varied considerably, as will be seen from the following table, which gives for each sex the proportion per cent. of the total population in the age groups "under 15," "15 and under 65," and "65 and over." The figures upon which these percentages have been computed are those furnished by the Censuses of the several States. Those for 1861 include the results of the Western Australian Census of 1859, while those for 1871 include the results of the Western Australian and Tasmanian Censuses of 1870 :—

AGE DISTRIBUTION OF COMMONWEALTH POPULATION, 1861 to 1901.

Census Year.	Males.				Females.				Persons.			
	Under 15 Years	15 and under 65.	65 and over.	Total.	Under 15 Years	15 and under 65	65 and over.	Total.	Under 15 Years	15 and under 65.	65 and over.	Total.
	%	%	%	%	%	%	%	%	%	%	%	%
1861	31.41	67 42	1.17	100	43.03	56.20	0.77	100	36.28	62.72	1.00	100
1871	38.84	59.11	2.05	100	46.02	52.60	1.38	100	42.09	56.17	1.74	100
1881	36.37	60.85	2.78	100	41.89	56.07	2.04	100	38.91	58.65	2.44	100
1891	34.77	62.02	3.21	100	39.36	58.08	2.56	100	36.90	60.20	2.90	100
1901	33.87	61.82	4.31	100	36.50	59.85	3.65	100	35.12	60.88	4.00	100

The excess of males over females, previously referred to, is found mainly in ages of 21 and upwards. In the total population under the age of 21 there were, at the date of the last Census, less than 102 males to each 100 females, while in that aged 21 and upwards there were more than 118 males to each 100 females. In the absence of a large immigration of males, therefore, the disparity between the sexes in Australia would soon be eliminated.

3. **Race and Nationality.**—(i.) *Constitution of Australia's Population.* As regards race, the population of the Commonwealth may be conveniently divided into two main groups, one comprising the aboriginal natives of Australia, and the other the various immigrant races which, since the foundation of settlement in 1788, have made the Commonwealth their home. Under the head of "immigrant races" would, of course, be included not only those residents of Australia who had been born in other countries, but also their descendants born in Australia.

(*a*) *The Aborigines.* It would appear that the aboriginal population of Australia was never large, and that the life led by them was, in many parts of the country, a most precarious one. With the continued advance of settlement the numbers have shrunk to such an extent that in the more densely populated States they are practically negligible. Thus, at the Census of 1901 the number of full-blooded aboriginals and nomadic half-castes living with those of full blood remaining in New South Wales was stated to be 4287, while in Victoria the total was only 271, and in Tasmania the last aboriginal native died in 1876. In Queensland, South Australia, and Western Australia, on the other hand, there are considerable numbers of natives still in the "savage" state, numerical

information concerning whom is of a most unreliable nature, and can be regarded as little more than the result of mere guessing.

Ethnologically interesting as is this remarkable and rapidly-disappearing race, practically all that has been done to increase our knowledge of them, their laws, habits, customs, and language, has been the result of more or less spasmodic and intermittent effort on the part of enthusiasts either in private life or the public service. Strange to say, an enumeration of them has never been seriously undertaken in connection with any State Census, though a record of the numbers who were in the employ of whites, or living in contiguity to the settlements of whites, has usually been made. As stated above, various guesses at the number of aboriginal natives at present in Australia have been made, and the general opinion appears to have prevailed that 150,000 might be taken as a rough approximation to the total. Recent estimates, however, have given results considerably below this total. Thus, in his report of June, 1908, the Queensland Chief Protector of Aborigines estimates the total at 74,030, distributed as follows :—New South Wales, 6960 ; Victoria, 270 ; Queensland, 20,000 ; South Australia (including the Northern Territory) 19,800 ; Western Australia, 27,000. A somewhat similar estimate made by Dr. Roth, formerly Chief Protector of Aborigines in Queensland, gives Queensland at least 18,000 ; Western Australia at least 24,000, and the Northern Territory from 20,000 to 22,000. In view of these figures it would appear that the number of aboriginal natives in Australia may be said to be not more than 100,000. The whole matter, however, is involved in considerable doubt, and it is proposed to make an attempt to estimate the aboriginal population of Australia in connection with the first Commonwealth Census to be taken in 1911.[1]

The number of aboriginal natives enumerated in the several States of the Commonwealth at the Census of 1901 was as follows :—

ABORIGINAL NATIVES ENUMERATED AT CENSUS OF 1901.

Persons, etc	N.S.W.	Victoria	Queensland.	South Australia	Western Australia	Tasmania.	Commonwealth.
Males	2,451	163	3,089	14,076	2,933	0	22,712
Females	1,836	108	2,048	12,357	2,328	0	18,677
Total	4,287[1]	271	5,137	26,433	5,261	0	41,389
Masculinity[2] ...	133.5	150.9	150.8	113.9	126.0	—	121.6

1. Including 509 half-castes living in nomadic state with natives of full blood.
2. Number of males per hundred females.

These figures, as noted above, refer only to those natives who were, at the date of the census, in the employ of whites or were living in contiguity to the settlements of whites.

In the Commonwealth Constitution Act provision is made for aboriginal natives to be excluded for all purposes for which statistics of population are made use of under the Act, but the opinion has been given by the Commonwealth Attorney-General that, "in reckoning the population of the Commonwealth, half-castes are not aboriginal natives within the meaning of section 127 of the Commonwealth of Australia Constitution Act, and should therefore be included." It may be added, however, that as "half-castes," living in the nomadic state, are practically undistinguishable from aborigines, it has not always been found practicable to make the distinction, and further, that no authoritative definition of "half-caste" has yet been given.

(*b*) *Immigrant Races.* As regards the immigrant races, it may be said that they consist mainly of natives of the three divisions of the United Kingdom and their descendants. The proportion of Australian-born contained in the population of the Commonwealth has, in recent years, increased rapidly, and at the Census of 31st March, 1901,

1. An article on the Aborigines of Australia, specially written for the Year Book by W. Ramsay Smith, D.Sc., M.B., C.M., F.R.S.E., Permanent Head of the Department of Public Health of South Australia will be found in Section IV., § 12, page 158, Year Book No. 3.

out of a total population of 3,765,879 persons whose birthplaces were specified, no fewer than 2,908,303, or 77.23 per cent., were Australian born, while of the remainder, 679,159, or 18.03 per cent., were natives of the United Kingdom, and 25,788, or 0.68 per cent., were natives of New Zealand, that is, 95.94 per cent. of the total population at the date of the Census had been born in either Australasia or the United Kingdom. The other birthplaces most largely represented in the Commonwealth were Germany, 38,352 (1.02 per cent.); China, 29,907 (0.79 per cent.); Scandinavia (comprising Sweden, Norway and Denmark), 16,144 (0.43 per cent.); Polynesia, 10,363 (0.28 per cent.); British India, 7637 (0.20 per cent.); United States of America, 7448 (0.20 per cent.); and Italy, 5678 (0.15 per cent.). The total population of Asiatic birth was 47,014 (1.25 per cent.), of whom 3593 were born in Japan.

(ii.) *Biological and Sociological Significance.* As regards race and nationality, therefore, the population of Australia is fundamentally British, and thus furnishes an example of the transplanting of a race into conditions greatly differing from those in which it had been developed. The biological and sociological significance of this will ultimately appear in the effects on the physical and moral constitution produced by the complete change of climatic and social environment, for the new conditions are likely to considerably modify both the physical characteristics and the social instincts of the constituents of the population. At present the characteristics of the Australian population, whether physical, mental, moral, or social, are only in the making, and probably it will not be possible to point to a distinct Australian type until three or four generations more have passed. Even then it is hardly likely that with the great extent of territory and varying conditions presented by the Commonwealth there will be but one type; on the contrary, a variety of types may be expected. The Australian at present is little other than a transplanted Briton, with the essential characteristics of his British forbears, the desire for freedom from restraint, however, being perhaps more strongly accentuated. The greater opportunity for an open-air existence, and the absence of the restrictions of older civilisations, may be held to be in the main responsible for this.

4. **Differences among the States.**—(i.) *Sex Distribution.* The varying circumstances under which the settlement of the several States has been effected, and the essentially different conditions experienced in the due development of their respective resources, have naturally led to somewhat marked differences in the constitution of their populations. In the matter of sex distribution the States in which the normal condition of older countries is most nearly represented are those of Victoria and Tasmania, in the former of which the numbers of males and females have, for some years, been practically identical, while in the latter there are 105 males to each 100 females. In Western Australia and Queensland, on the other hand, the position of affairs is quite abnormal, the numbers of males to each 100 females being respectively 136 and 119.

The variation in the masculinity of the estimated population of the several States and of the Commonwealth as a whole during the past ten years will be seen from the following table:—

MASCULINITY* OF THE POPULATION, 31st DECEMBER, 1900 to 1909.
(COMMONWEALTH.)

Year.	Masculinity of the Population on 31st December.						
	N.S.W.	Vict.	Qld.	S. Aust.	W. Aust.	Tas.	C'wealth.
1900	111.14	101.23	125.33	104.04	157.54	107.97	110.55
1901	110.22	101.37	125.58	103.50	155.85	107.37	110.29
1902	111.17	100.77	124.39	103.08	154.14	108.15	110.42
1903	111.55	100.31	123.91	103.02	149.41	107.65	110.28
1904	112.42	99.96	123.06	105.53	147.15	106.95	110.64
1905	113.40	100.13	122.01	109.28	144.31	106.58	111.23
1906	114.26	100.25	120.66	112.85	142.15	106.46	111.70
1907	114.92	99.88	119.51	112.72	139.08	106.01	111.48
1908	114.36	100.16	118.84	113.94	137.46	105.33	111.31
1909	113.68	101.26	119.31	114.70	136.33	104.62	111.46

*Number of males to each 100 females.

(ii.) *Age Distribution.* The disparity in sex distribution exhibited by the several States is accompanied by a corresponding inequality in the matter of age distribution. The number of persons in each State at the Census of 31st March, 1901, at what are commonly known as the "dependent," "supporting," and "old" ages, and the proportion of same to total of each State and Commonwealth were as follows :—

NUMBER AND PROPORTION OF PERSONS IN THE COMMONWEALTH OF DEPENDENT, SUPPORTING, AND OLD AGE.

State.	Number of Persons of				Proportion of Population of		
	Dependent age (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).	All ages.	Dependent age (under 15).	Supporting age (15 and under 65).	Old age (65 and upwards).
					%	%	%
New South Wales ...	486,996	821,277	46,573	1,354,846	35.94	60.62	3.44
Victoria	409,363	725,647	66,060	1,201,070	34.08	60.42	5.50
Queensland ...	182,432	302,824	12,873	498,129	36.62	60.79	2.59
South Australia ...	129,237	218,982	14,938	363,157	35.59	60.30	4.11
Western Australia ...	53,270	127,532	3,322	184,124	28.93	69.26	1.81
Tasmania	64,025	101,427	7,023	172,475	37.12	58.81	4.07
Commonwealth ...	1,325,323	2,297,689	150,789	3,773,801	35.12	60.88	4.00

Thus in Western Australia a larger proportion of its population was of supporting age than in any other State. In Tasmania the proportion was the lowest. On the other hand, in Tasmania the proportion of dependent age was the highest for the Commonwealth, while the Western Australian proportion was the lowest. Victoria had the highest and Western Australia the lowest proportion of persons aged 65 years and upwards.

(iii.) *Birthplaces.* Complete information concerning the race and nationality of the population is not available in the Census returns, the material there furnished of this nature being the records of birthplaces. The following table exhibits, in a very condensed form, the distribution of the population of the several States according to birthplace :—

BIRTHPLACES AT CENSUS OF 31st MARCH, 1901.

(COMMONWEALTH.)

Birthplace.	Total Population of Commonwealth at Census.						
	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	C'wealth.
Australia ...	1,079,154	940,830	323,436	289,993	126,952	147,938	2,908,303
New Zealand ...	10,589	9,020	1,571	711	2,704	1,193	25,788
United Kingdom	220,401	214,371	126,159	56,862	41,551	19,815	679,159
Other European Countries ...	20,151	16,548	21,174	9,326	6,076	1,398	74,673
Asia	14,208	8,793	13,878	4,376	4,810	949	47,014
Africa	986	926	378	235	243	101	2,869
America ...	4,813	3,659	1,688	811	1,151	385	12,507
Polynesia ...	1,139	203	8,877	39	78	27	10,363
At Sea	1,967	1,564	634	539	317	182	5,203
Unspecified ...	1,438	5,156	334	265	242	487	7,922
Total ...	1,354,846	1,201,070	498,129	363,157	184,124	172,475	3,773,801

The proportions for the several States for each of the birthplaces shewn in the foregoing table expressed as percentages of the total population, the birthplaces of which were specified, are as follows:—

PERCENTAGE OF COMMONWEALTH POPULATION ACCORDING TO BIRTHPLACE, 31ST MARCH, 1901.

Birthplace.	Percentage of Total Population.						
	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	%	%	%	%	%	%	%
Australia	79.74	78.67	64.97	79.91	69.04	86.02	77.23
New Zealand ...	0.78	0.75	0.32	0.20	1.47	0.69	0.68
United Kingdom ...	16.28	17.93	25.34	15.67	22.60	11.52	18.03
Other European Countries	1.49	1.38	4.25	2.57	3.30	0.81	1.98
Asia	1.05	0.74	2.79	1.21	2.62	0.55	1.25
Africa	0.07	0.08	0.08	0.06	0.13	0.06	0.08
America	0.36	0.30	0.34	0.22	0.63	0.22	0.33
Polynesia	0.08	0.02	1.78	0.01	0.04	0.02	0.28
At Sea	0.15	0.13	0.13	0.15	0.17	0.11	0.14
Total	100.00	100.00	100.00	100.00	100.00	100.00	100.00

As regards distribution according to birthplace, the population of New South Wales is very similar to that of Victoria, the proportions born in Australia and Asia being slightly higher, and that born in the United Kingdom slightly lower, in the case of New South Wales. There is also a rough similarity between the population distributions of Queensland and Western Australia. In both, the Australian-born represent a much smaller, and those born in the United Kingdom, in "Other European Countries" and in Asia, a much larger proportion than is the case with the remaining States. Polynesians were, however, much more numerously represented in Queensland at the date of the Census than in any other State, but this position has been considerably modified by the subsequent deportation of Kanakas. Natives of New Zealand were, proportionately, most numerous in Western Australia. Tasmania had the largest proportion of Australian-born population, viz., 86 per cent., while Queensland, with 65 per cent., had the smallest. On the other hand, more than 25 per cent. of Queensland's population consisted of natives of the United Kingdom, while only 11½ per cent. of the population of Tasmania had been born there. For the Commonwealth as a whole 98 per cent. of the population were from Australasian or European birthplaces.

§ 2. Commonwealth Population—Its Distribution and Fluctuation.

1. **Present Population.**—The estimated population of the several States of the Commonwealth at the end of each of the last ten years is as follows:—

POPULATION OF COMMONWEALTH on 31st DECEMBER, 1900 to 1909.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
			MALES.

2. **Growth of Population.**—(i.) *1788 to 1824.* From 1788, when settlement first took place in Australia, until December 1825, when Van Diemen's Land became a separate colony, the whole of the British Possessions in Australia were regarded as one colony, viz., that of New South Wales. The population during this period increased very slowly, and at the end of 1824 had reached only 48,072.

The population with which settlement in Australia was inaugurated, and that at the end of each year until 1824, are as follows:—

POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1788 to 1824.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1788[1]	...	...	1,035	1806	5,389	2,521	7,910

1805	5,395	2,312	7,707	1824	36,871	11,201	48,072

1. On 26th January.

(ii.) *1825 to 1858.* The period extending from 1825 to 1859 witnessed the birth of the colonies of Tasmania (then known as Van Diemen's Land), Western Australia, South Australia, Victoria, and Queensland. The years in which these came into existence as separate colonies were as follows:—Tasmania, 1825; Western Australia, 1829; South Australia, 1836; Victoria, 1851; Queensland, 1859.

The estimated population of the Commonwealth during each year of this transition period is as follows:—

POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1825 to 1858.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1825	40,288	12,217	52,505	1842	153,758	87,226	240,984
1826	41,289	12,593	53,882	1843	158,846	92,002	250,848
1827	43,053	13,247	56,300	1844	165,034	99,253	264,287
1828	44,778	13,419	58,197	1845	173,159	105,989	279,148

(iii.) *1859 to 1909.* From 1859, the year in which Queensland came into existence as a separate colony, until the beginning of 1901, when the Commonwealth of Australia was inaugurated under the provisions of the Commonwealth Constitution Act, Australia consisted of six States, practically independent of each other in all matters of government. During this period, the population of the Commonwealth increased from 1,050,828 at the end of 1858 to 3,765,339 on the 31st December, 1900. The particulars for this period are given in the table hereunder.

During the nine years that have elapsed since the federation of the States was effected the population of the Commonwealth has increased by 608,799, from 3,765,339 on 31st December, 1900, to 4,374,138 on 31st December, 1909. See table hereunder:—

POPULATION OF COMMONWEALTH ON 31st DECEMBER, 1859 to 1909.

Year.	Males.	Females.	Total.	Year.	Males.	Females.	Total.
1859	644,376	452,929	1,097,305	1885	1,460,394	1,234,124	2,694,518

1880	1,204,514	1,027,017	2,231,531	1906	2,173,545	1,945,936	4,119,481
1881	1,247,059	1,059,677	2,306,736	1907	2,212,480	1,984,557	4,197,037
1882	1,289,892	1,098,190	2,388,082	1908	2,252,027	2,023,279	4,275,306
1883	1,357,423	1,148,313	2,505,736	1909	2,305,637	2,068,501	4,374,138
1884	1,411,996	1,193,729	2,605,725				

It will be seen from the foregoing tables that the population of Australia attained its first million in 1858, seventy years after settlement was first effected; its second million nineteen years later, in 1877; its third million twelve years later, in 1889; and its fourth million sixteen years later, in 1905.

The growth of the total population of the Commonwealth generally, and of each State therein, is graphically shewn on page 157, and of each sex considered separately on pages 158 and 159.

3. **Variations in Masculinity.**—In the second issue of this publication on pages 163 to 165 an extended table was published, shewing the masculinity of the population of each of the States for each year from 1796 to 1907. The following table gives similar particulars for every fifth year from 1800 to 1905, and also for the four years 1906 to 1909. The graphs corresponding to these figures will be found on page 163:—

MASCULINITY OF COMMONWEALTH POPULATION, 1800 to 1909.

Year.	N.S.W.	Victoria.	Queensland.	South Aust.	West Aust.	Tasmania.	C'wealth.

§ 3. Influences affecting Growth and Distribution of Population.

1. **Mineral Discoveries.**—The discovery of gold in Australia in 1851 was undoubtedly one of the most influential factors in bringing about a rapid settlement of the country. Its effect may be gauged by a comparison of the increase during the ten years preceding, with that during the ten years succeeding the discovery. From 31st December, 1840, to 31st December, 1850, the increase was only 214,948 (viz., from 190,408 to 405,356). The rush of people to the newly-discovered goldfields during the succeeding decennium caused an increase of no less than 740,229, the population advancing to 1,145,585 on 31st December, 1860. In 1861, owing to the opening up in that year of the New Zealand goldfields, a rush of population from Australia set in, the result being that the net increase of population of the Commonwealth, which in 1854 amounted to 98,343, and even in 1860 was as much as 48,108, fell in 1861 to 22,564. In fact, during the year 1861 the departures from Australia exceeded the arrivals by 5958, the gain of 22,564 being due to the births exceeding the deaths by 28,522.

In more recent years the gold discoveries of Western Australia in 1886 and subsequent years, led to such extensive migration to that State that its population, which on 31st December, 1885, amounted to only 35,959, increased in 24 years by no less than 237,584, totalling 273,543 on 31st December, 1909. In this case, however, the additions to the population of the western State were largely drawn from those of the eastern States, so that the actual gain of population to the Commonwealth was but slight.

2. **Pastoral Development.**—Very early in the colonisation of Australia it was recognised that many portions were well adapted for pastoral pursuits, and pastoral developments have led to a considerable distribution of population in various directions. As the numbers engaged in connection therewith, compared with the value of the interests involved, are relatively small, and as pastoral occupancy tends to segregation rather than aggregation of population, the growth of pastoral industry is but slightly reflected in the population statistics of the Commonwealth.

3. **Agricultural Expansion.**—At the present time the area annually devoted to crops in the Commonwealth is nearly 11 millions of acres. Although considerable in itself, this area, viewed in relation to the total area of the Commonwealth, is relatively small, and represents only about ½ per cent. of the total area. Per head of population of the Commonwealth the area under crop, however, is 2½ acres, a fairly high amount when allowance is made for the recency of Australian settlement. About 80 per cent. of the area under crop is devoted to the production of wheat and hay, which require for their profitable production in Australia a considerable area in the one holding. Thus on the whole the agricultural districts of Australia are somewhat sparsely populated, though in a less marked degree than is the case in the pastoral areas.

4. **Progress of Manufacturing Industries.**—One direct effect of the development of manufacturing industries is the concentration of population in places offering the greatest facilities for the production of the particular commodities. In Australia, where manufacturing industries are as yet in their infancy, the tendency throughout has been to concentrate the manufacturing establishments in each metropolis. This has accentuated the growth of the capital cities, which growth, when compared with that of the rest of the country, appears somewhat abnormal.

5. **Influence of Droughts.**—The droughts, which at times so seriously affect the agricultural and pastoral prospects of Australia, have a marked influence on the distribution of population. Districts, which in favourable seasons were fairly populous, have, in times of drought, temporarily become more or less depopulated until the return of better conditions. This movement, however, ordinarily affects only the internal distribution of the population and not the total, but severe drought may even make its influence felt in the statistics of the total population of Australia. Thus in the case of the drought of 1902-3, the departures from the Commonwealth exceeded the arrivals for the two years 1903 and 1904 by 10,380. It may be noted also, that for the former of these years, the natural increase of population by excess of births over deaths was abnormally low, being only 51,150, as compared with 54,698 in the preceding and 60,541 in the succeeding year. As the solution of the problem of dealing with droughts is advanced, their influence will be less marked.

6. **Other Influences.**—(i.) *Commercial Crises.* The effect on population of a commercial crisis, such as that which occurred in Australia in the early years of the final decade of the last century, is clearly indicated on comparing the migration statistics of the Commonwealth for the five years 1887-91 with those for the five years 1892-96. During the former period, the arrivals in the Commonwealth exceeded the departures by no less than 146,872. In the latter period, the corresponding excess amounted to only 2064.

(ii.) *South African War.* The war in South Africa has apparently also left its impress on the population statistics of the Commonwealth, the departures during 1899 and 1900 exceeding the arrivals for the same period by no less than 10,546.

A reference to the graphs of population on pages 157 to 162 will illustrate the preceding observations.

§ 4. Elements of Growth of Population.

1. **Natural Increase.**—The two factors which contribute to the growth of a population are the "natural increase" by excess of births over deaths, and the "net immigration," *i.e.*, the excess of arrivals over departures. While the relative potency of these factors depends upon a variety of causes, it may be said that, in general, in the case of a new country, "net immigration" occupies an important position as a source of increase of population, while in an old country "natural increase," modified more or less by "net emigration," or excess of departures over arrivals, is the only element causing growth of population. The table hereunder gives the total natural increase, as well as that of males and females :—

NATURAL INCREASE[1] OF THE POPULATION OF STATES AND COMMONWEALTH, FROM 1861 TO 1909.

1861 to 1909 ...	897,273	769,013	285,958	265,533	69,892	113,819	2,401,488

With a single exception, viz., Tasmania, for the period 1906 to 1909, the natural increase of females exceeded that of males throughout the 49 years referred to in the foregoing table. This excess, for the total period 1861 to 1909, is shewn in the table both in absolute numbers and as percentages of the male increase. The quinquennial period in which the largest natural increase of population took place was that of 1891-5 with a total for the Commonwealth of 317,874. For the individual States the quinquennia of maximum natural increase were as follows:—New South Wales, Victoria and Queensland 1891-5, South Australia 1881-5, and Western Australia and Tasmania 1901-5.

2. **Comparison with other Countries.**—Notwithstanding its comparatively low birth-rate, Australia has a high rate of natural increase, owing to the fact that its death-rate is a very low one. The following table furnishes a comparison between the average rates of natural increase for some of the principal countries of the world for which such information is available, and those for the several States of the Commonwealth and the Dominion of New Zealand:—

NATURAL INCREASE PER 1000 OF MEAN POPULATION (VARIOUS COUNTRIES).

* 1903-7. † 1902-6.

The graphs of natural increase for each of the States, as well as for the Commonwealth, are shewn on page 162.

3. **Net Immigration.**—The other factor of increase in the population, viz., the excess of arrivals over departures, known as "net immigration," is, from its nature, much more subject to marked and extensive variation than is the factor of "natural increase." These variations are due to numerous causes, many of which have already been referred to in dealing with the influences which affect the growth of population. An important cause not yet referred to, is that of assisted immigration. The number of persons so introduced varies considerably in different years.

NET IMMIGRATION, OR EXCESS OF ARRIVALS OVER DEPARTURES

(STATES AND COMMONWEALTH), FROM 1861 TO 1909 INCLUSIVE.

1861 to 1909...	375,858	— 3,890	258,640	24,932	188,305	—16,780	827,065

Throughout, the minus sign (—) signifies that the number of departures was in excess of arrivals.

During the period 1861-1909, viz., 49 years, the gain to the Commonwealth population by excess of arrivals over departures was 827,065 persons, while the gain by excess of births over deaths for the same period was 2,401,488. That is, nearly 26 per cent. of the increase for the Commonwealth during the past 49 years has been due to "net immigration" and about 74 per cent. to "natural increase." In regard to the contribution of individual States to the total net immigration of 827,065, it may be said that for two, viz., Victoria and Tasmania, the departures for the period in question actually exceeded the arrivals, viz., by 3890 in the case of the former, and 16,780 in that of the latter, while in South

Australia the total gain for the period was only 24,932. In New South Wales, Queensland, and Western Australia, on the other hand, the additions due to net immigration during the 49 years were respectively 375,858; 258,640; and 188,305.

The quinquennial period in which the greatest net immigration to the Commonwealth occurred was that of 1881-5 with a total of 224,040, whilst that in which the smallest was recorded was the period 1896-1900 with the total of only 2487. The quinquennial periods in which maximum net immigration occurred in the several States were as follows:—New South Wales and Queensland 1881-5, Victoria 1886-90, South Australia 1876-80, Western Australia and Tasmania 1896-1900. In all the States quinquennial periods have occurred in which the departures for the five years have exceeded the arrivals. The periods in which such net emigration from the several States was greatest were as follows:—New South Wales and Victoria 1896-1900, Queensland 1901-5, South Australia 1886-90, Western Australia and Tasmania 1906-9.

The graphs shewing net increase, both for the Commonwealth as a whole and for each of the States, will be found on pages 160 and 161.

4. **Total Increase.**—(i.) *Rates for various Countries.* The table hereunder furnishes particulars concerning rates of increase in population for the Commonwealth, its component States, and other countries:—

— Decrease. * 1906 to 1907 only. † No increase.

(ii.) *Variations in the Commonwealth Rate.* During the twenty-seven years 1881-1908, the annual rate of increase in the population of the Commonwealth has exhibited a marked decline, falling from an average of 3.86 per cent. for the five years 1881-6 to an average of 1.49 for 1901-6, the rate for the latter period being also the average for the five years 1896-1901. During the years 1907 and 1908, however, an improvement took place, the rate of increase being 1.87 per cent., or almost identical with the rate for the period 1891-6. For the year 1909 the rate of increase was 2.31 per cent. As regards the separate States of the Commonwealth, the rates of increase in all cases except that of Western Australia were lower, and in most instances considerably lower, for the period 1901-6 than for 1881-6, while in all cases except those of New South Wales and Western Australia the rate of increase for 1906-8 was higher than for the preceding quinquennium, the rate for New South Wales for the two periods being identical.

(iii.) *Unsatisfactory Nature of Commonwealth Rate.* The annual rate of increase in the Commonwealth population for the quinquennium 1901-6 was practically identical with the annual rate for Germany, the figures being respectively 1.49 per cent. and 1.47 per cent. In view of the sparsity of the population of Australia, and the recency of its settlement, this rate of increase, equal only to that of such a densely populated country as Germany, cannot be regarded as satisfactory. When contrasted with the growth of population in the United States the comparison is even less favourable, since the annual rate of increase of that country for the period 1901-6 was 1.62 per cent. Further, if the increase in the population of the Commonwealth be compared with that of the United States under comparable conditions as to density of population, it will be seen that whilst during the seventy years 1790-1860 the population of the United States increased at a rate of slightly more than 3 per cent. per annum, that of the Commonwealth, during the ten years 1900-1909, increased at little more than half that rate. The full significance of the difference between these two rates of increase will be seen on comparing the figures shewn in line (*a*) below with those appearing on line (*b*). The former represent the population of the Commonwealth in the years specified, on the assumption that the rate of increase experienced in the Commonwealth during the ten years 1900-1909, viz., 1.64 per cent., remains permanently in force, while the latter shew what it would be in the same years if the rate of increase experienced in the United States during the seventy years 1790-1860 were in force.

SIGNIFICANCE OF PRESENT RATE OF GROWTH OF COMMONWEALTH POPULATION.

	31st Dec., 1909.	31st Dec., 1910.	31st Dec., 1915.	31st Dec., 1920.	31st Dec., 1930.	31st Dec., 1940.	31st Dec., 1950.
(*a*)	4,374,138	4,446,000	4,824,000	5,233,000	6,160,000	7,250,000	8,534,000
(*b*)	4,374,138	4,507,000	5,234,000	6,078,000	8,198,000	11,056,000	14,910,000

(*a*) On basis of Commonwealth rate of increase 1900-1909.
(*b*) On basis of U.S.A. rates of increase 1790-1860.

These are not predictions as to the probable future population of the Commonwealth, but computations shewing what the population will be if rate of increase for the period specified is maintained, and what it would be if the increase were as rapid as in the United States at a comparable period.

5. **Density of Population.**—From one aspect population may be less significant in respect of its absolute amount than in respect of the density of its distribution. The Commonwealth of Australia, with an area of 2,974,581 square miles, and a population on 31st December, 1909, of 4,374,138 has a density of only 1.47 persons to the square mile, and is, therefore, the most sparsely populated of the civilised countries of the world. For the other continents the densities are approximately as follows:—Europe, 114; Asia, 53; Africa, 13; and America, 11. The population of the Commonwealth has thus about 13 per cent. of the density of that of America, about 11 per cent. of that of Africa, about 2½ per cent. of that of Asia, and about 1¼ per cent. of that of Europe.

Particulars concerning the number and density of the population of the various countries of the world for the latest dates for which such information is available are given in the following table. These figures have in the main been derived from the 1910 issue of the "Statesman's Year Book," and in some instances, more particularly in the case of Africa, must be considered as rough approximations only, complete data not being obtainable :—

NUMBER AND DENSITY OF THE POPULATION OF THE VARIOUS COUNTRIES OF THE WORLD.

§ 5. Seasonal Variations of Population.

1. **Natural Increase.**—For the Commonwealth as a whole the natural increase of the population is greatest in the quarter ending 30th September, and least in that ending 31st March. The birth rate is usually at its highest, and the death rate at its lowest, in the September quarter, and *vice versa* in the March quarter. The average natural increase in population of the several States for each of the quarters, based upon the experience of the nine years 1901 to 1909, is given in the following table, from which it will be seen that the quarter in which the rate of natural increase is highest is that ended 30th June for Victoria and Queensland, that ended 30th September for New South Wales and Western Australia, that ended 31st December for Tasmania, while for South

Australia the rate for the quarters ending 30th June and 30th September was identical. The rate of natural increase is lowest in the quarter ended 31st March in all the States except Western Australia, in which the lowest rate occurs in the quarter ended 31st December.

AVERAGE QUARTERLY NATURAL INCREASE, STATES AND COMMONWEALTH, 1901 to 1909.

State.	* Average Natural Increase for Quarter ended on last day of—								Average Natural Increase per annum, 1901-9.	
	March.		June.		September.		December

Commonwealth	14,130	3.53	15,645	3.89	16,066	3.98	15,052	3.71	60,893	15.21

* The symbol o/oo denotes "per thousand."

2. **Net Immigration.**—For the Commonwealth as a whole the excess of arrivals over departures for the years 1901 to 1909 was greatest in the September quarter, while in the March quarter the average excess of departures over arrivals was 501. In New South Wales also the September quarter gives the greatest excess of arrivals over departures. In Western Australia the largest excess is in the June quarter. In South Australia and Tasmania the arrivals largely exceeded the departures in the December quarter, but in all the other quarters the departures were in excess. In Queensland, the December quarter shewed an excess of departures over arrivals. Victoria shews an excess of departures for every quarter, except that ended 31st December. Particulars concerning the average net immigration of the several States are as follows:—

AVERAGE QUARTERLY NET IMMIGRATION, STATES AND COMMONWEALTH, 1901 to 1909.

State.	Quarter ended on last day of—								Average Net Immigration per annum, 1901-9.	
	March.		June.		September.		December.			
	Persons	o/oo	Persons	o/oo	Persons	o/oo	Persons	o/oo	Persons	o/oo

C'wealth	— 501	—0.13	1,042	0.26	3,409	0.85	2,800	0.69	6,750	1.69

Throughout, the minus sign (—) denotes that the departures were in excess of arrivals, and o/oo denotes per thousand of population.

§ 6. Urban Population.

1. **The Metropolitan Towns.**—A feature of the distribution of population in Australia is the tendency to accumulate in the capital cities. To such an extent is this metropolitan aggregation carried, that in every State the population of the capital far outnumbers that of any other town therein, and ranges between 20 and 44 per cent.

the entire population of the State. The estimated populations of the several capitals on 31st December, 1909, and the percentages of such populations on the totals for the respective States, are shewn in the table hereunder. That this metropolitan concentration is phenomenal, may be readily seen by comparing the percentage on the total population with the similar figures for the principal countries of Europe, also given in the table hereunder:—

METROPOLITAN POPULATION.

(VARIOUS COUNTRIES.)

State or Country.	Metropolis.	Year.	Population.	Percentage on total of State or Country.
				%
New South Wales ...	Sydney	31st Dec., 1909.	605,900	37.36

Russia (European) ...	St. Petersburg ...	1905	1,678,000	1.47

* Population of Greater London 1909, 7,429,740.

2. **Provincial Towns.**—In connection with the particulars shewing the tendency in Australia to concentrate population in the metropolis, it should be borne in mind that in most of the European States the capital is but one of many populous cities, and in some instances is by no means the most populous. In Australia, on the other hand, the metropolis is in every instance the most populous city, and, in some of the States, is also the only town of considerable magnitude. It will be seen from the table on the next page, that there are in all, only eighteen towns in the Commonwealth having a population upwards of 20,000. Of these three are in New South Wales, four in Victoria, five in Queensland, one in South Australia, three in Western Australia, and two in Tasmania.

In the following table are given the estimated populations of the principal Australian towns. These particulars relate to the year 1909. The metropolitan towns are included for the purpose of giving a complete view of the urban population of the Commonwealth. In all cases the populations given for the towns include those of contiguous suburban areas:—

POPULATION OF PRINCIPAL TOWNS IN THE COMMONWEALTH.

Town (including Suburban Areas).	State in which Situated.	Population.
100,000 and upwards—

§ 7. Assisted Immigration.

In the earlier days of settlement in Australia, State-assisted immigration played an important part. Such assistance practically ceased in South Australia in 1886, in Tasmania in 1891, and for the time being, in Victoria in 1873. In New South Wales general State-aided immigration was discontinued in the year 1887, but those who arrived under that system and were still residing in New South Wales might, under special regulations, send for their wives and families. A certain amount of passage money, graduated according to the age of the immigrant, was required to be paid in each case. Under the provisions of these regulations immigrants to the number of 1994 received State assistance during the years 1888 to 1899 inclusive. From 1900 to 1905 no assistance of any kind was given, but from 1906 onwards assistance has again been afforded, a total of 4308 State-assisted immigrants being recorded for the year 1909. In Queensland and Western Australia, such assistance, although varying considerably in volume from year to year, has been accorded for many years past. The numbers so assisted during 1909 were 3501 in Queensland and 1359 in Western Australia. During 1909 assistance to 652 immigrants was rendered by the Victorian Government.

The total number of immigrants to Australia from the earliest times up to the end of 1909, the cost of whose introduction was wholly or partly borne by the State, is approximately as follows:—

ASSISTED IMMIGRANTS UP TO END OF 1909.

STATES AND COMMONWEALTH.

State	N.S.W.	Victoria	Qld.	S. Aust.	W A.	Tas	C'wlth.
No. of Assisted Immigrants	222,701	141,241	176,949	95,348	11,947	21,699	669,885

§ 8. Enumerations and Estimates.

1. **Musters.**—Actual enumerations of Australia's population, of varying accuracy, have been made from the earliest times onward. Originally known as "Musters," these were first undertaken with a view to estimating the food and other requirements of the settlements. These musters, the results of which are said to have been very unreliable, appear to have been carried out at least annually from 1788 to 1825, when they were discontinued.

2. **Census-taking.**—The first regular Census in Australia was that of New South Wales, in November, 1828. The dates on which Censuses have been taken in the several States, and the populations enumerated thereat, are as shewn in table on the page immediately following.

3. **The Census of 1901.**—A conference of the State Statisticians of Australia and New Zealand held in Sydney in February and March, 1900, aimed at securing uniformity in the collection and compilation of the Census of 1901. The householder's schedule which it drafted made provision for the collection of information in all the States under the following heads, viz.:—Name, Sex, Age, Conjugal Condition, Relation to Head of Household, Occupation, Sickness and Infirmity, Birthplace, Length of Residence in Colony, Religion, Education, Materials of Houses and Number of Rooms. In addition to these, it was agreed that States so desiring might include further inquiries relating to Land, Live Stock, Crops, and certain other matters.

Provision was made for uniformity in the classification and compilation of the data by formulating rules for dealing with cases in which differences of opinion as to methods of treatment might exist. Thus, although conducted by six different States, the Census of the Commonwealth, as taken in 1901, was carried out on a fairly uniform plan, and consequently furnished data in many ways suitable for purposes of aggregation or comparison. A detailed examination of the results, however, gives many indications of departure from a common line of action, which, in the absence of a central authority, can hardly be avoided in an undertaking of this nature.

4. **The Census of 1911.**—Under Section 51, sub-section (xi.) of the Constitution Act, power is given to the Parliament of the Commonwealth to make laws with respect to "Census and Statistics." This power was brought into requisition in 1905, when the Census and Statistics Act 1905 became law, being assented to on 8th December, 1905. Under this Act provision is made for the appointment of a Commonwealth Statistician, and amongst other duties that officer is charged with the taking of a Census in the year 1911 and in every tenth year thereafter.

The particulars which the Act requires to be included in the Census schedule are almost identical with those which were contained in the 1901 schedule, the principal

alterations being that "Length of Residence in Australia" is to be asked instead of "Length of Residence in the Colony of Enumeration," that "Duration of Marriage" is to be asked in all cases, and that nationality is to be ascertained in addition to birthplace.

1. Including Port Phillip District, which afterwards became the Colony of Victoria. 2. Previously included with New South Wales. 3. 3rd April. 4. 5th April. 5. 31st March.

5. **Estimates of Population.**—In the absence of an annual enumeration of the population, it becomes necessary to adopt some method of estimating it for intercensal periods, basing such estimates on the results of the most recent Censuses. The manner in which this is effected varies, however, in different parts of the world. In England, for example, the assumption made is that the rate of increase of the preceding intercensal period will

continue unchanged during the current period. Again, in the United States, it has been assumed, in certain cases, that the numerical increase per annum ascertained for the preceding intercensal period will hold good for the current period. From the earliest times in Australia, "statistics of fluctuation" have been obtained from the records of births, deaths, arrivals and departures. With reasonable thoroughness in the collection of such statistics, the deduced estimates possess much greater weight than those based on the mere assumption of a continuation of the increase experienced in the preceding period. In most cases, however, estimates of population, based on statistics of fluctuation, are found to be in excess at the Census, thus indicating a uniform tendency to over-estimation, and the necessity for a correction. In the population figures given in the earlier portion of the present section, the estimates of the population of the several States have been carefully revised, the results of the various Censuses being taken in conjunction with the records of births, deaths, arrivals and departures. It is believed that by this means the population of the Commonwealth from the date of settlement onwards has been obtained with a high degree of accuracy, and that the figures supplied represent a reasonably close approximation to the actual numbers. Particulars for the several States from the date of settlement onwards are given in the following tables, and are shewn by graphs on pages 157 to 159:—

COMMONWEALTH POPULATION FROM EARLIEST DATE.

* Previously included with New South Wales. † Details not available.

The tables on the two preceding pages, shewing the quinquennial figures for the male, female, and total population of each State and the Commonwealth, give sufficient indication, for general purposes, of its progress. A reference to the diagrams given hereinafter (pp. 157 to 159), on which the graphs shew the particulars for *each* year, is also desirable. The characteristics of the fluctuations of each element, or of the totals, will be more readily perceived by reference to the graphs than they possibly can by reference to these numerical tables. The earliest date for which particulars as to sex were available was 1796. The figures from 1788 to 1825 inclusive are based upon the results of the musters taken in those years; those for subsequent years are founded upon estimates made on the basis of the Census results and the annual returns of births and deaths and immigration and emigration.

§ 9. Principal Results of Census of 1901.

1. **Census Results.**—In the first issue of the Official Year Book tables are given shewing in some detail particulars for the several States under the headings of Ages, Birthplaces, Occupations, Religions, and Conjugal Condition. Similar information in a very condensed form is given hereunder. For fuller particulars reference should be made to the first issue (see Year Book No. 1, pp. 164 to 179).

2. **Ages.**—The numbers of persons of each sex in some of the more important age groups enumerated in the several States of the Commonwealth at the Census of 31st March, 1901, are as follows:—

AGE DISTRIBUTION OF COMMONWEALTH POPULATION ON 31st MARCH, 1901.

3. **Birthplaces.**—In the next table is given a summary of the populations of the several States of the Commonwealth on 31st March, 1901, classified according to sex and birthplace, the birthplaces being grouped under the five continental divisions of the globe, with two additional headings for those born in Polynesia, and those born at sea. Of the total population of 3,773,801 those of unspecified birthplace numbered only 7922, or little more than 2 per thousand :—

4. **Occupations.**—In the compilation of the results of the Census of 31st March, 1901, the populations of the several States were tabulated according to occupation in the following classes:—

(i.) *Professional.* Embracing all persons not otherwise classed, mainly engaged in the government and defence of the country, and in satisfying the moral, intellectual, and social wants of its inhabitants.

(ii.) *Domestic.* Embracing all persons engaged in the supply of board and lodging, and in rendering personal services for which remuneration is usually paid.

(iii.) *Commercial.* Embracing all persons directly connected with the hire, sale, transfer, distribution, storage, and security of property and materials.

(iv.) *Transport and Communication.* Embracing all persons engaged in the transport of persons or goods, or in effecting communication.

(v.) *Industrial.* Embracing all persons not otherwise classed who are principally engaged in various works of utility, or in specialities connected with the manufacture, construction, modification, or alteration of materials so as to render them more available for the various uses of man, but excluding, as far as possible, all who are mainly or solely engaged in the service of commercial interchange.

(vi.) *Agricultural, Pastoral, Mineral, and other Primary Producers.* Embracing all persons mainly engaged in the cultivation or acquisition of food products, and in obtaining other raw materials from natural sources.

(vii.) *Indefinite.* Embracing all persons who derive incomes from services rendered, but the direction of which services cannot be exactly determined.

(viii.) *Dependents.* Embracing all persons dependent upon relatives or natural guardians, including wives, children, and others, not otherwise engaged in pursuits for which remuneration is paid, and all persons depending upon private charity, or whose support is a burthen on the public revenue.

Particulars concerning the number contained in each of these classes are given in the table hereunder:—

5. **Religions.**—In the Acts under which the Census of 1901 was taken in the several States, persons enumerated were required under penalty to furnish replies to all the inquiries contained in the schedule, with the exception of that relating to religion. In this case, any person objecting to give such particulars was allowed to insert the words "Object to state" in the column provided for religion. Of the total population of 3,773,801 there were 42,131, or 1.12 per cent., who availed themselves of this option. There were also 14,060, or 0.37 per cent., concerning whom no particulars as to religion were obtained.

Of the remainder, 3,626,449, or 97.55 per cent., were members of the various Christian denominations, 53,371 were members of non-Christian religions, 31,011 were of indefinite religious belief, and 6779 stated that they were of no religion.

Amongst the Christian denominations, that most numerously represented was the Church of England, with 1,497,576 adherents, the next in order being the Roman Catholic (850,620), the Methodist (504,101), the Presbyterian (426,105), the Baptist (89,338), the Lutheran (75,021), the Congregational (73,561), and the Salvation Army (31,100).

The principal non-Christian religions represented in Australia were the Hebrew, Mahomedan, Buddhist and Confucian, the members of the Hebrew congregation totalling 15,239.

Those included under the head of "Indefinite" in the attached table consist mainly of persons who stated that they were "Freethinkers" or "Agnostics," or returned themselves as being of "No Denomination," while under the head of "No Religion" are given those who were so returned on the schedules as well as a small number who stated that they were "Atheists."

COMMONWEALTH POPULATION ON 31st MARCH, 1901,

6. **Conjugal Condition.**—In the following tables are given summaries of the particulars concerning the population of the several States on 31st March, 1901, classified according to age and conjugal condition. In the case of South Australia divorced persons and persons whose conjugal condition was not stated were included under other heads. The figures given in these tables are exclusive of 1553 half-castes in Queensland, and 553 in South Australia, whose ages and conjugal condition were unspecified :—

§ 10. Naturalisation.

1. **The Commonwealth Act.** — The Commonwealth Constitution empowers the Commonwealth Parliament to make laws with respect to "Naturalisation and Aliens," a power which was exercised when the "Naturalisation Act of 1903" was passed. Assented to on 13th October of that year, this Act came into force on 1st January, 1904, in accordance with a proclamation by *Gazette* of 14th November, 1903.

Prior to the passing of this Act the issue of certificates of naturalisation had been a function of the State Governments, carried out under Acts of the several State Legislatures, which, however, did not differ materially from each other, and furnished the basis on which the Commonwealth Act was drafted. From 1st January, 1904, when the Commonwealth Act became operative, the right to issue certificates of naturalisation in the Commonwealth has been vested exclusively in the Federal Government, but all certificates or letters of naturalisation issued under the several State Acts prior to that date entitle the recipients to be deemed to be naturalised under the Commonwealth Act.

The grant of a certificate of naturalisation entitles the recipient within the limits of the Commonwealth to all the rights and privileges, and renders him subject to all the obligations, of a natural-born British subject, with the exception that where, by any Commonwealth or State Constitution or Act, a distinction is made between natural-born British subjects and naturalised persons, such distinction shall hold good in the case of all persons naturalised under the Commonwealth Act.

Applications for certificate of naturalisation must be made to the Governor-General, the qualifications required in an applicant being :—

(i.) That he is not a British subject.

(ii.) That he is not an aboriginal native of Asia, Africa, or the Islands of the Pacific, excepting New Zealand.

(iii.) That he intends to settle in the Commonwealth.

(iv.) (*a*) That he has resided in Australia continuously for two years immediately preceding naturalisation ; or

(*b*) That he has obtained in the United Kingdom a certificate or letters of naturalisation.

An applicant who has already obtained a certificate or letters of naturalisation in the United Kingdom is required to furnish, in support of his application—

(i.) His certificate or letters of naturalisation.

(ii.) His statutory declaration—

(*a*) That he is the person named therein.

(*b*) That he obtained the certificate or letters without fraud or intentional false statement.

(*c*) That the signature and seal thereto are, to the best of his knowledge and belief, genuine.

(*d*) That he intends to settle in the Commonwealth.

If the applicant is not already naturalised in the United Kingdom the particulars which he is required to furnish in support of his application are as follows :—

(i.) His own statutory declaration stating—

(*a*) Name ; (*b*) Age ; (*c*) Birthplace ; (*d*) Occupation ; (*e*) Residence ; (*f*) Length of residence in Australia ; (*g*) Intention to settle in the Commonwealth.

(ii.) A certificate signed by a Justice of the Peace, a postmaster, a teacher of a State school, or an officer of police, that the applicant is known to him and is of good repute.

In connection with any application for naturalisation, the Governor-General in Council is authorised to grant or withhold a certificate as he thinks most conducive to the public good, but the issue of a certificate to any person who is not already naturalised in the United Kingdom is not admissible until the applicant has taken an oath or affirmation of allegiance. The grant of a certificate is made free of charge.

In addition to naturalisation by grant of certificate, the Act makes provision for—

(i.) Naturalisation by marriage.
(ii.) Naturalisation by residence with naturalised parent.

The former relates to the case of a woman who is not herself a British subject, but is married to a British subject; the latter to that of an infant who is not a natural-born British subject, but who has resided at any time in Australia with a father or mother who is a naturalised British subject. In each instance the person concerned is deemed to be naturalised under the Commonwealth Act.

The administration of the Act is carried out by the Department of External Affairs, and the Governor-General is authorised to make such regulations as are necessary or convenient for giving effect to the Act. Up to the present, however, no such regulations have been issued.

2. **Statistics of Naturalisation.**—Particulars relative to the nationalities of the recipients of certificates of naturalisation issued under the Act during each of the five years 1905 to 1909, and to the countries from which such recipients had come, are shewn in the following table:—

COMMONWEALTH NATURALISATION CERTIFICATES GRANTED, 1905 to 1909.

The following table furnishes particulars concerning the States in which the recipients of Commonwealth certificates of naturalisation during the years 1904 to 1909 were resident. The numbers of certificates granted under the several State Acts during the years 1901, 1902, and 1903 are also given.

NATURALISATION CERTIFICATES GRANTED BY STATES AND COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W.A.	Tas.	C'wlth.
1901	507	574	449	109	58	70	1,767
1902	386	500	375	54	111	28	1,454
1903	400	397	355	43	75	149	1,419
1904	1,379	319	115	25	248	21	2,107
1905	544	213	150	34	166	11	1,118
1906	475	301	177	45	150	39	1,187
1907	458	214	193	27	134	16	1,042
1908	396	243	377	45	152	28	1,241
1909	644	507	378	600	221	81	2,431

3. **Census Particulars.**—In the Census Schedule drafted by the Statistical Conference of 1900, provision was made for the inclusion of particulars concerning the number of persons who had become British subjects by naturalisation. This information was obtained in all the States except Queensland, the particulars being as follows:—

NUMBER OF NATURALISED BRITISH SUBJECTS RECORDED AT THE AUSTRALIAN CENSUS OF 1901.

Particulars.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	C'wealth.[2]
Males	3,265	3,304	[1]	1,360	576	119	8,624
Females ...	354	1,262	[1]	545	101	24	2,286
Persons ...	3,619	4,566	[1]	1,905	677	143	10,910

1. Not ascertained. 2. Exclusive of Queensland.

It is probable that the numbers furnished above fall short of the total number of naturalised persons at the date of the Census, as the method of recording the fact of naturalisation on the schedule was that of inserting the letter N after the birthplace, a method which is always liable to lead to errors of omission. Cases also of women who had become naturalised by marriage to British subjects, would probably remain unrecorded in many instances.

§ 11. Graphical Representation of Growth of Population.

1. **General.**—The nature of the fluctuations of the numbers representing (*a*) total population, or those representing (*b*) births and deaths from year to year, or (*c*) the natural increase, *i.e.*, the difference of births and deaths, or (*d*) the net immigration, all of which taken together make up the element of increase of total population, cannot be readily discerned from mere numerical tables. It has been deemed desirable therefore to furnish a series of graphical representations, shewing in some cases the characteristics of these elements from 1788 to 1909, and in others from 1860 to 1909. The graphs furnish at a glance a clear indication of the changes taking place, and of their significance from year to year. The great importance of such representations is that only by their means can the most recent changes be justly apprehended, either in their relation to the past, or their meaning for the future.

2. **Graphs of Total Population** (page 157).—These graphs furnish interesting evidence of the comparatively slow rate of growth of the several States and of the Commonwealth as a whole, during the period from the foundation of settlement in 1788 until 1832. From that year onwards to 1851, a moderately increased rate of progress was experienced. In 1851 gold was discovered in Australia, and the effect of this discovery on the population of the Commonwealth is shewn by the steepness of the curves for New South Wales and Victoria, and also of the Commonwealth, from this point onwards for a series of years. The sudden breaks in the continuity of the curves for New South Wales indicate the creation of new colonies, and their separation from the mother colony. Thus, Tasmania came into existence in 1825, Victoria in 1851, and Queensland in 1859. Owing to the extensive gold discoveries in Victoria, its population increased so rapidly that in 1854 its total passed that of New South Wales, and remained in excess until 1892, when the mother State again assumed the lead, which it has since maintained. The rate of increase in New South Wales is large, but the State is only sparsely populated. A feature of the New South Wales curve is its comparative regularity as compared with that of Victoria, the population of which State increased with great rapidity from 1851 to 1860, less rapidly from 1861 to 1878, with a further period of increased rapidity from 1878 to 1891, and a period of very slow and fluctuating growth from the latter year to 1909. Victoria, however, has a population density more than double that of Tasmania, and nearly three times that of New South Wales.

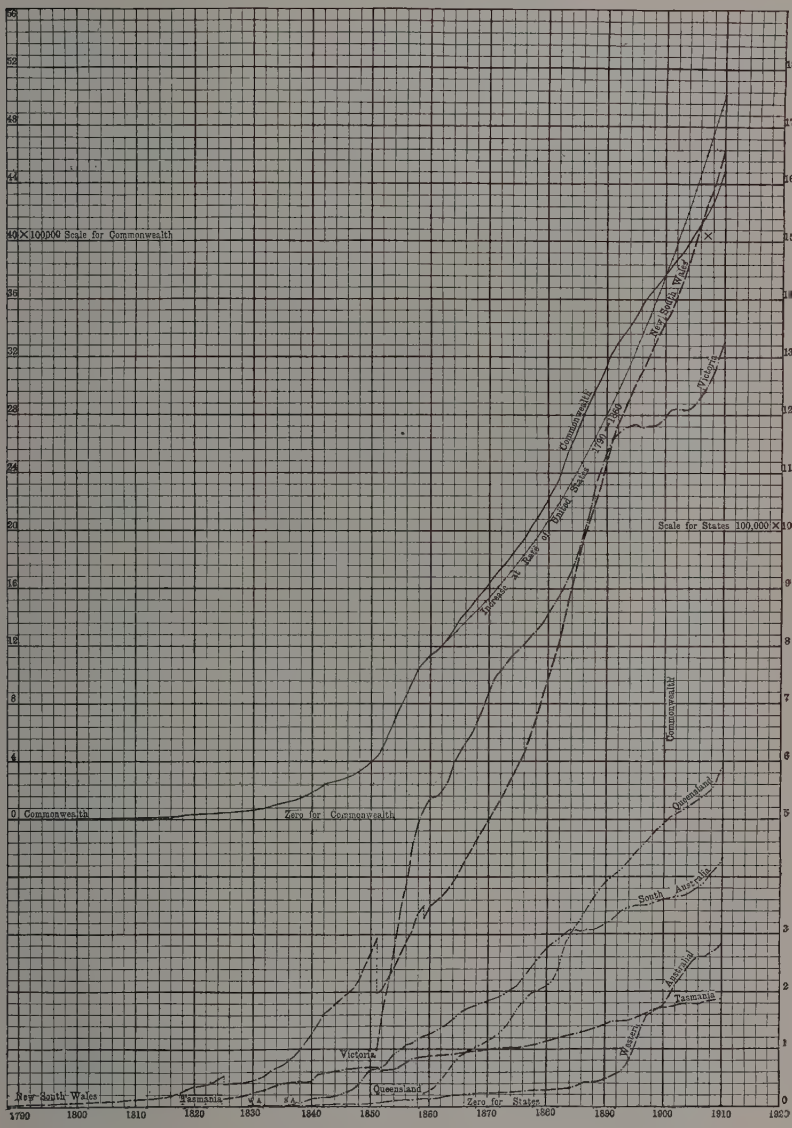
In the case of Queensland, the curve indicates a rate of growth which, though varying somewhat, has on the whole been satisfactory, and at times very rapid. Periods of particularly rapid increase occurred from 1862 to 1865, from 1873 to 1877, and from 1881 to 1889. The population of Queensland passed that of Tasmania in 1867, and that of South Australia in 1885. The population density of Queensland is less than one-seventeenth of that of Victoria.

The curve for South Australia indicates that with fluctuations more or less marked, the population increased at a moderate rate from the date of the foundation of the colony in 1836 until 1884, and that from that point onwards a diminished rate of increase was experienced. The population of South Australia passed that of Tasmania in 1852. Its density is about half of that of Queensland, about one-twelfth of that of New South Wales, and about one-thirty-third of that of Victoria.

The curve for Western Australia indicates that the population increased regularly but very slowly until 1886, when the discovery of gold in the Kimberley division caused an influx of population. The effects of the further rich discoveries of gold in the Murchison and Coolgardie districts in 1891 and 1892, are clearly shewn in the rapid increase of

population in those and subsequent years to 1897. Two years of retarded progress then occurred, followed by a satisfactorily rapid rate of increase from 1899 to 1906, a slight decline in 1907 and a further advance in 1908 and 1909. The population of Western Australia became greater than that of Tasmania in 1899. Its density is little more than half of that of South Australia, one-third of that of Queensland, one-eighteenth of that of New South Wales, and about one-fiftieth of that of Victoria.

The Tasmanian population curve indicates a comparatively slow rate of growth throughout. Its most noticeable feature is a retardation in increase in 1852 and subsequent years, brought about by the discovery of gold on the mainland. The population density of Tasmania is nearly 40 per cent. greater than that of New South Wales, and a little less than half of that of Victoria.



3. **Graphs for Commonwealth of Male and Female Population** (page 158). These curves shew the relative growth of male and female population of the Commonwealth, and it will be seen that the former are far more liable to marked fluctuations than the latter. The curves representing an increase of population on the basis of the United States rate for 1790 to 1860, indicate that on the whole the female rate of increase in the Commonwealth has been a fairly satisfactory one, and that from 1860 to 1893 the same might be said of the male population. From 1893 onwards, however, the male population of the Commonwealth has fallen considerably below this rate, and it may be added that the rapid lowering of the rate of increase of the male population must be regarded as unsatisfactory from a national standpoint.

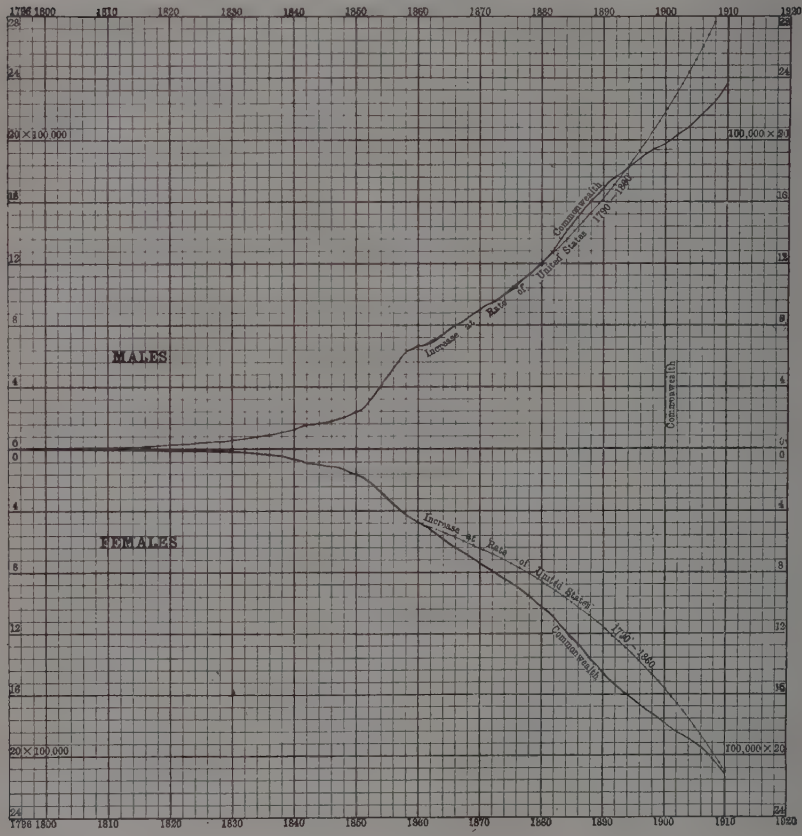
Although the rate of increase of the female population from 1860 onwards is on the whole very satisfactory, it should be noted that the total number at the beginning of this period was relatively very small, and that from 1894 there is an unsatisfactory falling off in the rate of increase, similar to that experienced in the case of males.

4. **Graphs for each State of Male and Female Population** (page 159).—These graphs, shewing the relative progress in male and female population for each of the States, disclose the fact that in all cases the female population is much less liable to marked fluctuations than the male, and further, that in cases where rapid increases have taken place in the latter a similar, but much more gradual, increase is in evidence in the former, commencing usually, however, somewhat later than in the case of the males. A comparison of the graphs of each of the States with that of the Commonwealth shews that the fluctuations in the latter case are smaller than in the former. This is largely due to internal migrations of the male element of the population, brought about by various causes, amongst which mining developments figure prominently.

5. **Graphs of Natural Increase of Population, Commonwealth and States** (page 162).—The graphs indicate that, with the exception of certain marked variations, the natural increase of the population of the Commonwealth, viz., the excess of births over deaths, advanced with fair rapidity from 1860 to 1892, in which year it attained its maximum, when, however, it fell rapidly till 1898. A subsequent rise to 1900 was followed by a continuous fall for the three years succeeding, viz., to 1903. The recovery shows a fairly rapid rise to 1909. The years in which the natural increase of the Commonwealth was at its highest were 1865, 1871, 1881, 1892, 1900, and 1909; and the years of extraordinarily low rates of natural increase were 1866, 1875, 1882, 1898, and 1903. The low rate of 1898 was due in large measure to a phenomenally high death rate experienced in practically all the States in that year, when an epidemic of measles was prevalent throughout the Commonwealth. The low rate of 1903 was brought about by the low birth rates and high death rates which accompanied the drought of 1902-3, while the advance in the rate of natural increase since 1903 has been collateral with the marked improvement in material conditions experienced throughout the Commonwealth during that period.

GRAPHS OF TOTAL POPULATION OF THE COMMONWEALTH OF AUSTRALIA AND EACH STATE THEREIN, 1788-1910.

(See Tables pages 125 to 127.)



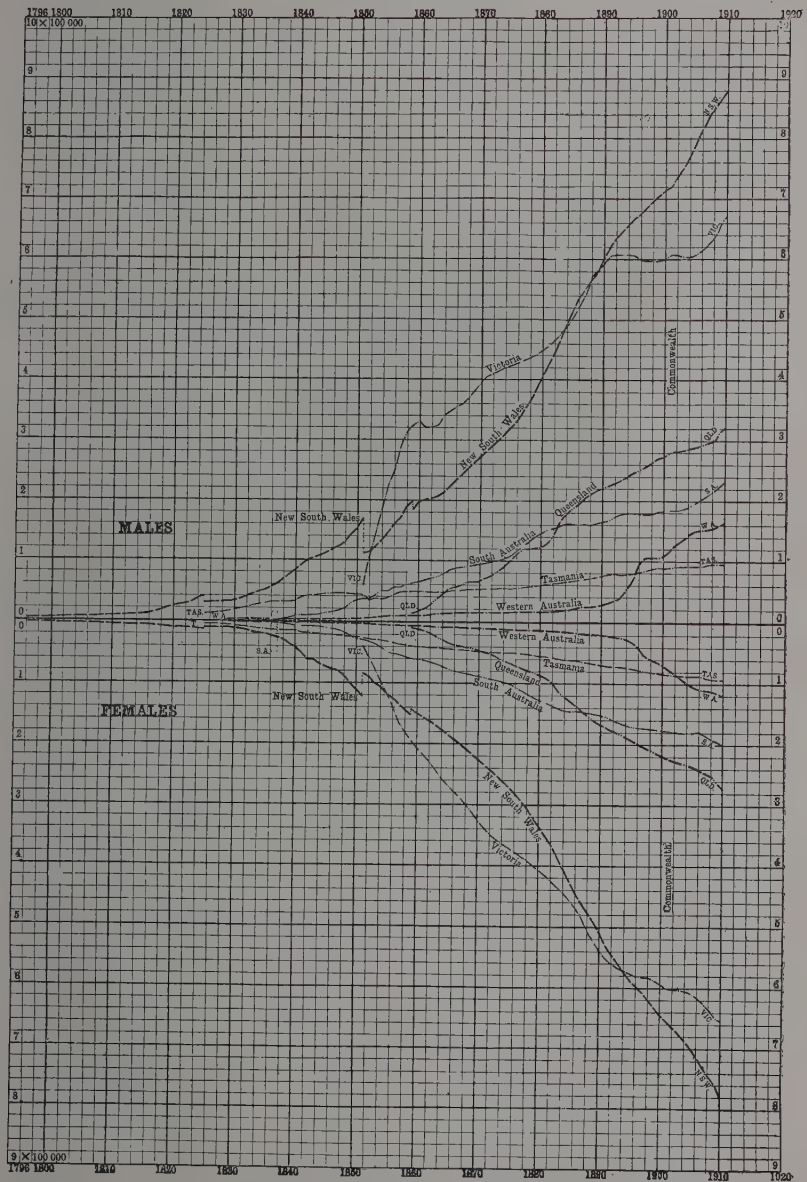
EXPLANATION OF GRAPHS.—The base of each small square represents two years' interval for both States and Commonwealth; and the vertical height 80,000 persons for Commonwealth or 20,000 for States. The zero line for the States is the bottom line; for the Commonwealth it is the line marked "Commonwealth." The scale on the left above the Commonwealth zero line relates to the Commonwealth, and that on the right relates to the States.

Where the population falls suddenly the fall denotes the creation of a new colony, *e.g.*, New South Wales 1825, loses the whole population of Tasmania, then erected into a separate colony.

The curves are as follows:—Commonwealth, an unbroken line; New South Wales, — · — · —; Victoria, — - - - -; Queensland, — — - — — - —; South Australia, — - — - — - —; Western Australia, — — — — — — —; Tasmania, — — - — — -; the names on the curves also shew which State each represents.

The manner in which the population of the Commonwealth would have grown from 1860 to 1910 if, during that period, there had been in operation the rate of increase actually experienced the United States from 1790 to 1860, is shewn for purposes of comparison.

GRAPHS OF MALE AND FEMALE POPULATIONS, COMMONWEALTH OF AUSTRALIA, 1796-1910.



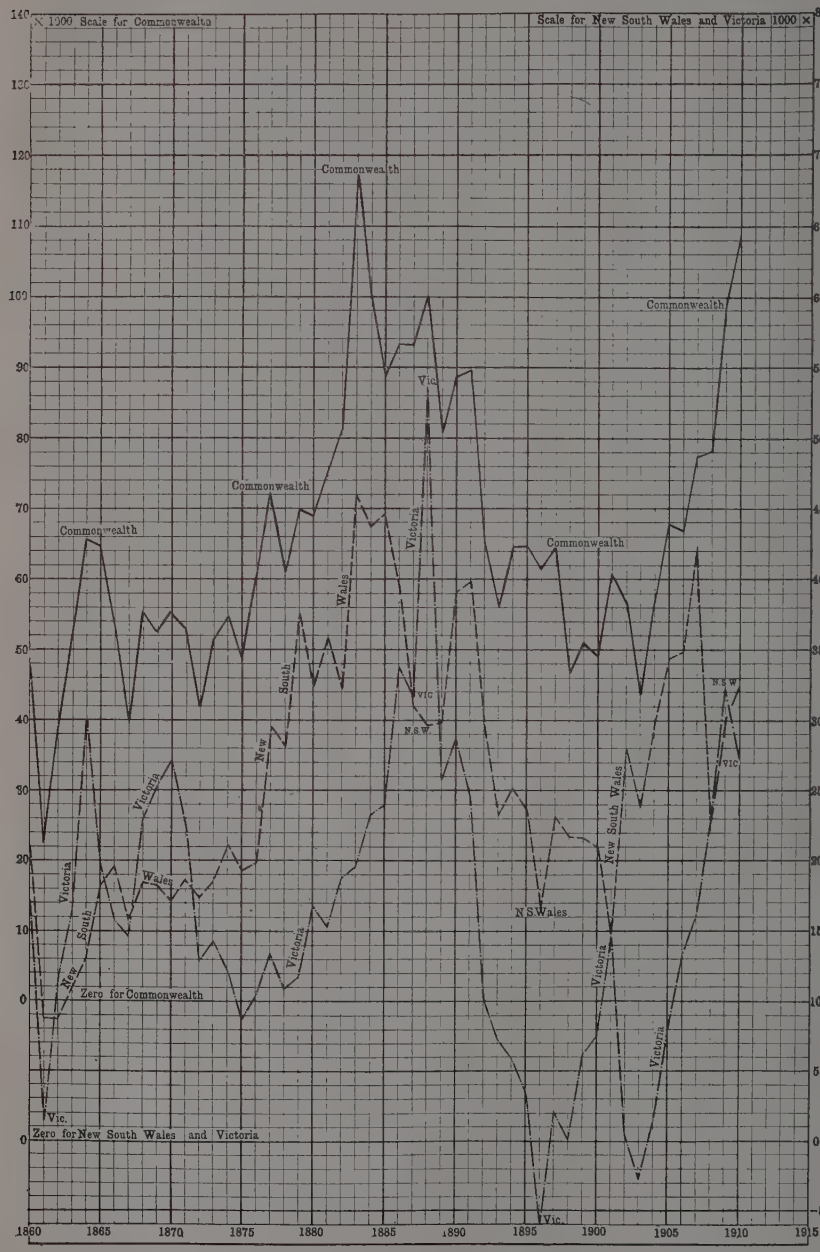
(See Tables pages 126 and 127.)

EXPLANATION OF GRAPHS.—The base of each small square represents two years' interval, and the vertical height 80,000 persons. The distances upward from the heavy zero line denote the number of males, and downward the number of females. From 1860 onward is shewn, for purposes of comparison, the manner in which the numbers of each sex in the Commonwealth would have grown from 1860 to 1908 (1910 for females), if, during that period, there had been in operation the rate of increase actually experienced in the United States from 1790 to 1860.

The asymmetry of the two graphs reveals the want of uniformity in the increase of the two sexes.

GRAPHS OF MALE AND FEMALE POPULATION OF THE STATES OF AUSTRALIA, 1796-1910.

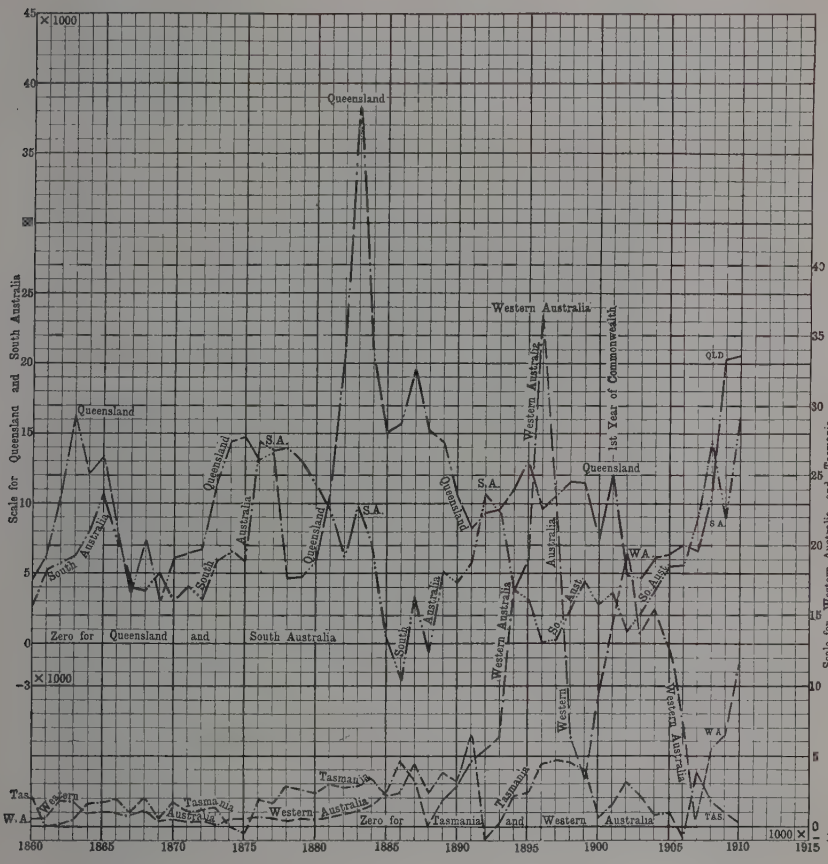
(See Tables pages 125 to 127.)



EXPLANATION OF GRAPHS.—The base of each small square represents two years' interval, and the vertical height 20,000 persons. The distances upward from the zero line represent the number of males, and downward the number of females.

The sudden falls denote the creation of new colonies.

The names on the curves denote the States to which they refer, and the curves are as follows:—New South Wales, — — —; Victoria, — - — - —; Queensland, — — - — — - —; South Australia, — - — - — - —; Western Australia, — — - — — - —; Tasmania, — - — - — - —.

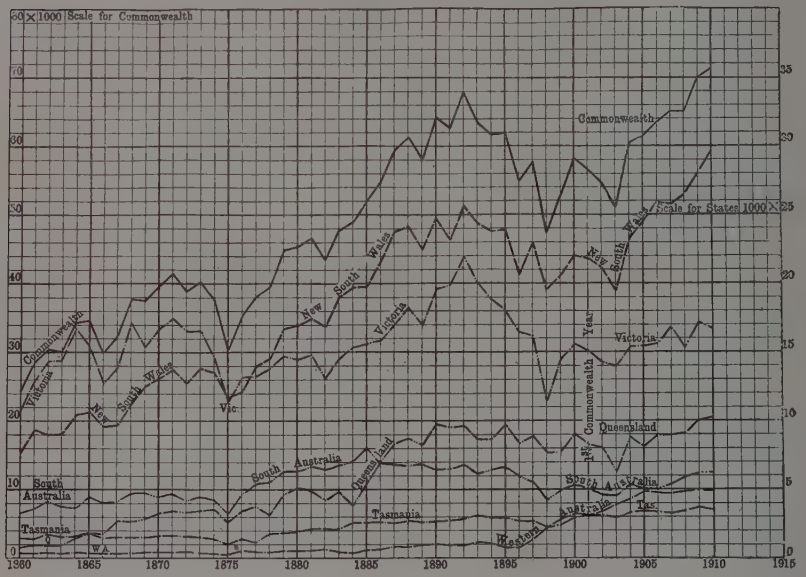


The asymmetry of the two series of graphs reveals the want of uniformity in the increase of the two sexes.

GRAPHS SHEWING NET INCREASE OF POPULATION OF THE COMMONWEALTH OF AUSTRALIA AND THE STATES OF NEW SOUTH WALES AND VICTORIA, 1860-1910.

(For explanation see foot of next page.)

GRAPHS SHEWING NET INCREASE OF POPULATION OF THE STATES OF QUEENSLAND, SOUTH AUSTRALIA, WESTERN AUSTRALIA, AND TASMANIA, 1860-1910.

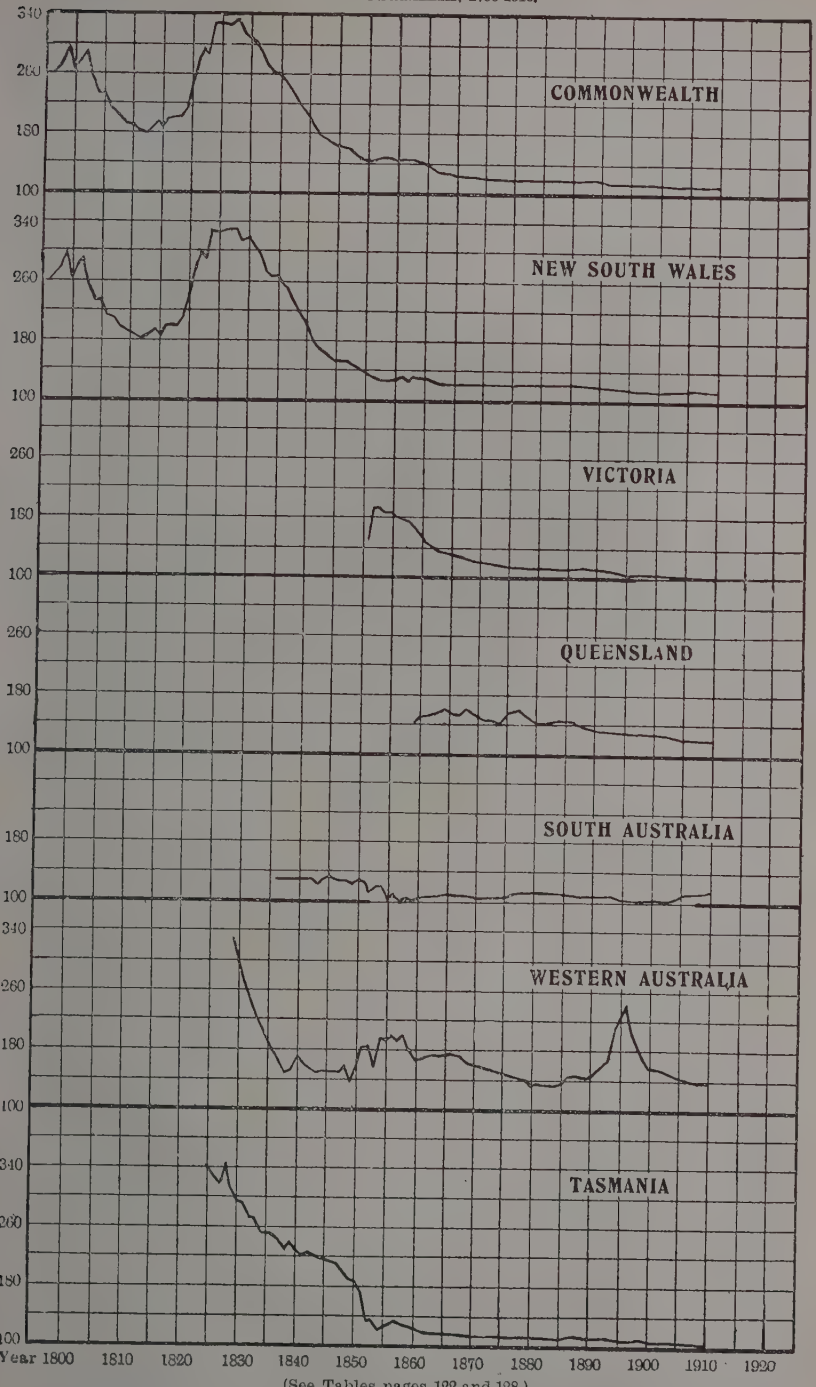


EXPLANATION OF GRAPHS SHEWING NET INCREASE.—The base of each small square represents an interval of a year for both States and Commonwealth; the vertical height represents 2000 for the Commonwealth and 1000 for the States. In the first graph two zero lines are taken (i.) for the Commonwealth and (ii.) for New South Wales and Victoria. The scale on the left relates to the Commonwealth and that on the right relates to New South Wales and Victoria. In the second graph two zero lines are taken (i.) for Queensland and South Australia, and (ii.) for Tasmania and Western Australia. The scale on the left relates to Queensland and South Australia, and that on the right relates to Tasmania and Western Australia.

NET DECREASES in population are shewn by carrying the graph in such cases below the zero line, the distance of the graph below the zero line indicating the extent of the decrease.

The lines used are as follows:—Commonwealth, an unbroken line; New South Wales, — — — — —; Victoria, — - — - — - —; Queensland, — — - — — - — —; South Australia, — - — - — - — - —; Western Australia, — — — - — — — — —; Tasmania, — — - — - — - —.

The names on the curves denote the States to which they refer.



GRAPHS OF NATURAL INCREASE OF THE POPULATION OF THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1910.

EXPLANATION OF GRAPHS.—The base of each small square represents one year for both States and Commonwealth, and the vertical height 1000 persons for the States and 2000 persons for the Commonwealth.

The distances upward from the zero line, marked 0 for both Commonwealth and States, denote the excess of births over deaths. The scale on the left relates to the Commonwealth, and that on the right to the States. The names shew the States to which the curves refer, they are as follows:—Commonwealth ——— ; New South Wales, — — —; Victoria, — - — - —; Queensland, — — - — — - —; South Australia, — - - — - - — - -; Western Australia, — — — - — — — —; Tasmania, — — - — — -.

GRAPHS SHEWING MASCULINITY OF THE COMMONWEALTH AND STATES OF AUSTRALIA, 1796-1910.

(See Tables pages 122 and 128.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of five years and the vertical height an excess of forty per cent. of males over females. The basic line (shewn thickened) for Commonwealth and all the States is 100 per cent., equivalent to a numerical equality of the sexes.

DENSITY OF POPULATION THROUGHOUT THE COMMONWEALTH OF AUSTRALIA ACCORDING TO CENSUS OF 1901.

This map furnishes a graphic representation of the distribution of the population of the Commonwealth at the date of the last census, 1901. For this purpose the density of the population of variously constituted districts in each State has been computed, and the areas representing these have been shaded in accordance with the scale of density given at the foot of the map. The districts for which the results of the census were tabulated in the several States and which have, therefore, been used in the map are as follows:—New South Wales, counties; Victoria, counties; Queensland, census districts coincident with registration districts; South Australia, counties so far as the State has been divided into counties; Western Australia, magisterial districts; Tasmania electoral districts.

A map drawn on such a small scale must of course be considered as furnishing only a rough approximation as to the true distribution of the population, owing to the fact that a small densely-populated area may exist in certain cases within a comparatively large district, the balance of which is but sparsely populated. Thus, in such a case, owing to the density of the whole district being alone taken into account, the fact of a concentration of population within a small area is lost for purposes of representation. It is evident that the larger the district is for which the density has been calculated, the less will the map represent the true facts. Thus New South Wales, Victoria, and South Australia present a truer picture than the remaining three States. The densely-populated mining centres of the northern part of Queensland, the goldfields and pearling grounds of Western Australia, and the mines on the west coast of Tasmania are all contained in large districts which, apart from the centres mentioned, are very sparsely populated, and which, therefore, shew a darker shading on the map than they would present if the size of the map had allowed a division into smaller districts to be made.

The concentration of population about the capitals, referred to in the accompanying text, is obvious on reference to the above map.

6. **Graphs shewing Net Increase of Population** (pages 160 and 161).—The graphs disclose the fact that the most notable years of large net increases of population of the Commonwealth as a whole were 1864, 1877, 1883, 1888, and 1909. The highest increase was attained in 1883. The net increase for 1909 was higher than for any year since 1888. The years in which low net increases were noticeable were 1861, 1867, 1872, 1878, 1889, 1893, 1898, and 1903.

The graph for New South Wales indicates a high net increase of population between 1876 and 1893, advancing to a maximum in 1883, and then declining to 1901. From the latter year onwards to 1907 an advance in the net increase was in evidence, followed by a decline in 1908, and a recovery in 1909.

Some features of the graph shewing the Victorian net increase are the height attained in 1864, 1870, 1888, and 1901, the smallness of the increase for the years 1861 and 1875, and the decreases for 1896 and 1903.

For Queensland it will be seen that the years of high net increases were 1862, 1875, 1883, 1895, and 1901, while the years in which these were at very low level were 1869, 1878, 1891, and 1903.

In South Australia the net increases were exceptionally high in 1865, 1876, 1883, and 1892, and correspondingly low in 1870, 1886, and 1896.

In Western Australia the net increase graph indicates no very marked advance until about 1884, from which it rises somewhat rapidly to 1886, and then declines to 1888. This is followed by an exceedingly rapid rise to 1896, and a subsequent fall to 1899, succeeded by a further rise to 1902, and a fall thereafter to 1907, followed by a rise to 1909.

In the case of the Tasmanian graph, indications of a very varied net increase are in evidence, the principal high points being those for the years 1887, 1891, 1897, 1902, and 1907, while actual decreases were experienced in 1874, 1875, 1892, and 1906.

7. **Graphs shewing Masculinity of Population, Commonwealth and States** (page 163).—These graphs furnish information concerning the variations which have taken place in the relative numbers of males and females in the populations of the Commonwealth and the several States during the years 1796 to 1909, and incidentally serve to indicate special features of growth in the respective populations. In general it will be noted that in recent years there has been a marked tendency towards a masculinity of 100, that is, to a condition in which the numbers of males and females in the population were equal, but that with the exception of Victoria in 1904 and 1907 the masculinity has never fallen below 100. The early experience of the Commonwealth exhibits a fairly rapid decline in masculinity to 1812, followed by an even more rapid rise to 1828 and a subsequent fall with more gentle slope to 1850. From 1850 onwards the decline in masculinity has been fairly continuous though subject to fluctuations. It should be noted that the marked variations of the earlier as compared with the later years have been due to a considerable extent to the fact that, owing to the smallness of the population, any considerable influx of male immigrants had a marked effect in increasing the masculinity of the population, while an influx of female immigrants tended to considerably reduce it. Two points of special interest in the graphs of the separate States are the maxima attained in 1852 in Victoria and 1896 in Western Australia, as the result of extensive male immigration consequent on the gold discoveries in the respective States.

SECTION V.

VITAL STATISTICS.

§ 1. Births.

1. **Male and Female Births, 1901 to 1909.**—The total number of male and female births registered in the Commonwealth during the years 1901 to 1909 is as shewn in the two tables hereunder :—

TOTAL MALE BIRTHS, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.[1]	W. Aust.	Tasmania.	C'wealth.
1901	19,149	15,876	7,281	4,687	2,946	2,570	52,509
1902	19,322	15,583	7,279	4,587	3,241	2,604	52,616
1903	18,377	15,115	6,427	4,484	3,433	2,570	50,406
1904	19,857	15,313	7,134	4,686	3,666	2,702	53,358
1905	20,206	15,523	6,978	4,514	3,862	2,812	53,895
1906	21,066	15,716	7,280	4,617	4,043	2,792	55,514
1907	21,604	15,986	7,451	4,689	3,962	2,797	56,489
1908	21,605	16,071	7,677	4,949	3,993	2,818	57,113
1909	22,464	16,096	7,954	5,235	3,884	2,849	58,482

1. Including Northern Territory.

TOTAL FEMALE BIRTHS, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.[1]	W. Aust.	Tasmania.	C'wealth.
1901	18,726	15,132	7,022	4,424	2,772	2,360	50,436
1902	18,513	14,878	6,937	4,360	2,991	2,481	50,160
1903	17,589	14,454	6,194	4,024	3,266	2,510	48,037
1904	18,810	14,450	6,948	4,447	3,510	2,590	50,755
1905	19,295	14,584	6,648	4,354	3,720	2,445	51,046
1906	19,882	15,128	6,739	4,329	3,757	2,541	52,376
1907	20,597	15,379	7,089	4,549	3,750	2,494	53,858
1908	20,853	15,026	7,153	4,841	3,762	2,797	54,432
1909	21,318	15,448	7,598	4,856	3,718	2,651	55,589

1. Including Northern Territory.

2. **Total Births, 1901 to 1909.**—While the total number of births for the Commonwealth was higher in 1909 than in any of the preceding eight years, the following table of particulars discloses also the fact that apart from New South Wales and Western Australia, the excess of births in 1909 over those in 1901 was very small :—

TOTAL BIRTHS, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.[1]	W. Aust.	Tas.	C'wealth.
1901	37,875	31,008	14,303	9,111	5,718	4,930	102,945
1902	37,835	30,461	14,216	8,947	6,232	5,085	102,776
1903	35,966	29,569	12,621	8,508	6,699	5,080	98,443
1904	38,667	29,763	14,082	9,133	7,176	5,292	104,113
1905	39,501	30,107	13,626	8,868	7,582	5,257	104,941
1906	40,948	30,844	14,019	8,946	7,800	5,333	107,890
1907	42,201	31,365	14,540	9,238	7,712	5,291	110,347
1908	42,458	31,097	14,830	9,790	7,755	5,615	111,545
1909	43,782	31,544	15,552	10.091	7.602	5.500	114,071

1. Including Northern Territory.

3. **Birth Rates, 1901 to 1909.**—(i.) *Crude Birth Rate.* The birth rate for the whole Commonwealth was lower in 1909 than in 1901, and Tasmania is the only State in which a slight increase in the rate took place, as will be seen from the following table, which gives also the number of persons per square mile in each State :—

CRUDE BIRTH RATE,[1] COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Vic.	Qld.	S.A.[3]	W.A.	Tas.	Cwlth.
1901	27.78	25.75	28.53	25.11	30.34	28.60	27.14
1902	27.20	25.16	27.89	24.54	30.27	29.23	26.66
1903	25.41	24.46	24.62	23.25	30.26	28.62	25.23
1904	26.81	24.65	27.13	24.71	30.33	29.60	26.33
1905	26.79	24.83	25.92	23.67	30.29	29.33	26.12
1906	27.12	25.20	26.31	23.55	30.01	29.82	26.41
1907	27.22	25.32	26.98	23.96	29.40	29.50	26.55
1908	26.86	24.71	26.99	24.59	29.26	30.90	26.35
1909	27.26	24.55	27.52	24.57	28.06	29.86	26.40
Density[2] (No. per square mile) ...	5.22	14.83	0.85	0.46	0.28	7.13	1.47

1. Number of Births per 1000 of the mean annual population.
2. On 31st December, 1909.
3. Including Northern Territory.

The population density of each State and of the Commonwealth has been given for the purpose of considering the influence, if any, of concentration of population on birth-rate, in connection with the disparities of the rate in different parts of Australia.

(ii.) *Objections to Crude Birth Rate.* The figures just given represent the "crude birth rate," *i.e.*, the number of births per thousand of mean annual population. The number of births per thousand of the female population of child-bearing ages, *i.e.*, from 15 to 45, would furnish a more significant rate. To calculate this, would, of course, involve assumptions concerning the variations of the age and sex constitution of the population since the last Census. Calculations of this nature at the present time would be subject to so large an uncertainty that it has been decided to defer computing the rates of fecundity and fertility on other and better bases until after the next Census. The calculation has, however, been made for the last three Census periods, and covers in each case the Census year together with the year immediately preceding and the year immediately following. The following results have been obtained:—Total births per 1000 women (married and unmarried) of ages 15 to 45 :—Years 1880-82, 169.69 ; years 1890-92, 158.81 ; years 1900-02, 117.26. Nuptial births per 1000 married women of ages 15 to 45 :—Years 1880-82, 320.96 ; 1890-92, 332.03 ; years 1900-02, 235.84.

4. **Birth Rates of Various Countries.**—A comparison with other countries shews that the Australian States occupy a very low position, which is, however, fortunately counterbalanced by a still lower position in regard to their death rates, as will be seen from the table on page 187.

CRUDE BIRTH RATE[1] OF VARIOUS COUNTRIES.

Country.	Year.	Rate.	Country.	Year.	Rate.
Russia, European ...	1903	48.1	Western Australia ...	1909	28.1
Bulgaria	1907	43.6	Queensland	1909	27.5
Rumania	1908	40.8	New South Wales ...	1909	27.3
Ceylon	1908	40.1	New Zealand ...	1909	27.3
Chile	1908	39.3	Scotland	1908	27.2
Jamaica	1908	37.6	Switzerland	1907	26.8
Servia	1908	36.8	England and Wales ...	1908	26.5
Hungary	1908	36.3	Commonwealth ...	1909	26.4
Austria	1907	33.8	United Kingdom ...	1908	26.3
Italy	1908	33.4	Norway	1908	26.2

Japan	1907	33.0	Belgium	1907	25.3
Prussia	1908	32.8	South Australia ...	1909	24.6
German Empire ...	1907	32.3	Victoria	1909	24.6
Finland	1907	31.3	Ireland	1908	23.3
Tasmania	1909	29.9	Canada (Ontario) ...	1906	23.3
Netherlands	1908	29.7	France	1908	20.2
Denmark	1908	28.3			

1. Number of births per 1000 of the mean population.

5. **Masculinity at Birth.**—The masculinity of births, *i.e.*, the number of males per 100 females, registered during the last nine years in the several States of the Commonwealth has varied from 100.75 in Tasmania in 1908 to 115.01 in Tasmania in 1905. The following table, which gives the values for the States and Commonwealth for 1901 to 1909, shews the remarkable fact that for the Commonwealth there was a steady increase of masculinity from 1901 to 1906, with a sharp decrease in 1907 and a further increase in 1908 and 1909:—

MASCULINITY[1] OF BIRTHS REGISTERED, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	102.26	104.92	103.69	105.94	106.28	108.90	104.11
1902 ...	104.37	104.74	104.93	105.21	108.36	104.96	104.90
1903 ...	104.48	104.57	103.76	111.43	105.11	102.39	104.93
1904 ...	105.57	105.97	102.68	105.37	104.44	104.32	105.13
1905 ...	104.72	106.44	104.96	103.67	103.82	115.01	105.58
1906 ...	105.96	103.89	108.03	106.65	107.61	109.88	105.99
1907 ...	104.89	103.95	105.11	103.08	105.65	112.15	104.89
1908 ...	103.61	106.95	107.33	102.23	106.14	100.75	104.93
1909 ...	105.38	104.19	104.69	107.80	104.46	107.47	105.20

1. Number of males to each 100 females.

There is ordinarily a very small difference between the masculinity of nuptial and ex-nuptial births. Thus, according to Bodio, whose figures are quoted in the following

table, for the period about 1887-1891, the masculinity ranged from 108.3 to 103.6, and from 107.9 to 101.6 for total and ex-nuptial births respectively.

MASCULINITY OF BIRTHS IN VARIOUS COUNTRIES.

Country.	Masculinity of Births.[1]		Country.	Masculinity of Births.[1]	
	All Live Births.	Ex-nuptial Live Births.		All Live Births.	Ex-nuptial Live Births.
Spain	108.3	107.9	German Empire ...	105.2	104.7
Rumania	107.7	103.4	Finland	105.0	105.2
Portugal	107.5	106.4	Hungary	105.0	102.9
Austria	105.8	105.5	Sweden	105.0	104.3
Italy	105.8	104.4	Denmark	104.8	105.0
Norway	105.8	105.9	Servia	104.7	103.5
Ireland	105.5	104.8	France	104.6	102.9
Netherlands ...	105.5	104.7	Belgium	104.5	102.2
Scotland	105.5	105.9	Switzerland ...	104.5	101.6
Russia, European ...	105.4	104.5	England	103.6	104.4

1. Number of males to each 100 females.

The masculinity of ex-nuptial births in the Commonwealth was as follows:—

MASCULINITY[1] OF EX-NUPTIAL BIRTHS REGISTERED, COMMONWEALTH, 1901 TO 1909.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901 ...	108.46	102.22	107.84	100.56	100.00	102.07	105.50
1902 ...	103.67	106.78	100.23	106.91	111.11	93.17	103.96
1903 ...	97.79	114.83	95.22	100.00	114.29	122.66	104.10
1904 ...	100.80	108.68	95.77	83.50	107.28	93.71	100.98
1905 ...	102.50	102.52	105.63	96.94	98.75	102.80	102.44
1906 ...	103.10	102.23	104.17	116.97	118.13	124.92	105.44
1907 ...	104.91	105.59	100.90	113.56	115.94	100.00	105.11
1908 ...	108.60	105.38	96.83	97.30	89.33	108.51	104.00
1909 ...	105.46	102.16	103.90	104.81	129.14	129.01	106.25

1. Number of males to each 100 females.

It is curious to note that while, so far as the total births are concerned, there has always been an excess of male births over female births, this has not been the case in regard to ex-nuptial births, where in South Australia in 1904 the masculinity was only 83.50. On the other hand it rose as high as 129.14 in Western Australia in 1909. Little weight, however, can be attached to these results on account of the small totals on which they are based.

6. **Ex-nuptiality of Births.**—The total ex-nuptial births fell from 1901 to 1903, then rose rapidly to 1908 and remained almost stationary till 1909. See the table on the following page.

It is, of course, possible that the number of ex-nuptial births is somewhat understated, owing to diffidence in proclaiming the fact of ex-nuptiality, and it is not unlikely that the majority of unregistered births are ex-nuptial.

TOTAL EX-NUPTIAL BIRTHS REGISTERED IN THE COMMONWEALTH, 1901 TO 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901	2,712	1,729	848	361	222	293	6,165
1902	2,497	1,677	859	389	247	311	5,980
1903	2,413	1,695	857	354	315	285	5,919
1904	2,755	1,707	971	367	313	308	6,421
1905	2,912	1,689	950	386	318	290	6,545
1906	2,882	1,721	1,076	358	373	308	6,718
1907	2,920	1,764	1,117	378	298	306	6,783
1908	2,887	1,793	1,118	438	337	294	6,867
1909	2,821	1,870	1,097	426	346	300	6,860

(i). *Rate of Ex-nuptiality, 1901 to 1909.* The rate of ex-nuptiality, *i.e.*, the percentage of ex-nuptial to total births, shews on the whole a slight increase from 1901 to 1905, with a decrease during the last four years, as the subjoined table shews :—

PERCENTAGE OF EX-NUPTIAL ON TOTAL BIRTHS, COMMONWEALTH, 1901 TO 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth
	%	%	%	%	%	%	%
1901	7.16	5.58	5.93	3.96	3.88	5.94	5.99
1902	6.60	5.51	6.04	4.35	3.96	6.12	5.82
1903	6.71	5.73	6.79	4.16	4.70	5.61	6.01
1904	7.12	5.74	6.90	4.02	4.36	5.82	6.17
1905	7.37	5.61	6.97	4.35	4.19	5.52	6.24
1906	7.04	5.58	7.68	4.00	4.78	5.78	6.23
1907	6.92	5.62	7.68	4.09	3.86	5.73	6.15
1908	6.80	5.77	7.54	4.47	4.35	5.24	6.16
1909	6.44	5.94	7.05	4.22	3.95	5.45	6.01

A comparison of greater significance would be obtained by calculating the number of ex-nuptial births per thousand of the single and widowed female population between the ages of 15 and 45, but until the next Census has once more shewn the composition of the population, such a calculation would be liable to considerable error, and will, therefore, be deferred. The calculation has, however, been made for the three last Census periods, and covers in each case the Census year, together with the year immediately preceding and the year immediately following. The number of ex-nuptial births per 1000 unmarried women of ages 15 to 45 has been found to be as follows:—Years 1880-82, 14.49; years 1890-92, 15.93; years 1900-02, 13.30.

(ii.) *Causes of Increase.* Since the rate of ex-nuptiality might appear to increase by the mere decrease in the general birth rate, the following table has been prepared :—

CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES,[1] COMMONWEALTH, 1901 to 1909.

Births.	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.
Ex-nuptial ...	1.62	1.56	1.52	1.62	1.63	1.65	1.63	1.62	1.59
Nuptial ...	25.52	25.10	23.71	24.71	24.50	24.76	24.92	24.73	24.81

1. Number of births per 1000 of mean population.

(iii). *Ex-nuptiality—Rates of Various Countries.* The rate for the Commonwealth is higher than that for England and Wales, slightly lower than that for Scotland, and considerably below the rates for many of the countries for which returns are available, as the table hereunder shews. The rates shewn below refer to three triennial periods, 1880-2, 1890-2, and 1900-2, and are given per thousand of the unmarried and widowed female population:—

EX-NUPTIAL BIRTHS PER THOUSAND OF UNMARRIED AND WIDOWED FEMALE POPULATION IN VARIOUS COUNTRIES.

Country.	Rate.			Country.	Rate.		
	1880-2.	1890-2.	1900-2.		1880-2.	1890-2.	1900-2.
	%	%	%		%	%	%
Ireland	4.4	3.9	3.8	Belgium	20.0	20.6	17.8
Netherlands ...	9.7	9.0	6.8	France	17.6	17.7	19.1
England and Wales ...	14.1	10.5	8.5	Italy	25.4	...	19.4
New Zealand ...	13.4	9.0	8.9	Russia	25.8	25.1	23.7
Switzerland	10.8	10.0	9.8	Denmark	26.9	24.5	24.2
Commonwealth ...	14.5	15.9	13.3	Sweden	22.6	22.9	24.3
Scotland	21.4	17.1	13.4	German Empire ...	29.6	28.7	27.4
Spain	16.0	17.5	15.5	Austria	43.4	42.7	40.1
Norway	19.7	16.9	17.2				

It may be added that the general circumstances in Australia with regard to opportunity for marriage are probably relatively easy as compared with those in older established countries.

7. **Multiple Births.**—Among the total number of 114,071 births registered in the Commonwealth in 1909 there were 111,779 single births, 2251 twins, and 41 triplets. The number of cases of twins was 1128, five children being still-born, and the number of cases of triplets 14, one child being still-born. The total number of mothers was, therefore, 112,921, the proportion of mothers of twins being one in every 100, and of mothers of triplets one in every 8066 of total mothers. The proportion of multiple births is a fairly constant one. In 1907 they numbered 1043 out of a total of 109,306, or one in 105; in 1908, 1065, or one in 104; and in 1909, 1142, or one in 99. The number of cases of triplets is so small that a slight alteration in the total will completely change the proportion. Thus, there were 14 cases in 1907, or one in 7872 of total mothers, as compared with one in 18,415 in 1908, and one in 8066 in 1909.

8. **Ages of Parents.**—The relative ages of the parents of children registered in 1909 have been tabulated, twins and triplets being distinguished from single births, and are shewn for single ages and for every State in "Bulletin of Population and Vital Statistics, No. 20; Vital Statistics of the Commonwealth for the Year 1909." In the present work the exigencies of space allow only the insertion of corresponding tables shewing the relative ages of parents in groups of five years. It will be seen from the tables that the largest number both of single and of twin births occurred where the ages of both father and mother were between 25 and 29. The largest number of mothers of single children was found at ages 25 to 29, and that of mothers of twins at ages 30 to 34.

11. **Mothers' Age, Duration of Marriage, and Issue.**—A tabulation has been made shewing, in age-groups, the duration of marriage and issue of mothers. The total number of nuptial confinements in 1909 was 106,113, viz., 105,023 single births, 1076 cases of twins, and 14 cases of triplets. From this number 1214 mothers must be deducted, viz., 1026 in Tasmania and 188 in other States, in whose case the necessary particulars either as to date of marriage or as to previous issue were not stated, while 157 registrations of births under the New South Wales Legitimation Act are also excluded. The tables refer, therefore, to a total of 104,742 mothers. They exclude children by former marriages and still-born children, but include ex-nuptial children, previous issue by the same father. The tables cannot be given *in extenso*, but the following are their most salient features. The complete tabulations are shewn in "Commonwealth Bulletin of Population and Vital Statistics, No. 20; Vital Statistics of the Commonwealth for the Year 1909."

DURATION OF MARRIAGE AND ISSUE OF MOTHERS, OF ALL AGES, COMMONWEALTH, 1909.

Duration of Marriage.	Total Mothers.	Total Issue.	Average Number of Children.	Duration of Marriage.	Total Mothers.	Total Issue.	Average Number of Children.

Total Mothers	3,664	23,785	30,435	23,459	16,257	6,474	668	104,742

The tables shew a fairly regular increase in the number of children up to the period where the marriage has lasted twenty-one years, and it appears that the average interval between successive confinements up to that period was rather less than two and a half years. One mother of the age-group 40 to 44 years, had her twentieth child in the twenty-ninth year of her marriage. The average number of children of all marriages was 3.42, the corresponding figure for 1908 having been 3.44.

A similar table has been prepared shewing the previous issue of mothers of twins and triplets, from which it appears that 231 mothers had twins at their first confinement; 175 at their second; 168 at their third; 127 at their fourth; 103 at their fifth; 79 at their sixth; 65 at their seventh; 47 at their eighth; 28 at their ninth; 11 at their tenth; 12 at their eleventh; 11 at their twelfth; 4 at their thirteenth; and 1 at her fourteenth.

Of the fourteen cases of triplets 2 occurred at the first confinement; 2 at the second; 2 at the third; 2 at the fourth; 2 at the fifth; 3 at the seventh; and 1 at the eighth.

12. **Interval between Marriage and First Birth.**—The following table shews the interval between marriage and first birth. Twins and triplets are included, the elder born only being enumerated.

INTERVAL BETWEEN MARRIAGE AND FIRST BIRTH, COMMONWEALTH, 1909.

Interval.	Number of First Children.	Interval.	Number of First Children.	Interval.	Number of First Children.
Under 1 month	482	1 year	6,973	13 years	15
1 month	509	2 years	1,823	14 ,,	6
2 months	808	3 ,,	745	15 ,,	2
3 ,,	1,001	4 ,,	386	16 ,,	3
4 ,,	1,179	5 ,,	201	17 ,,	4
5 ,,	1,376	6 ,,	162	18 ,,	7
6 ,,	1,604	7 ,,	99	19 ,,	3
7 ,,	1,338	8 ,,	64		
8 ,,	1,197	9 ,,	35		
9 ,,	3,364	10 ,,	35		
10 ,,	2,220	11 ,,	22	Total	27,407
11 ,,	1,723	12 ,,	21		

Of these 27,407 children 14,042 were males and 13,365 were females; the masculinity of first births was therefore only 105.07 as compared with 105.20 for total births.

The previous issue of mothers of ex-nuptial children is not recorded, but for the purposes of the following table all ex-nuptial births have been assumed to be first births, and the table shews, together with the ages of mothers, the first births which occurred within less than nine months of the date of marriage, and those which occurred at a later date, as well as the ex-nuptial births. A comparison of the column shewing the total of nuptial births within less than nine months of marriage and of ex-nuptial births with the next column, shewing the nuptial births which occurred not less than nine months after marriage, reveals the fact that for all ages the proportion of the two was as 9 to 10, while at ages up to and including 21 there was a great preponderance of nuptial births following on antenuptial conception and of ex-nuptial births. It must, of course, be understood that a certain number of premature births are necessarily included amongst the births which occurred within less than nine months of marriage, but there is no means of arriving at the proportion of those births.

AGES OF MOTHERS AND INTERVAL BETWEEN MARRIAGE AND FIRST BIRTH, etc., COMMONWEALTH, 1909.

Age of Mother at Birth of Child.	Ex-nuptial Births.	Nuptial Births less than nine months after Marriage.	Total of two preceding columns.	Nuptial Births nine months after Marriage and later.	Total Nuptial First Births.	Nuptial First Births and Ex-nuptial Births.

§ 2. Marriages.

1. **Marriages, 1901 to 1909.**—The number of marriages registered in the Commonwealth in 1909 was 33,775, the highest number ever recorded. There has been a steady increase in the annual number of marriages in each State since 1903, and the crude marriage-rate increased similarly in all the States until 1907, with the exception of Western Australia, where a further diminution may reasonably be expected until the composition of the population as to sexes and ages approaches more closely to that of the other States. In 1908 all the States, with the exception of New South Wales and Tasmania, had a lower marriage rate than in 1907, but the rate recovered in 1909, and was higher in that year than in 1907 in all the States with the exception of Victoria and Western Australia. The number of marriages in each State since 1901 is shewn below:—

TOTAL MARRIAGES, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	10,538	8,406	3,341	2,309	1,821	1,338	27,753
1902 ...	10,486	8,477	3,243	2,383	2,024	1,313	27,926
1903 ...	9,759	7,605	2,933	2,272	2,064	1,344	25,977
1904 ...	10,424	8,210	3,078	2,534	2,088	1,350	27,684
1905 ...	10,970	8,774	3,173	2,599	2,123	1,365	29,004
1906 ...	11,551	8,930	3,588	2,681	2,261	1,399	30,410
1907 ...	12,187	9,575	4,105	3,079	2,114	1,410	32,470
1908 ...	12,641	9,335	4,009	3,122	2,012	1,432	32,551
1909 ...	13,025	9,431	4,543	3,285	1,997	1,494	33,775

2. **Marriage Rates, 1901 to 1909.**—The number of marriages registered per thousand of mean population is shewn in the following table for the same period:—

CRUDE MARRIAGE RATE[1], COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	7.73	6.98	6.66	6.36	9.66	7.76	7.32
1902 ...	7.54	7.00	6.36	6.54	9.83	7.55	7.24
1903 ...	6.89	6.29	5.72	6.21	9.32	7.57	6.66
1904 ...	7.23	6.80	5.93	6.86	8.83	7.55	7.00
1905 ...	7.44	7.24	6.03	6.94	8.48	7.62	7.22
1906 ...	7.65	7.30	6.73	7.06	8.70	7.82	7.44
1907 ...	7.86	7.73	7.62	7.98	8.06	7.86	7.81
1908 ...	8.00	7.42	7.30	7.84	7.59	7.88	7.69
1909 ...	8.11	7.34	8.04	8.00	7.37	8.11	7.82

1. Number of marriages (not persons married) per 1000 of mean annual population.

As in some international tabulations the marriage rates are calculated per 1000 of the unmarried population of 15 years and over, the corresponding rates have been worked out for the Commonwealth for the three last Census periods. The figures comprise in each case the Census year with the year immediately preceding, and the year immediately following, and are as follows:—Years 1880-82, 48.98; years 1890-92, 45.74; years 1900-02, 42.14. These rates refer, of course, to persons married and not to marriages, as do the rates in the preceding table.

3. **Marriage Rates in Various Countries.**—A comparison of the Australian marriage rate with that of European countries shews it to be considerably below the rates prevailing in the East of Europe, almost identical with those of Central and Western Europe, and higher than those of the North of Europe:—

CRUDE MARRIAGE RATE.—VARIOUS COUNTRIES.

Country.	Year.	Crude Marriage Rate.	Country.	Year.	Crude Marriage Rate.
Bulgaria	1907	9.90	Switzerland... ...	1907	7.80
Rumania	1908	9.20	Austria	1907	7.50
Servia	1908	9.20	England and Wales ...	1908	7.45
Hungary	1908	9.10	Denmark	1908	7.40
Canada (Ontario) ...	1906	9.0	Netherlands ...	1908	7.20
Russia	1903	8.90	Spain	1908	7.15
New Zealand... ...	1909	8.33	Finland	1907	6.85
Italy	1908	8.30	Scotland	1908	6.55
German Empire ...	1907	8.15	Norway	1908	6.10
France	1908	8.05	Sweden	1908	6.10
Belgium	1907	8.0	Ireland	1908	5.20
Commonwealth ...	1909	7.82			

4. **Age at Marriage.**—(*a*) The age at marriage of bridegrooms and brides will be found in the following table, the previous conjugal condition of the contracting parties being distinguished. It will be seen that no less than 1219 males were married during 1909 who were less than twenty-one years of age. The corresponding number of females was 6911, of whom four were widows and one was divorced. At the other end of the scale there were twenty-four men of sixty-five years and upwards, who described themselves as bachelors, and seven spinsters of corresponding ages.

5. **Previous Conjugal Condition.**—In a previous table the total number of bachelors and spinsters, widowed and divorced persons, who were married during the year 1909, was shewn. In the following table the relative conjugal conditions of the contracting parties are given:—

RELATIVE CONJUGAL CONDITION OF PERSONS MARRIED, COMMONWEALTH, 1909.

Conjugal Condition.		Total Bridegrooms.	Brides.		
			Spinsters.	Widows.	Divorced.
Bridegrooms	Bachelors ...	31,426	30,137	1,124	165
	Widowers ...	2,199	1,524	636	39
	Divorced ...	150	125	18	7
Total Brides		33,775	31,786	1,778	211

6. **Birthplaces of Persons Married.** —Information as to the birthplaces of persons who were married in 1909 was not obtained in the State of Western Australia; the following figures refer, therefore, only to New South Wales, Victoria, Queensland, South Australia and Tasmania. As might be expected, there were more brides than bridegrooms who were born in one of the Commonwealth States, and more bridegrooms than brides who were born elsewhere. In "Bulletin No. 20 of Population and Vital Statistics" the relative birthplaces of bridegrooms and brides will be found tabulated.

BIRTHPLACES OF PERSONS MARRIED, 1909.

1. Exclusive of Western Australia.

7. **Occupations and Ages of Bridegrooms.**—A tabulation has been made of the occupations and ages of all males married in the Commonwealth in the years 1907, 1908 and 1909. In "Bulletin No. 20" the 1909 tabulation is shewn for orders of occupations: here it is repeated for classes only, with a subdivision of the Industrial class and of the class of Primary Producers. The average ages of the persons falling under those twelve subdivisions were determined, and it appears that, apart from the Indefinite class, which consists chiefly of persons who have retired from business and

who are living on their own means, and where a high average age may naturally be expected, the average age ranges from 28.40 in the Manufacturing class to 33.10 years in the Pastoral class. The averages, calculated on the basis of the 1907 and 1908 figures, have been added for the purposes of comparison. The figures for three years are, however, rather small to allow of definite conclusions being drawn. The results obtained are shewn in the following table:—

OCCUPATIONS AND AGES OF BRIDEGROOMS, COMMONWEALTH, 1909.

Ages at Marriage.	Professional.	Domestic.	Mercantile.	Transport and Communication.	Industrial.			Primary Producers.				Indefinite.
					Manufacturing.	Building and Construction.	Indefinite Industrial Workers.	Agricultural.	Pastoral.	Mines and Quarries.	Other Primary Producers.

8. **Fertility of Marriages.**—The quotient obtained by division of the nuptial births registered, say during the five years 1905 to 1909, by the number of marriages registered during the five years 1900 to 1904, *i.e.*, the period antecedent by five years to the period of the births, has been called the "fertility of marriages." This works out at 3.77, or in other words, the number of children to be expected from every four marriages in the Commonwealth is fifteen. This method, while not professing any claim to accuracy, furnishes results which agree fairly well with those found by more elaborate and careful investigation.

9. **Registration of Marriages.**—In all the States of the Commonwealth marriages may be celebrated either by ministers of religion, whose names are registered for that purpose with the Registrar-General, or by certain civil officers, in most cases district registrars. The percentage of marriages celebrated by ministers of religion has increased from 96.25 per cent. in 1901 to 97.55 per cent. in 1909. The figures for the individual States in 1909 were: New South Wales, 98.30 per cent.; Victoria, 99.16 per cent.; Queensland, 95.62 per cent.; South Australia, 95.68 per cent.; Western Australia, 92.24 per cent.; and Tasmania, 99.20 per cent. The registered ministers in 1909 belonged to forty-four different denominations, some of which, however, can hardly be regarded as having any valid existence. The extraordinary number of marriages credited to some

denominations, the number of whose adherents, according to the Census returns, was very small indeed, is not inconsistent with the supposition that some of these denominations have been created for the purpose of obtaining the registration necessary to conduct marriages, or to be connected with a so-called "Matrimonial Agency." The figures for 1909 are shewn in the following table :—

MARRIAGES IN EACH DENOMINATION, COMMONWEALTH, 1909.

10. **Mark Signatures.**—The marriage registers afford some clue, even if an imperfect one, to the illiteracy of the adult population, since a small and constantly diminishing percentage of bridegrooms and brides sign the registers with marks.

(i.) *Males and Females, 1901 to 1909.* For a number of years, with the exception of 1908, mark signatures by males have been slightly more numerous than those by females, the percentages for the Commonwealth during the past nine years having been as follows :—

PERCENTAGE OF MARK SIGNATURES AT MARRIAGE, COMMONWEALTH, 1901 to 1909.

Year. ...	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.
Male...	1.35	1.21	1.17	0.95	0.91	0.92	0.81	0.71	0.65
Female	1.29	1.11	1.02	0.91	0.93	0.86	0.70	0.73	0.62

(ii.) *Mark Signatures in Commonwealth States, 1901 to 1909.* The following table shews that while the Tasmanian percentage has been the highest, and the Victorian the lowest, in each of the nine years under review, there has been a marked decrease in every State :—

PERCENTAGE OF MARK SIGNATURES AT MARRIAGE, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	1.34	0.53	2.56	0.95	0.99	4.11	1.32
1902 ...	1.22	0.61	1.93	1.15	0.69	3.12	1.16
1903 ...	1.10	0.60	1.86	1.32	0.75	2.38	1.10
1904 ...	0.90	0.54	1.72	0.65	0.53	2.85	0.93
1905 ...	1.12	0.44	1.39	0.83	0.57	2.12	0.92
1906 ...	0.94	0.43	1.67	0.67	0.66	2.18	0.89
1907 ...	0.87	0.36	1.14	0.55	0.64	2.02	0.76
1908 ...	0.79	0.33	1.20	0.56	0.82	1.57	0.72
1909 ...	0.60	0.22	1.16	0.64	0.68	2.07	0.64

A complete disappearance of mark signatures is hardly to be expected, for the available information tends to shew that two-thirds of those who sign with marks are natives of their respective States, who apparently have not made use of the advantages offered to them by the State schools.

§ 3. Deaths.

1. **Male and Female Deaths, 1901 to 1909.**—The total number of deaths registered in the Commonwealth from 1901 to 1909 inclusive, gives an annual average of 26,216 males and 19,231 females, the details being as follows :—

MALE DEATHS, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901	9,327	9,035	3,838	2,289	1,653	1,001	27,143
1902	9,535	9,152	3,924	2,389	1,832	1,044	27,876
1903	9,428	8,626	3,951	2,242	1,829	1,136	27,212
1904	8,733	7,992	3,259	2,071	1,823	1,061	24,939
1905	8,709	8,273	3,499	2,041	1,728	1,061	25,311
1906	8,715	8,342	3,212	2,109	1,878	1,118	25,374
1907	9,444	7,977	3,482	2,087	1,866	1,083	25,939
1908	9,298	8,816	3,500	2,106	1,800	1,112	26,632

Rate,* 1909 ...	10.74	12.54	11.11	9.76	10.66	10.89	11.20

* Number of deaths per 1000 of mean population.

FEMALE DEATHS, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901	6,694	6,869	2,169	1,776	866	813	19,187
1902	7,111	7,025	2,280	1,925	991	870	20,202
1903	7,069	6,969	2,395	1,709	959	980	20,081
1904	6,627	6,401	1,991	1,707	994	913	18,633
1905	6,269	6,403	2,004	1,763	981	783	18,203
1906	6,260	6,895	1,883	1,822	1,206	893	18,959
1907	6,967	6,562	2,116	1,741	1,065	915	19,366
1908	6,757	6,950	2,180	1,811	1,079	1,017	19,794
1909	6,626	6,366	2,111	1,710	1,033	812	18,658
Rate,* 1909 ...	8.82	9.93	8.20	8.94	9.04	9.06	9.13

* Number of deaths per 1000 of mean population.

2. **Male and Female Death Rates, 1909.**—The crude male and female death rates for 1909 only are given, viz., in the last line of the preceding tables: both are highest for Victoria and Tasmania, while the Queensland rate is lowest for females, and the South Australian for males.

Owing to differences in the age constitution of the six States, the crude rates are not, however, strictly comparable, but as has been pointed out in the case of the births, the available data, at a period so remote from the Census, are insufficient for a satisfactory distribution of the population according to ages. For the purposes of calculating the "Index of Mortality" (see page 196) a distribution into five age-groups has, however, been made.

3. **Death Rates of Various Countries.**—A comparison with foreign States is, for the same reason, apt to show the Commonwealth in too favourable a light, but even if an allowance for the different age constitution were made, it would still be found occupying a very enviable position. The following table gives particulars of the death rates of various countries for the latest available years :—

DEATH RATES* OF VARIOUS COUNTRIES.

Country.	Year.	Crude Death Rate.	Country.	Year.	Crude Death Rate.
New Zealand	1909	9.2	German Empire ...	1907	18.0
Commonwealth ...	**1909**	**10.2**	France	1908	19.0

1908 ...	16,055	15,766	5,680	3,917	2,879	2,129	46,426
1909 ...	15,810	14,436	5,530	3,850	2,704	1,842	44,172

5. **Crude Death Rates, 1901 to 1909.**—The death rate for 1909 was the lowest experienced during the nine years under review in every State with the exception of Queensland, where the rate in 1906 was even lower than that of 1909. The Commonwealth rate for 1909 was considerably lower than in any of the other years of the period under review.

CRUDE DEATH RATES,* COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901 ...	11.75	13.21	11.98	11.20	13.37	10.52	12.22
1902 ...	11.97	13.36	12.17	11.83	13.71	11.00	12.47
1903 ...	11.65	12.90	12.38	10.80	12.60	11.92	12.12
1904 ...	10.65	11.92	10.11	10.22	11.91	11.04	11.02
1905 ...	10.16	12.10	10.47	10.15	10.82	10.29	10.83
1906 ...	9.92	12.45	9.56	10.35	11.87	11.24	10.85
1907 ...	10.58	11.74	10.39	9.93	11.17	11.14	10.90
1908 ...	10.16	12.53	10.34	9.84	10.86	11.71	10.97
1909 ...	9.84	11.24	9.79	9.37	9.98	10.00	10.22

* Number of deaths per thousand of mean population for year.

6. **Male and Female Death Rates, 1901 to 1909.**—The rise in the Commonwealth rate from 1905 to 1907 was due to an increase in the female death rate, while the increase in 1908 was practically limited to the male death rate, as the subjoined table shews. The decrease from 1908 to 1909 was fairly equal for the male and female rates:—

MALE AND FEMALE DEATH RATES,* COMMONWEALTH, 1901 to 1909.

Year.	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.
Male rate ...	13.65	13.78	13.30	12.02	11.98	11.78	11.84	11.94	11.20
Female rate	10.64	11.02	10.82	9.92	9.56	9.81	9.86	9.88	9.13
Crude total rate ...	12.22	12.47	12.12	11.02	10.83	10.85	10.90	10.97	10.22

* Number of deaths per thousand of mean population.

7. **Infantile Death Rate.**—(i.) *Deaths and Death Rates of Male and Female Infants 1901 to 1909.* A marked improvement has taken place in the infantile death rate since

1901, in which year it stood at 103.61 per thousand births registered, while in 1909 it had fallen to 71.56 per thousand, a rate lower than that experienced in any previous year. In the following table, which shews both the total number of deaths of children under one year and the rate per thousand births since 1901, males and females are distinguished. The universal experience that during the first few years of life the excess of male births disappears as a consequence of the higher death rate of male infants is shewn by the fact that out of 490,382 male infants born from 1901 to 1909, 46,981 died during their first year of life, while of 466,689 female infants the number who died was only 37,520:—

NUMBER OF INFANTILE DEATHS AND RATE OF INFANTILE MORTALITY, COMMONWEALTH, 1901 to 1909.

Year.	Registered Deaths under one year.			Rate of Infantile Mortality.*		
	Males.	Females.	Total.	Males.	Females.	Total.
1901	5,888	4,778	10,666	112.13	94.73	103.61
1902	6,008	5,004	11,012	114.19	99.76	107.15
1903	6,003	4,960	10,963	119.09	103.25	111.36
1904	4,713	3,800	8,513	88.33	74.87	81.77
1905	4,884	3,696	8,580	90.62	72.41	81.76
1906	5,002	3,981	8,983	90.10	76.01	83.26
1907	4,993	3,952	8,945	88.39	73.38	81.06
1908	4,885	3,791	8,676	85.53	69.65	77.78
1909	4,604	3,559	8,163	78.73	64.02	71.56

*Number of deaths under 1 year per 1000 births registered.

(ii.) *Infantile Mortality, 1901 to 1909.* Divided among the six States, the rate of infantile mortality during the last nine years was as follows:—

RATE* OF INFANTILE MORTALITY, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901	103.74	102.94	101.94	99.99	128.89	89.05	103.61
1902	109.74	108.60	100.17	94.00	142.01	79.06	107.15
1903	110.35	106.40	119.88	97.09	141.22	110.83	111.36
1904	82.42	77.92	76.13	70.51	113.02	90.70	81.77
1905	80.55	83.30	75.52	72.96	104.19	80.65	81.76
1906	74.53	92.92	74.68	75.90	110.00	90.19	83.26
1907	88.46	72.60	77.65	66.57	97.51	82.97	81.06
1908	75.20	86.05	70.67	69.46	84.72	75.16	77.78
1909	73.87	71.36	71.50	61.04	78.01	64.91	71.56

* Number of deaths under 1 year per 1000 births registered.

The movement has been a fairly regular one, shewing an increase in the rate during 1902 and 1903, and a fall since the latter year, so that the 1907 rate was lower than that for 1901 in every State. The regrettable increase in the Victorian rate for 1908 over that of 1907 was wholly due to the large mortality caused by the phenomenal heat of January, 1908. With the exception of Queensland, where the 1908 rate was exceptionally low, the 1909 rate was the lowest ever experienced in any of the States.

(iii.) *Infantile Mortality in Various Countries.* Compared with European countries the States of the Commonwealth occupy a very enviable position, and it may be pointed out that experience has shewn that a high birth rate is often, though not invariably,

accompanied by a high infantile death rate. The figures in the subjoined table relate to the latest years for which returns are available:—

RATE* OF INFANTILE MORTALITY IN VARIOUS COUNTRIES.

Country.	Year.	Rate of Infantile Mortality. *	Crude Birth Rate. †	Country.	Year.	Rate of Infantile Mortality. *	Crude Birth Rate. †
New Zealand ...	1909	62	27.3	Japan	1907	151	33.0

* No. of deaths under 1 year per 1000 births registered. † No. of births per 1000 of mean population.

(iv.) *The Effect of Infantile Mortality on Birth Rate.* It has been contended by certain investigators that the birth-rate question is intimately related to that of infantile mortality, and that in many cases a declining birth rate may be to a large extent accounted for by a decline in the infantile death rate, since, in the case in which an infant has survived, the period elapsing before the birth of the next child is likely to be longer than in the case in which the infant has died. It may indeed be readily admitted that in any community the birth rate may be affected in a definite way by variations of infantile mortality, but careful investigation of the question serves to shew that, whether considered from the theoretical aspect with a view to determining the *maximum* and the *probable* effects which a given change in the rate of infantile mortality would produce in the birth rate, or from the practical point of view by observing the fluctuations in the birth rates of various countries which have been collateral with changes in their rates of infantile mortality, there is little ground for the contention that the rate of infantile mortality is an important factor in determining the variations in the birth rate. One calculation which has been made on the basis of normal Australian conditions indicates that the *maximum* effect of increasing the rate of infantile mortality 100 per cent. would, in the absence of other disturbing causes, be to increase the birth rate by only 3¼ per cent., whilst the *probable* effect would be considerably less than this. In other words, the *maximum* effect of an increase in the rate of infantile mortality from 100 to 200 per 1000 births would be to increase the birth rate from say 30 to 31 per 1000 of population. It may be noted too, that although in some countries an increase in birth-rate accompanies an increase in the rate of infantile mortality, in others the birth rate would appear to be quite unaffected by such an increase, while in the case of England and Wales, Scotland, and Ireland, the tendency apparently exhibited is for an increase in the rate of infantile mortality to be associated with a decrease in the birth rate. The conclusion which these results appear to warrant is that although infantile mortality undoubtedly tends on the whole to increase the birth rate, the practical effect produced is so slight that the existence of such a relation may in any instance be quite masked by more important causes of variation.

8. **Deaths in Age-Groups, 1901 to 1909.**—A distribution into age-groups has been made of the 409,023 deaths which occurred in the Commonwealth from 1901 to 1909, and the results are tabulated for each State. It is, however, sufficient here to shew the results for the Commonwealth as a whole, which are as follows:—

DEATHS IN AGE-GROUPS, COMMONWEALTH, 1901 to 1909.

Ages.	Males.	Females.	Total.	Percentage of Total Males.	Percentage of Total Females.	Percentage of Total.
Under 1 year	46,981	37,520	84,501	19.91	21.68	20.66
1 year and under 5 ...	13,814	12,716	26,530	5.85	7.35	6.49
5 years and under 20 ...	13,911	12,419	26,330	5.90	7.18	6.44
20 years and under 40 ...	33,027	28,783	61,810	14.00	16.63	15.11

10. **Deaths of Centenarians, 1909.**—Particulars as to the twenty persons who died in 1909, aged 100 years and upwards, are given in the following table. It must, of course, be understood that while the Registrars-General of the various States take the greatest care to have statements as to abnormally high ages verified as far as possible, no absolute reliance can be placed on the accuracy of the ages shewn, owing to the well-known tendency of very old people to overstate their ages. The fact must not be lost sight of in connection with this question, that while parish registers in the United Kingdom often date very far back, compulsory registration of births dates practically only from 1874, the Act passed in 1836 having left many loop-holes open for those unwilling to register the births of their children.

14. **Index of Mortality.**—The death rates so far shewn are crude rates, *i.e.*, they simply shew the number of deaths per thousand of mean population, without taking the age constitution of that population into consideration. It is, however, a well-known fact that the death rate and age constitution of a people are intimately related, thus, other conditions being equal, the death rate of a country will be lower if it contain a large percentage of young people (not infants). In order to have a comparison of the mortality of various countries on a uniform basis, so far as age constitution is concerned, the International Statistical Institute in its 1895 session recommended the universal adoption of the population of Sweden in five age-groups, as ascertained at the Census of 1890, as the standard population by which this "Index of Mortality," as distinguished from the crude death rate, should be ascertained. The calculation for 1909 is shewn below for each of the six States and for the Commonwealth, but it will be understood that the distribution of the mean population of 1909 into age-groups according to the distribution as found at the Census of 1901 must be taken as the best approximation which the data will admit of, not as absolutely correct:—

(*a*) **INDEX OF MORTALITY, 1909.**—(STATES AND COMMONWEALTH.)

Age-Group.	Mean Population, 1909, distributed according to Results of Census of 1901.	Number of Deaths, 1909.	No. of Deaths per 1000 of Mean Population, 1909, in each Age-Group.	Age Distribution per 1000 of Standard Population.	Index of Mortality.

NOTE.—The small number of persons whose ages were not ascertained at the 1901 Census have been proportionately distributed among the various age-groups, and the same plan has been followed in regard to the 68 persons who died in 1909, and whose ages were not stated in the certificates of death.

It will be seen that the States and the Commonwealth remain in the same order with one exception—while the crude death rate was third highest in Western Australia, and highest in Victoria, the index of mortality was highest in Western Australia and

third highest in Victoria. Tasmania has the second highest crude rate and the second lowest index, while Queensland has the second lowest crude rate and the second highest index. South Australia has both the lowest crude rate and the lowest index, and New South Wales the third lowest crude rate and the third lowest index. The range of the indexes is generally rather wider than that of the crude death rates, thus, while the latter in 1909 rose from 9.37 per thousand in South Australia to 11.24 per thousand in Victoria, a range of 1.87 per thousand, the indexes varied from 12.57 per thousand in South Australia to 15.07 per thousand in Western Australia, a range of 2.50 per thousand. In 1907 the range of the crude rates was only 1.81 per thousand as compared with a range of 2.33 per thousand for the indexes, while in 1908 the range of the crude rates was 2.69, and that of the indexes only 2.65 per thousand.

For the purpose of comparison with previous years the index of mortality is shewn in the following table for each of the Commonwealth States for the years 1902 to 1909:—

(*b*) **INDEX OF MORTALITY, 1902 to 1909.**—(STATES.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.
1902	15.45	15.89	15.85	15.12	17.66	14.26
1903	15.06	15.25	16.22	13.89	15.75	14.86
1904	14.10	14.29	13.23	13.32	15.60	14.36
1905	13.53	14.55	14.53	13.52	14.41	13.36
1906	13.44	15.05	13.20	13.94	16.51	14.87
1907	14.31	14.40	14.60	13.33	15.66	14.87
1908	13.88	15.24	14.56	13.15	15.80	15.34
1909	13.44	13.74	13.80	12.57	15.07	13.14

A comparison of the above figures with the crude death rates given on a previous page shews that while the crude death rate was highest in Victoria for seven out of the eight years, and in Western Australia in one year, and lowest five times in South Australia, twice in Queensland, and once in Tasmania, the index of mortality was highest in Western Australia six times, in Victoria once, and in Queensland once, and lowest four times in South Australia, twice in Queensland, and twice in Tasmania. The crude death rates shew the following ranges:—In New South Wales, 2.13; in Victoria, 2.12; in Queensland, 2.82; in South Australia, 2.46; in Western Australia, 3.73; and in Tasmania, 1.92 per thousand; while the fluctuations in the indexes amounted to 2.01 per thousand in New South Wales; to 2.15 in Victoria; to 3.02 in Queensland; to 2.55 in South Australia; to 3.25 in Western Australia; and to 2.20 in Tasmania.

15. **Causes of Death.**—(i.) *Changes in Classification from 1903 to 1906.* The causes of death were classified in all the States of the Commonwealth to the end of 1903 according to the system originally devised by Dr. William Farr, and modified in 1886 by Dr. William Ogle. A conference of the State Statisticians, held at Hobart in January, 1902, decided to substitute for that system the classification adopted since 1901 by the Registrar-General of England. While New South Wales, Queensland, and Tasmania remodelled their vital statistics on that plan, Victoria, South Australia, and Western Australia continued to tabulate according to the Farr-Ogle system, and a comparison of the causes of death in the six States during the years 1903, 1904, 1905, and 1906 is, therefore, a matter of extreme difficulty. The differences in tabulation will be seen in the following statement:—

TABULATION OF CAUSES OF DEATH.

State.	1902.	1903.	1904.	1905.	1906.	State.	1902.	1903.	1904.	1905.	1906.
N.S.W. ...	Old	Old	Old	New	International	S. Australia	Old	Old	Old	Old	Old
Victoria ...	Old	Old	Old	Old	Old	W. Australia	Old	Old	Old	Old	Old
Queensland	Old	New	New	New	New	Tasmania ...	Old	New	New	New	New

Old= Farr-Ogle classification. New= New classification by Registrar-General of England. International—See next paragraph.

(ii.) *The Classification of the International Institute of Statistics.* At a conference held in Melbourne in November and December, 1906, the Commonwealth Statistician recommended the adoption of the classification of the International Institute of Statistics, generally known as the Bertillon Index, and after some discussion that recommendation was accepted, a course which has met with wide approval in medical circles. This index, as the one used by the Registrar-General of England, is based on the original Farr-Ogle classification, but approximates more closely to the present English system than to the older one. The chief advantage possessed by the international classification is that it presents a very extensive field for comparison, the countries which have adopted it representing a population which is probably not less than 150,000,000. Provision is made for a decennial revision of the classification, as it has been recognised that finality is impossible in the present state of medical science. The committee charged with the first revision met in Paris in July, 1909, and a number of recommendations were, in accordance with a resolution of the Australasian Medical Congress, held in Melbourne in October, 1908, made to it, dealing particularly with tropical diseases occurring in the northern parts of Australia. Most of these recommendations, together with many others, have been adopted. A full statement of what has been done must be deferred until the next issue of this Year Book, when the Vital Statistics of the Commonwealth for the year 1910 will be shewn in accordance with the revised classification.

The detailed classification groups causes of death under 179 (increased to 189 by the revised classification) different headings in fourteen categories, as follows:—

i. General Diseases.
ii. Diseases of the Nervous System and Organs of Special Sense.
iii. Diseases of the Circulatory System.
iv. Diseases of the Respiratory System.
v. Diseases of the Digestive System.
vi. Diseases of the Genito-urinary System and Adnexa.
vii. Puerperal Condition.
viii. Diseases of the Skin and Cellular Tissue.
ix. Diseases of the Organs of Locomotion.
x. Malformations.
xi. Infancy.
xii. Old Age.
xiii. Violence.
xiv. Ill-defined Diseases.

(iii.) *Compilation of Vital Statistics for 1907, 1908, and 1909 in Commonwealth Bureau.* The vital statistics of the six Commonwealth States for 1907, 1908, and 1909 have been tabulated according to this classification in the Commonwealth Bureau, and the system is being employed in the majority of the State offices in the preparation of their monthly and quarterly bulletins of vital statistics.

(iv.) *Classification of Causes of Death, 1905 to 1909, according to Abridged Bertillon Index.* An abridged classification, which enumerates thirty-five diseases and groups of diseases (increased to thirty-eight by the revised classification) is in use in many European and American States, and while the Commonwealth Statistics for 1907, 1908, and 1909 have been compiled on the detailed classification of 179 headings, it was at least possible to group the causes of death experienced in 1905 and 1906 under the 35 headings of the abridged classification. Two slight modifications had to be made in the tabulation of those two years, viz., in No. 31, Congenital Debility and Malformations, only children under three months, who died of congenital debility, should have been included. The age limit had here to be extended to 12 months, as in the majority of States the causes of death were only tabulated for the group "under one year." For the same reason, the very few cases of "Insufficient Nourishment of Infants," No. 153 of detailed, and No. 34 of abridged classification, had to be included with No. 173, "Inanition," of detailed, and No. 33 of abridged classification. Apart from the two cases mentioned, and certain minor difficulties mentioned in paragraph 16 hereinafter,

it is believed that all the causes of death enumerated either under the Farr-Ogle, or under the Registrar-General's classification, have been grouped under the correct headings of the abridged Bertillon Index. The compilations for 1907, 1908, and 1909 do not labour under those defects. They will be found in full in "Bulletins Nos. 8, 14, and 20 of Population and Vital Statistics"; here it will suffice to give the abridged classification under thirty-five headings for the year 1909 :—

16. **Certification of Deaths.**—Information was obtained in 1909 as to the persons by whom the 44,172 deaths which occurred in the Commonwealth were certified. The result of the enquiry shews that approximately 87.7 per cent. (in 1908, 87.3 per cent.) were certified by medical practitioners, and 11.5 per cent. (in 1908, 11.5 per cent.) by coroners after inquests, or magisterial enquiries, while in 0.8 per cent. (in 1908, 1.2 per cent.) of the cases there was either no certificate given, or particulars were not forthcoming. The results are shewn in detail in Bulletin No. 20; a short summary will therefore suffice here :—

CERTIFICATION OF DEATHS, COMMONWEALTH, 1909.

Death Certified by—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
Medical practitioner ...	13,751	12,591	4,940	3,402	2,373	1,663	38,720
Coroner	2,025	1,834	354	418	293	164	5,088
Not certified or not stated ...	34	11	236	30	38	15	364
Total Deaths	15,810	14,436	5,530	3,850	2,704	1,842	44,172

Of the cases certified by coroners, violent deaths numbered 2415, ill-defined causes 365, organic heart disease 406, senile decay 343, congenital debility 175, diarrhœa and enteritis 96, Bright's disease 89, congestion and hæmorrhage of brain 123, tuberculosis of lungs 113, pneumonia 104, infantile convulsions 72, broncho-pneumonia 48, diseases of arteries, aneurisms, etc. 47, and acute and chronic alcoholism 36; a total of 4432 out of 5088.

Of uncertified causes of death, violent deaths numbered 41, senile debility 41, ill-defined causes 50, infantile convulsions 42, congenital debility 43, diarrhœa and enteritis 8, tuberculosis of the lungs 7, organic heart disease 12, and pneumonia 13; a total of 257 out of 364.

17. **Deaths from Special Causes.**—The table on p. 203 furnishes comparisons for the last five years only, and comparisons will, therefore, be restricted to that period.

(i.) *Typhoid Fever.* Deaths from typhoid fever were more numerous in 1908 than in either 1905 or 1907, and about the same as in 1906, numbering 736, against 630 in 1905, 738 in 1906, and 564 in 1907. In 1909 the number fell to 661, of which 285 occurred in New South Wales, 131 in Victoria, 89 in Queensland, 37 in South Australia, 81 in Western Australia, and 38 in Tasmania.

(ii.) *Typhus.* The death of one woman was registered in 1906 in Victoria as being due to typhus, but this registration may have been due to an error in the death certificate, and the death may possibly have been one of typhoid (enteric) fever.

(iii.) *Intermittent Fever and Malarial Cachexia.* Deaths from malarial diseases are practically confined to the tropical districts of Northern Queensland and Western Australia, and to the Northern Territory, 29 out of 59 deaths registered in 1909 having occurred in Queensland, and 22 in the Northern Territory.

(iv.) *Small-pox.* No deaths from small-pox occurred during the four years 1905 to 1908, but in 1909 one death was registered in Western Australia, the patient having developed the disease on board ship during the journey from India.

(v.) *Measles.* No serious epidemic of measles has occurred for several years; the deaths in 1908 were, however, slightly more numerous than in 1905 and 1906, but less numerous than in 1907, numbering 125, against 113, 39 and 147 respectively. In 1909 the deaths numbered 31, and were distributed among all the six States.

(vi.) *Scarlet Fever.* 74 deaths were registered in 1909, 30 of which occurred in New South Wales, and 42 in Victoria.

(vii.) *Whooping Cough.* A rather severe epidemic of whooping cough visited New South Wales in the early part of 1907, causing 592 deaths out of a total of 1070 registered in the Commonwealth. The number of deaths in Victoria was 130; in Queensland, 127;

in South Australia, 76; in Western Australia, 97; and in Tasmania, 48. The deaths in 1905 numbered only 42, in 1906, 293, and in 1908 fell to 249, with a slight increase to 257 in 1909.

(viii.) *Diphtheria and Croup.* Deaths in 1905 numbered 314; in 1906, 280; in 1907, 403; in 1908, 421, and in 1909, 435, of which 185 occurred in New South Wales, 90 in Victoria, and 82 in Western Australia.

(ix.) *Influenza.* This disease was rather more prevalent in 1907 than in the two previous years, the deaths numbering 902, against 428 and 539. Of the deaths occurring in 1907, 309 were registered in New South Wales, 275 in Victoria, and 209 in Queensland. The deaths in 1908 were 588, and in 1909, 326, of which 107 occurred in New South Wales, 104 in Victoria, and 63 in Queensland.

(x.) *Asiatic Cholera.* No cases of Asiatic cholera have ever occurred in the Commonwealth.

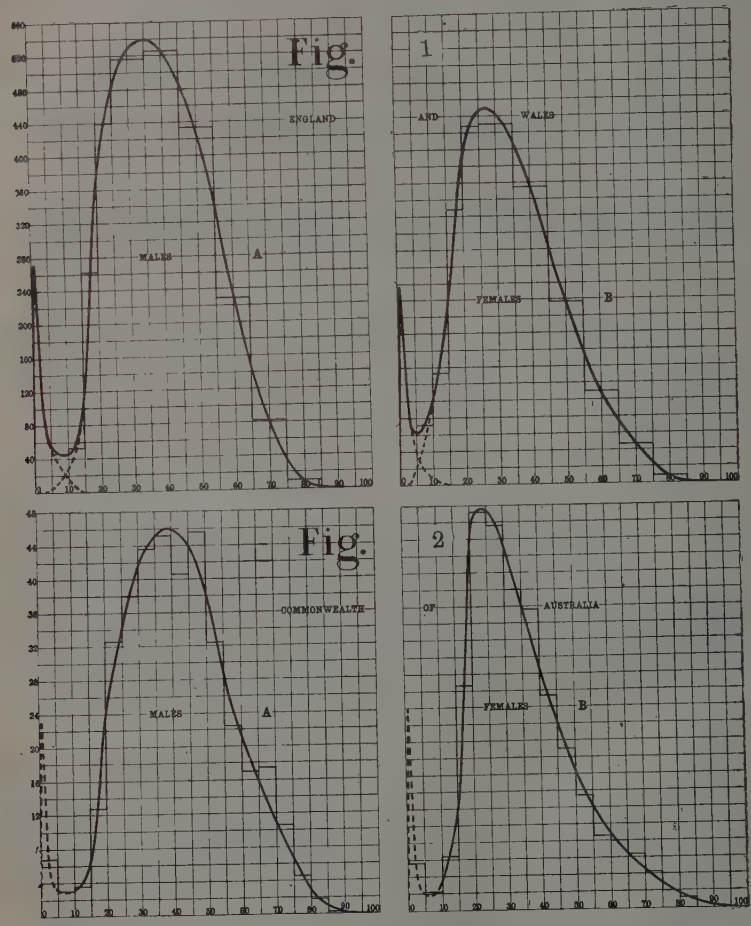
(xi.) *Cholera Nostras.* Isolated cases only of choleriform diarrhœa occurred in each of the five years with the exception of 1906, when the deaths recorded amounted to 209.

(xii.) *Other Epidemic Diseases.* The number of deaths registered under this heading was 597 in 1905, 354 in 1906, 268 in 1907, 258 in 1908, and 211 in 1909. The list in 1909 includes the following diseases:—Dysentery, 85; plague, 13 (of which 7 in New South Wales, 1 in Queensland, 4 in South Australia, and 1 in Western Australia); erysipelas, 52; miliary fever, 1, other epidemic diseases, 60.

(xiii.) *Tuberculosis of the Lungs.* The deaths in 1909 numbered 3119, viz., 1740 males and 1379 females. The figures for 1905, 1906, 1907, and 1908 were 3244, 3222, 3166, and 3367 respectively. Of the deaths in 1909, 1031 occurred in New South Wales, 1093 in Victoria, 329 in Queensland, 342 in South Australia, 198 in Western Australia, and 126 in Tasmania.

(xiii.*a*) *Tuberculosis of the Respiratory System.* Of the various forms of tuberculosis prevalent in the Commonwealth, that which has probably attracted the most attention and has been the subject of the widest comment is phthisis, or tuberculosis of the lungs. The intimate relation, however, between tuberculosis of the lungs and that of other parts of the respiratory system renders it desirable that all forms of tuberculosis of the respiratory system should be brought under one head for various investigations concerning the age incidence and duration of this disease. A preliminary investigation of these two phases has been made by the Commonwealth Statistical Bureau, but owing to the paucity of the data and their incompleteness in certain particulars the results obtained, so far as duration is concerned, can be considered as tentative only, and cannot be regarded as sufficiently reliable to warrant their inclusion in an official Year Book.

In the matter of the age incidence of death from tuberculosis of the respiratory system, more satisfactory data are obtainable, and the diagrams given hereunder furnish graphic representation of the frequency of deaths at successive ages in England and Wales during 1906 (Fig. 1), and in the Commonwealth during 1907 (Fig. 2). The figures for the Commonwealth being insufficient in extent to admit of an exact determination of the age incidence of death for the first five years, the English results have been made use of in deciding the form of this portion of the curve.



The figures shewn at the foot of each graph denote the respective ages at death, while the figures shewn in the margin denote the number of deaths corresponding to each year of age. In each of the graphs various rectangles are shewn, through the upper parts of which smooth curves have been drawn. The areas of these rectangles represent the number of deaths which occurred between the ages indicated at the extremities of their respective bases, the scale being 100 persons for each small square in the case of graphs for England and Wales and 10 for each small square in the case of the Common-

wealth graphs. The smooth curve may be said to represent the form of the results which would have been obtained under the existing circumstances if the number of cases observed had been indefinitely large and the age intervals had been made indefinitely small.

If a point be taken on the base-line corresponding to any given age, the vertical height of the curve above that point represents the rate per annum at which deaths are occurring at the given age.

ENGLAND AND WALES.

MALES. FEMALES.

MALES. FEMALES.

AUSTRALIAN COMMONWEALTH.

It will be seen that in both instances the curve for males differs considerably from that for females, and that there is a general though not a close resemblance between the two curves for males, and also between the two curves for females. It will also be

noticed that in both cases the curve for females rises much more abruptly than that for males, owing to the fact that the age of maximum frequency is less in the case of females than in the case of males.

The figures dealt with furnish the following death-rates from tuberculosis of the respiratory system for the years specified:—

Particulars.	Males.	Females.	Total.
ENGLAND AND WALES, 1906—			
Population	16,689,707	17,857,309	34,547,016
Deaths from tuberculosis of the respiratory system	22,645	17,101	39,746
Death-rate per 100,000 of population ...	135.68	95.76	115.05
COMMONWEALTH OF AUSTRALIA, 1907—			
Population	2,191,472	1,964,201	4,155,673
Deaths from tuberculosis of the respiratory system	1,891	1,477	3,368
Death-rate per 100,000 of population ...	86.29	75.20	81.05

(xiv.) *Tuberculosis of the Meninges.* The number of deaths registered in 1905 was 290; in 1906, 273; in 1907, 237; in 1908, 205, and in 1909, 220. Not much reliance can, however, be placed on the figures for 1905 and 1906, as the tabulation in some of the States appears to have included cases of simple meningitis in those years.

(xv.) *Other Forms of Tuberculosis.* Deaths in 1905 numbered 498; in 1906, 547; in 1907, 455; in 1908, 394, and in 1909, 382. The deaths in 1909 include the following forms of tuberculosis:—Tuberculosis of the larynx, 50; tuberculosis of the peritonæum, 147; Pott's disease, 43; tuberculosis of other organs, 75; and general tuberculosis, 67.

(xv.*a*) *All Forms of Tuberculosis.* A complete tabulation of all the different tubercular diseases from which deaths occurred in 1909, will be found in Bulletin No. 20 of Population and Vital Statistics. Here it will suffice to show a few of the features of the tabulation mentioned. The total number of deaths due to tubercular diseases was 3721, viz., 2065 males and 1656 females. The following table shews the ages of these 3721 persons:—

AGES OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1909.

COMMONWEALTH.

The length of residence in the Commonwealth of persons who died from tubercular diseases has been tabulated for the year 1909 for all the Commonwealth States, with the following results:—

LENGTH OF RESIDENCE IN COMMONWEALTH

OF PERSONS WHO DIED FROM TUBERCULAR DISEASES, 1909.

Length of Residence in Commonwealth.	Male.	Fem.	Total.	Length of Residence in Commonwealth.	Male.	Fem.	Total.
Born in Commonwealth ...	1,295	1,376	2,671	Resident 10 yrs. & under 15	30	14	44

" 5 " & under 10	26	10	36	Total Deaths ...	2,065	1,656	3,721

There would not appear, therefore, to be much ground for the statement sometimes heard that many persons arrive in Australia in the last stages of consumption.

In order to shew the prevalence of tuberculosis in the several States, the death rates from tubercular diseases are shewn in the following table, together with the percentage which deaths from tuberculosis bear on the total number of deaths registered :—

DEATH RATES FROM TUBERCULOSIS AND PERCENTAGE ON TOTAL DEATHS, 1909.

COMMONWEALTH.

State.	Death Rates* from Tuberculosis.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.81	0.72	0.77	7.59	8.22	7.86
Victoria ...	1.09	0.94	1.02	8.75	9.52	9.09
Queensland ...	0.79	0.53	0.67	7.14	6.54	6.91
South Australia ...	0.89	1.04	0.96	9.16	11.64	10.26
Western Australia	0.90	0.78	0.85	8.50	8.71	8.58
Tasmania ...	0.84	0.87	0.85	7.77	9.61	8.58
Commonwealth	0.90	0.81	0.86	8.09	8.88	8.42

* Number of deaths from tuberculosis per 1000 of mean population.

In the first issue of this book a series of figures was given shewing the rates of mortality from phthisis in various countries, and it was shewn that these ranged from 570 per million in New Zealand to 4415 per million in Hungary, with a rate of 808 for the Commonwealth. It is not considered necessary to repeat those figures here in detail, and it may suffice to state that while deaths from all tubercular diseases in the Commonwealth were 0.86 per thousand in 1909, they were 1.40 per thousand in Belgium in 1904; 1.65 per thousand in England and Wales in 1906; 1.80 per thousand in the Netherlands in 1906; 2.04 per thousand in the German Empire in 1905; and 2.72 per thousand in Switzerland in 1905. The Commonwealth occupies, therefore, a very enviable position in regard to tubercular diseases, when compared with European countries.

(xvi.) *Cancer and other Malignant Tumours.* Deaths from cancer shew a tendency to increase, the figures for 1905 being 2742 deaths; for 1906, 2772 deaths; for 1907, 2940 deaths; for 1908, 2921 deaths, and for 1909, 3112 deaths. Of the deaths registered in 1909, 1626 were those of males, viz., 600 in New South Wales, 529 in Victoria, 191 in Queensland, 156 in South Australia, 97 in Western Australia, and 53 in Tasmania;

while 1486 were those of females; viz., 547 in New South Wales, 493 in Victoria, 146 in Queensland, 154 in South Australia, 85 in Western Australia, and 61 in Tasmania. Bulletin No. 20 contains a complete tabulation of the various types of cancer and of the seat of the disease, of which the following is a summary :—

DEATHS FROM CANCER, COMMONWEALTH, 1909.

Seat of Disease.	Male.	Female	Total.
Cancer, etc., of the mouth	296	27	323
,, ,, the stomach and liver	705	459	1,164
,, ,, the peritonæum, the intestines, and the rectum ...	194	173	367
,, ,, the female genital organs	...	336	336
,, ,, the breast	...	201	201
,, ,, the skin	58	23	81
,, ,, other organs	373	267	640
Total Deaths	1,626	1,486	3,112

Of these deaths 1035 were described as cancer, 1253 as carcinoma, 129 as epithelioma, 387 as "malignant disease," 62 as "malignant tumour," 9 as neoplasm, 35 as "rodent ulcer," 188 as sarcoma, and 14 as scirrhus.

The ages of the 3112 persons who died from cancer in 1909, are shewn in the following table, from which it will be seen that while the ages below 35 are not by any means immune from the disease, the great majority of deaths occurred at ages from 35 upwards, the maximum being found in the age group 65 to 70.

AGES OF PERSONS WHO DIED FROM CANCER, 1909.

COMMONWEALTH.

A tabulation has been made of the occupations of the males who died from cancer, of which the following is a summary :—

OCCUPATION OF MALES WHO DIED FROM CANCER, 1909.

COMMONWEALTH.

Occupation.	No. of Deaths.	Occupation.	No. of Deaths.
Professional class	71	Pastoral class	72
Domestic class	46	Working in mines and quarries...	125
Mercantile class	169	Other primary producers ...	16
Engaged in transport and communication	108	Independent means	66
Manufacturing class	165	Dependents	50
Engaged in building and construction	103	Occupation not stated... ...	43
Indefinite industrial workers ...	330	Total Male Deaths ...	1,626
Agricultural class	262		

As the following tables shew, the death rates from cancer are below those for tubercular diseases in all the States (with the exception, however, of the female death rates in New South Wales and Queensland), but while the latter have a general tendency to decrease the former have, on the contrary, shewn an increase in nearly every recent year.

DEATH RATES* FROM CANCER AND PERCENTAGE ON TOTAL DEATHS, 1909.

COMMONWEALTH.

State.	Death Rates* from Cancer.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.70	0.73	0.71	6.53	8.25	7.26

Queensland ...	0.62	0.56	0.59	5.69	6.92	6.10
South Australia ...	0.71	0.80	0.75	7.29	9.01	8.05
Western Australia	0.62	0.74	0.67	5.80	8.23	6.73
Tasmania ...	0.56	0.68	0.62	5.15	7.51	6.19
Commonwealth	0.71	0.73	0.72	6.37	7.96	7.04

* Number of deaths from Cancer per 1000 of mean population.

The table shewing the death rates from cancer in various countries, which was given in the first issue of this work, is not here repeated. It may, however, be stated that while the death rate of the Commonwealth from cancer in 1909 was 0.71 per thousand, that of Belgium in 1904 was 0.56; that of the German Empire in 1905, 0.80; that of England and Wales in 1905, 0.92; that of the Netherlands in 1906, 1.01; and that of Switzerland in 1905, 1.32 per thousand.

(xvii.) *Simple Meningitis.* The table shews 461 deaths in 1905, 250 deaths in 1906, 648 deaths in 1907, 676 deaths in 1908, and 616 deaths in 1909. The last three figures are the only ones that can be taken as correct, the returns for some of the States having in 1905 and 1906 included this disease with tuberculosis of the meninges, as has already been stated in paragraph xiv.

(xviii.) *Congestion, Hæmorrhage, and Softening of the Brain.* The deaths registered under this heading in 1905 numbered 1611, viz., 865 males and 746 females; in 1906, they were 1685, viz., 904 males and 781 females; in 1907, 1901, viz., 1038 males and 863 females; in 1908, 1867, viz., 991 males and 876 females, and in 1909, 1665, viz., 869 males and 796 females. The 1909 figures are made up of congestion and hæmorrhage of the brain—822 males, 751 females, total 1573; and softening of the brain—47 males, 45 females, total 92.

(xix.) *Organic Diseases of the Heart.* Owing to the changes in tabulation it is impossible to say whether the figures for the five years are strictly comparable. The number of deaths registered in 1909 was 3940, viz., 2257 males and 1683 females. Of these deaths, New South Wales was responsible for 775 males and 510 females; Victoria for 801 males and 695 females; Queensland for 282 males and 158 females; South Australia for 198 males and 202 females; Western Australia for 130 males and 65 females; and Tasmania for 71 males and 53 females. To the figures for 1909 correspond the following death rates and percentages to total deaths:—

DEATH RATES* FROM ORGANIC HEART DISEASE AND PERCENTAGE ON TOTAL DEATHS, COMMONWEALTH, 1909.

State.	Death Rates* from Organic Heart Disease.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.90	0.68	0.80	8.44	7.70	8.13
Victoria ...	1.24	1.08	1.16	9.93	10.92	10.36
Queensland ...	0.91	0.61	0.78	8.25	7.48	7.96
South Australia ...	0.90	1.05	0.97	9.25	11.81	10 39
Western Australia	0.83	0.57	0.72	7.78	6.29	7.21
Tasmania ...	0.75	0.59	0.67	6.89	6.53	6.73
Commonwealth ...	0.99	0.82	0.91	8.85	9.02	8.92

* Number of deaths from Organic Heart Disease per 1000 of mean population.

(xx.) *Acute Bronchitis.* The classification of causes of deaths requires deaths of persons under five years of age, which are merely ascribed to "bronchitis," to be classified under "acute bronchitis," and similarly certified deaths of older persons under "chronic bronchitis." This rule has been followed in adjusting the tabulation of 1905 and 1906, and followed throughout in compiling the tables for 1907, 1908, and 1909, with the result that acute bronchitis is credited with 478 deaths in 1905, 421 deaths in 1906, 514 deaths in 1907, 412 deaths in 1908, and 422 deaths in 1909, viz., 238 males and 184 females.

(xxi.) *Chronic Bronchitis.* The adjustment mentioned in the preceding paragraph gives a total of 1023 deaths due to chronic bronchitis in 1905, 984 deaths in 1906, 844 deaths in 1907, 818 deaths in 1908, and 897 deaths, viz., 549 males and 348 females, in 1909.

(xxii.) *Pneumonia.* The figures for 1905 and 1906 are unduly swelled by the inclusion of broncho-pneumonia, etc., which in 1907, 1908, and 1909 is classified under "Other Diseases." The 1909 figures were 1106 males and 646 females, a total of 1752 deaths.

(xxiii.) *Diseases of the Stomach (Cancer excepted).* In 1909 this heading includes: Ulcer of the stomach, 44 males, 45 females; and other diseases of the stomach (cancer excepted), 99 males, 84 females; a total of 272 deaths. The corresponding figures for 1905 and 1906, which are fairly comparable, were 442 and 467 respectively, and those for

1907 and 1908, which were compiled on the same basis as those for 1909, 334 and 308 respectively.

(xxiv.) *Diarrhœa and Enteritis (Children under two years only).* In 1905 the deaths numbered 2593, viz., 1421 boys and 1172 girls; in 1906 they were 2881, viz., 1624 boys and 1257 girls; in 1907, 2733, viz., 1513 boys and 1220 girls; in 1908, 3236, viz., 1814 boys and 1422 girls; and in 1909, 2803, viz., 1544 boys and 1259 girls. The 1909 deaths were distributed amongst the six States as follows:—New South Wales, 666 males, 534 females, total 1200; Victoria, 417 males, 299 females, total 716; Queensland, 205 males, 187 females, total 392; South Australia, 91 males, 81 females, total 172; Western Australia, 137 males, 127 females, total 264; and Tasmania, 28 males, 31 females, total 59.

The following are the death rates and percentages on total deaths due to infantile diarrhœa and enteritis in the six States for the year 1909:—

DEATH RATES FROM INFANTILE DIARRHŒA AND ENTERITIS, AND PERCENTAGE ON TOTAL DEATHS, COMMONWEALTH, 1909.

State.	Death Rate* from Infantile Diarrhœa and Enteritis.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.78	0.71	0.74	7.25	8.06	7.59
Victoria ...	0.64	0.46	0.55	5.17	4.70	4.96
Queensland ...	0.66	0.72	0.69	6.00	8.86	7.09
South Australia ...	0.41	0.42	0.42	4.25	4.74	4.47
Western Australia	0.87	1.11	0.97	8.20	12.29	9.76
Tasmania ...	0.29	0.34	0.32	2.72	3.82	3.20
Commonwealth	0.68	0.61	0.65	6.05	6.75	6.35

* Number of deaths from these diseases per 1000 of mean population.

As a large number of these deaths is directly due to improper feeding, it would be interesting to know the percentages of infants who were bottle-fed, but, unfortunately, no provision exists for the registration of that fact. The number of deaths was larger than usual in 1908 particularly in Victoria, and to a lesser degree in South Australia and in Tasmania, owing to the phenomenal heat experienced in the early part of that year. The death rates for the three States named were only 0.82, 0.59, and 0.74 per 1000 respectively in 1908, compared with 0.54, 0.44 and 0.49 in 1907, and with 0.55, 0.42 and 0.32 in 1909.

(xxv.) *Hernia, Intestinal Obstructions.* The number of deaths has not varied much from year to year, the number registered in 1905 being 432; in 1906, 399; in 1907, 411; in 1908, 389; and in 1909, 396, viz., 215 males and 181 females.

(xxvi.) *Cirrhosis of the Liver.* The deaths in 1905 numbered 290; in 1906, 267; in 1907, 325; in 1908, 362; and in 1909, 331, viz., 211 males and 120 females.

(xxvii.) *Nephritis and Bright's Disease.* The number of deaths attributable to these diseases is a very large one from year to year. In 1905 there were registered the deaths of 1083 males and 690 females; in 1906, those of 1114 males and 678 females; in 1907, those of 1065 males and 695 females; in 1908, those of 1140 males and 724 females; and in 1909, those of 1076 males and 723 females. Of the deaths registered in 1909, those of 71 males and 81 females were ascribed to acute nephritis, and those of

1005 males and 642 females to Bright's disease. New South Wales was responsible for 612 deaths; Victoria for 643; Queensland for 230; South Australia for 183; Western Australia for 83; and Tasmania for 48; making a total of 1799.

(xxviii.) *Non-cancerous Tumours and other Diseases of the Female Genital Organs.* Deaths in 1905 numbered 134; in 1906, 153; in 1907, 128; in 1908, 159; and in 1909, 130. Included in the 130 deaths registered in 1909 were the following:—Metritis, 4; non-puerperal uterine hæmorrhage, 4; non-cancerous uterine tumours, 32; other diseases of the uterus, 15; cysts and other ovarian tumours, 37; other diseases of the female genital organs, 38.

(xxix.) *Puerperal Septicæmia (Puerperal Fever, Puerperal Peritonitis, Puerperal Phlebitis).* Deaths in 1905 were 205; in 1906, 168; in 1907, 179; in 1908, 202; and in 1909, 201.

(xxx.) *Other Puerperal Accidents of Pregnancy and Confinement.* The deaths in 1905 numbered 411; in 1906, 458; in 1907, 435; in 1908, 404; and in 1909, 376. Included in the 376 deaths registered in 1909 were the following:—Accidents of pregnancy, 70; puerperal hæmorrhage, 46; other accidents of childbirth, 118; puerperal albuminuria and eclampsia, 91; other puerperal accidents (including "sudden death"), 50; puerperal diseases of the breast, 1.

(xxx. *a*) *All Puerperal Diseases.* The 577 deaths registered in 1909 under the two preceding headings will be found tabulated in "Bulletin No. 20 of Population and Vital Statistics" under various aspects. It will suffice to repeat here the following facts:—

Of the 577 mothers who died in childbirth during the year 1909, 513 were married and 64 were single. As the total number of nuptial confinements was 106,113, and of ex-nuptial confinements 6808, it follows that one in 207 of married mothers, and one in 106 of single mothers, died of puerperal disease, the general proportion being one in 195, as against one in 181 in 1908, and one in 178 in 1907.

The ages of the mothers who died varied from 15 to 48 years, and are shewn in the following table:—

AGES OF MOTHERS WHO DIED IN CHILDBIRTH, COMMONWEALTH, 1909.

Age at Death.	Married Women.	Single Women.	Total.	Age at Death.	Married Women.	Single Women	Total.

32 „ ...	27	2	29	T't'l Deaths	513	64	577

Of the 513 married women shewn in the above table, 19 died in Tasmania; in regard to these no information is available as to previous issue and as to duration of marriage.

Of the remaining 494 women, 151 died at their first confinement, 73 at their second, 70 at their third, 44 at their fourth, 45 at their fifth, 37 at their sixth, 26 at their seventh, 22 at their eighth, 13 at their ninth, 3 at their tenth, 4 at their eleventh, 4 at their twelfth, 1 at her thirteenth, and 1 at her fourteenth confinement. The total number of children of the 494 mothers was 1548.

Twenty-five of the mothers who died had been married less than one year; 65 between one and two years; 41 between two and three years; the duration of marriage ranging up to 27 years. This tabulation will be found in detail, and distinguishing the ages at marriage, in "Bulletin No. 20. of Population and Vital Statistics," as will a further tabulation shewing the duration of marriage and previous issue in combination. The tables shew, for instance, that one mother, who had been married at the age of 19 years, died at the age of 42, in the 23rd year of her marriage, at her thirteenth confinement. The mother who died at her fourteenth confinement had been married for 24 years, and was at the time of her death 43 years old.

(xxxi.) *Congenital Debility and Malformations.* As has been pointed out on a previous page, the figures set down under this heading, viz., 3200 for 1905, 2960 for 1906, 3038 for 1907, 2973 for 1908, and 2905 for 1909 are not strictly comparable, owing to the impossibility of distinguishing in every case for 1905 and 1906 between children under three months of age and those from three to twelve months. The 1909 figures include:—Malformations, 174 males, 130 females, total 304; and congenital debility, icterus, and scleroma of children under three months of age, 1500 males and 1101 females, total 2601; or a grand total of 2905. Of these deaths, 1093 were registered in New South Wales, viz., 616 males and 477 females; 825 in Victoria, viz., 480 males and 345 females; 384 in Queensland, viz., 228 males and 156 females; 251 in South Australia, viz., 149 males and 102 females; 198 in Western Australia, viz., 106 males and 92 females; and 154 in Tasmania, viz., 95 males and 59 females.

(xxxii.) *Senile Debility.* The deaths ascribed to "old age" form a large group, and are slightly in excess of those due to infantile debility. In 1905 they numbered 3160, viz., 1807 males and 1353 females; in 1906, 3031, viz., 1712 males and 1319 females; in 1907, 3136, viz., 1721 males and 1415 females; in 1908, 3466, viz., 2027 males and 1439 females; and in 1909, 3194, viz., 1829 males and 1365 females. Of the deaths registered in 1909, 982 occurred in New South Wales, viz., 554 males and 428 females; 1288 in Victoria, viz., 751 males and 537 females; 242 in Queensland, viz., 153 males and 89 females; 320 in South Australia, viz., 159 males and 161 females; 111 in Western Australia, viz., 68 males and 43 females; and 251 in Tasmania, viz., 144 males and 107 females.

Of the males whose death was described as due to senility, 5 were between 55 and 59; 31 between 60 and 64; 108 between 65 and 69; 261 between 70 and 74; 486 between 75 and 79; 486 between 80 and 84; 294 between 85 and 89; 124 between 90 and 94; 27 between 95 and 99; while 6 were 100 years old and upwards; and of one the age was not stated.

Of the females, one was between 45 and 49; 1 between 50 and 54; 2 between 55 and 59; 21 between 60 and 64; 88 between 65 and 69; 186 between 70 and 74; 334 between 75 and 79; 338 between 80 and 84; 261 between 85 and 89; 107 between 90 and 94; 16 between 95 and 99; while 9 were 100 years old and upwards; and of one the age was not stated.

(xxxiii.) *Violence.* A very large number of deaths is every year due to external violence, and, as might be expected from the fact that their occupations expose them much more to accidents, males largely predominate. The figures quoted are exclusive of suicides, which have been treated as a separate group. Deaths ascribed to violence numbered, in 1905, 2663, viz., 2014 males and 649 females; in 1906, 2617, viz., 2024 males and 593 females; in 1907, 2679, viz., 2038 males and 641 females; in 1908, 2922, viz., 2187 males and 735 females; and in 1909, 2664, viz., 2050 males and 614 females. Of the deaths registered in 1909, those of 757 males and 254 females occurred in New South Wales; those of 489 males and 184 females in Victoria; those of 365

males and 76 females in Queensland; those of 181 males and 43 females in South Australia; those of 183 males and 29 females in Western Australia; and those of 75 males and 28 females in Tasmania.

The following table shews the various kinds of accidental deaths which occurred in 1909, distinguishing males and females:—

DEATHS FROM VIOLENCE, COMMONWEALTH, 1909.

Cause of Death.	Males.	Females.	Total.
Fractures	97	28	125
Other accidental injuries	1,029	137	1,166
Burning by fire	119	188	307
Burning by corrosive substances	...	1	1
Insolation	50	29	79
Freezing	...	...	...
Electric shock	11	1	12
Accidental drowning	441	81	522
Inanition	42	2	44
Inhalation of noxious gases	35	18	53
Other accidental poisoning	49	32	81
Other external violence	177	97	274
Total Deaths	2,050	614	2,664

In every kind of accidental death there was, therefore, a large excess of males, with the exception of burning accidents, in which female deaths largely predominated.

The excessive heat of January, 1908, was responsible for an increase in the number of deaths caused by insolation, i.e., sunstroke and heat apoplexy, from 64 in 1907 to 246 in 1908, distributed as follows:—New South Wales, 46; Victoria, 130; Queensland, 14; South Australia, 39; Western Australia, 15; Tasmania, 2. In 1909, as the preceding table shews, the deaths fell to 79.

(xxxiii.*a*) *Suicide.* Although their number in 1908 and 1909 was greater than it was in 1907, it may be said that suicides have shewn a tendency to decrease during recent years, the number in 1905 having been 520, viz., 431 males and 89 females; while in 1906 it was 499, viz., 403 males and 96 females; in 1907, 461, viz., 385 males and 76 females; in 1908, 497, viz., 413 males and 84 females; and in 1909, 495, viz., 398 males and 97 females. Of the last named, those of 146 males and 45 females happened in New South Wales; those of 97 males and 27 females in Victoria; those of 85 males and 8 females in Queensland; those of 31 males and 10 females in South Australia; those of 32 males and 4 females in Western Australia; and those of 7 males and 3 females in Tasmania.

The modes adopted by persons who committed suicide in 1909 were as follows:—

SUICIDES, COMMONWEALTH, 1909.

Mode of Death.	Males.	Females.	Total.
Poison	70	54	124
Asphyxia	2	...	2
Hanging or strangulation	67	9	76
Drowning	24	19	43
Firearms	138	6	144
Cutting instruments	74	5	79
Precipitation from a height	7	...	7
Crushing	5	1	6
Other modes	11	3	14
Total Suicides	398	97	495

The death rates from suicides and the percentage on total deaths borne by suicides are shewn in the following table :—

DEATH RATES* FROM SUICIDES AND PERCENTAGE ON TOTAL DEATHS, 1909.

COMMONWEALTH.

State.	Death Rates* from Suicides.			Percentage on Total Deaths.		
	Males.	Females.	Total.	Males.	Females.	Total.
New South Wales	0.17	0.06	0.12	1.59	0.68	1.23
Victoria ...	0.15	0.04	0.09	1.20	0.42	0.86

Norway ...	2	...	2				
Russia	1	...	1	Total Deaths ...	398	97	495
Scotland	21	1	22				

The following table shews the occupations of the 398 males who committed suicide:—

OCCUPATIONS OF MALE PERSONS WHO COMMITTED SUICIDE, 1909.

COMMONWEALTH.

Occupations.	Deaths.	Occupations.	Deaths.
Professional class	21	Pastoral class	26
Domestic class	13	Working in mines and quarries ...	34
Mercantile class	59	Other primary producers ...	6
Engaged in transport and communication	31	Independent means	4
Manufacturing class	39	Dependents	2
Engaged in building and construction	16	Occupation not stated ...	16
Indefinite industrial workers ...	90		
Agricultural class	41	Total Deaths	398

The assertion has been made that suicide has become more frequent during recent years, but an examination of the figures from the year 1871 onwards hardly bears this out. The absolute figures have certainly increased, but proportionately to the population the figures for 1906-09 are practically the same as those for 1886-90. No particulars are available for Western Australia prior to 1886, and from 1886 to 1895 the sexes are not distinguished. All figures for the first five periods are, therefore, exclusive of Western Australia:—

SUICIDES, COMMONWEALTH, 1871-75 to 1906-9.

Period.	Number of Suicides.			Suicides per One Million.			Suicides of Females to 100 Suicides of Males. Based on	
	Males.	Females.	Total.	Males.	Females.	Total.	Absolute Figures.	Rates.
1871-75	715	150	865	150.94	37.56	99.07	20.98	24.88
1876-80	878	145	1,023	159.69	31.06	100.62	16.51	19.45
1881-85	999	183	1,182	152.58	32.90	97.61	18.32	21.56
1886-90	1,394	292	[1]1,686	179.20	43.97	[3]116.92	20.95	24.54
1891-95	1,574	337	[2]1,911	181.34	44.09	[4]117.07	21.41	24.31
1896-1900	1,838	410	2,248	191.11	47.88	123.65	22.31	25.05

1906-09	1,599	353	1,952	180.63	44.44	116.22	22.08	24.60

1. 1705 inclusive of Western Australian figures. 2. 1984 inclusive of Western Australian figures. 3. 116.49 inclusive of Western Australian figures. 4. 119.11 inclusive of Western Australian figures.

(xxxiv.) *Other Diseases.* The number of causes included under this heading is a very large one, amounting to no less than 89 of the items shewn in the detailed classification, and deaths were recorded under every one of these with the exception of the following six:—Glanders and farcy, rabies, pellagra, gonococcic diseases of children under five years of age, other general diseases, other poisonings due to occupation. The total number of deaths under "other diseases" in 1905 was 10,263, viz., 6137 males and 4126 females; in 1906 it was 9976, viz., 5880 males and 4096 females; in 1907, 8679, viz., 5102 males and 3577 females; in 1908, 9289, viz., 5473 males and 3816 females; and in 1909, 9338, viz., 5480 males and 3858 females. Some of the diseases included here account for very considerable numbers of deaths. Thus there were 791 deaths ascribed to bronchopneumonia; 864 to diarrhœa and enteritis of children over two years of age and of adults, 523 to convulsions of children under five years of age; 381 to diabetes; 319 to paralysis without indicated cause; and 344 to appendicitis and abscess of the iliac fossa. Particulars of the deaths included in 1909 are shewn in the following table:—

CAUSES OF DEATH INCLUDED UNDER "OTHER DISEASES," COMMONWEALTH, 1909.

Causes.	M.	F.	T'tal.	Causes.	M.	F.	T'tal.

Diseases of the Nasal Fossæ	8	2	10				
Diseases of the Larynx	55	41	96				
Diseases of the Thyroid Body	1	19	20				

(xxxv.) *Unspecified or Ill-defined Diseases.* The number of cases which has to be included here is a considerable one from year to year, having numbered 1042 in 1905, 1168 in 1906; 1275 in 1907; 1262 in 1908; and 1087, viz., 681 males and 406 females, in 1909. The detailed classification distinguishes these ill-defined diseases under three headings:—Dropsy, including such definitions as anasarca, ascites, general œdema, etc.; sudden death, including syncope; and unspecified or ill-defined causes, of which the following are specimens:—Asthenia, coma, dentition, exhaustion, heart failure, etc. In 1909 the number of cases of death which would have to be classed under the first of these categories was 28; those belonging to the second, 65; and those belonging to the third, 994. It is, of course, true that there must always occur some cases where the disease is not well characterised, or where sufficient information is not procurable to allow of a clear definition being given in the certificate of death, but in the majority of cases included under this heading a more complete diagnosis and consequently a more satisfactory certificate would no doubt have been possible.

18. **Causes of Death in Classes.**—The figures presented in the preceding paragraphs relate to certain definite causes of death. It is almost generally acknowledged that figures of this kind are of greater value in medical statistics than is a classification under general headings. The classification under fourteen general headings adopted by the compiler of The International Nomenclature is, however, shewn in the following table, together with the death rates and percentages on total deaths pertaining to those classes:

DEATHS, DEATH RATES*, AND PERCENTAGES ON TOTAL DEATHS IN CLASSES, 1909.
COMMONWEALTH.

Class.	Total Deaths.			Death Rate.*			Percentage on Total Deaths.		
	M.	F.	Total.	M.	F.	Total	M.	F.	Total.

* Number of deaths per 1000 of mean population.

19. **Age at Death of Married Males and Females, and Issue.**—"Bulletin No. 20 of Population and Vital Statistics" contains a number of tables, compiled for the first time for the year 1908 for the Commonwealth, exclusive of Tasmania, shewing the age at marriage, age at death, duration of life after marriage, birthplaces, and occupations, in combination with the issue, of married persons who died in 1909. A short summary of the tables mentioned is given hereunder. Deaths of married males in 1909 numbered 10,751, and of married females, 9891. The ages at death of the males ranged from 20 to 109 years, and those of the females, from 17 to 109 years. The total number of children in the families of the 10,751 males was 57,889, the maximum in one family being 25; and of the 9891 females, 51,474, with a maximum of 21. The average number of children is shewn for various age-groups in the following table:—

AGE AT DEATH OF MARRIED MALES AND FEMALES, AND AVERAGE ISSUE,
COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1909.

Age at Death.	Average Family of Males.	Average Family of Females.	Age at Death.	Average Family of Males.	Average Family of Females.
Under 20 years ...	...	0.73	70 to 74 years ...	6.35	6.45
20 to 24 years ...	0.79	1.31	75 „ 79 „ ...	6.42	6.43
25 „ 29 „ ...	1.49	1.93	80 „ 84 „ ...	6.35	5.92
30 „ 34 „ ...	1.95	2.59	85 „ 89 „ ...	6.28	5.84
35 „ 39 „ ...	2.65	3.53	90 „ 94 „ ...	7.32	5.60
40 „ 44 „ ...	3.45	4.24	95 „ 99 „ ...	6.86	5.14
45 „ 49 „ ...	4.37	4.79	100 years and upwards	3.25	6.70
50 „ 54 „ ...	4.96	5.35	Age not stated ...	5.57	3.75
55 „ 59 „ ...	5.41	5.83			
60 „ 64 „ ...	5.95	6.00			
65 „ 69 „ ...	6.14	6.10	All ages	5.38	5.20

The figures shewn in the preceding table include the issue both living and dead; the proportion between the two, taking deceased males and females together, was about as 758 to 242, or, roughly speaking, as three to one. The totals are shewn in the following table:—

ISSUE OF MARRIED MALES AND FEMALES,

COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1909.

Issue of Married Males.	Males.	Females.	Total.	Issue of Married Females.	Males.	Females.	Total.
Living ...	22,565	22,282	44,847	Living ...	19,121	18,966	38,087
Dead	7,000	6,042	13,042	Dead ...	7,120	6,267	13,387
Total ...	29,565	28,324	57,889	Total ...	26,241	25,233	51,474

These figures shew a masculinity in the births of 104.20, which agrees fairly well with the experience of the birth statistics, the masculinity of the births in the Commonwealth from 1901 to 1909 having ranged from 104.11 to 105.99.

As a matter of curiosity it may be mentioned that the family of twenty-five belonged to a father who died at the age of 81, and that it had originally comprised fifteen sons and ten daughters, of whom fourteen sons and eight daughters survived their father.

20. **Age at Marriage of Males and Females, and Issue.**—While the table giving the average families of married males and females naturally shews an increase in the averages with advancing ages at death, the following table, which gives the average families of males and females according to the age at marriage of the deceased parents, shews a corresponding decrease in the averages as the age at marriage advances:—

AGE AT MARRIAGE OF MALES AND FEMALES, AND AVERAGE ISSUE,

COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1909.

Age at Marriage.	Average Family of Males.	Average Family of Females.	Age at Marriage.	Average Family of Males.	Average Family of Females.
Under 20 years ...	6.91	6.96	55 to 59 years ...	1.54	...
20 to 24 years ...	6.36	5.63	60 „ 64 „ ...	0.75	...
25 „ 29 „ ...	5.66	4.22	65 years and upwards	0.10	...
30 „ 34 „ ...	4.82	3.00	Age not stated ...	5.31	4.67
35 „ 39 „ ...	3.99	1.60			
40 „ 44 „ ...	3.26	0.57			
45 „ 49 „ ...	2.51	0.08			
50 „ 54 „ ...	1.84	...	All ages ...	5.38	5.20

It will be seen that of women who were married at ages from 40 to 44 years, one in every two gave birth to a child, while in the case of women who were married at ages from 45 to 49 years, the proportion fell to one in every twelve.

21. **Duration of Life after Marriage of Males and Females.**—The duration of life after marriage has been tabulated for males and females both in combination with the age at marriage, and with the total and average issue. The tables shewing the result do

not, however, lend themselves to condensation, and are, therefore, omitted here. They will be found in "Bulletin No. 20 of Population and Vital Statistics," pages 134 to 139.

22. **Birthplaces of Married Males and Females, and Issue.**—In the following table, which shews the birthplaces of married males and females whose deaths were registered in 1909, together with their average issue, the total numbers of males and females have been inserted under each birthplace. No generalisations can, of course, be made in those cases where the number of deaths is small, and where the average family had to be worked out on small figures. But where the figures are comparatively large, as in the case of natives of the Commonwealth, differences occur between the averages of the individual States which appear inexplicable on any other ground than that of inefficient registration in some of the States. It will be noted that the differences occur both in the male and female averages. Although the figures apply to the Commonwealth as a whole, with the exception of Tasmania, it must be borne in mind that the vast majority of deaths of natives of any one State are registered in that particular State. For the whole Commonwealth the average family of deceased males was 4.65, and of deceased females, 4.36.

23. **Occupations of Married Males, and Issue.**—A final tabulation shews the average issue in combination with the occupation of deceased males. When these figures will be available for a number of years they will afford some clue to the much

debated question as to the decrease in the birth rate among various classes of the population.

OCCUPATIONS OF MARRIED MALES, AND AVERAGE ISSUE,

COMMONWEALTH (EXCLUSIVE OF TASMANIA), 1909.

Occupations.	Deaths of Married Males.	Average Family.

§ 4. Graphical Representation of Vital Statistics.

1. **General.**—The progressive fluctuations of the numbers representing the total births and marriages are important indexes of the economic conditions and social ideals of a community. For this reason graphs have been prepared (see pages 227 and 228), shewing these fluctuations from 1860 to 1909, both for the States and the Commonwealth. The facts are very significant from the national point of view and call for serious consideration. To properly appreciate the situation it should be remembered that, normally, the increases of births and also of marriages will be similar to the increase of population. Although the marriage curve shews a falling off in marriages after 1891 (see page 228), it shews a recovery in 1894, and, with the exception of a small fall for 1903, it has continually advanced. The same characteristic is not seen in the curve of births, which discloses a recovering tendency only in 1904.

The table on the following page shews the number of births, marriages and deaths which would have been experienced had the rate for 1890 continued, and reveals the significance of the facts disclosed by the curves. It may be remarked that the death rate has greatly improved, and among other countries, Australia stands in a very favourable position in this respect. At the same time the decline in the marriage rate, overtaken once more in 1907, and the still more serious decline in the birth rate, in a country but sparsely populated, have an obvious and most important bearing on the national future, and on questions concerning the extent to which it is desirable to promote immigration.

ACTUAL BIRTHS, DEATHS, AND MARRIAGES,

EXPERIENCED IN THE COMMONWEALTH DURING THE YEARS 1890 TO 1909, COMPARED WITH THE NUMBER THAT WOULD HAVE OCCURRED IF THE RATES OF 1890 HAD REMAINED IN OPERATION.

Year.	Births.		Deaths.		Marriages.	
	Actual.	Number of Births that would have been experienced if the 1890 birth rate had been in operation.	Actual.	Number of Deaths that would have been experienced if the 1890 death rate had been in operation.	Actual.	Number of Marriages that would have been experienced if the 1890 marriage rate had been in operation.
1890	108,683		44,449		23,725	
1891	110,187	111,802	47,430	45,737	23,862	24,419
1892	110,158	114,502	42,268	46,842	22,049	25,009
1893	109,322	116,617	45,801	47,707	20,631	25,470
1894	104,660	118,734	42,958	48,573	20,625	25,933
1895	105,084	121,002	43,080	49,501	21,564	26,428
1896	100,134	123,212	45,202	50,405	23,068	26,911
1897	101,137	125,419	43,447	51,308	23,939	27,393
1898	98,845	127,371	51,406	52,106	24,472	27,819
1899	100,638	129,088	47,629	52,809	25,958	28,194
1900	102,221	130,848	44,060	53,529	27,101	28,579
1901	102,945	132,662	46,330	54,271	27,753	28,975
1902	102,776	134,873	48,078	55,175	27,926	29.458
1903	98,443	136,478	47,293	55,832	25,977	29,808
1904	104,113	138,305	43,572	56,579	27,682	30,207
1905	104,941	140,511	43,514	57,482	29,004	30,689
1906	107,890	142,908	44,333	58,462	30,410	31,213
1907	110,347	145,365	45,305	59,468	32,470	31,749
1908	111,545	148,093	46,426	60,583	32,551	32,345
1909	114,071	151,166	44,172	61,841	33,775	33,016

2. **Graphs of Annual Births, Commonwealth and States** (page 227).—A striking feature of the graphs of births is the practically continuous increase in the number of births exhibited in the graph for the Commonwealth from 1860 to 1891, and the marked variations of subsequent years. As the curve clearly shews, a turning point in the number of births occurred in 1891, whilst, as regards the separate States, New South Wales and Tasmania date their decline in number from 1893, Victoria from 1891, and Queensland from 1890. In South Australia the corresponding decline took place as early as 1885, while in Western Australia the increase in number of births has been practically continuous throughout.

It is of special interest to note the decline in births associated with the commercial crisis of 1891-3, and also the decline occurring in 1903, an accompaniment of the severe drought of that period.

In the case of New South Wales the graph crosses that of Victoria in 1879, *i.e.*, the births for that year were sensibly identical in the two States. A fairly continuous increase was experienced in the former State from 1860 to 1893, the only marked fluctuation being a sudden decline in 1889 and an equally rapid recovery in 1890. From 1893 to 1898 a somewhat rapid decline again took place, succeeded by a rise, the continuity of which was broken only by a sharp decline in 1903 and recovery in 1904.

In the case of Victoria the graph shews the increase between 1860 and 1880 to have been comparatively slight, the curve being a gradual rise, with fluctuations more or less marked to 1873, with a subsequent decline. From 1880 to 1891 the increase in the number of births is seen to be very rapid and practically continuous, while from 1891 to 1898 an equally sharp and continuous decline was experienced. A further rise and fall

took place between 1898 and 1903, succeeded by a continuous rise from the last-mentioned year to 1907, and a slight fall in 1908, followed by a recovery in 1909.

Starting in 1860 with a lower number of births than any State except Western Australia, the Queensland graph shews that the births increased somewhat rapidly until 1867. The equality in the number of births in Queensland and Tasmania in 1864 is shewn by the Queensland curve crossing the Tasmanian curve at the line for that year. From 1867 to 1882 a continuous though somewhat less rapid increase was experienced, followed by a very rapid rise to 1890, in which year Queensland's maximum number of births was recorded. The South Australian graph is crossed by that of Queensland at the year 1885. From 1890 onwards the number of births has fluctuated somewhat, but has, on the whole, retained a practically stationary position at a height rather less than that of 1890. The most serious variation was a sudden fall in 1903, the drought year, and rapid recovery in 1904, with a further fall in 1905 and a continuous rise since 1906.

The South Australian graph, a slow but practically continuous rise from 1860 to 1885, exhibits the steady increase in the total number of births. This rise is followed by a slow but fluctuating decline to 1903, and a slight recovery to 1909.

The Tasmanian curve may be regarded as made up of five portions, of which the first, from 1860 to 1877, represents a period of very slight variation, with, on the whole an increase; the second, from 1877 to 1884, a period of continuous and moderately rapid increase; the third, from 1884 to 1893, a period of rapid increase; the fourth, from 1893 to 1898, a period of continuous but slow decrease; and the fifth, from 1898 onwards, a period of steady recovery.

The Western Australian curve indicates that an increase, which was practically continuous but very slow, took place from 1860 to 1884, and that a somewhat quicker rate of increase, experienced from 1884 to 1896, was succeeded by a still more rapid and very satisfactory rate of increase from 1896 onwards.

It will be seen that the years in which the highest points were reached by the several curves are as follows:—

State ...	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Year ...	1909	1891	1909	1885	1906	1908	1909

3. **Graphs of Annual Marriages, Commonwealth and States** (page 228).—The Commonwealth marriage graph from 1860 to 1885 reveals a moderate but somewhat fluctuating increase in the annual number of marriages between 1860 and 1871, a more rapid increase between 1871 and 1879, and a still more rapid increase between 1879 and 1885. From 1885 to 1891 the numbers continued to increase, but with marked fluctuations in rate. The financial crisis associated with the period subsequent to the latter year was accompanied by a strongly-marked decline in the number of marriages, which reached its lowest point in 1894. From that year onwards a fairly rapid recovery was effected, the record for 1891 being exceeded by that of 1897. This progress was maintained until 1902, when the severe drought of that and the succeeding year were collateral with a rapid fall in the number of marriages. An equally rapid recovery, however, has since taken place, and the number of marriages in the Commonwealth during 1909 was greater than in any preceding year.

4. **Graphs of Annual Deaths, Commonwealth and States** (page 229).—The curves, shewing the progression of the annual number of deaths, indicate clearly that the periods for which exceptionally large numbers of deaths occurred were:—(*a*) 1866-7, (*b*) 1875-6, (*c*) 1884-5, (*d*) 1889-1891, (*e*) 1893, (*f*) 1898, and (*g*) 1902-3. It is remarkable that in each of the periods specified the phenomenon of a relatively high number of deaths was experienced in a majority of the States. Thus, as regards 1866-7, all the States except Western Australia and Tasmania were so affected; in 1875-6 all except Western Australia; in 1884-5 all were affected; in 1889 all except Western Australia and South Australia; in 1891 all except Queensland; whilst in 1893 and 1898, and in 1902-3, all were affected. The fact that the periods of high death rates have been practically identi-

cal in the several States furnishes an indication that the excessive mortality has been due to a considerable extent to some common cause operating throughout the Commonwealth.

It may be noted as curious that periods of heavy mortality have occurred at intervals of approximately nine years, viz. :—1866-7, 1875-6, 1884-5, 1893, and 1902-3. There are, however, two marked increases between the third and fourth dates, and one between the fourth and fifth. Thus there is no real indication of the periodicity in the death rate.

Periods in which the number of deaths was exceptionally low are far less clearly defined than those in which the number was high, and the agreement amongst the States is also less complete. The principal periods of low mortality may be said to be 1861, 1869-71, 1879, 1892, 1897, 1900, 1904-5, 1909.

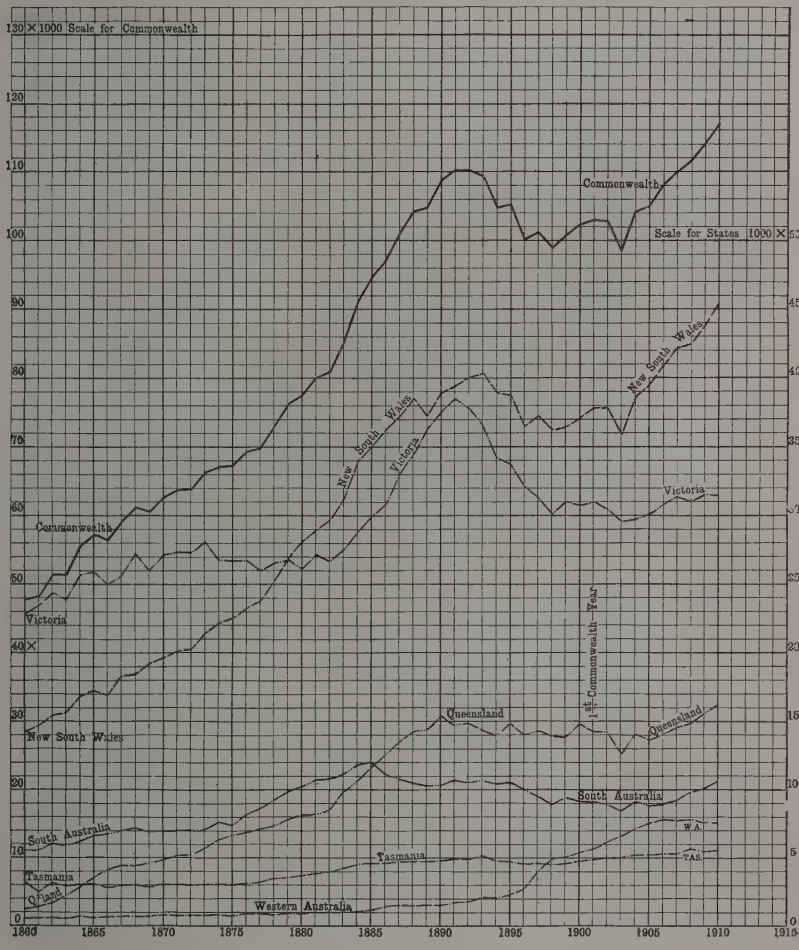
5. **Graphs of Annual Birth, Death, and Marriage Rates and of Rate of Natural Increase—Commonwealth** (page 230).—(i.) *General.* These graphs represent the number of births, deaths, and marriages, and the excess of births over deaths (natural increase) per 1000 of the population of the Commonwealth, for each of the years 1860 to 1909.

(ii.) *Births.* In the case of births, the graph indicates a well marked decline in rate during the period, and represents a fall from 42.56 per 1000 of population in 1860 to 26.40 per 1000 in 1909. This enormous reduction has been subject to small fluctuations during the period under review, but may, on the whole, be said to have been in evidence throughout. There are, however, two periods of arrested decline noticeable, one from 1877 to 1890, and the other from 1898 to the present time. The course of the graph thus indicates a rapid fall from 42.56 in 1860 to 34.99 in 1877, succeeded by a fluctuating but, on the whole, fairly stationary, period to 34.98 in 1890, then a fall even more rapid to 27.15 in 1898, and a further comparatively stationary period to 26.40 in 1909. The lowest point reached, viz., 25.23, was attained in 1903, the year in which the Commonwealth suffered severely from the worst drought it has ever experienced. Since then a small but well defined advance in the birth rate has been in evidence. A declining birth rate is usually due to complex causes, amongst which the variations in the age constitution of the population, and the adoption of preventive measures, are generally considered the most potent.

(iii.) *Deaths.* The three graphs relating to deaths furnish particulars concerning the rates experienced during the period amongst males and females separately, and in the population as a whole, the latter occupying naturally a position between the other two. Throughout the period the rate for males has largely exceeded that for females, but the fluctuations in the two rates have synchronised remarkably, indicating that the conditions which have been responsible for the marked variations which have occurred from time to time have affected males and females alike. On the whole, the graphs furnish clear evidence of a satisfactory decline in the death rate of the Commonwealth, a fall having taken place from 20.86 in 1860 to 10.22 in 1909. The graphical representation of the death rates brings into prominence five years in which the rates were exceptionally high when compared with those of adjacent years. These years are 1860, 1866, 1875, 1884, and 1898. The principal cause of the excessive rate of 1860 was the prevalence in that year of measles, scarlatina, and diphtheria, while the high rates of 1866, 1875, and 1898 were also largely due to epidemics of measles. Prior to 1892, when a rate of 12.91 was experienced, the lowest general death rate for the Commonwealth was that of 1871, viz., 13.24. The highest male death rate for the period was 20.97 in 1860, and the lowest 11.20 in 1909. For females the highest was 20.71 in 1860, and the lowest 9.13 in 1909. The difference between the male and female rates has, since 1869, been fairly constant, and has ranged between 1.97 and 3.44, with a mean value of about 2.7.

(iv.) *Marriages.* In the case of the graph representing marriage rates, the fluctuations are less abrupt than in the case of the birth-rate and death-rate graphs, and the rate for 1909, the final year of the period, viz., 7.82, does not differ very considerably

from that of 1860, which was 8.42. The lowest marriage rate for the period was that of 1894, viz., 6.08, marking the culmination of the commercial and financial depression indicated by the declining rates from 1888 onwards. From 1894 to the present time a satisfactory increase has been in evidence, disturbed only by the sharp decline which, in 1903, accompanied the severe drought experienced in the Commonwealth in that year.



(v.) *Natural Increase.* This graph, which represents the excess of births over deaths per 1000 of population, exhibits marked fluctuations arising from the combined fluctuations in birth and death rates. Thus, corresponding to the high death rates of 1860, 1866, 1875, and 1898, there are exceptionally low rates of natural increase, accentuated in the last-mentioned year by a comparatively low birth rate. A combination of low birth rate and comparatively high death rate was also responsible for a very low rate of natural increase in 1903. The highest rate of natural increase for the period was 26.58 in 1864, and the lowest 13.03 in 1898.

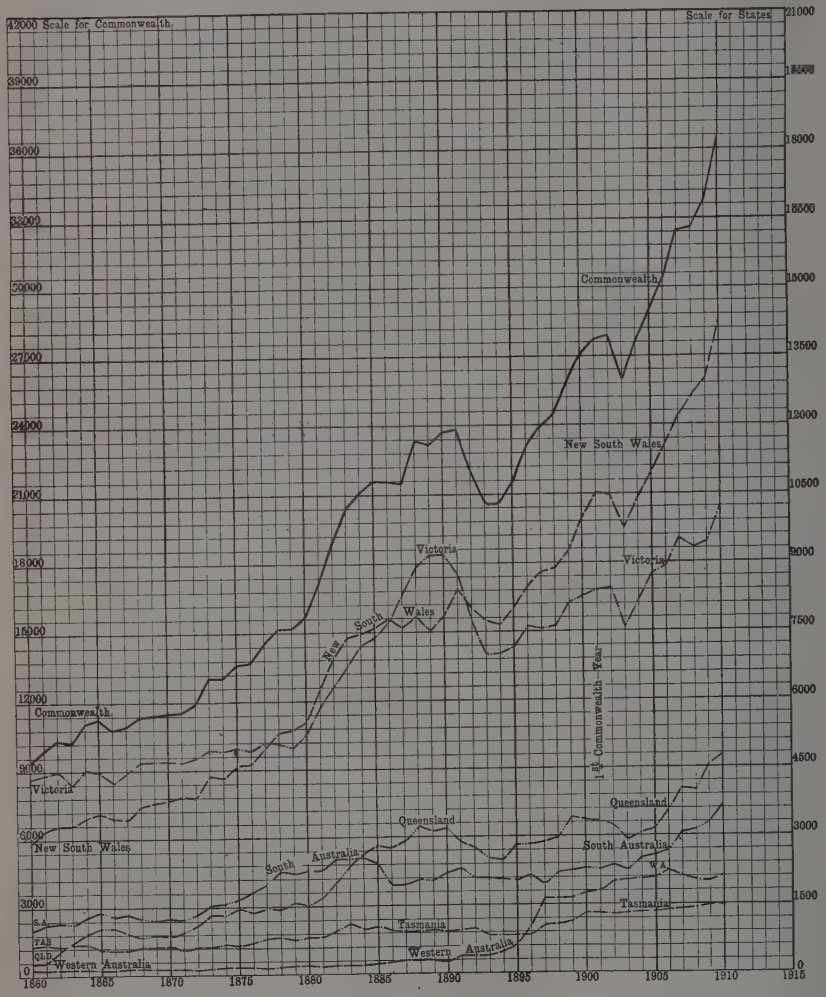
6. **Graphs of Annual Birth Rates—States** (pages 231 and 232).—These graphs furnish for the several States information similar to that supplied in the graph on page 230 for the Commonwealth as a whole. It will be seen that in every case the total effect has been an extensive decline in rate, subject to very marked fluctuations. In all the States the period from 1875 to 1885 was one of arrested decline, if not of actual advance, in the birth rate. With the exception of the very low rate accompanying the drought in 1903, the variations in any of the States since 1901 have not been very marked, and in some cases a slight tendency to increase is in evidence.

The highest birth rates during the period were as follows:—New South Wales (1864), 44.00; Victoria (1862), 44.71; Queensland (1860), 47.93; South Australia (1862), 45.44; Western Australia (1860), 38.96; and Tasmania (1884), 36.63. The following were the lowest rates for the period:—New South Wales (1903), 25.41; Victoria (1903), 24.46; Queensland (1903), 24.62; South Australia (1903), 23.25; Western Australia (1896), 23.44; Tasmania (1899), 27.43.

7. **Graphs of Annual Death Rates—States** (pages 233 and 234).—These graphs furnish for the several States similar information to that given for the Commonwealth as a whole in the diagram on page 230, and indicate in each case a satisfactory decline in death rate. It may be noted that an exceptionally high death rate was experienced in all the States in 1875, and that a similar uniformity, though on a smaller scale, is observable for the year 1898, the principal cause in each case having been an epidemic of measles. The highest death rates experienced during the period were as follows:—New South Wales (1867), 19.79; Victoria (1860), 22.77; Queensland (1866), 25.96; South Australia (1875), 19.97; Western Australia (1884), 21.54; and Tasmania (1875), 19.99. The following were the lowest death rates for the period:—New South Wales (1909), 9.84; Victoria (1909), 11.24; Queensland (1906), 9.56; South Australia (1909), 9.37; Western Australia (1909), 9.98; and Tasmania (1909), 10.00.

GRAPHS SHEWING TOTAL ANNUAL BIRTHS IN THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1910.

(See Table page 167.)



EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 2000 persons for the Commonwealth, and 1000 for the States.

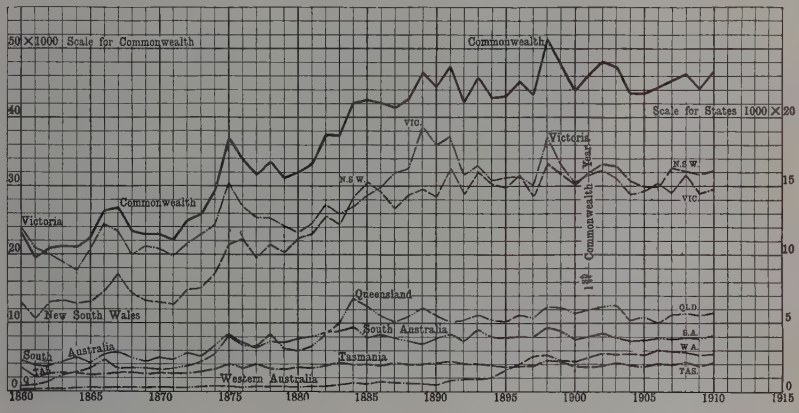
The scale on the left relates to the Commonwealth, and that on the right to the States.

The distances upwards from the common zero lines of the States and Commonwealth, marked 0, denote the total annual number of births in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the characters of the lines used are as follows:—Commonwealth, ————————; New South Wales, — — — — —; Victoria, — - — - — - —; Queensland, — — - — — - — —; South Australia, — - — - — - —; Western Australia, — — — - — — - — —; Tasmania, — — - — - — - — —.

GRAPHS SHEWING TOTAL ANNUAL MARRIAGES IN THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1910.

(See Table page 179.)



Explanation of Graphs.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 600 marriages for the Commonwealth and 300 for the States.

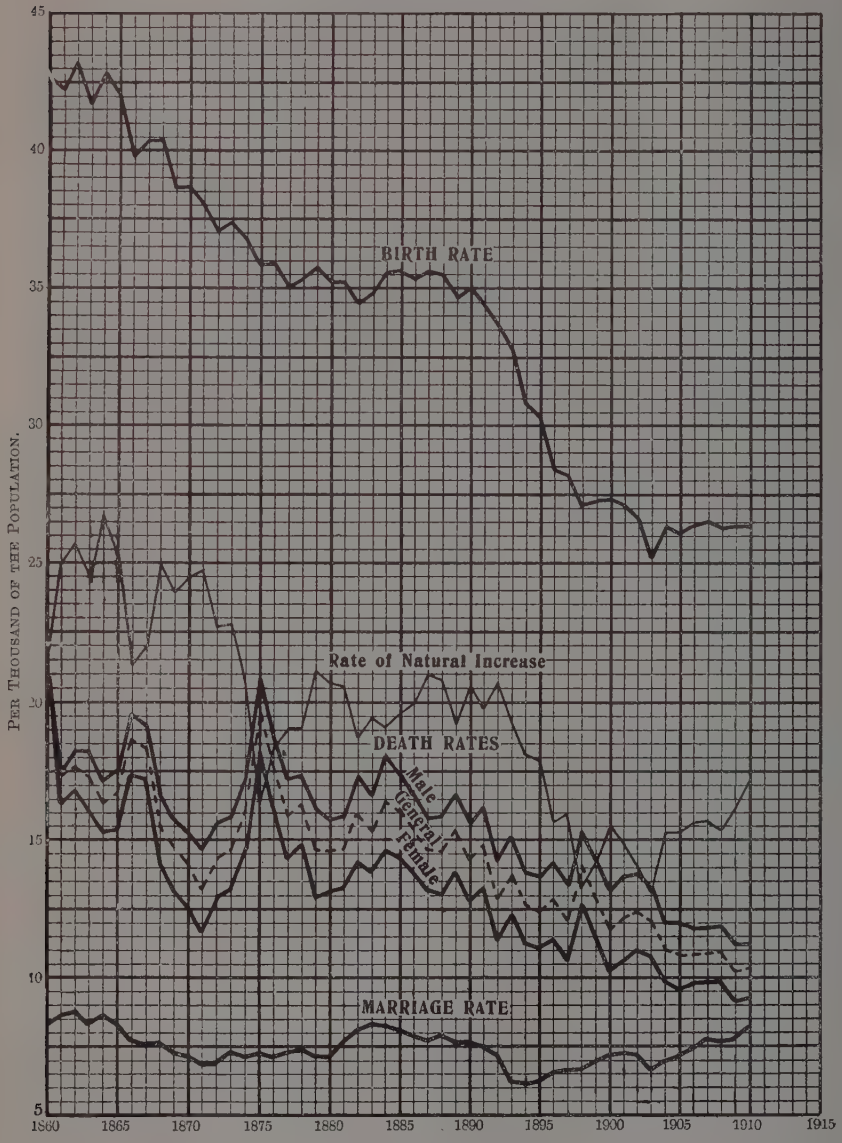
The scale on the left relates to the Commonwealth, and that on the right relates to the States.

The distances upwards from the zero line, marked 0, denote the total annual number of marriages in the States and Commonwealth, the scale of the latter being reduced one-half.

The names of the States to which the graphs refer are written thereon, and the lines used are similar to those for births on page 227.

GRAPHS SHEWING TOTAL ANNUAL DEATHS IN THE COMMONWEALTH AND STATES OF AUSTRALIA, 1860-1910.

(See Table page 188.)

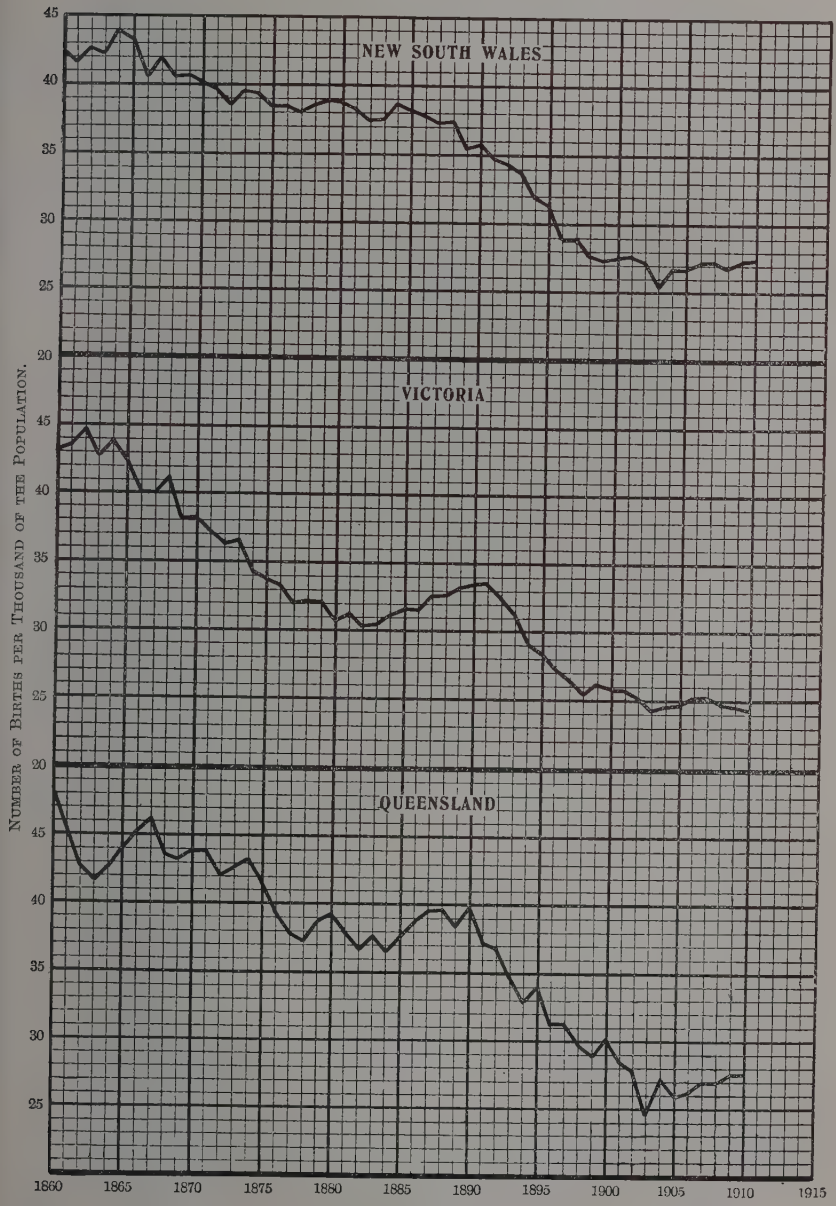


EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year for both Commonwealth and States, and the vertical height represents 2000 persons for the Commonwealth and 1000 for the States.

The scale on the left relates to the Commonwealth, and that on the right relates to the States.

The distances upwards from the common zero line for States and Commonwealth, marked 0, denote the total annual number of deaths in the States and Commonwealth, the scale of the latter being reduced to one-half.

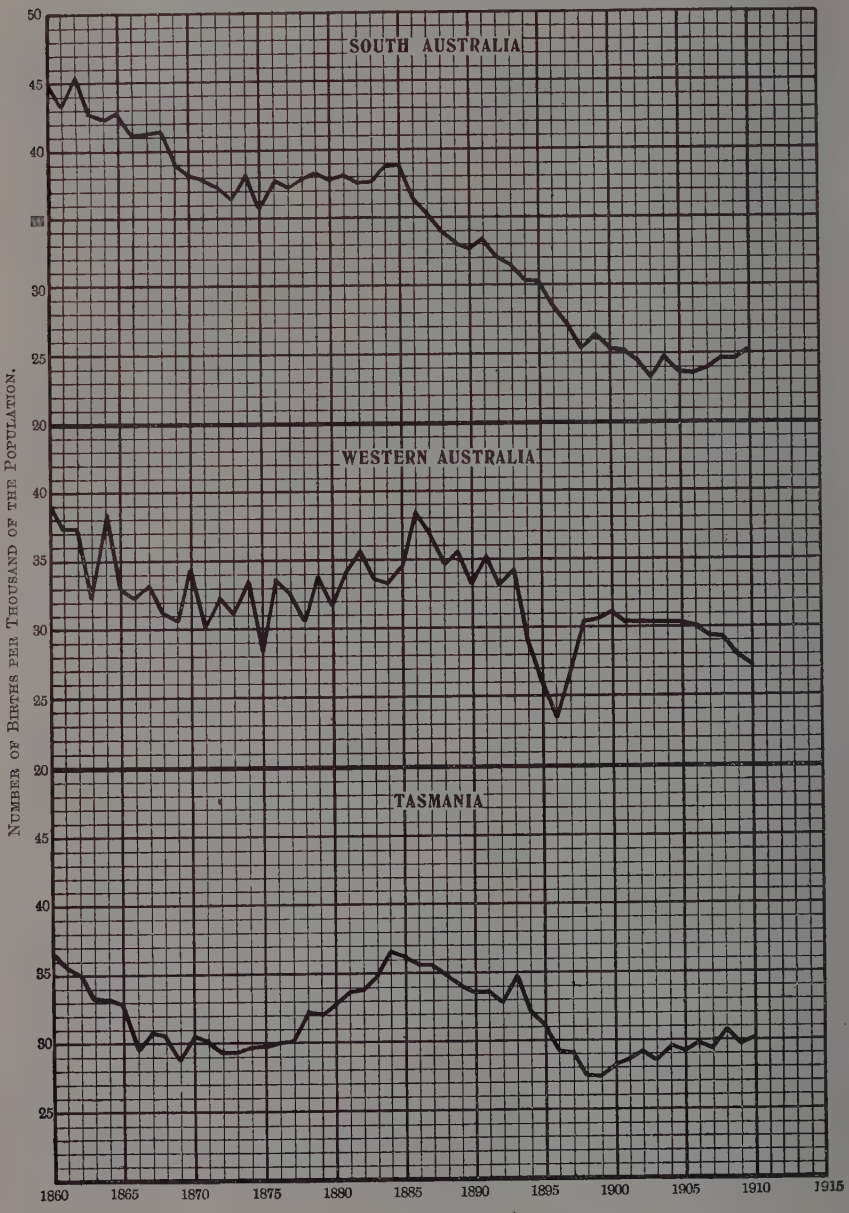
The names of the States to which the curves refer are written thereon, and the lines used are similar to those for births on page 227.



GRAPHS SHEWING GENERAL BIRTH NATURAL INCREASE, DEATH (MALE, GENERAL AND FEMALE), AND MARRIAGE RATES IN THE COMMONWEALTH OF AUSTRALIA, 1860-1910.

(See pages 167, 180, 188 and 226.)

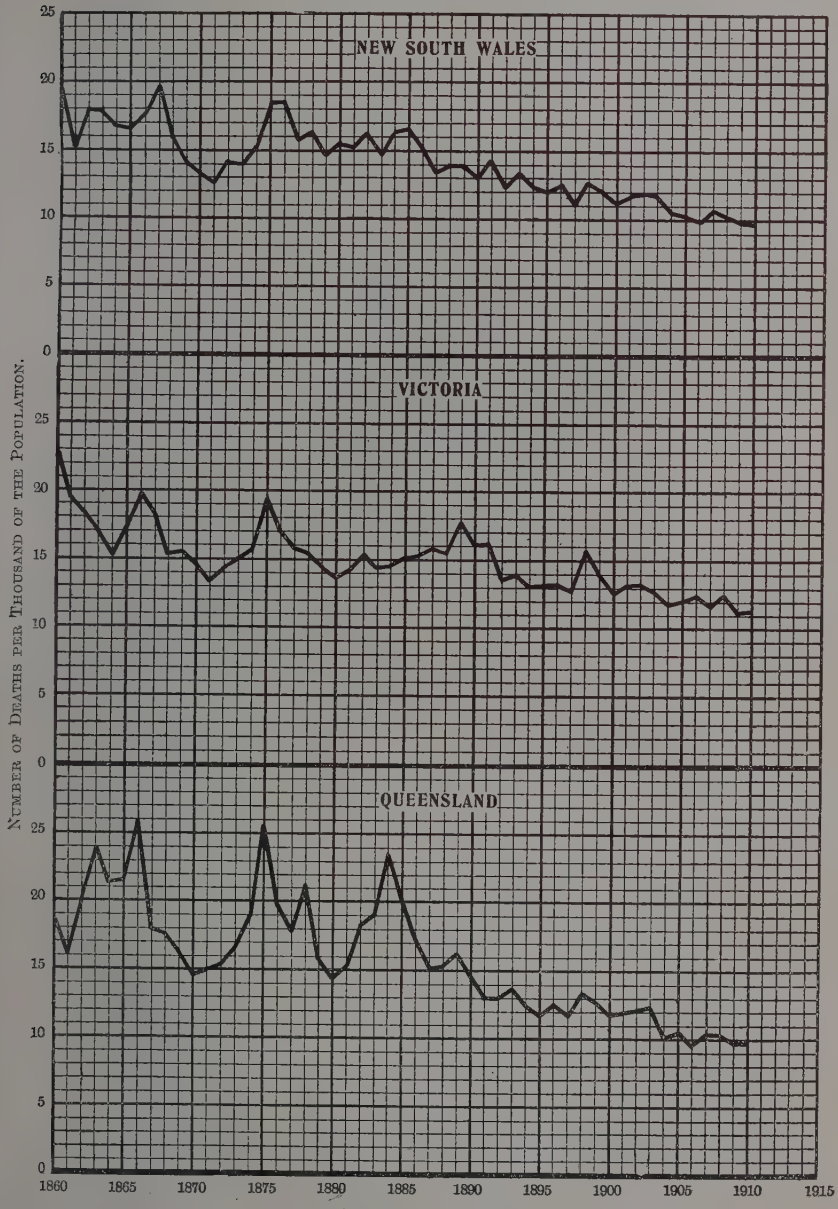
EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height, according to the character of the curve, one half per thousand o the population—the basic line being five per thousand of the population.



GRAPHS SHEWING BIRTH RATES IN THE STATES OF NEW SOUTH WALES, VICTORIA, AND QUEENSLAND, 1860-1910.

(See Table page 167.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one birth per thousand of the population—the basic line for each State being twenty per thousand of the population.



GRAPHS SHEWING BIRTH RATES IN THE STATES OF SOUTH AUSTRALIA, WESTERN AUSTRALIA, AND TASMANIA, 1860-1910.

(See Table page 167.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one birth per thousand of the population—the basic line for each State being twenty per thousand of the population.

GRAPHS SHEWING DEATH RATES IN THE STATES OF NEW SOUTH WALES, VICTORIA, AND QUEENSLAND, 1860-1910.

(See Table page 188.)

EXPLANATION OF GRAPHS.—The base of each small square represents one year's interval, and the vertical height one death per thousand of the population. The zero for each State is shewn by a thickened line.

SECTION VI.

LAND TENURE AND SETTLEMENT.

§ 1. Introduction and Early History.

1. **Introduction.**—The various forms of land tenure which have been adopted with a view to securing the settlement of a large and sparsely populated country like Australia are not only of interest to the immigrant, but also have an important and immediate bearing upon the welfare of the community. An attempt was made in Year Book No. 2, to give a comprehensive description, in a classified and co-ordinated form, of the land systems of the several States, and to thus obviate the necessity of having recourse to the numerous Acts of Parliament and other documents dealing with the subject. That description has been brought up to date and is repeated in this volume *in extenso* in so far as it relates to existing forms and conditions of tenure; the historical matter dealing with the development of the land legislation has, however, been considerably condensed in the last two issues of the Year Book. For a more complete account of the land legislation in the individual States, reference may therefore be made to Year Book No. 2 (pp. 263 to 272).

Though there is a certain similarity between the principal forms of tenure in the States of the Commonwealth, the difficulty of the task of rendering a succinct and co-ordinated account of the land systems is increased by the variety in detail of the terms and conditions imposed, and also by the different manners in which statistics dealing with the subject are presented by the several States. In the account given in this section the classifications ordinarily adopted in the several States have necessarily not always been adhered to, the tenures having been reclassified in accordance with the scheme indicated hereunder. (See § 4.) Statistics relating to various forms of tenure have also, where necessary, been regrouped according to that scheme.

In order to preserve continuity, and in order that the general trend of land legislation may be comprehended, a short historical account of land settlement in the Commonwealth is first given hereunder.

2. **First Grants of Land made in New South Wales, 1789.**—In the early days of Australian colonisation, land was alienated by grants and orders from the Crown. The first instructions, issued on the 25th April, 1787, authorised the Governor to make grants only to liberated prisoners, but by further instructions issued by the Secretary of State in 1789, the privilege of obtaining grants was extended to free immigrants and to such of the men belonging to the detachment of marines serving in New South Wales—which then included the whole of the eastern part of Australia—as were desirous of settling in the colony; the maximum grant was not to exceed 100 acres, and was subject to a quit-rent of one shilling per annum for every fifty acres, to be paid within five years of the date of issue. In many cases these grants were made conditional upon a certain proportion of the land being cultivated, or upon certain services being regularly performed, but these conditions do not seem to have been enforced. The first settler was a convict of the name of James Ruse, who, having been liberated, entered on his farm of thirty

acres at Parramatta on the 25th February, 1789. The first free settlers arrived in the *Bellona* on the 15th January, 1793, and took up land at Liberty Plains, about eight miles from Sydney.

3. **Grants of Town Allotments in Sydney, 1811.**—Until the year 1811 all the land which had hitherto been alienated lay outside the borders of the town of Sydney, but in that year the Governor, with the authority of the Secretary of State, commenced to grant town allotments on lease only, for periods of fourteen or twenty-one years; the rents on these leases varied considerably from time to time according to the discretion of the Governor, by whom they were imposed. In 1824 and 1826 further regulations relating to grants to immigrants were issued by the Colonial Office. In 1829 leases were entirely abolished, grants of freehold estates being made in lieu, but five years later they were, however, again introduced. As regards the payment of quit-rents generally, it appears that they were collected in a very perfunctory manner, and in later years the Government offered special inducements for their redemption.

4. **Introduction of Land Sales, 1825.**—By this time the principle of alienation of land by sale to free settlers had already been introduced under Sir Thomas Brisbane, and under a Government order of the 24th March, 1825, land was allowed to be sold by private tender, at a minimum price of five shillings an acre, no person being allowed to buy more than 4000 acres, nor any family more than 5000 acres. The disposal of lands by sale did not, however, interfere with the ordinary method of alienating town allotments and country lands by grants subject to the payment of quit-rents. In 1830 the division of the eastern part of the colony into counties, hundreds and parishes had been completed by a commission of three persons appointed for that purpose. Dividing the territory into nineteen counties, covering about 34,505 square miles, they made a valuation of the whole of the lands with a view to fixing a fair price for future sales. This territory comprised a belt of land in what is now the middle of the Eastern Division of New South Wales, extending from the coast nearly as far as the boundary of the Central Division, and from the Macleay River in the north to the Moruya River in the south.

5. **Free Grants Abolished, 1831.**—On the 14th February, 1831, it was notified by a Government order that no Crown lands were in the future to be disposed of except by public auction, the minimum price for country lands being fixed at five shillings an acre, which was raised to twelve shillings an acre in 1839, power being given in the latter year to select, at the upset price, land for which there was no bid at the auction, or upon which the deposit paid at the time of sale had been forfeited. This was the first introduction of the principle of selection into the land laws of Australia, and it was then only applied to lands which had been put up for sale by auction.

6. **Land Regulations Issued under Imperial Acts, 1842 and 1847.**—In 1842 regulations made under an Imperial Act of Parliament came into force. The principle of sale by auction was maintained, the lands were to be surveyed before being put up for sale, and the upset price was fixed at twenty shillings an acre. It was provided that, subject to a primary charge for survey, half the proceeds of sales were to go to defray the cost of immigration of persons to the colony in which the revenue accrued. Special blocks of 20,000 acres formed an exception. They might be sold, before survey, by private contract at not less than the upset price. Under Orders in Council, issued on the 9th March, 1847, in pursuance of the provisions of the Waste Lands Act of 1846, a new classification of lands took place, and the territory was divided into—(*a*) settled districts; (*b*) intermediate districts; and (*c*) unsettled districts. Under this Act the principles of sale by auction or by private contract were maintained, but a system was introduced by which leases were granted for various terms in each of the three divisions for pastoral purposes only. During the currency of such a lease the lessee could at any time purchase the freehold at the upset price of £1 an acre, and on the expiration of the term he had a pre-emptive right at the same price over all or any part of the land.

7. **Occupation of Pastoral Lands.**—In the early days land was held for pastoral purposes under tickets of occupation, which ceased to be issued on the 1st May, 1827, after which date pastoral lands could only be occupied under annual licenses, upon payment of a quit-rent of twenty shillings per 100 acres, and had to be vacated at six months' notice. Under the Imperial Act of 1846, referred to above, an entirely new system for the occupation of pastoral lands was introduced. Under this system fixity of tenure of lease was granted, and the fee was paid upon the stock-carrying capacity of the run. In the unsettled districts the term of the lease was fixed at fourteen years; in the intermediate districts the term was for eight years; while in the settled districts the yearly tenure was retained.

8. **First Land Legislation of Individual States.**—The legislation of 1846 remained in force in New South Wales until the year 1861; and in the States of Victoria and Queensland, which were separated from the mother colony in 1851 and 1859 respectively, until repealed by Acts of the State Parliaments. The discovery of gold in 1851, and the consequent rush of population to Australia, greatly changed the conditions of colonisation. The various States of the Commonwealth have found it to their advantage to adopt different systems for securing the settlement of an industrial and agricultural population. The land regulations of Victoria, Queensland, and Tasmania were identical with those in force in New South Wales until the dates of the separation of these States from the mother State, and at the present time practically the same form of conditional occupation with deferred payments exists in all four States. In Western Australia and in South Australia the influence of the legislation of New South Wales was not felt. In these States new conditions prevailed; under a different set of circumstances settlement was effected by legislation of a special and novel character, and it was not until a later date that their land laws were brought more into line with those of the eastern States.

9. **New South Wales Areas Alienated between 1787 and 1859.**—The subjoined statement shews the areas of Crown lands which had been alienated, both in the mother colony and in the settlements administered from Sydney, from the date of the foundation of the colony in 1787 up to the dates of separation of these settlements by their constitution as separate colonies :—

NEW SOUTH WALES ALIENATIONS,

UP TO SEPARATION OF VARIOUS SETTLEMENTS, BETWEEN 1787 AND 1859.

Particulars.	In New South Wales Proper (N.S.W.).	In Van Diemen's Land[1] (Tasmania).	In Port Phillip District[1] (Victoria).	In Moreton Bay District[1] (Q'nsland).
	Acres.	Acres.	Acres.	Acres.
From 1787 to 1823	520,077	57,423	...	...
From 1824 to 1836	4,268,750	...	...	...
From the first settlement in Port Phillip in 1837 to 1841	1,110,544	...	222,214	...
From the first settlement in Moreton Bay in 1842 to the separation of Port Phillip in 1851	48,119	...	121,702	2,521
From 1852 to the separation of Moreton Bay in 1859	899,283	...	...	58,398
Total from 1787 to 1859 inclusive ...	6,846,773	57,423	343,916	60,919

1. Particulars for the States *after* their separation are shewn in subsequent paragraphs.

§ 2. Land Legislation in Individual States.

1. **New South Wales.**—After the excitement of the first rush, following the discovery of gold in 1851, had died away, the interest in gold-digging commenced to decline, and the number of people desiring to settle on the land greatly increased. The question of land settlement had accordingly to be dealt with in an entirely new spirit, to meet the requirements of a class of immigrants differing greatly from those contemplated by the Act of 1847.

(i.) *The Lands Act and Occupation Act 1861.* The public interest in the question which thus arose resulted in the passing of the Crown Lands Act and the Occupation Act in 1861, under the leadership of Mr. (afterwards Sir) John Robertson. The object of these Acts was to facilitate the establishment of an agrarian population side by side with the pastoral tenants. It had hitherto been difficult for men with limited capital to establish themselves with a fair chance of success, but under the new principle of free selection before survey, introduced by Robertson's Act, country lands were sold in limited areas of from 40 to 320 acres at a price of £1 an acre, payable partly by deposit, and carrying interest on the balance outstanding at the rate of 5 per cent. per annum. By the Occupation Act of 1861 the colony was divided into first and second-class settled districts and unsettled districts, and the whole of the pastoral leases were left open to the operations of free selectors. The system of unconditional sales was still continued under the Act of 1861, and remained in force until its abolition in 1884. With many benefits there was also considerable mischief as a result of the operation of Robertson's Act, chiefly for the reason that land, being held under pastoral leases not exempt from free selection, could be the subject of speculative selecting without *bonâ fide* intention of settlement.

(ii.) *Acts now in Force.* The Crown Lands Act of 1884 and the supplementary Act of 1889 were accordingly passed to remedy this state of things. These measures, while maintaining the principle of free selection before survey, were designed to give fixity of tenure to the pastoral lessees, and at the same time incidentally tended to restrict the area sold unconditionally. Pastoral leases were required to be surrendered to the Crown and divided into two equal parts. One of these parts was returned to the lessee under a lease with fixity of tenure for a certain term of years; the other half, called the resumed area, the lessee was allowed to hold under an annual occupation license, but this half was always open to selection.

It was found in course of time that the Acts of 1884 and 1889 did not succeed in attaining the objects for which they were designed; settlement proceeded very slowly, and the accumulation of land into large estates continued. Parliament has been led to introduce entirely new principles into the agrarian legislation of the State, embodied in the Crown Lands Acts 1895 to 1909, the Labour Settlements Act 1902, the Closer Settlement Acts 1904 to 1909, and the Closer Settlement Promotion Act 1910, which, while still giving fixity of tenure to pastoral lessees, retain the principle of free selection before survey, and to offer *bonâ fide* settlers special inducements by the introduction of new forms of tenure on easy terms and conditions.

(iii.) *The Western Lands Acts.* All lands in what is known as the Western Division of New South Wales are now subject to the special provisions of the Western Lands Acts 1901 to 1909. The registered holder of a lease of any description or of an occupation license of land could bring his lease or license within the provisions of the Western Lands Act by application before the 30th June, 1902. If he did not so apply, the lease or license is dealt with as if the Act had not been passed, and the Western Land Board, constituted under the Act, is to be deemed to be the Local Land Board to deal with such cases. All leases issued or brought under the provisions of the Western Lands Acts expire

on the 30th June, 1943, except in cases where part of the land leased is withdrawn for the purpose of sale by auction or to provide small holdings, in which case the Governor may add to the remainder of the lease a term, not exceeding six years, as compensation for the part withdrawn.

2. **Victoria.**—The early history of land settlement in Victoria is intimately bound up with that of New South Wales. For the first fifteen years of its existence, during which period it was known as the District of Port Phillip, the alienation of Crown lands was regulated by the Orders in Council of the mother State, to which orders reference has already been made. In the month of September, 1836, the Port Phillip district was proclaimed open to settlement, and the principle of the sale of unoccupied land by auction was introduced. The first Port Phillip land sale took place on the 1st June, 1837, and the first Portland Bay sale on the 15th October, 1840. In the year 1841 the upset price of country lands, in New South Wales limited to twelve shillings per acre, was specially raised to twenty shillings per acre in the Port Phillip district.

The Orders in Council made under the Imperial Acts of 1842 and 1846, referred to above, remained in force until 1860, when an Act (known as Nicholson's Act) was passed by the Victorian Government, which, after making provision for special reserves for mineral purposes, etc., divided all Crown lands into country and special classes. The former were available after survey for selection in allotments of from forty to sixty acres, while special lands, situated near towns, railways, rivers, etc., were sold quarterly by auction at an upset price of £1 an acre.

(i.) *Duffy's Act 1862.* In 1862 free selection before survey was introduced by Duffy's Act, which provided for the setting apart of large agricultural areas, within which land could be selected at a uniform price of £1 per acre. Alternative conditions were imposed to the effect that certain improvements should be effected, or that part of the land should be placed in cultivation, and modifications were introduced as to the mode of payment. As regards pastoral lands, license fees and assessments of stock were abolished, and provision was made for the payment of rent for runs according to their value, based on their stock-carrying capacity. This Act was amended in 1865.

(ii.) *The Land and Pastoral Acts 1869.* The next legislation on the subject of land settlement was in 1869, in which year a Land Act and a Pastoral Act were passed, consolidating and amending all previous land legislation. The system of free selection before survey, as applied to all unoccupied Crown lands, was retained, but the selected area was limited to 320 acres, and was at the outset to be held under license for a term of three years, during the first two and a-half years of which the selector had to reside on the land, fence it, and cultivate a certain proportion of it. At the end of the period of license, the selector could either purchase the land outright or he might obtain a further lease of seven years, with the right to purchase at any time during the term. The pastoral Act of 1869 provided for the occupation of the land for pastoral purposes under two systems, either as runs under license or lease or under grazing rights. The Land Act of 1869 was amended in 1878, when the conditions of selection were greatly restricted, the immediate effect being a considerable falling-off in the areas taken up.

(iii.) *Acts now in Force.* In 1884 the whole system of land occupation and alienation, except as regards Mallee lands (see below), was altered. This measure was again modified by the Acts of 1890, 1891, 1893, 1896, 1898, and 1900, the whole being consolidated in the Land Act 1901, which came into force on the 31st December of that year, and which has in turn been modified by the amending Acts of 1903, 1904, 1905, and 1909. The subject of closer settlement was dealt with in the Land Act 1898 and 1901 and amendments, until the introduction of the Closer Settlement Act 1904, which has been amended in 1906, 1907, and 1909. Other special forms of tenure have been provided for by the Settlement on Lands Act 1893, and the Small Improved Holdings Act 1906; these, however, are now embraced in the Land Acts and Closer Settlement Acts respectively. It is proposed to pass an amending and consolidating Land Act at an

early date. Particulars of any amending Acts which may be passed prior to the publication of this book may be found in the Appendix.

(iv.) *Mallee Lands.* The territory known generally as the "Mallee"—so named from the scrub with which the country, in its virgin state, was covered—comprises an area of about 11,000,000 acres in the north-western district of the State, and of this area more than half is unalienated and available for occupation. The soil is mostly of a light chocolate and sandy loam character, covered with scrub, interspersed with plains lightly timbered with pine, buloke, belar, sandalwood, etc. The scrub can be cleared at a moderate expenditure, and the extension of railway facilities and of successful systems of water-supply should bring large districts in this country into prominence as a field for agricultural enterprise.

Originally Mallee lands could be acquired under lease either as "Mallee Blocks" or "Mallee Allotments." The former were very large areas of the back country, and the term was for a period of twenty years, which has now expired, and these areas are now only let under annual grazing licenses until required for selection. "Mallee Allotments" could be leased up to a maximum area of 20,000 acres, but the area was latterly restricted to the area which could be selected. Leases of "Mallee Allotments" expiring on the 31st December, 1909, were extended to the 31st December, 1912, but no such leases can now be issued. Alienation by selection was allowed by the Land Act 1896, and lands in the Mallee are now dealt with by a special part of the Land Act of 1901 (see 6, 3, iii), as amended in 1904 and by the Murray Settlements Act 1907.

3. **Queensland.**—Previous to the year 1859 the Moreton Bay district, as it was then called, formed a portion of New South Wales. The early history of its method of land settlement is thus included in that of the mother colony. With separation from New South Wales, and the election of a Legislative Assembly of its own, the district of Moreton Bay—or, as it was henceforth to be known, the Colony of Queensland—entered on a new era of prosperity. The first Parliament of the new colony, which assembled in 1860, passed three Acts dealing with Crown lands.

(i.) *Pastoral Leases.* The first two of these (24 Vic., Nos. 11 and 12) dealt chiefly with the occupation of land for pastoral purposes, and their provisions differed but little from those adopted in the mother colony. These measures were amended by Acts passed in 1862, 1863, and 1864. In 1868 an Act was passed providing more land for agricultural settlement by the resumption of land from runs as required, unless the proprietors voluntarily surrendered for selection one-half of their runs, and accepted a ten years' lease for the remainder. The occupation of lands for pastoral purposes was further dealt with by Acts passed in 1869, 1876, and 1882.

(ii.) *General Settlement.* The third measure (24 Vic., No. 15), passed in 1860, provided for general settlement. This was also more an expansion of the existing law than the adoption of a new line of policy. This Act was amended in 1863 and 1864, and again in 1866, when a comprehensive measure was passed practically introducing the principle of deferred payment, although styled leasehold with the right of purchase. The principle of selection before survey was extended by the Crown Lands Alienation Act 1868, the Homestead Areas Act of 1872, and the Crown Lands Alienation Act of 1876. These measures, with slight amendments, continued in force until 1884, when the Crown Lands Act was passed. This Act introduced the system of grazing farms and provided for the constitution of a Land Board, which was the forerunner of the Land Court established by the Act of 1897. The complaints of pastoral lessees as to insecurity of tenure were also met by the Act of 1884, which, while securing prescribed proportions for settlement, gave the lessees fixed tenures of the remainder of their holdings for fifteen years, increased later to twenty-one years, subject to prescribed powers of resumption, and later again to twenty-eight years on the holdings being enclosed by rabbit-proof fences.

(iii.) *Acts now in Force.* The Act of 1884 was, after various amendments, repealed by the Land Act 1897, which was in turn amended in 1902, 1905, 1908, and 1909, and which re-enacted with modification the provisions relating to grazing farms, abolished the exclusively leasehold tenure as applied to agricultural farms, restoring to them the earlier principle of conditional purchase, but on more liberal terms. Nearly all pastoral leases are now held under the Act of 1897, in conjunction with the Land Act 1902. Under the provisions of the Agricultural Lands Purchase Acts 1894 to 1905, power was given to the Government to repurchase lands for the purpose of closer settlement; these Acts have now been consolidated and repealed by the Closer Settlement Act of 1906. Under the Co-operative Communities Land Settlement Act of 1893, as amended in 1894 and 1895, provision was made for the establishment of co-operative communities; these Acts were, however, repealed by the Land Act Amendment Act 1909. The Special Agricultural Selections Acts 1901 to 1904 were passed for the purpose of promoting closer settlement upon agricultural lands, by affording to bodies of settlers special facilities for the acquirement of agricultural selections to be held in conjunction with portions in adjacent agricultural townships; these Acts were also repealed by the Land Acts Amendment Act 1909, which now provides for group selections by bodies of settlers. An important Bill was introduced in Parliament in 1910, the object of which is to consolidate, amend, and simplify the law relating to the occupation and alienation of Crown lands. The Bill proposes to take the place of thirty-two Acts relating to Crown lands repealed in 1908 and 1909, and also by the new Bill.

4. **South Australia and the Northern Territory.**—In the year 1834 a Bill for the colonisation of South Australia was passed by the British Government, and under this Act the colony was founded. It provided for the appointment by the Crown of three or more Commissioners to carry certain parts of the Act into execution; they were to declare all the lands of the colony, excepting areas reserved for roads and footpaths, to be open to purchase by British subjects, and to make regulations for the survey and sale of such lands at such price as they might deem expedient, and for letting unsold lands for periods of not less than three years. They might sell the land by auction or otherwise, but for ready money only, at a uniform price, and at not less than twelve shillings per acre. The principles on which the colony was established originated with Mr. Edward Gibbon Wakefield. The main idea in Wakefield's scheme was the sale of waste or unappropriated lands at a high price, and the application of the revenue thus obtained to the introduction of immigrants, so as to secure a constant supply of hired labour for the cultivation of the land, and for the progress of settlement. Other leading features of the scheme were that no convicts should be transported, that no State Church should be established, and that the new colony should be financially independent, and not be a charge on Great Britain.

The Wakefield system fell into disfavour owing to the financial crises of the early forties, and soon had to be modified. It was not until 1872, however, that an Act was passed more in conformity with the legislation of the neighbouring States, and giving to settlers with only a small amount of capital an opportunity of settling upon the lands of the Crown under fair conditions and with a reasonable chance of success. The Act of 1872 was amended from time to time, until it was repealed and its provisions consolidated by the Crown Lands Act 1888. The principles of closer settlement were introduced by the Closer Settlement Act of 1897, which was amended in 1902, while village settlements were dealt with by the Village Settlements Act 1901.

(i.) *The Torrens Act.* Reference may here be made to the Real Property Act, which was originated in South Australia by the late Sir R. R. Torrens in the year 1858, and which has been adopted in all the States of the Commonwealth, and also in New Zealand. The objects of this Act are to give security and simplicity to all dealings with land, by providing for such registration of title as shall admit of all interests which may appear upon the face of the registry being protected, so that a registered title or interest shall practically never be affected by any claim or charge not registered. By this system everyone who acquires an estate or interest in land, upon being registered as owner

thereof, obtains a title, if not absolutely at least practically secure against everyone whose claim does not appear upon the registry; and the two elements of simplicity and security as regards the acquisition of land appear to be effectually attained.

(ii.) *Acts now in Force.* The Act of 1888, referred to above, in course of time underwent numerous amendments, the whole being repealed and consolidated by the present Crown Lands Act of 1903, which also repealed the previous Closer Settlement and the Village Settlement Acts, and which in turn was amended in 1905 and 1906. A Bill to amend the provisions relating to Closer Settlement was introduced in 1910. Provisions as to the occupation of land for pastoral purposes are now contained in the Pastoral Act 1904, while special provisions for granting leases of reclaimed lands were made by the Irrigation and Reclaimed Lands Acts 1908 and 1909.

(iii.) *The Northern Territory.* In 1863 so much of the State of New South Wales as lay to the north of lat. 26° S., and between long. 129° and 138° E., was annexed to South Australia. This portion of the continent is under the administration of a Resident, appointed by the Government of South Australia. The Acts referred to in the preceding paragraph hereof do not apply to the Northern Territory lands, the sale and occupation of which are now regulated by the Northern Territory Crown Lands Act 1890, the Northern Territory Lands Act 1899, and the Northern Territory Tropical Products Act 1904.

5. **Western Australia.**—In the year 1827 Captain James Stirling, accompanied by Mr. Charles Fraser, the Colonial Botanist in New South Wales, made an examination of the country in the vicinity of the Swan River, with a view to the establishment of a settlement, and in consequence of the favourable report made by these gentlemen, the Imperial Government decided to organise a colonising expedition forthwith. On the 2nd June, 1829, the transport *Parmelia* arrived in Cockburn Sound, having on board Captain Stirling, who had been appointed Civil Superintendent of the Swan River settlement, and a number of officials and intending settlers. On the 17th June the expedition disembarked and encamped on the north bank of the Swan River, at the place now called Rous Head, and with the landing of these immigrants the settlement of Western Australia commences.

(i.) *First Grants of Land.* The first settlers were offered large grants of land proportional to the amount of capital introduced, at the rate of forty acres for every sum of £3, and of 200 acres for every labourer brought into the colony, the grants being subject, however, to improvement conditions. Closely following the *Parmelia* a number of vessels arrived, increasing the number of settlers and introducing further supplies of live stock, until at the end of the year 1830 nearly 1800 immigrants had arrived in the colony. No preparations had been made for the reception or provision of these settlers; many of them were persons who were quite unfitted for the hardships which had to be endured, and a general feeling of despondency and depression commenced to spread amongst the colonists. Numbers left, rather than face the difficulties inseparable from initial colonisation; those who remained, however, struggled on manfully, and in spite of great hardships and privations laid the foundations of the present State.

(ii.) *Free Grants Abolished.* The original regulations under which grants were made to the first settlers were amended by others of a similar nature issued by the Imperial Government on the 20th July, 1830, which in turn were replaced in 1832, when free grants were abolished and land was sold at a minimum price of five shillings per acre. In 1837 the price of allotments in Perth, Fremantle, and Albany was fixed at a minimum of £5 an acre. New land regulations were issued by the Colonial Office in 1843, 1864, 1873, 1882, and 1887, when the whole of the regulations were amended and consolidated. The colony was divided into six divisions, in all of which sale by auction was permitted, but otherwise the conditions of occupation differed in each division.

(iii.) *Acts now in Force.* In the year 1890 Constitutional Government was granted to the colony, and from time to time various amendments were made in the land laws,

until the year 1898, when a Land Act was passed amending, repealing, and consolidating previous legislation as to the sale, occupation, and management of Crown lands. This Act has in turn been amended in 1899, 1900, 1902, 1904, 1905, 1906, and 1909, and, with its amendments, is now in force. The principle of repurchasing Crown lands for the purposes of closer settlement was introduced by the Agricultural Lands Purchase Acts 1896 to 1904; these Acts were repealed and consolidated by the Agricultural Lands Purchase Act 1909.

6. **Tasmania.**—The early settlement of Tasmania was carried out under the regulations framed for the disposal of Crown lands in New South Wales, of which colony it was, at the outset, a part, and after its constitution under a separate administration in 1825 the regulations issued from the Colonial Office for the settlement of Crown lands in the mother colony were made applicable to Tasmania. In 1828 the first land sales in the island took place, but so low were the prices obtained that 70,000 acres enriched the Treasury by only £20,000. In the month of January, 1831, the system of issuing free grants of land was abolished.

(i.) *The Waste Lands Acts 1858 to 1870.* In 1855 responsible government was granted to the island colony, and from this time dates the policy under which later settlement has taken place. The Waste Lands Act 1858 introduced the principle of free selection before survey. From 1860 to 1870 no less than thirteen Land Acts were passed, and in the latter year a new measure, the Waste Lands Act 1870, embodying and consolidating many of the salient features of previous enactments, was carried. The Act of 1870 gave power to the Governor to reserve such land as he might deem necessary for public purposes, and the lands not so reserved were divided into (*a*) town, (*b*) agricultural, and (*c*) pastoral lands. The upset price for agricultural lands was £1 an acre, that for pastoral lands being a sum equivalent to twelve years' rental, but not in any case more than five shillings an acre.

(ii.) *Acts now in Force.* Numerous amendments to the Act of 1870 were passed, until, in 1890, a measure was carried, consolidating the various Acts then in force; the Act of 1890 was itself amended from time to time. The law relating to land tenure and settlement is now consolidated in the Crown Lands Acts 1903, 1905, and 1907; and in the Closer Settlement Acts of 1906, 1907, and 1908; a Bill to further amend the Closer Settlement Act was introduced in Parliament in 1910.

7. **Administration and Classification of Crown Lands.**—In each of the States of the Commonwealth there is now a Lands Department under the direction of a responsible Cabinet Minister, who is charged generally with the administration of the Acts relating to the alienation, occupation, and management of Crown lands. The administrative functions of most of the Lands Departments are to some extent decentralised by the division of the States into what are usually termed Land Districts, in each of which there is a Land Office, under the management of a land officer, who deals with applications for selections and other matters generally appertaining to the administration of the Acts within the particular district. In some of the States there is also a Local Land Board or a Commissioner for each district or group of districts.

In most of the States Crown lands are classified according to their situation, the suitability of the soil for particular purposes, and the prevailing climatic and other conditions. The modes of tenure under the Acts, as well as the amount of purchase money or rent and the conditions as to improvements and residence, may vary in each State according to the classification of the land. The administration of certain special Acts relating to Crown lands has in some cases been placed in the hands of a Board, under the general supervision of the Minister; for such purposes, for instance, are constituted the Western Lands Board in New South Wales, the Lands Purchase and Management Board in Victoria, and the Closer Settlement Board in Tasmania.

In each of the States there is also a Mines Department, which is empowered under the several Acts relating to mining to grant leases and licenses of Crown lands for mining

and auxiliary purposes. Such leases and licenses are more particularly referred to in a later part of this section. (See § 9, below.)

Full information respecting lands available for settlement or on any matter connected with the selection of holdings may be obtained from the Commonwealth representative in London, from the Lands Departments, or from the Agents-General of the respective States. The administration and classification of Crown lands in each State was more fully dealt with in Year Book No. 2 (pp. 273-6) to which reference may be made.

§ 3. Tenures under which Crown Lands may be Alienated or Occupied.

1. **Introduction.**—The freehold of Crown lands in the several States of the Commonwealth may now ordinarily be alienated either by free grant (in trust for certain specified purposes), by direct sale and purchase (which may be either by agreement or at auction), or by conditional sale and purchase. Crown lands may be occupied in the several States under a variety of forms of leases and licenses, issued both by the Lands and the Mines Departments.

2. **Classification of Tenures.**— The tabular statement given on pages 246-7 shews the several tenures under which Crown lands may be acquired or occupied in each State of the Commonwealth. The several forms of tenure are dealt with individually in the succeeding parts of this section. In the State of Victoria it is proposed to amend and consolidate the Land Acts at an early date, and to abolish some of the existing forms of tenure. Reference to any amending Acts which are passed up to the latest available date prior to the publication of this book may be found in the Appendix.

(i.) *Free Grants, Reservations, and Dedications.* The modes of alienation given in this category include all free grants either of the fee simple or of leases of Crown lands. "Free" homesteads in Queensland and Western Australia are not included in this class, these tenures being free in the sense that no purchase-money is payable, though the grants are not free from residential and improvement conditions. Reservation and dedication, which are ordinarily conditions precedent to the issue of free grants, are also dealt with herein.

(ii.) *Sales by Auction and Special Sales.* This class of tenure includes all methods by which the freehold of Crown lands may be obtained (exclusive of sales under the Closer Settlement and kindred Acts) for cash or by deferred payments, and in which the only condition for the issue of the grant is the payment of the purchase-money.

(iii.) *Conditional Purchases.* In this class are included all tenures (except tenures under Closer Settlement and kindred Acts) in which the issue of the grant of the fee simple is conditional upon the fulfilment of certain conditions (as to residence or improvements) other than, or in addition to, the condition of the payment of purchase-money.

(iv.) *Leases and Licenses.* This class includes all forms of occupation of Crown lands (other than under Closer Settlement and kindred Acts) for a term of years under leases and licenses issued by the Lands Departments. As the terms indicate, the freehold cannot be obtained under these forms of tenure.

(v.) *Closer Settlement Sales, Leases, and Licenses.* In this division are included all forms of tenure provided for under the various Closer Settlement Acts and also under kindred Acts, such as the Village Settlements and Small Holdings Acts.

(vi.) *Mines Departments' Leases and Licenses.* The tenures here specified include all methods in which Crown lands may be occupied for mining and auxiliary purposes under leases and licenses issued by the Mines Departments in the several States.

3. **Conversion of Tenures.**—It may be seen in later parts of this section that in certain cases provision is made in the Land Acts for the conversion of one form of tenure into another. In this connection an important Act was passed in New South Wales in 1908, viz., the Crown Lands (Amendment) Act 1908.

(i.) *New South Wales.—The Crown Lands Amendment Act 1908.* This Act, which came into force on the 1st February, 1909, contains provisions for the conversion of various forms of tenure.

(*a*) *Conversion of Homestead Selections or Grants.* Under the amending Act any homestead selection or grant (see page 259) may be converted into (*a*) a conditional purchase lease, (*b*) a conditional purchase, or (*c*) a conditional purchase and conditional lease, but so that the area comprised in such lease does not exceed three times the area comprised in the conditional purchase. Any application for conversion must be accompanied by a provisional deposit of one shilling per acre of the area of a proposed conditional purchase, as part payment of a deposit of 5 per cent. on the capital value ; any balance of the latter deposit must be paid within one month after the applicant has been called upon to do so.

(*b*) *Conversion of Settlement Leases.* Any settlement lease (see page 275 may be converted into an original conditional purchase or into an original conditional purchase and a conditional lease if the total area held by an applicant for conversion (exclusive of land under annual tenure) does not exceed an area which, in the opinion of the Board, would be sufficient for the maintenance in average seasons and circumstances of an average family. The area of the lease must not exceed three times the area of the conditional purchase.

If the total area held by an applicant for conversion (exclusive of land under annual tenure) exceeds such area, the conversion must be partly into an original conditional purchase and the balance into a conditional lease.

(*c*) *Conversion of Non-residential Conditional Purchases.* A non-residential conditional purchase (see p. 258) may be converted into an original conditional purchase, the term of ten years' residence commencing from the date of application for conversion, The term of compulsory residence is, however, reducible by any period (not exceeding five years) of continuous residence on the land by the holder up to and immediately preceding his application for conversion.

(*d*) *Conversion of Special Leases and Church and School Lands Leases.* The registered holder of any special lease for the purpose of access to water, agricultural, bee and poultry farming, dairying, dams, drainage, garden, grazing, irrigation, orchard, pig and poultry farm, residence, sugar-cane growing, tanks, tobacco-growing, or water conservation, or of any church or school lands lease, may apply to convert the same or part thereof into (*a*) a conditional purchase lease, (*b*) a conditional purchase, (*c*) a homestead selection, (*d*) a settlement lease, or (*e*) a conditional lease. An application for conversion must be accompanied by the prescribed deposit. The application is referred to the Board for inquiry and the Board reports to the Minister as to whether there is any objection to the granting of the application. If the Board recommends the granting of the application, it proceeds to appraise the capital value or price or rent of the land.

(*e*) *Purchase of Residential Leases.* The holder of any residential lease (see § 7, 2 vi.) may at any time after the first five years of his lease apply to purchase his holding. The application must be accompanied by the prescribed deposit, and is referred to the Secretary for Mines, who, if he concurs therein, reports to the Board, which in turn reports to the Minister. The purchase price is fixed by the Board and must be paid within three months, or within such extended time as the Minister may allow, subject to the payment of interest at 5 per cent.

(*f*) *Limitation of Transfer.* Conditional purchase leases, conditional purchases, homestead selections, and settlement leases, and subdivisions of the same may not be transferred, except by way of mortgage, to a person who already holds under any tenure (other than annual tenure) an area greater than a "home maintenance area."

4. **Limitation of Tenures in New South Wales.**—In October, 1910, it was officially stated that it was the policy of the Government to discontinue the granting of the freehold of Crown lands. Pending the necessary alteration of the law to give effect to that policy, settlement will continue under the provisions of the Crown Lands Acts. In cases where lands are to be classified and where the method of disposal is within the discretion of the Minister for Lands, disposal by way of homestead selection and settlement lease has been adopted for the present.

5. **Tenure of Lands by Aliens.**—In the States of New South Wales, Queensland, South Australia, and Tasmania restrictions are imposed upon the tenure of lands by aliens (*i.e.*, persons other than natural-born or naturalised British subjects). In Victoria and Western Australia there are no such restrictions.

(i.) *New South Wales.* Under the Crown Lands Act 1895 (sections 40 and 41), an alien is not qualified to apply for a homestead selection, conditional purchase lease, settlement lease, original homestead lease, or original conditional purchase, unless he has resided in New South Wales for one year, and at the time of making application he lodge a declaration of his intention to become naturalised within five years. If he fail to become naturalised within that period the land is forfeited.

It is proposed to pass a regulation at an early date giving priority to applicants in ballots for land in the following order :—(*a*) Members of any of the European races. (*b*) Persons who are not members of any European race. (*c*) Coloured people who are aliens.

(ii.) *Victoria.* Under the Aliens Act 1890 (section 3), every alien friend resident in Victoria may acquire, either by grant from the Crown or otherwise, both real and personal property.

(iii.) *Queensland.* Under the Land Act 1897 (sections 85.2 and 86B), an alien cannot acquire the freehold of any land in Queensland unless he obtains a certificate that he is able to read and write from dictation words in such language as the Minister for Lands may direct. He must within three years of such acquisition become a naturalised subject. In the Land Bill recently introduced in Parliament these provisions are proposed to be re-enacted, save that the time within which an alien must be naturalised is extended to five years.

(iv.) *South Australia and the Northern Territory.* In South Australia Asiatics are disqualified from holding perpetual leases of lands in irrigation areas under Section 18 of the Irrigation and Reclaimed Lands Act 1908.

In the Northern Territory, under Section 102 of the Northern Territory Crown Lands Act 1890, an Asiatic alien cannot acquire the fee simple of any land. Under the Northern Territory Act 1903, the granting of mining leases to Asiatic aliens is prohibited, and the same Act limits the granting of rights to Asiatic aliens to mine in other than particular localities.

(v.) *Western Australia.* In this State aliens are under no disability as regards the acquisition of the freehold of lands already alienated. Every application to acquire Crown lands, whether by a British subject or an alien, is subject to the approval of the Minister for Lands, with an appeal to the Governor-in-Council.

(vi.) *Tasmania.* Under the Aliens Act 1861 (section 2), aliens cannot hold real estate. An alien, if the subject of a friendly State, may, however, occupy lands for any term not exceeding twenty-one years.

§ 4. Free Grants, Reservations, and Dedications.

1. **Introduction.**—Although free grants of Crown lands were virtually abolished as far back as 1831 (see § 1, 4, above), the Land Acts of all the States now contain provisions under which the free alienation or occupation of Crown lands for certain specified purposes—comprising generally charitable, educational, and public purposes—is allowed. In all the States, also, Crown lands may be excepted from sale and reserved to the Crown or dedicated for various public and special purposes. Generally reservation and dedication are conditions precedent to the issue of a free grant. In addition to reservations of a permanent nature, temporary reservations are also made, but these are, as a rule, subject to considerable fluctuations in area by reason of withdrawals, renotifications, and fresh reservations.

The following table shews the area for which free grants were issued and the areas permanently reserved or dedicated in each State during each year from 1901 to 1909 inclusive:—

PARTICULARS OF FREE GRANTS, RESERVATIONS, AND DEDICATIONS, 1901 to 1909.

§ Including both permanent and temporary reservations and dedications. ‡ Free leases.
* Not available. † Exclusive of South Australia.

2. **New South Wales.**—Under Sections 104 to 106 of the Crown Lands Act 1884 Crown lands may be reserved or dedicated for certain charitable, educational, and public purposes therein specified, and at any time thereafter the fee simple of such lands may be alienated in trust for the purpose specified. The Crown Lands Alienation Act 1861, which was repealed by the Act of 1884, contained provisions for the dedicating and granting in trust of Crown lands for religious purposes. In cases where a dedication or a promise of dedication had been made under the authority of the repealed Act, but had not been carried into effect before such repeal, the grant is made by virtue of the saving clause contained in Section 2 of the Act of 1884. No fresh promises of dedication for religious purposes were made after the 11th May, 1880, on which date a resolution against any further such grants was passed by the Legislative Assembly. Holders of certificates issued to such volunteers as had served efficiently for a certain period under the provisions of the Volunteer Force Regulation Act 1867 are entitled to a free grant of 50 acres of such land as may be open to conditional purchase, other than lands within a proclaimed special area; during the year 1908-9 three such grants were made.

(i.) *Reservations.* In addition to the reservations under Sections 104 to 106 of the Act of 1884, referred to above, Crown lands may also be temporarily reserved as sites for cities, towns, or villages under Section 101 of the same Act, and may be reserved for mining purposes under Section 106 of the Mining Act 1906. Crown lands within one mile of any made or projected railway may be temporarily reserved from sale under Section 103 of the Crown Lands Act 1884, and under Sections 112 to 114 of that Act any Crown lands may be reserved from sale for the preservation and growth of timber. Further, under Section 39 of the Crown Lands Act 1889, Crown lands may be reserved by notification in the *Gazette* from being sold or let upon lease or license, in such particular manner as may be specified, or may be reserved from sale or lease generally.

(ii.) *Areas Granted and Reserved 1909-10.* During the financial year 1909-10 the total area for which free grants were prepared was 2039 acres, including grants of 1474 acres of leased land resumed under the 12th clause of the Public Roads Act 1902. During the same period 437 acres were dedicated and permanently reserved, the number of separate dedications being 86.

On the 30th June, 1910, the total area temporarily reserved was 26,437,251 acres, of which 6,289,682 acres were for travelling stock, 6,550,499 acres for forest reserves, 2,998,615 acres for water, 1,866,894 acres for mining, and the remainder for temporary commons, railways, recreation and parks, and miscellaneous purposes.

3. **Victoria.**—Under Section 10 of the Land Act 1901 the Governor is authorised to reserve Crown lands, either temporarily or permanently, from sale, lease, or license for any public purpose whatsoever. In case of temporary reservations the land cannot be sold or leased, nor a license be granted until the temporary reservation has been revoked, and in case of permanent reservation all conveyances and alienations except for the purpose for which the reservation is made are void both against the Crown and against all other persons.

During the year 1909 eleven free grants, comprising an area of 165 acres, were issued. During the same year reservations of both a permanent and temporary nature, comprising an area of 34,504 acres, were made; of this area 28,037 acres were reserved for recreation grounds, including National Parks, and 1370 acres for the growth and preservation of timber (excluding reserves under the Forests Act 1907).

4. **Queensland.**—Under Section 190 of the Land Act 1897 the Governor in Council may grant in trust or may reserve from sale or lease, either temporarily or permanently, any Crown lands required for any of the various charitable, educational, and public purposes specified therein, and may, by proclamation and without issuing any deed of grant, place any lands so reserved under the control of trustees.

(i.) *Reservations.* Under Section 19 of the same Act the Governor in Council may set apart any Crown lands as reserves for public purposes, and under Section 2 of the State Forests and National Parks Act 1906 he may permanently reserve any Crown lands and declare them to be a State Forest or a National Park.

(ii.) *Areas Granted and Reserved 1909.* During the year 1909 there were forty-five free grants for a total area of 281 acres issued. During the same period reserves covering an area of 498,515 acres were proclaimed, of which 196,142 acres were for timber reserves, 98,709 acres were for reserves for aborigines, 31,436 acres for camping and water, and 21,677 acres for water supply. The total area reserved up to the end of the year 1909 was 13,318,885 acres.

5. **South Australia.**—Under Section 7 (*d*) of the Crown Lands Act 1903 the Governor is empowered to dedicate by proclamation any Crown lands for various charitable, educational, and public purposes, and may, at any time after dedication, grant the fee simple of such lands to secure the use thereof for the purpose for which they were dedicated.

(i.) *Reservations.* Under Section 7 (*f*) of the same Act the Governor may by proclamation reserve any Crown lands (*a*) for the use of aborigines, (*b*) for the purposes of military defence, (*c*) for forest or travelling-stock reserves, (*d*) for public recreation grounds, (*e*) for railways or tramways, and (*f*) for park lands.

(ii.) *Artesian Leases.* Under special circumstances free leases of pastoral lands may be granted to discoverers of artesian wells. (See § 8. 5 vi. c.)

(iii.) *Areas Granted and Reserved, 1909.* During the year 1909 there were 17 free grants issued for a total area of 28 acres. During the same year 111 reserves, comprising 270,523 acres, were proclaimed; of this area 256,000 acres were rereserved as a commonage reserve at the Tanami Rockholes, Northern Territory.

6. **Western Australia.**—Under Section 39 of the Land Act 1898, as amended by Section 27 of the Act of 1906, the Governor is authorised to except from sale, and to reserve to the Crown or to dispose of in such other manner as may seem best for the public interest, any Crown lands which may be required for the various religious, charitable, and public purposes specified. These reservations may be either temporary or permanent, but if temporary the reservation lapses unless confirmed within twelve months. Any reserve may either be alienated in trust for the purpose specified, the trustees having power of leasing for any term not exceeding twenty-one years, or may be leased for a term of 999 years. The Governor is further authorised, without issuing any deed of grant, to place any reserve under the control of any person or body of persons, as a board of management.

During the year 1909, 15 free grants for 299 acres were issued, while the area reserved was 394,266 acres. Further particulars are not available.

7. **Tasmania.**—There are no free grants of the fee simple of Crown lands in this State. Under Section 24 of the Crown Lands Act 1903, however, the Governor may by proclamation reserve any Crown lands for the purposes therein specified, and may thereafter, in order to give effect to any such proclamation, vest for such term as he thinks fit any lands so reserved in any person or body of persons. Under this section lands are reserved from sale and are ordinarily leased to the trustees of public bodies for a period of ninety-nine years at a peppercorn rental. These leases contain provisions that the lands shall be appropriated only to the purposes for which they were reserved. Upon breach of such provisions the lands are forfeited to the Crown.

During the year 1909 there were twenty-one free leases, comprising an area of 270 acres, issued. During the same period 997,213 acres were reserved, 996,791 acres being reserved for re-afforestation purposes, 150 acres for recreation grounds, and 146 acres for scenery reserves. The total area permanently reserved to the end of the year 1909 was 1,016,757 acres.

§ 5. Sales by Auction and Special Sales.

1. **Introduction.**—In all the States sales by auction of Crown lands are held from time to time. Notifications of such sales are given in the Government *Gazettes*, together with particulars as to the upset price and conditions of sale. Excepting in the case of South Australia, where land is sold at auction for cash only, the purchase may be either for cash or on credit by deferred payments. In most of the States land may also be purchased by private contract at the upset price, when it has been offered at auction and not sold. In the case of auction sales on credit in the States of Western Australia and Tasmania, certain improvement conditions are imposed, and such sales are therefore classed for the purposes of this article among *Conditional Purchases.* (See § 6 below.) In most of the States comparatively small areas of Crown lands may be sold without competition under special circumstances. Sales by auction and special sales under Closer Settlement Acts are referred to in a later part of this section. (See § 8.)

2. **New South Wales.**—Under the Crown Lands Act 1884 lands not exceeding in the aggregate 200,000 acres for the whole State may be sold by auction during any one year. The sales are notified in the *Gazette* not less than one month before the day of sale. The upset prices may not be less than £8 an acre for town lands; £2 10s. for suburban lands; and other lands fifteen shillings. Town lands may not be sold in areas exceeding half-an-acre; suburban lands in areas exceeding twenty acres; and country lands in areas exceeding 640 acres. A deposit of 25 per cent. on the purchase money must be paid at the sale, and the remainder within three months.

(i.) *Deferred Payment on Auction Sales.* Under the Auction Sales Balances Act 1887 and the Crown Lands Amendment Act 1903 special terms of payment may be made on auction sales of land subdivided into areas not exceeding forty acres. The time for deferred payments may not exceed five years and the instalments carry interest at five per cent. per annum. A cash deposit of 25 per cent. on the purchase money must be paid.

(ii.) *After-auction Sales.* Under the Crown Lands Amendments Acts 1895 and 1903 lands which have been offered for sale at auction and not sold may be granted at the upset price to any person applying. A deposit of 25 per cent. on the upset price must be paid, and the remainder according to the terms on which the land was offered at auction.

(iii.) *Special Sales without Competition.* Under the Crown Lands Act 1884 the Governor is authorised to rescind the reservation of water frontage, or of land adjoining such frontage, contained in any Crown grant, and to sell the land, the subject of such rescission, at a fair price not less than the upset price, to the owner of the land contained in the grant. Crown lands may be sold to the owners of adjacent lands in a similar manner in the following cases:—(*a*) Where there is no way of access attainable, (*b*) where the lands comprised are insufficient in area for conditional sale, (*c*) where the lands are situated between granted land and a road which should form the way of approach to such granted land, (*d*) where the lands are encroached upon by buildings erected on granted land, and (*e*) where lands have been reclaimed with the authority of the Governor from below high-water mark.

(iv.) *Improvement Purchases.* Although termed an "improvement" purchase, this type of sale is not conditional on the subsequent fulfilment of any improvement conditions. Only lands within proclaimed goldfields are available for improvement purchase. The areas which may be acquired in this manner may not exceed one-quarter of an acre within the boundaries of a town or village defined as such in the Mining Act, or two acres of land outside such boundaries. The price of the land is fixed by the local Board, and must not be less than at the rate of £8 per acre for town lands, and £2 10s. for suburban or other lands, or for any area less than one acre. The applicant must be in authorised occupation under the Mining Act of the land he applies for, and must be the owner of the improvements thereon in virtue of which his application is made, and such improvements must be of value equal to the respective minimum rates above-mentioned, *i.e*, £8 an acre for town lands, and £2 10s. an acre for suburban or other lands, or for an area less than one acre. No person who has made an improvement purchase may make a subsequent purchase of the same kind within three miles of a prior purchase by him.

(v.) *Alienation by Auction and Special Sales.* During the year ended the 30th June, 1910, the area of Crown lands sold by auction and special sales for which grants were prepared amounted to 14,915 acres, of which 10,202 acres were sold by auction in 1331 lots; 2907 were sold by after-auction sales in 953 lots; 45 acres were sold as improvement purchases in 134 lots; and 1761 acres were sold as special purchases in 185 lots. The following table gives particulars of Crown lands alienated by auction and special sales during each year from 1901 to 1909:—

NEW SOUTH WALES.—AUCTION AND SPECIAL SALES, 1901 to 1909.

Year.	Auction and After-auction Sales.	Improvement Purchases.	Special Sales.	Total.	
				Area.	Price.
	Acres.	Acres.	Acres.	Acres.	£
1901	49,074	43	445	49,562	116,562
1902	50,110	801	1,022	51,933	115,625
1903	40,610	23	576	41,209	117,879
1904	53,556	23	1,185	54,764	120,946
1905[1] ...	22,390[3]	6	129	22,525	99,246
1906[2] ...	22,774[3]	36	2,616	25,426	86,802
1907[2] ...	25,327[3]	57	1,131	26,515	132,127
1908[2] ...	13,995[3]	34	712	14,741	94,928
1909[2] ...	11,745[3]	48	1,229	13,022	98,763

1. Half-year ended 30th June. 2. Year ended 30th June. 3. Including land sold under the Centenary Park Sale Act.

The total areas alienated by auction and other forms of sale up to the 30th June, 1910, are shewn below. (See § 11.)

3. **Victoria.**—Lands specially classed for sale by auction, and any land in any city, town, or borough, may be sold by auction in fee simple, not exceeding 100,000 acres in any one year, at an upset price of £1 an acre, or at any higher price determined. Before any country lands can be sold a schedule thereof must be laid before both Houses of Parliament. The purchaser must pay the survey charge at the time of the sale, together with a deposit of 12½ per cent. of the whole price; the residue is payable in equal half-yearly instalments not exceeding forty in number, according to the amount, with interest at the rate of 4 per cent. per annum, or may be paid at any earlier time at the option of the purchaser. On failure of the payment of any instalment with interest, the deposit and any instalments already paid are liable to forfeiture, and the contract becomes void. Isolated portions of Crown lands not exceeding fifty acres, or any portion not exceeding three acres required as a site for a church or for any charitable purpose, for which land cannot legally be reserved, may also be sold by auction. There are stringent provisions and penalties against illegal agreements to prevent fair competition at auction sales.

(i.) *Special Sales without Competition.* Detached strips of land not exceeding twenty acres may be sold at a valuation to the owner of the adjoining freehold in cases somewhat similar to those specified above in respect to Crown lands in New South Wales.

(ii.) *Areas Sold at Auction and by Special Sales, 1901 to 1909.* The following table gives particulars of auction sales and special sales for the year 1901 and from 1905 to 1909:—

VICTORIA.—AUCTION AND SPECIAL SALES, 1901 to 1909.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Country lands	4,079	3,267	2,060	2,776	2,805	2,729
Town and suburban lands	2,127	2,129	1,946	1,369	1,630	2,062
Special sales	846	3,382	2,636	2,168	2,117	2,602
Total	7,052	8,778	6,642	6,313	6,552	7,393

Particulars of total areas alienated are given below. (See § 11.)

4. **Queensland.**—The Governor may proclaim any Crown lands to be sold by auction. Town or suburban lots must be offered as nearly as possible according to the following scale:—Town lands in allotments of from one rood to one acre, at an upset price of £8 per acre; suburban lands, if within one mile from town lands, in lots of from one to five acres, and if over one mile from town lands, in lots of from one to ten acres, the upset price being £2 per acre. In respect of country lands, the maximum area which may be sold by auction in any one year is 500,000 acres, and the upset price is fixed at £1 an acre for lands classed as agricultural, and not less than ten shillings per acre in the case of other lands. The area of any portion of country lands so sold may not exceed 5120 acres. In sales by auction both of country and of town lands, a deposit, as specified in the proclamation, must be paid at the time of sale, and the balance, including the value of improvements on the land, together with assurance and survey fees, must be paid within one month from the date of sale.

(i.) *Deferred Payment on Auction Sales.* The Governor may, by the proclamation under which the sale is notified, vary the conditions as to the amount of the deposit and the times for payment of the balance. The time for payment may not, however, be extended beyond ten years. If the time for payment is extended beyond six months, all instalments payable at a later date bear interest at 5 per cent. per annum.

(ii.) *After-auction Sales.* The proclamation of lands for sale by auction declares that any lands therein mentioned, which have been offered at auction, but not sold or withdrawn, shall be open to purchase at the upset price by the first applicant. The price may be paid in the same instalments and at the same periods as if the land had been bought at the auction.

(iii.) *Special Sales without Competition.* Land may be sold without competition to the holder or holders of adjoining lands at a price to be determined by the Land Court, under circumstances similar to those specified above in the case of New South Wales. When the holder of any land proves that, owing to danger from floods or other reasons, it is unsafe to reside on his holding, he may be granted, on payment of a price determined by the Land Court, an area not exceeding ten acres out of the nearest convenient and available Crown lands.

(iv.) *Areas Sold at Auction, after Auction, and by Special Sales, 1901 to 1909.* The following table shews the areas sold at or after auction, and by special sales, during the year 1901 and from 1905 to 1909:—

QUEENSLAND.—AUCTION AND SPECIAL SALES, 1901 to 1909.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Town	334	128	340	285	472	227
Suburban	793	363	706	364	621	340
Country—						
Ordinary sales	52,132	157,839	15,481	11,556	7,585	12,844
Special sales	...	1,659	...	3,716	...	...
Total	53,259	159,989	16,527	15,921	8,678	13,411

Particulars as to the total areas alienated by all forms of purchase up to the end of each year from 1901 to 1909 are given in a later part of this section. (See § 11 below.)

(v.) *Unconditional Selections.* Although termed a "selection," this form of tenure partakes rather of the nature of a sale by auction with deferred payment than of a conditional purchase. Areas of land are available for unconditional selection at a price ranging from thirteen shillings and fourpence upwards, which is payable in twenty

annual instalments. The maximum area which can be acquired by any one person as an unconditional selection in any one district is 1280 acres. As the term implies, no other condition than the payment of the purchase-money is attached to this mode of selection; a negotiable lease for the term of twenty years is issued to the selector when his application to select has been approved of by the Court, and a deed of grant may be obtained at any time on payment of the balance of the purchasing price. An agricultural farm, or an agricultural homestead, may be converted into an unconditional selection, and an unconditional selection may be converted into an agricultural farm.

The following table shews the number and area of unconditional selections for which applications were accepted during the year 1901 and from 1905 to 1909:—

QUEENSLAND.—UNCONDITIONAL SELECTION, 1901 to 1909.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.
Number	151	90	130	91	126	131
Area ... ... Acres	24,322	10,586	25,262	25,382	22,770	27,395
Rent .... £	1,180	481	1,113	1,042	1,073	1,111

5. **South Australia.**—The following lands may be sold by auction for cash:—(*a*) Special blocks. Any single section of Crown lands which may be surrounded by lands sold or contracted to be sold, and any section or block of land (not exceeding 100 acres in area) which may be required for the establishment of any industry, trade, or business. (*b*) Crown lands which have been offered for perpetual lease, and not taken up for two years. (*c*) Town lands. (*d*) Suburban lands, which the Governor by proclamation may except from being dealt with by the Board. The upset price of any land offered at auction is determined by the Commissioner, and 20 per cent. of the purchase-money must be deposited at the time of sale, and the residue must be paid within one month or within such extended time as the Commissioner may allow. Purchase-moneys derived from the sale of lands by auction are paid into a fund primarily applicable to the payment of such portion of the public liabilities as shall be specially charged thereon.

(i.) *After-auction Sales.* All Crown lands, except town or suburban lands, offered at auction and not sold remain open for leasing or sale under agreement or may be sold by private contract for cash at the upset price.

(ii.) *Sales for Special Purposes.* Under section 201 of the Crown Lands Act 1903 the Governor may, on the application of the purchaser or lessee under any of the Crown Lands Acts, grant any of the land comprised in such agreement or lease to a corporation or to trustees, to be used for any public or charitable purposes, not exceeding two acres, for any one purpose, or he may, on the application of the holder of a lease or agreement, grant not over one acre of land, comprised in such lease or agreement, as a site for a blacksmith's or carpenter's shop, mill, store, or post office, provided that the land is not situated within five miles of any town lands. The purchase-money for such land must be paid at the time of application.

(iii.) *Northern Territory, Auction Sales.* Town and suburban lands may be offered for sale by auction at an upset price of not less than £1 an acre, and country lands at an upset price of not less than ten shillings an acre; 20 per cent. of the amount of the purchase-money must be paid at the time of sale, and the balance within one month. Town and suburban lands may also be sold by private contract.

(iv.) *Areas Sold for Cash, 1901 to 1909.* The following table shews the areas sold for cash during the year 1901 and from 1905 to 1909. The total areas sold under all types

of sale at the end of the year 1901 and from 1905 to 1909 are shewn in a later part of this section. (See § 11.)

SOUTH AUSTRALIA.—AUCTION AND SPECIAL SALES, 1901 to 1909.

Year	1901.	1905.	1906.	1907.	1908.	1909.
Area in acres	11,314	77,022	69,060	70,349	78,557	128,529

6. **Western Australia.**—Town and suburban lands throughout the colony, after being surveyed into lots and notified in the *Gazette* as open for sale, may be sold by public auction at an upset price to be determined by the Governor in Council. Any person may apply to the Minister to put up for sale by auction any lot already surveyed on depositing 10 per cent. of the upset price, which is refunded in the event of the applicant being outbid at auction. The purchaser must pay 10 per cent. on the fall of the hammer, unless he has already paid a sufficient deposit on application, and must ordinarily pay the balance of the purchase-money, and the value of the improvements, if any, by four equal quarterly instalments. In the case of suburban lands, the purchaser must carry out certain improvements, which are more particularly referred to below. (See § 6. *Conditional Purchases*, 6, vii.). On payment of the first instalment of the purchase-money a license is issued to the purchaser, and his license may be transferred or mortgaged.

(i.) *Areas Sold by Auction, 1901 to 1909.* The following table shews the areas of town and suburban lands sold at auction during the year 1901 and from 1905 to 1909 :—

WESTERN AUSTRALIA.—AUCTION SALES, 1901 to 1909.

Year	1901.	1905.	1906.	1907.	1908.	1909.
Area sold ... ... Acres	856	1,076	1,109	1,895	2,258	2,160
Number of Allotments ...	1,366	950	935	995	1,090	879

Particulars as to total areas alienated are given in a later part of this section. (See § 11 below.)

7. **Tasmania.**—Any town lands may be sold at auction or by private contract, either for cash or on credit, provided that no such lands may be sold on credit if the price is less than £15. Rural lands may also be sold at auction or by private contract, but lots of first-class land may not be sold on credit if less than fifteen acres in area. In the case of sales on credit both of town and rural lands, improvement conditions are imposed, and such sales are therefore classified for the purposes of this article as *Conditional Purchases*. (See § 6.) The area of any rural lot sold may not exceed: (*a*) 200 acres (nor be less than fifteen acres, if sold by private contract) of first-class land ; (*b*) 250 acres, nor be less than thirty acres of second-class land ; and (*c*) 500 acres, nor be less than 60 acres of third-class land.

(i.) *After-auction Sales.* All rural lands and town lands, not within five miles of any city, which have been offered at auction and not sold, may be purchased by private contract at the upset price, and subject to the conditions on which they were offered at auction.

(ii.) *Sale of Land in Mining Towns.* The surface of any Crown land within a mining town occupied as a residence area or a business area (see § 7, below) may be sold

at auction. The holder of a residence or business license, who is in occupation and is the owner of buildings and improvements upon the area licensed of a value equal to the upset price of such area, is entitled to purchase the area at the upset price, which may not be less than £10, exclusive of improvements. The area so purchased may not in any case exceed half an acre. The areas may be sold on credit, one-third of the price being added as premium. The purchaser must pay a deposit of one-fourteenth of the price at the time of sale, and the remainder by thirteen annual instalments.

(iii.) *Areas Sold for Cash, 1901 to 1909.* The following table shews the areas sold for cash during the year 1901 and from 1905 to 1909:—

TASMANIA.—AUCTION AND SPECIAL SALES, 1901 to 1909.

Year	1901.	1905.	1906.	1907.	1908.	1909.
Area in acres	1,915	404	463	504	603	1,026

Particulars of total areas alienated are given in a later part of this section. (See § 11.)

§ 6. Conditional Purchases.

1. **Introduction.**—In all the States of the Commonwealth the freehold of the land may be acquired under what are known as systems of conditional purchase by deferred payments of half-yearly or yearly instalments. Certain conditions, generally as to residence and improvements, have to be complied with before the freehold is granted, but these conditions are usually of a light nature and are inserted chiefly with the object of guaranteeing that the occupier will become of benefit to the community by making a reasonable effort to render his holding wealth-producing. Though there is a considerable similarity between some of the forms of tenure in the several States, the terms and conditions vary greatly in detail. As a rule a lease or license for a certain period is first issued to the selector, and upon fulfilment of the prescribed conditions and payment of the full amount of purchase-money the freehold is conveyed to him. In Queensland and Western Australia "free" homesteads may be acquired. Although under these tenures no purchase-money is payable, the grant is conditional on the performance of residential and improvement conditions; these tenures are therefore included here with conditional purchases rather than with free grants.

2. **New South Wales.**—The following are the methods by which land may be alienated by conditional purchase:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conversion of conditional purchase; and (iv.) homestead selections.

(i.) *Residential Conditional Purchase.* Any vacant Crown lands in the "Eastern Division" and "Central Division" are available for conditional purchase, but only those set apart by proclamation as special areas are open in the "Western Division." For a holding of this class an applicant must be not less than sixteen years of age, and must pay on application both the prescribed deposit and a survey fee according to a fixed scale. The area which may be selected depends upon the division in which the land is situated. In the Eastern Division the minimum and maximum areas are respectively 40 and 640

acres ; in the Central 40 and 2560 acres ; and in a special area the maximum is 320 acres in the Eastern and 640 acres in the Central or Western Divisions. The deposit is 10 per cent. of the price of the land, which is ordinarily available at the statutory value of £1 an acre, subject to the applicant's right to apply for an appraisement where he considers such price excessive. At the end of the third year from the date of application the purchaser may pay an instalment of 5 per cent. on the price of the land. This instalment includes interest at the rate of 2½ per cent. on the outstanding balance of the purchase-money due to the Crown, and he must continue to pay a similar instalment annually until such balance and interest have been paid off.

The following conditions are attached to the holding, viz.:—That it must be fenced within three years, or be improved to the value of six shillings an acre (but not exceeding £384) within the same period, and to the value of ten shillings an acre (but not exceeding £640) at the end of the first five years. The settler must commence to reside on his holding within three months from the date of the confirmation of his application by the Land Board, and continue to do so for a period of ten years from the date of application, but for sufficient reason this condition may be suspended. Members of a family taking up land situated within working distance of each other, may fulfil the condition of residence in respect of their holdings by living on any one of them. The conditional purchase may be transferred after the issue of the first certificate of fulfilment of conditions. This certificate will be issued at the expiration of five years from the date of application if the required conditions have been fulfilled up to that date, and if the holding be transferred the transferee must reside thereon during the remainder of the unexpired residence term of ten years.

The holder of a conditional purchase may at any time, if land be available, apply for an additional conditional purchase (of unclassified land) the area of which, together with that of the original holding, may not exceed the maximum limits stated above. The Crown Lands Act of 1903, however, provides that the areas specified may be exceeded by allowing an applicant to acquire additional holdings of classified land, the area of which, together with that of all other lands held by the applicant other than under annual tenure, must not exceed such an area as, in the opinion of the Land Board, is sufficient for the maintenance of his home thereon in average seasons and circumstances. The additional holdings need not be contiguous to the original holding, but must be within reasonable working distance thereof.

(ii.) *Non-residential Conditional Purchase.* When land is conditionally purchased without residence the maximum area obtainable is 320 acres, and the minimum 40 acres. The price, deposit, and annual instalments are double those required under residential conditions. The selection must be enclosed with a fence within twelve months from the date of confirmation of application, and within five years improvements, other than boundary fencing, must be made to the value of £1 an acre, or, with the permission of the Local Board, other improvements to the value of thirty shillings an acre may be substituted for fencing. No person under twenty-one years of age may select land on non-residential terms, and anyone who has made a non-residential conditional purchase is not allowed to make any other conditional purchase. Under the Crown Lands (Amendment) Act 1908 non-residential conditional purchases may be converted into original conditional purchases (see p. 245 *ante*).

(iii.) *Conversion of Conditional Purchase Leases.* Under the Crown Lands Amendment Act 1905, a conditional purchase lease, for which the term is forty years, carries with it a right of conversion into a conditional purchase at any time during its currency, and ultimately into a freehold. These leases are more particularly referred to below. (See § 7. *Leases and Licenses*).

(iv.) *Applications Made and Confirmed and Deeds Issued, 1901 to 1910.* During the year ended the 30th June, 1910, deeds of grant were prepared on the completion of conditional purchases for 1,079,887 acres, making the total number of conditional purchases

in existence at the end of the financial year 93,567 for a total areas of 14,362,463 acres. The following table gives particulars of conditional purchases for each year from 1901 to 1910:—

NEW SOUTH WALES.—CONDITIONAL PURCHASES, 1901 to 1910.

Year.	Applications Made.		Applications Confirmed.		Areas for which Deeds have been Issued.	
	Number.	Area.	Number.	Area.	During the Year.	To end of Year.

Total ...	282,912	40,093,758	67,321	12,101,888	10,216,418[3]	14,362,463

1. Half-year ended 30th June. 2. Year ended 30th June. 3. From 1901 to 1910 inclusive.

Further particulars as to the total areas alienated and in process of alienation are given below. (See § 11.)

(v.) *Homestead Selection.* Under a principle of classification and measurement introduced by the Act of 1895 suitable land may be classified for homestead selection, which tenure is similar in many respects to perpetual leases in other States. (See § 7, *Leases and Licenses*, below.) In a homestead selection, however, the freehold of the land may be acquired, subject to the payment of an annual rent, whereas in a perpetual lease the freehold is not alienated. The areas set apart for homestead selection are either good agricultural lands, divided into blocks, each large enough for one family, or suitable lands, within easy access of towns, divided to suit the requirements of business people. Conditions as to area of blocks, capital value, etc., are published in the *Gazette*, and the selector is limited to one block, as gazetted, the area of which must not be greater than 1280 acres. The selector must reside continuously on the land for five years, on the expiration of which a grant will be issued. After the issue of the grant he must continue to reside on the holding for at least seven months in the year. The annual rent for the first six years will be an amount equal to 1½ per cent. of the capital value of the land, after which the rent will be increased to 2½ per cent. of the capital value, which is determined according to the character and situation of the holding, and is subject to re-appraisement every ten years. Should an area granted under this tenure be found to be insufficient for the maintenance of a home in average seasons and circumstances, it may be increased to a home maintenance area by additional homestead selection. The additional holding need not necessarily adjoin the original holding, but must, in the opinion of the Land Board, be situated within a reasonable working distance thereof. Any person who is eligible to take up a conditional purchase may apply for a homestead selection. The incoming tenant must pay for improvements at a price to be determined by the Land Board, but if the appraised value of such improvements be greater than 20 per cent. of the estimated value as notified in the *Gazette*, the applicant may withdraw his application and obtain a refund of all moneys paid. Tenant right in improvements may be obtained under certain circumstances, and the holding may be so protected that it cannot, under any circumstances, be taken from the selector. Holders of conditional purchases may convert their holdings into homestead selections, and under the Crown

Lands Amendment Act 1908, homestead selections or grants may be converted into conditional purchases (see p. 245 *ante*).

During the year 1908-9, nineteen blocks, containing a large proportion of Mallee scrub and situated in an extensive tract of Crown lands in the Hay and Forbes land districts, were set apart for homestead selection in areas from 900 to 1280 acres, and at capital values of from 10s. to 13s. 4d. per acre. The district referred to embraces some 3,000,000 acres, and lies between the Lachlan and Murrumbidgee Rivers; it extends from Gunbar and Groongal on the west towards Condobolin, Wyalong, and Temora on the east. A design for the disposal of a further area of 48,000 acres, in blocks for homestead selection, conditional purchase lease, and settlement lease has been approved, and a contract has been let for carrying out a water-supply scheme for stock and domestic purposes.

During the year ended the 30th June, 1909, there were 275 original and 170 additional homestead selections applied for, comprising an area of 137,292 acres. During the same period the total number of applications confirmed was 336, comprising 79,179 acres, and 269 homestead grants were issued for 116,323 acres. The total number of homestead selections confirmed up to the 30th June, 1909, was 6794, comprising an area of 2,479,802 acres, the annual rent of which was £43,261, and the capital value £3,456,691. Further particulars for previous years are given in a later part of this section. (See § 11.)

3. **Victoria.**—The freehold of agricultural and grazing lands may be acquired by conditional purchase under the following tenures:—(i.) Agricultural allotments and grazing allotments; (ii.) agricultural and grazing allotments by selection from grazing area or perpetual leases; (iii.) Mallee agricultural licenses; (iv.) Murray settlements leases; and (v.) swamp or reclaimed lands purchase leases. Numbers (i.), (ii.) and (iii.) may be either on residential or on non-residential conditions. It is proposed to make various important alterations at an early date in the land laws of Victoria. Particulars of any Acts which are passed up to the latest available date prior to the publication of this book may be found in the Appendix.

(i.) *Agricultural Allotments and Grazing Allotments.* A selection may be obtained by any person over the age of eighteen years who has not already made a selection under the Land Acts, or has not taken up a pre-emptive right to the extent of the maximum number of acres in the first, second or third class (as the case may be), or who is not in respect of the license applied for an agent, servant, or trustee for any other person, or who has not, at the time of the application, entered into any agreement to permit any other person to acquire by purchase or otherwise the allotment in respect of which such application is made. An agricultural allotment is an area not exceeding 200 acres of first-class lands or 320 acres of second-class lands, and a grazing allotment is an area not exceeding 640 acres of third-class lands, which may be selected under license enabling the freehold to be paid for in twenty or forty years at the option of the applicant. The minimum price for the freehold is, in the case of first-class land, £1 an acre; second-class land, fifteen shillings an acre; and third-class, ten shillings an acre, and the prices may be enhanced according to the valuation of the land. Any person may become the licensee of more than one agricultural or grazing allotment, provided the total acreage does not exceed the limits for the various classes, but no selector may pick out the best or any part of an allotment, leaving the balance unselected.

Agricultural allotments and grazing allotments may be granted under either (*a*) residential or (*b*) non-residential licenses.

(*a*) *Residential Licenses* are granted for six years at a fee, according to the valuation of the land, of not less than one shilling an acre per annum in the case of first-class land, not less than ninepence an acre per annum in the case of second-class land, and not less than sixpence per acre per annum in the case of third-class land, payable half-yearly in advance. The licensee may not transfer, assign, or sublet, but may give a lien

up to half the value of the improvements effected to any person for money advanced: he must destroy vermin on the land, and must within six years from the issue of his license enclose the land with a fence, or he may, if he prove to the satisfaction of the Board that such a fence is impracticable or is not required, expend in permanent improvements an amount equivalent to the cost of fencing. The licensee must enter into occupation within twelve months from the issue of the license, and must occupy the allotment thenceforward during the continuance of the license. Any licensee may during each year, however, absent himself from his allotment for not more than three months, by registering with the district land officer a notice of his intention to so absent himself; and if his home is situated upon the allotment the Board may consent for a specified period to a substituted occupation by the wife or by a child over the age of eighteen years; or, if he has no wife or child, by the father or mother of the licensee, provided that he or she is dependent upon him for support. During the currency of the license the Crown reserves the right to resume possession of any of the land required for reserves or for public or mining purposes, subject to repayment to the licensee of all moneys paid by him as rent to the Crown, and of a reasonable sum as compensation for such resumption. Substantial and permanent improvements must be made to the value of £1 for every acre if of first-class land, or of the value of fifteen shillings for every acre if of second-class land, or of the value of ten shillings for every acre if of third-class land, during the following periods and on the following basis:—If the land be first-class land, to the value of three shillings and fourpence for each acre before the end of the second year from the date of the license, another three shillings and fourpence before the end of the third year, another three shillings and fourpence before the end of the fourth year, and the balance before the end of the sixth year; if the land be second-class, to the value of two shillings and sixpence for each of the same periods as in the case of first-class land; and if the land be third-class, to the value of five shillings for each acre before the end of the third year from the date of license, and the balance before the end of the sixth year. Upon satisfying the Board that all conditions of the license have been fulfilled, the licensee is entitled at any time within twelve months after six years from the commencement of the license to obtain a grant upon payment of the balance of the purchase-money; or otherwise he may obtain a lease of the allotment for a term of fourteen years at the same rental as the fee paid under license. The lessee is entitled upon payment at the end of the term of the last instalment due on account of the rent reserved, or at any time during the currency of the lease by paying the difference between the amount of rent actually paid and the entire sum payable for the purchase of the land, to obtain a grant in fee of the lands leased.

Residental licenses are also granted, subject to the same convenants and conditions as stated above, but varied with regard to the term and to the amount of the fee and rent reserved, as follows, being double the term at half the yearly payment:—The fee for occupation to be, according to the valuation of the land, not less than sixpence, fourpence halfpenny, and threepence an acre per annum in the case respectively of first, second, and third-class land, the term of a lease to be thirty-four years' annual rent of the same amounts, instead of only fourteen years at double the rental.

(*b*) *Non-residential Licenses* for both agricultural and grazing allotments may be issued on conditions identical with the above, with the exception that the term of the lease granted after the license period must be on the fourteen years basis only. The improvements which must be effected are as follows:—In the case of agricultural allotments, to the value of six shillings and eightpence an acre during each year of the license for first-class land, and five shillings an acre during each of the first three years of the license of second-class land, and in the case of grazing allotments, three shillings and fourpence an acre during each of the first three years, for third-class land. During any one year non-residential licenses may not be issued for more than 50,000 acres.

(ii.) *Agricultural and Grazing Allotments by Selection from Grazing Areas and Perpetual Leases or Auriferous Lands Licenses.* The lessee of a grazing area lease may

select thereout, under residential conditions (see 3 (i.) above), and if the residence and improvement conditions necessary under an agricultural or grazing allotment license have already been complied with, the license may be antedated any period, not exceeding 6 years, upon payment of the difference in the rent for such period, and a grant may, therefore, be obtained immediately. The lessee of a grazing area may, if preferred, select thereout under non-residential conditions (see 3 (i.) (*b*) above). Grazing area leases are more particulaly referred to below, under the heading of *Leases*. (See § 7, 3 (i.) Either residential or non-residential, agricultural or grazing allotments may also be selected under certain circumstances out of areas held under perpetual leases (see § 7, 3 (ii.) below) or auriferous lands licenses. (See § 7, 3 iv.)

(iii.) *Mallee Agricultural Licenses*. These licenses are issued for first, second, and third-class Mallee lands, similarly to licenses for agricultural and grazing lands explained above, but for larger areas, the maximum being 640, 1000, and 1280 acres of first, second, and third-class land respectively. Selections must form one continuous area, separated only by roads. The purchase price for selection is fixed at £1 an acre for first-class, fifteen shillings for second-class, and ten shillings for third-class land, unless the value of the land is greater than the amounts stated. The licenses are for six years, and are issued subject to similar conditions (both residential and non-residential) as agricultural allotments. (See above.) At the expiration of a license, or on obtaining a lease, if all conditions have been complied with, the selector is entitled to a grant upon payment of the difference between the amount of rent actually paid and the entire purchase-money. Holders of "Mallee allotment" leases (see 6, 2 iv.) may select thereout an agricultural allotment license as above, and if the residence and improvement conditions necessary under such a license have already been complied with, the license may be ante-dated any period not exceeding six years, or in case of the full six years compliance, the lease or Crown grant may be obtained without the issue of a license. Credit is given for all rents paid under Mallee allotment lease.

(iv.) *Murray Settlements Leases*. Under the Murray Settlements Act 1907, any Crown lands within the Mallee country or Mallee border may be subdivided into either (*a*) *Homestead allotments* near the River Murray, each containing an area of not more than fifty acres, or (*b*) *Mallee farm allotments*, situated more or less remote from the homestead allotments, and each containing an area not exceeding 640, 1000, 1280, or 1600 acres if of first, second, third, or fourth class land respectively. Payment of the value of a holding, with interest at not less than 4½ per cent. per annum, must be made by sixty-three half-yearly instalments, and the prescribed improvements must be carried out. Part II. of the Act provides for the construction and maintenance of irrigation works and gives power to constitute irrigation areas. Two settlement areas have been laid out under the Act with due regard to irrigation conditions, viz., those at White Cliffs and Nyah, and at the former place a dry farm area has also been subdivided. At White Cliffs 6273 acres were subdivided as homestead allotments, and 50,345 acres as dry farm allotments, while at Nyah 1960 acres were subdivided as homestead allotments. At the commencement of the year 1910, there were 94 allotments held under the Act, covering an area of 3390 acres.

(v.) *Swamp or Reclaimed Lands Purchase Leases*. The special conditions attached to conditional purchase leases of swamp or reclaimed lands are referred to below. (See § 7, 3 v.)

(vi.) *Area Selected Conditionally and Area Sold, 1901 to 1909*. The subjoined table gives particulars shewing the areas selected conditionally during the year 1901 and from 1905 to 1909. A large proportion of the areas shewn has reverted to the Crown in consequence of non-fulfilment of conditions.

VICTORIA.—AREAS PURCHASED CONDITIONALLY, 1901 to 1909.

Particulars as to total areas alienated and in process of alienation are given in a later part of this section. (See § 11.)

4. **Queensland.**—The several types of selections under which the freehold may be acquired by conditional purchase are as follows:—(i.) Agricultural farms; (ii.) agricultural homesteads; (iii.) prickly pear selections; and (iv.) free homesteads.

Land is made available for selection by proclamation in the *Gazette*, specifying the modes in which the land may be selected, the area, rent, price and conditions. Any person of either sex over the age of sixteen years, who does not seek to acquire the land merely as the agent or servant of another, is allowed to select; but a single girl under the age of twenty-one is debarred from selecting an agricultural or grazing homestead as also is a married woman, unless she is judicially separated, or possesses separate estate, or is living apart from her husband and has been specially empowered by the Land Court to select a homestead. A married woman may, however, acquire a grazing homestead by transfer after the expiration of five years of the term of the lease. An alien may, under certain circumstances, acquire a selection, but must become a naturalised British subject within three years.

Applications for selections must be made in the prescribed form, in triplicate, and be lodged with the land agent for the district in which the land is situated, and must be accompanied by the prescribed deposit. In the case of a prickly pear selection the deposit must be the full amount of the survey fee, and in other cases, except free homesteads, a year's rent and one-fifth of the survey fee. In the case of a free homestead application the deposit consists of an application fee of £1 and one-fifth of the survey fee. If land is open for selection in two or more modes, alternatively, and there are simultaneous applications to select it under different modes, priority among such applications is given to an application for the land as an agricultural homestead, as against an application for it as an agricultural farm, and to an application for it as an agricultural farm as against an application for it as an unconditional selection. In the case of simultaneous applications for the same land as an agricultural farm, priority is secured by an applicant other than a married woman or a single girl under twenty-one years of age, who, when making application, undertakes to personally reside on the land during the first five years of the lease. When an application has been accepted by the Land Commissioner and approved by the Land Court, and the applicant has paid for any improvements there may be on the land, he becomes entitled to receive a license to occupy the land in the case of an agricultural selection or a grazing selection, or a lease in the case of a scrub selection, unconditional selection, or prickly pear selection. Within six months after the issue of a license, the selector must commence to occupy the land, and thereafter continue to occupy it in the manner prescribed. Selectors may, under certain conditions, by application to the Under Secretary for Public Lands, obtain concessions in respect of the carriage by rail to the railway station nearest to his selection of himself, his family and his effects, and in respect of the carriage of any such material intended for use in improving the selection.

(i.) *Agricultural Farms.* The more accessible lands are usually set apart for agricultural selection up to the maximum area of 1280 acres allowed to each selector of an

agricultural farm. If the same person be the selector of both an agricultural farm and an agricultural homestead, the joint areas must not exceed 1280 acres. The term is twenty years and the price ranges from ten shillings per acre upwards, as may be fixed by the proclamation. The annual rent is one-fortieth of the purchasing price, and the payments are credited as part of the price. The selector must occupy the land continuously, either in person or by agent, for the whole term of the lease, but where priority of application has been conceded the condition of personal residence during the first five years of the term is enforced. The cost of survey, ranging from about £9 for a farm of 160 acres to about £18 for a farm of 1280 acres, must be borne by the selector.

Within five years from the issue of the license to occupy, the selector must enclose his land with a substantial fence, or make permanent improvements of equivalent value. On the completion of the improvements the selector becomes entitled to a lease of the farm, and may thereafter mortgage it; or, with the permission of the Minister, may subdivide or transfer it; or, with the approval of the Court, may sublet it. After five years of the term have elapsed, the prescribed conditions of occupation and improvement having been duly performed, a deed of grant may be obtained on payment of the balance of the purchase money.

During the year 1909 applications were accepted to select agricultural farms to the number of 1433 for 541,293 acres, an average area of 378 acres, at an average price of 18s. 1d. per acre. The number of selections and the total area selected were lower than the corresponding figures for the previous year by 175 and 65,871 acres, respectively. The average area is the same as in 1908 and the average price higher by 1s. 6d. per acre.

(ii.) *Agricultural Homesteads.* When land is taken up as an agricultural homestead, the maximum area is restricted to 160 acres, 320 acres, or 640 acres, according as the price specified in the proclamation is determined at not less than twenty shillings; less than twenty shillings but not less than fifteen shillings; or less than fifteen shillings per acre respectively. The price for a homestead is two shillings and sixpence an acre, the annual rent threepence an acre, and the term ten years. The selector must himself reside continuously on the land, and within five years from the issue of the license to occupy, must also fence the land, or must make permanent improvements of equivalent value. On the completion of the improvements the selector is entitled to a lease, which, however, cannot be transferred or mortgaged.

At any time after five years from the commencement of the term, on the selector proving that the conditions have been performed and that the sum expended in improvements on the land has been at the rate of ten shillings, five shillings, or two shillings and sixpence an acre respectively according to the value of the land, he may pay up the remaining rent, so as to make his total payments equal to two shillings and sixpence an acre, and obtain a deed of grant of the land in fee simple. Under the amending Act of 1905 agricultural homesteads may, on certain conditions, be converted into agricultural farms.

Particulars of agricultural homesteads are given in par. (iv.) hereinafter.

(iii.) *Prickly Pear Selections.* Prickly pear infested selections comprise areas thickly covered with prickly pear. The area selected must not exceed 5000 acres. The term is fifteen years, with a peppercorn rental for the first ten years, and an annual rent of one-fifth of the purchasing price for the remaining five years. During the first ten years of the term the land must be absolutely cleared of prickly pear (one-tenth during each year), and must be kept clear for the remainder of the term. Under the amendment Act of 1909, an applicant for a prickly pear selection who declares in writing that he undertakes to personally reside on the land during the first five years of the lease, is entitled to priority over other applicants.

Prickly pear frontage selections are confined to prickly pear frontage areas, comprising lands free from or only lightly infested with prickly pear, but which adjoin and do not extend for more than seven miles from lands heavily infested. The greatest area allowed is 5000 acres. The term is fifteen years, with a peppercorn rental during the first five years, and an annual rent of one-tenth of the purchasing price during the remaining

ten years. During the first five years the land must be absolutely cleared of prickly pear (one-fifth each year) and must be kept clear during the balance of the term.

In the case of prickly pear (bonus) selections, the freehold of the land, and a bonus in addition, are granted in return for the complete eradication of the pear. The maximum amount payable as bonus is stated in the opening proclamation, but each applicant must lodge a tender specifying a bonus per acre not in excess of that mentioned in the proclamation. The size of the portions opened out must not exceed 2560 acres. The term of the lease is ten years, at a peppercorn rental throughout. The land must be absolutely cleared of prickly pear during the first seven years (one-seventh each year), and the land must be maintained clear till the end of the lease. One-seventh of the bonus payable may be claimed at the end of each of the first seven years of the term on proof to the satisfaction of the Commissioner that the condition of eradication has been complied with. If the eradication be completed at an earlier date than is required by the condition of the lease, the balance of the bonus will then become payable.

In all prickly pear selections the freehold may be obtained prior to the expiry of the term on proof being made that the land has been maintained free from prickly pear for three years consequent on the eradication having been completed in advance of the prescribed period.

Particulars of prickly pear selections are given in the following paragraph.

(iv.) *Number and Area of Conditional Purchases, 1901 to 1909.* The following table shews the number and area of conditional purchases for which applications were accepted during each year from 1901 to 1909 :—

QUEENSLAND.—CONDITIONAL PURCHASES (APPLICATIONS ACCEPTED), 1901 to 1909.

Year.	Agricultural Farms.		Agricultural Homesteads.		Prickly Pear Selections.		Total.	
	Number.	Area.	Number.	Area.	Number.	Area.	Number.	Area.
		Acres.		Acres.		Acres.		Acres.
1901 ...	661	160,804	669	155,512	19	48,450	1,349	364,766
1902 ...	683	168,301	523	118,246	10	51,058	1,216	337,605
1903 ...	499	124,026	424	89,037	6	5,423	929	218,486
1904 ...	516	136,092	355	73,705	1	200	872	209,997
1905 ...	962	254,117	448	97,543	7	31,457	1,417	383,117
1906 ...	1,427	438,605	392	96,561	3	9,562	1,822	544,728
1907 ...	1,948	689,916	267	68,464	439	524,956	2,654	1,283,336
1908 ...	1,608	607,164	229	55,152	714	870,849	2,551	1,533,165
1909 ...	1,433	541,293	162	39,654	496	665,614	2,091	1,246,561

The average area of agricultural farms selected during the year 1909 was 378 acres at an average price of 18s. 1d. per acre ; the average area of agricultural homesteads was 245 acres. The average price of the land selected as prickly pear infested selections during the year was 5s. 2½d. per acre, and of prickly pear frontage selections was 5s. 5½d. per acre.

Particulars as to total areas alienated and in process of alienation may be found below. (See § 11.)

(v.) *Free Homesteads.* This form of tenure was introduced by the Land Acts Amendment Act 1908. Any country lands may be proclaimed open for free homestead selection. The maximum area which may be selected in this manner is 160 acres. The term is five years, and during that period the selector must occupy the land by personally residing on it, and must effect improvements to the total value of ten shillings per

acre. A free homestead cannot be sold or mortgaged until a deed of grant is obtained. During the year 1909 10,100 acres of land were opened for selection as free homesteads and 28 applications, totalling 4480 acres, were accepted.

5. **South Australia.**—The types of conditional purchases under which land may be alienated in this State (exclusive of the Northern Territory) are as follows:—(i.) Agreement to purchase, and (ii.) Agreement under the Pinnaroo Railway Act 1903. The Land Board, composed of three members, arranges the subdivision of lands and fixes the price at which each block is to be offered. When approved by the Commissioner the lands are gazetted as open to application, which must be made in writing, and must specify the name, address, and occupation of the applicant, and the land applied for. A month's notice is usually given, during which applications may be made. No person under eighteen years of age can hold a lease, agreement, or license under the Act. The applicant has the choice as to whether he will take the land on perpetual lease or on an agreement to purchase, except in the case of repurchased lands and lands within the schedule to the Pinnaroo Railway Act, which are offered on agreement to purchase only. As early as possible after the date for receiving applications the Board meets, takes the evidence of applicants, and allots the blocks to each applicant who, in the opinion of the Board, should have the block. Preference is given to applicants who will reside on the land applied for, involving continuous residence on the land for at least nine months in each year. Other considerations which assist the Board to come to a decision are the ability, through means and experience, to utilise and improve the land applied for, and the number of members of the family which would become settled on the land. Any blocks not allotted on the date fixed may be applied for, and may be allotted on application. Agreements and leases are liable to forfeiture if payments due thereunder are six months in arrear and remain unpaid for three months after the same have been demanded, or for breach of any of the covenants or conditions. In place of forfeiture of any lease or agreement the holder's interest therein may be sold by auction, the proceeds to pay all arrears on the land and expenses of sale. If any balance remain the outgoing holder may be paid for substantial improvements made by him on the land. Any purchase-money the outgoing holder may have paid on the land sold may also be reimbursed to him if the proceeds of the sale admit. Interest at the rate of 5 per cent. is charged on arrears due under leases and agreements; if over two months in arrears the Commissioners may recover the same in court. No perpetual lease or agreement to purchase is granted for lands the unimproved value of which exceeds £5000, or in such a way that the lessee or purchaser would hold lands under any tenure, except under pastoral lease, the aggregate unimproved value whereof would, in the opinion of the Board, exceed £5000. Exceptions are made in cases where land to be included in the lease or agreement is suitable only for pastoral purposes, the carrying capacity thereof unimproved, and of all other lands held by the lessee or purchaser under any tenure not exceeding 5000 sheep; if the land is outside Goyder's line[1] the limitation may be increased to a carrying capacity of 10,000 sheep. Municipal Corporations and District Councils may apply for land in the same manner as individuals.

(i.) *Agreement to Purchase.* No lands may be held under this form of tenure unless they have been surveyed, or their boundaries delineated on the public maps. The Commissioner, on the recommendation of the Land Board, determines the area of blocks, and the price and annual rental at which each block may be taken up on lease with the agreement to purchase. Applications must be made in writing to the Commissioner, and must be accompanied by a deposit equal to the first half-yearly instalment of the purchase-money of the land and improvements. The purchaser must covenant to pay for his block at the price fixed by the Land Board, and to pay the purchase-money and interest

1. Goyder's line is not exactly based on rainfall, but on the evidence of vegetation ("salt-bush" and "blue-bush" etc.), and marked the northern limit of what was thought to be fit land for agricultural pursuits. The vegetation which was supposed incapable of flourishing in regions of regular rainfall afforded the indications for locating the line.

for land and improvements, if any, at not less than the rate of 2 per cent. per annum by sixty equal half-yearly instalments payable in advance. The land must be fenced within five years, and vermin and weeds must be destroyed. Having complied with the terms and conditions of the agreement, the purchaser has the option of completing the purchase of his block at any time after the expiration of six years, on paying all principal due under his agreement and all interest due up to the time of purchase. Where the land is allotted on personal residence, each agreement must contain a covenant for personal residence by the purchaser on the lands purchased for nine months during each year. The conditions as to reservation of Crown rights, and also as to subletting, are the same as in the case of perpetual leases. (See § 7 below.)

(ii.) *Pinnaroo Railway Lands.* Under the Pinnaroo Railway Act 1903 provision was made for opening up to conditional purchase certain scheduled lands, amounting to about 1,500,000 acres of good agricultural country in the vicinity of a line from Pinnaroo to Tailem Bend, a distance of eighty-seven miles. The line was opened for traffic in 1906. The lands scheduled may be sold by the Crown under agreement, with a covenant to purchase the same at the price fixed by the Land Board, together with interest thereon at the rate of 2 per cent. per annum, by sixty half-yearly payments, payable in advance. Any purchaser may complete his purchase at any time. Application is to be made, the price fixed and accepted, the agreement entered into and executed, and all matters in connection with the sale, transfer, resale, surrender, and forfeiture of any of the lands are to be carried out, as far as practicable, as if the lands were taken up under the existing regulations as to the acquisition of land for the purposes of closer settlement.

In the annual report of the Surveyor-General for the year 1909-10 it is stated that the opening up of the Pinnaroo district and the change which has taken place in the value of land, which prior to the proposal to construct a railway was almost *nil*, and now realising as much as £10 and £12 an acre, shews in a remarkable way the advantages of the system of constructing railway lines in advance of settlement, and also that, with the use of phosphates and other manures and a scientific system of farming, hardly any class of land can be said to be valueless for agricultural purposes. The total area now held is 548,803 acres; of this area 25,478 acres are held on perpetual and right of purchase leases, allotted before the Pinnaroo Railway Act was passed.

(iii.) *Particulars of Conditional Purchases, 1901 to 1909.* The subjoined table gives particulars of the areas alienated by conditional purchase, on fulfilment of the conditions, at the end of 1901 and from 1905 to 1909 inclusive:—

SOUTH AUSTRALIA.—AREAS ALIENATED UNDER AGREEMENTS TO PURCHASE, 1901 to 1909.

Year	1901.	1905.	1906.	1907.	1908.	1909.
Area in acres ...	57,460	16,106	6,439	57,890	68,977	128,656

Particulars as to the total areas alienated and in process of alienation are given in a later part of this section. (See § 11.)

6. **Western Australia.**—The various types of selections under which the freehold can be alienated by conditional purchase in this State are as follows:—(i.) Residential conditional purchase; (ii.) non-residential conditional purchase; (iii.) conditional purchase by direct payment; (iv.) conditional purchase of blocks for vineyards, orchards, or gardens; (v.) conditional purchase of grazing lands; and (vi.) free homestead farms.

All applications must be lodged, with the prescribed deposit and fees, at the agency in which the land is situated. No person may acquire under homestead farm, conditional

purchase, and grazing lease, collectively, or any two or more of them, either as lessee or transferee, more than 2000 acres of cultivable land (that is, land acquired as homestead farm and by conditional purchase), or an equivalent area of grazing land, or cultivable and grazing land mixed. Where a man has selected up to the maximum allowed, his wife may hold a further area of 1000 acres of cultivable land or its equivalent area of grazing or of cultivable and grazing land. Five acres of grazing land are deemed to be an equivalent of two acres of cultivable land, and all unclassified land disposed of prior to the 1st February, 1907, is deemed to be cultivable land until otherwise classified by the Lands Department. If the holder require the land to be classified he must pay the prescribed fee.

(i.) *Residential Conditional Purchase.* Under this form of tenure any person over the age of sixteen years may select from a minimum area of 100 acres to a maximum of 1000 acres. The price of the land varies from ten shillings to forty shillings per acre payable in twenty years by half-yearly instalments, or sooner, at the occupier's option, but for the first three years of the lease only sixpence per acre per annum is charged; subsequent payments are increased when the land is over ten shillings per acre. Applications must be accompanied by a deposit of a half or a quarter-year's rent, as the case may be; that is to say, if the application be made during the first quarter of the half-year, a half-year's rent is required; if in the second quarter, only a quarter-year's rent need be deposited. In the event of the application not being approved the deposit is refunded. The cost of survey is paid by the selector in easy instalments, viz., it is included in the price of the land when within "surveyed areas," and when it is outside such areas and required to be surveyed, the survey fees payable are one-fourth with deposit and balance with interest in forty instalments with purchase-money. The selector is required to take up residence on his allotment within six months from the date of approval, and to reside thereon for at least six months during each of the first five years; the residence condition may, however, be performed on any rural land held by the selector within twenty miles. Residence by the wife, parent, or a child of over sixteen years of age, may also be accepted. Improvements must be effected equal in value to the amount of the purchase-money, and must be at the rate of one-fifth of the purchase-money every two years of the first ten years, but are not required to be more than £1 per acre in value should the price of the land exceed that amount. One-half of the land must be fenced within five years and the whole within ten years. Half the value of great and small stock-proof fencing is allowed towards the improvements required, and two-thirds of the value of a dog or rabbit-proof fence; but no allowance in respect to the fencing is made until after the fourth year of the term of the lease. Where any Crown land open for selection is situated within a distance prescribed by regulations from a railway, or the line of an authorised railway, the Minister may prescribe by regulations special conditions as to the improvements in substitution for, or in addition to, the conditions prescribed by the principal Act, but the holder of such land shall not be required to carry out any improvements that exceed in cost the amount that the Agricultural Bank is prepared to lend such holder. A lease fee of ten shillings is payable with every application for a lease, at the expiration of which, or at any time after five years from the date of which, provided that all the conditions of residence and improvements have been complied with and the purchase-money paid, the lessee may obtain a Crown grant of the land on payment of the grant fee of thirty shillings.

(ii.) *Non-residential Conditional Purchase.* If the selector does not wish to reside upon the land he may take up from 100 to 1000 acres, subject to the same conditions with regard to improvements, purchase-money, and survey, lease, and grant fees as in the case of residential purchases, with the exception that the total value of the improvements required is 50 per cent. over and above the amount of the purchase-money, but not more than thirty shillings per acre need be spent on improvements, although the price of the land may be over £1 per acre.

(iii.) *Conditional Purchase by Direct Payment.* Any unalienated Crown lands may be acquired by conditional purchase by direct payment. The price is not less than ten shillings an acre, payable within twelve months; the maximum area that may be selected by one person is 1000 acres, and the minimum is 100 acres. An amount equal to 10 per cent. of the purchase-money must be deposited with the application, on the approval of which by the Minister a license is issued for seven years, dating from the first day of the quarter next preceding the date of the approval of the application. The balance of the purchase-money must be paid within twelve months by four equal quarterly instalments, or sooner, at the option of the selector, but no Crown grant will be issued until the Minister is satisfied that the prescribed conditions have been fulfilled. The licensee must within three years fence in the whole of the land, and within seven years must expend upon the land in prescribed improvements at least ten shillings an acre in addition to the cost of fencing. The cost of survey must be paid by the purchaser as follows:—One-quarter is payable with the application, and the balance, plus 5 per cent. interest, is payable by three quarterly instalments. The Crown grant may be obtained at any time, provided that all the conditions have been complied with and the purchase-money and fee have been paid.

(iv.) *Conditional Purchase of Small Blocks for Vineyards, Orchards or Gardens.* Areas of from five to fifty acres may be selected for any of these purposes on the following terms:—The price of the land is not less than £1 an acre; a deposit of 10 per cent. of the purchase-money must be made upon application, and the balance must be paid within three years from the date of the approval of the application by equal half-yearly instalments. One quarter of the cost of survey is payable with application, and the balance, plus 5 per cent. per annum interest, is payable by equal amounts every half-year during the three years. A lease is granted for three years, during which time the whole of the land must be fenced with a great and small stock-proof fence, and at least one-tenth of the area must be planted with vines or fruit trees, or cultivated *bonâ-fide* as a vegetable garden. A Crown grant will be issued as soon as all the conditions have been complied with and the purchase completed.

(v.) *Conditional Purchase of Grazing Lands.* The Governor may declare any lands which, in the opinion of the Minister, are unsuitable for agriculture, but suitable for grazing purposes, and which are not within an agricultural area, as open for selection as grazing leases. The application must be accompanied by the usual deposit of rent, as explained above with reference to conditional purchase with residence, and the lease fee of ten shillings. If the land is unsurveyed, one-quarter of the cost of survey must be paid with the application, and the balance, plus 5 per cent. per annum interest, extending over twenty years, which is the term of the lease. An inspection fee may be charged if the Minister so directs. The land is inspected and reported on by a surveyor, and the price is fixed by the Governor, but may not be less than three shillings and ninepence per acre, and must be paid half-yearly at the rate of one-twentieth of the total purchase-money per annum. The maximum area allowed is 5000 acres, and the minimum 500 acres, but if the land applied for adjoins a holding of the applicant the minimum may be 300 acres. Within six months the lessee must take possession of his lease, and residence is required for six months of the first year and for nine months during each of the next four years. These conditions as to residence may be performed by self or by an agent or servant of the lessee, and if the lessee be the owner of any rural lands within twenty miles, and reside thereon, such residence is sufficient. Expenditure on improvements to the extent of one-fifth of the purchase-money is required during every two years of the first ten years of the lease, and the whole of the land must be fenced within the first ten years. Half the value of a great and small stock-proof fence, and two-thirds of the value of a dog or rabbit-proof fence, may be allowed towards the value of the improvements required after the fourth year of the lease. At the expiration of the term of the lease, or at any time after five years from the date of the lease, a Crown grant will

be issued, provided that all conditions have been complied with and the full purchase-money paid.

(vi.) *Free Homestead Farms.* Every person who is not already the holder of more than 100 acres of land within the State, and being the head of a family, or a male of sixteen years of age and upwards, may select an area of from 10 to 160 acres as a free homestead farm, on lands declared open for such selection within the South-West, Central, or Eucla Divisions, not being within a goldfield. The application must be accompanied by a statutory declaration with a one-shilling duty stamp and a fee of twenty shillings. If a homestead farm is selected out of a surveyed block within a "surveyed area" the balance of which is taken up by the same applicant, no survey fee is payable, but if it is selected outside such an area and is required to be surveyed, the survey fees payable are one-fourth with the deposit and the balance with interest in three equal half-yearly instalments. Upon approval of the application an occupation certificate for seven years is issued; the selector must take personal possession of the land within six months from the date of such certificate, and must reside thereon for at least six months in each of the first five years of the term, but residence on rural land held by the same person within twenty miles of the free homestead farm is sufficient compliance with the above residence condition. Residence of the holder's wife, parent, or child over sixteen years of age, may be accepted at the Minister's discretion. Four shillings per acre must be spent in prescribed improvements during the first two years; a further six shillings per acre during the next three years; and an additional four shillings per acre during the last two years. Not more than £30 of the amount spent on a habitable house will be allowed towards the total amount of fourteen shillings per acre required to be expended upon improvements. Half of the land must be fenced during the first five years, and the whole must be enclosed with a great and small stock-proof fence by the end of the term of seven years. Half the value of a sheep and cattle-proof exterior fence, and two-thirds of the value of a rabbit or dog-proof exterior fence will be allowed towards the amount required to be spent upon improvements after the fourth year of the term. A Crown grant will be issued upon compliance with all the conditions and upon payment of a fee of thirty shillings at the expiration of the term of seven years, but may be issued earlier if the holder has completed twelve months' residence, has made all the required improvements, and pays the sum of five shillings per acre for the land. The Crown grant for a homestead farm which is portion of a surveyed block will not be issued separately unless the holder pays the prescribed survey fees and thirty shillings for the Crown grant.

(vii.) *Conditional Auction Sales.* Sales of town and suburban lands at auction have already been referred to. (See § 5, vi., above.) In the case of suburban lands the sale is of the nature of a conditional purchase, inasmuch as the land must be fenced within two years. In the case of the sale at auction of suburban lands set apart for cultivation, the balance of the purchase-money, after paying a deposit of 10 per cent., must be paid by half-yearly instalments within five years; the land must be fenced within two years, and within three years at least one-tenth of the area must be planted as an orchard or vineyard, or cultivated as a vegetable garden, or one-quarter of the area must be cultivated otherwise. The purchaser may pay the balance of the purchase-money at an earlier date, if he so desire, but no grant may issue until the prescribed improvements have been effected.

(viii.) *Areas Alienated Absolutely under Forms of Conditional Purchase, 1901 to 1910.* The following table shews the area of the selections for which grants were issued, the prescribed conditions having been fulfilled, during the year 1901 and from 1905 to 1910.

Particulars as to the total areas alienated absolutely, and in process of alienation, are given in a later part of this section. (See § 11.)

WESTERN AUSTRALIA.—AREAS SELECTED CONDITIONALLY FOR WHICH CROWN GRANTS WERE ISSUED, 1901 to 1910.

* For year ended ended 30th June. 1. Provisions repealed by Act of 1906.
2. Closer settlement. (See § 8. 7, below.)

Particulars as to the total areas in process of alienation are given in a later part of this section. (See § 11.)

7. **Tasmania.**—The various types of conditional purchases in this State are as follows:—(i.) Selection of rural land ; (ii.) homestead areas ; (iii.) selection in mining areas ; and (iv.) sales by auction on credit, either of town or rural lands. Upon all first class lands purchased or selected under the Acts now in force habitual residence is necessary for five years, commencing to run two years after the date of purchase, and must be continuous ; but on land within a mining area the necessary period of residence is reduced to three years. In both cases this may be complied with by the selector himself or some member of his family, or someone employed by him or on his behalf. If purchased at auction on credit all lands (town or rural) must be improved to the value of a sum at least equal to the sale price of the land. Upon first-class lands the selector must expend a sum of not less than two shillings and sixpence an acre of the whole area in substantial improvements every year for the first eight years. By paying off before the expiration of the period of credit all purchasers and selectors obtain a rebate of the added premium in proportion to the unexpired period of credit. Second-class lands must be

improved to the value of at least one shilling an acre per annum for the first five years before the selector can pay up and obtain his deed of grant; and in the case of third-class lands the selector must expend on substantial improvements a sum amounting at least to sixpence per acre per annum during the first five years before the balance of the purchase-money can be paid and the deed of grant issued. Improvements on all lands must be of a substantial nature, and include dams, wells, cultivation, fences, clearing or draining of land, the erection of a dwelling-house or farm or other buildings upon and permanently attached to the soil of such land.

No person may hold more than 200 acres of first-class, 250 acres of second-class, and 500 acres of third-class Crown lands on credit at one time, either by purchase, selection, or purchase at auction. In order to make the payments during the first year of purchase as light as possible the Lands Department advances to the selector of any first-class land four-fifths of the amount of fee necessary for the survey of the land. The balance is payable in the next succeeding four years, together with interest at the rate of two shillings and sixpence in the pound. For lands purchased by auction, and for second and third-class lands, the survey fee must be paid in full. The amount of this fee, for first-class lands, ranges from £4 10s. to £15 15s. for selections of from 25 to 200 acres respectively; for second-class lands the fee ranges from £6 5s. to £15 10s. for selections of from 30 to 250 acres; and for third-class lands it ranges from £11 to £20 for selections of from 60 to 500 acres respectively.

(i.) *Selection of Rural Lands.* Any person of eighteen years of age and upwards may select an area of from 15 to 200 acres of first-class land, and from 30 to 250 acres of second-class land, or from 60 to 500 acres of third-class land. Application must be made in a prescribed form obtainable from the various post and police offices throughout the State, and from the Crown Lands Office, Hobart, and Lands Branch Office, Launceston. Intending selectors can obtain ready assistance in making their choice of lands from the District Surveyors or from the officers of the Crown Lands Office. The price of first-class land is not less than £1 an acre, with one-third of that price added as a premium for credit, which extends over a period of eighteen years. For second-class land ten shillings an acre is the minimum price, with one-third added for credit, the period of which is fourteen years. For third-class land the price is not less than five shillings an acre, with one-third added for fourteen years.

In the case of first-class land the purchaser must pay a deposit of twopence an acre, and must pay the residue by eighteen annual instalments at the following rates per acre:—Threepence during the first and second years; one shilling during each year from the third to the sixth; one shilling and sixpence during each year from the seventh to the tenth, and two shillings during each of the remaining eight years. For second or third-class land the purchaser must pay a deposit of one-fortieth part of the purchase-money, and must pay the residue by fourteen annual instalments, of which the first two instalments must equal one-twenty-sixth part of the residue, and each remaining instalment must equal one-thirteenth part of the residue. The conditions as to residence on first-class land and as to improvements on all classes are as stated above.

(ii.) *Selection of Homestead Areas.* Any person of the age of eighteen years or over who has not previously purchased land in Tasmania may make a selection of a homestead area of first-class land not exceeding fifty acres, at the price of £1 an acre, with one-third added for credit. The selector of a homestead area must pay a cash deposit of twopence an acre at the time of purchase, but need pay nothing further towards the purchase-money until the fourth year, when the repayments for that year and for the fifth year are at the rate of tenpence an acre, and for the remaining fourteen years, during which the credit extends, the annual payment is at the rate of two shillings an acre. The selector must reside on his homestead for a term of five years commencing to run one year after the date of contract, and must effect improvements to the value of £1 an acre before a grant is issued.

(iii.) *Selection in Mining Areas.* A "Mining Area," under the Crown Lands Act, comprises land in the vicinity of a mining field, and which is specially proclaimed a mining area. The land so proclaimed may be selected as first-class agricultural land, not exceeding 100 acres, on the terms provided for the purchase of these lands; but if the land is within one mile of a town the maximum area is twenty acres and the minimum ten acres. Second-class lands within a mining area can be sold at auction, but no lands within a mining area can be sold as third-class. All lands purchased within a mining area are open to any person to search or mine for minerals, gold or other metals; but before any such person can commence searching or mining he must obtain permission in writing from the Secretary for Mines or the nearest Commissioner of Mines. The terms as to payment of purchase-money for mining area selections are the same as in the case of selections of rural lands, mentioned above.

(iv.) *Conditional Sales on Credit.* Both town and rural lands may be sold on credit, either at auction or by private contract, subject to certain conditions. The maximum and minimum area which may be so sold have already been specified. (See above § 5. *Sales by Auction*, 7.) In the case of sales of town lands on credit, the purchaser may not receive a grant until he has effected improvements to the value of a sum equal to the purchase-money. When first-class rural lands (except lands within mining areas) are sold on credit, the purchaser must reside thereon for at least five years, commencing two years after the date of contract, and must effect substantial improvements to the value of £1 an acre before a grant will issue. In the case of the sale of the second and third-class land similar improvement conditions to the value of five shillings and two shillings and sixpence an acre in each class respectively are imposed. A sum equal to one-third of the price is added for credit. The purchaser must pay a deposit of one-fortieth, and the remainder by fourteen annual instalments.

(v.) *Areas Sold Conditionally, 1901 to 1909.* The following table shews the areas alienated absolutely under systems of conditional purchases and sales on credit, the conditions having been fulfilled, and also shews the areas sold conditionally and the applications for conditional purchases received and confirmed, during the year 1901 and from 1905 to 1909, inclusive:—

1. Including selections and sales on credit.

Particulars of total areas alienated and in process of alienation are given below. (See § 11.)

§ 7. Leases and Licenses.

1. **Introduction.**—Leases and licenses are issued in all the States for various terms and upon various conditions. In Victoria, Queensland, and South Australia perpetual leases are issued for an indefinitely long period upon payment of an annual rent, while in all the States leases or licenses of comparatively large areas may be obtained for pastoral purposes. Provisions have also been made in all the States for convenient forms of leases and licenses for various special purposes, and also of special classes of lands. The leases and licenses dealt with below are exclusive of those issued under Closer Settlement and kindred Acts, and also of those issued for mining and auxiliary purposes. (See § 8 and 9 below.)

2. **New South Wales.**—The following are the various types of leases and licenses issued in this State:—(i.) Conditional leases; (ii.) conditional purchase leases; (iii.) settlement leases; (iv.) improvement leases; (v.) annual leases; (vi.) residental leases; (vii.) special leases; (viii.) snow leases; (ix.) pastoral leases; (x.) scrub leases; (xi.) inferior lands leases; (xii.) occupation licenses; and (xiii.) Western lands leases.

(i.) *Conditional Leases.* Conditional leases may be granted to any selector of a conditional purchase, other than a non-residential one, or one whose selection is within a special area in the Eastern Division. In other words, before applying for a conditional lease it is necessary to apply for a residential conditional purchase, in virtue of which such a lease may be held. The provisional deposit with application is, if the amount of rent has been notified prior to the date of application, a sum equal to half a year's rent, and if so notified is at the rate of twopence an acre, but is subject to appraisement by the Local Board. A survey fee in accordance with a fixed scale must also be lodged with the application.

The area of land which may be conditionally leased must not be less than 40 acres, nor more than three times the area of the conditional purchase, and the two together must not amount to more than 1280 acres in the Eastern, or 2560 acres in the Central Division, except in cases where the Land Board has allowed either of these areas to be exceeded by virtue of the power vested in them under the Crown Lands Act 1903 or 1905, as stated above. The lease is for a period of forty years, and this term is divided into four periods of ten years each. The annual rent for each period may, on application by the lessee, or on a reference by the Minister, be separately determined by appraisement in accordance with Section 6 of the Crown Lands Act of 1889. The lessee may at any time during the currency of the lease convert the whole or part into an additional conditional purchase. The total area held under conditional leases on the 30th June, 1909, was 15,480,660 acres, the total rent therefrom being £184,929, as compared with an area of 16,338,676 acres at a rent of £189,602 on the 30th June, 1908.

(ii.) *Conditional Purchase Leases.* This tenure was created by the Crown Lands Amendment Act of 1905, and its chief advantages are that the intending settler can for a small initial outlay by way of deposit, for a moderate rent and under easy conditions, obtain a lease for forty years, together with a right of converting it into a conditional purchase at any time during its currency, and ultimately into a freehold. These leases can only be acquired within areas subdivided and specially set apart by proclamation in the *Government Gazette* for holdings of this class, and an applicant, if a male, must not be under the age of eighteen years, or twenty-one years if a female. No one may apply who already holds any land, other than town or suburban land under the Crown Lands Acts, or land leased from a private individual, or who is either disqualified under the provisions of sec. 40 of the Crown Lands Act of 1895, or is subject to any of the disabilities specified in sec. 14 of the Act of 1905. These sections should be carefully read by intending applicants, as it is impracticable, within the limits of this summary, to fully

explain all the details of the qualification clauses. The deposit, which must be lodged with an application for a conditional purchase lease, is always the half of one year's rent of the land, the rent being calculated at the rate of 2½ per cent. of the capital value of the land. The amounts of the annual rent and of the survey fee required for each block are always stated in the *Gazette*, and on the lithographs issued by the Lands Department shewing the subdivision. Only one-fifth of the survey fee need be lodged with the application, although two or more instalments of one-fifth of the full amount may be deposited, and the balance may be paid subsequently in equal annual instalments, with interest at the rate of 4 per cent. The capital value of the land is fixed by the Minister for the first ten years of the lease, but the lessee may, within six months after confirmation of his application for the lease, apply in the prescribed manner to have such capital value determined by appraisement, and for each succeeding period of ten years the capital value is determined by the Local Land Board on a similar basis.

A condition of ten years' personal continuous residence is attached to holdings of this class, and such residence must, under ordinary circumstances, be commenced within twelve months from the date of confirmation of the application, but the Local Board may, if the circumstances of the case warrant the concession, permit the commencement of residence to be extended to any date within five years of such confirmation, and on such terms and conditions as to improvements and cultivation as may be agreed upon between the Board and the lessee, and the Board may also, on application in the prescribed manner, permit the residence condition to be performed in any adjacent village or town.

The following statement gives particulars of conditional purchase leases applied for and confirmed during the year ended the 30th June, 1909 :—

NEW SOUTH WALES—CONDITIONAL PURCHASE LEASES.

YEAR ENDED 30TH JUNE, 1909.

Applications Received.		Applications Confirmed.			
Number.	Area.	Number.	Area.	Capital Value.	Annual Rent
	Acres.		Acres.	£	£
369	249,360	267	214,079	249,328	6,213

The total area held under conditional purchase leases on the 30th June, 1909, was 534,499 acres, compared with an area of 328,448 acres held on the same date in 1908.

During the years 1908 and 1909 considerable progress was made in clearing land near Narrabri West for settlement under conditional purchase lease. This land is thrown open to settlement in blocks of from 680 to 1600 acres, and in each block 250 acres is ready for the stump-jumping plough, so that a settler is able almost immediately to get some return from the land. Subdivision of the adjoining Pilliga scrub lands in their uncleared state has also taken place, and designs are being prepared for the disposal of from 50,000 to 100,000 acres in the same locality under similar conditions. Since the year 1906 further lands amounting to nearly 69,507 acres, on the Dorrigo, in the north-east of the State, have been subdivided for selection under conditional purchase lease. The aggregate capital value of these lands is £118,020 (giving an average of £1 13s. 11d. per acre), and of the 289 blocks made available 286 or 99 per cent. have been selected.

(iii.) *Settlement Leases.* Under the Lands Act of 1895 provision was made for a convenient form of tenure by way of settlement leases for persons who require a considerable area for agricultural or grazing purposes, or for these purposes combined. The area which might be taken up as a settlement lease was originally limited to 1280 acres for agricultural and to 10,240 acres for grazing purposes, but provision has now been made under which larger areas may be taken as additional settlement leases, in cases where the

Local Land Board is of the opinion that the area sought to be acquired, together with other lands held by the applicant, does not in the aggregate exceed such an area as is sufficient to enable him to maintain his home thereon in average seasons and under ordinary circumstances. The additional holding need not necessarily adjoin the original holding, but must, in the opinion of the Board, be situated within a reasonable working distance thereof. The lease is for a term of forty years, which is divided into four periods of ten years each. The annual rent for the first ten years is fixed by the Minister before the land is made available for lease, and the lessee may, if dissatisfied with the amount, apply to have it determined by appraisement. The rent for each succeeding period of ten years may, on the application of the lessee or on a reference by the Minister, be separately determined in a similar manner. The lessee must make the holding his *bonâ-fide* residence during the whole term of the lease. He must fence the holding within five years, must conform to any regulations made by the Minister for the destruction of vermin, noxious weeds, scrub, etc., and may not assign or sublet his holding without the Minister's consent. Tenant right in improvements is secured to an outgoing lessee, and the lessee may apply at any time after the first five years of the lease for an area not exceeding 1280 acres, not being reserved from sale, on which his house is situated, as a homestead grant. Settlement leases may be converted into original conditional purchases (see 245 *ante*).

The following statement gives particulars of applications for settlement leases received and confirmed during the year ended the 30th June, 1909 :—

NEW SOUTH WALES—SETTLEMENT LEASES.

YEAR ENDED 30TH JUNE, 1909.

Applications Received.		Applications Confirmed.		
Number.	Area.	Number.	Area.	Rent.
278	Acres. 823,208	227	Acres 658,708	£ 7,735

The total area held under settlement leases on the 30th June, 1909, was 6,671,742 acres at an annual rent of £85,602, as against 5,942,867 acres at a rent of £78,512 on the same date in the preceding year.

During the year 1909 certain blocks were opened for settlement lease in the district known as the Mungle Scrub. This district is situated on the commencement of the rise from the great plains of the interior to the Main Dividing Range and from 40 to 65 miles north-east of Moree. In its present state the country is only suited for running a few head of cattle per acre, but when cleared it is considered that fully 75 per cent. of the land will be suitable for agriculture. The settlement of this district under suitable conditions is receiving attention.

(iv.) *Improvement Leases.* Improvement leases may comprise any scrub or inferior land in the Eastern or Central Divisions, and can only be let by auction or tender on the recommendation of the Land Board, or, if not taken up, may be tendered for afterwards at the upset rental. Leases of large areas at moderate rentals can be obtained of lands which are not suitable for settlement until improved, and in the improvement of which it would be necessary to spend large sums before they could be rendered suitable for settlement. The lease is for a term not exceeding twenty-eight years, the rent being payable annually. During the last year of the lease, the lessee may convert into a homestead selection 640 acres not being reserved land, on which his dwelling-house may be erected; he has tenant right in certain improvements, except when such right is stated to be barred. On the 30th June, 1909, an area of 6,676,655 acres was held under improvement leases, the total annual rent amounting to £50,395, or an average of 1⅛ pence per acre.

(v.) *Annual Leases.* These are leases from year to year, renewable by payment of a year's rent in advance before the termination of the current year. The area is restricted to 1920 acres under any one lease, but there is no limit to the number of leases which one individual may hold. The deposit is thirty shillings for each 320 acres or part thereof applied for, and the annual rent is as appraised and notified in the *Gazette*. No conditions as to residence or improvements are attached to these leases, but security of tenure is not guaranteed, and the land may be alienated by conditional purchase or lease, etc. On the 30th June, 1909, there were current 11,010 annual leases for 5,885,768 acres, producing a yearly rental of £40,127.

(vi.) *Residential Leases.* Only lands situated within proclaimed gold or mineral fields are available for holdings of this class. An applicant must be a holder of what is termed a "miner's right," or "mineral license," and must pay a deposit of £1, a provisional rental of one shilling per acre applied for, and the survey fee. The maximum area that may be leased is twenty acres, and the term may not exceed twenty-eight years. The annual rent will be appraised by the Local Land Board, and a condition of perpetual residence is attached to the lease. Within twelve months from the commencement of the lease, fences and buildings of a character suitable for the beneficial occupation of the land must be erected. Tenant right in improvements is conferred upon the lessee. On the 30th June, 1909, there were 867 leases current for 12,640 acres at a rental of £1,450.

(vii.) *Special Leases.* These leases are issued chiefly to meet cases where land is required for some industrial or business purpose, or for such purpose as the Governor, by proclamation in the *Gazette*, may declare, such as the erection of dams, tanks, irrigation works, saw-mills, etc. The area may not exceed 320 acres, except in the case of leases under secs. 89 and 92 of the Act of 1884, for such purposes as wharves, jetties, tramways, and irrigation works, and the term of a special lease may not exceed twenty-eight years. One person may, however, hold more than one special lease. The annual rent, if the land has not been notified for lease in the *Gazette*, is determined after report by the Local Board. Special leases may be obtained either by application, purchase at auction, or by tender. If the lease be sold at auction or let by tender, the rent will be the amount bid at auction, or offered by the successful tenderer, but must not be less than the upset rent. Leases of this kind which have been offered at auction and not sold, or for which tenders have been invited without any being lodged, may be obtained by after-auction tender. In such cases the rent will be the upset rent as notified, and the application will be subject to the approval of the Minister. A special lease may, under the Crown Lands (Amendment) Act 1908, be converted into (*a*) a conditional purchase lease, (*b*) a conditional purchase, (*c*) a homestead selection, (*d*) a settlement lease, or (*e*) a conditional lease. On the 30th June, 1909, there were 4180 leases current comprising an area of 419,469 acres, at a total rent of £25,583, as compared with 354,866 acres at a rent of £23,578 in the preceding year.

(viii.) *Snow Leases.* Lands not held under pastoral or other lease, which may be usually covered with snow for a part of each year, and which are consequently unfit for continuous occupation, may be leased in areas of not less than 1280 acres, nor more than 10,240 acres, and during the currency of such lease the land is exempt from sale or from other lease under the Lands Acts. Such leases are sold by auction or let by tender or by after-auction tender for terms not exceeding seven years, but may be extended for a term of three years by giving twelve months' notice prior to the expiration of the lease. The upset rental is fixed by the Minister after report by the Local Land Board, and the annual rent payable will be the amount bid at auction or tendered. If the lease be applied for after auction or after the time for lodging tenders has expired, the amount will be the notified upset rent. On the 30th June, 1909, there were 23 leases current covering an area of 76,930 acres, at a rental of £458 per annum.

(ix.) *Leases under Section 18, Act of 1903.* The only existing pastoral leases under the Crown Lands Act are situated in the Western district (see para. xiii. hereof). Under

the provisions of the amending Act of 1903, Section 18, leases may, on the recommendation of the Local Land Board, be granted to the registered holder of any pastoral lease, occupation license, or preferential occupation license, for an area not exceeding one-third of the total area comprised within the lease, license, or lease and license, at the date of expiration of the pastoral lease. The term of the lease may not exceed twenty-eight years, and the lease is subject to such rent and conditions as may be determined. At the end of the year 1908-9, there were 150 leases current for 1,142,409 acres at a rental of £10,335 per annum.

(x.) *Scrub Leases.* The Minister has power, on the recommendation of the Local Land Board (*a*) to declare as "Scrub Lands" any Crown lands wholly or partly covered by scrub or noxious undergrowth, and (*b*) to grant leases of such lands on application, or sell the same by auction or tender for a term not exceeding twenty-one years, which term may be extended by the Governor to twenty-eight years. The total area held under scrub leases on the 30th June, 1909, was 2,253,952 acres at a total rent of £8198.

(xi.) *Inferior Land Leases.* The Minister may, after report by the Local Land Board, lease by auction or tender for a period not exceeding twenty years (which term may be extended by the Governor to twenty-eight years) such lands as, in consequence of their inferior character or isolated position, may not have been held under any tenure, or, having been held, have been abandoned. At the close of the financial year 1908-9 there were current twenty-eight leases, covering 106,090 acres, at a rental of £261 per annum.

(xii.) *Occupation Licenses.* There are two forms of occupation licenses, viz., (*a*) preferential, consisting of the areas within expired pastoral leases, and (*b*) ordinary, which relate to the parts of holdings formerly known as resumed areas. Occupation licenses are granted annually by the Minister for Lands at rents determined by the Land Boards, and are terminable at notice. On the 30th June, 1909, there were 1958 permissive occupancies current, embracing about 915,471 acres, the rental being £5911; these figures are exclusive of Lord Howe Island and the Western District, and also of fifty-nine occupancies, aggregating 5247 acres, granted to the Commonwealth Government for rifle ranges.

(xiii.) *Western Lands Leases.* Subject to existing rights and to the extension of tenure to the 30th June, 1943, which might be granted to a lessee on bringing his lease within the provisions of the Western Lands Act 1901 (see § 2, 1, iii., above), all forms of alienation, other than by auction and leases, prescribed by the Crown Lands Act, ceased to operate within this division from the 1st January, 1902. Lands are declared open for lease by notice in the *Government Gazette*, and applications therefor may be made in the prescribed form, accompanied by a deposit of 20 per cent. on the amount of the first year's rent. Within one month from the date of issue of the lease the successful applicant must pay the balance of the first year's rent and execute the lease. The annual rent is determined by the Commissioners for periods not exceeding ten years, and the rent fixed for the first period cannot on reappraisement be either increased or decreased more than 25 per cent. on the first reappraisement, and this provision applies at each subsequent reappraisement to the rent last determined. No rent or license fee may be less than 2s. 6d. per square mile, but it may not be fixed at a higher rate than sevenpence per sheep on the carrying capacity of the land as determined by the Commissioners. The Minister may, on application and after report from the Commissioners, extend over a period not exceeding five years the payment of any money due to the Crown. All lands leased must be fenced within such period and with such class of fencing, not being a rabbit-proof fence, as the Commissioners may determine. Special leases may be granted to discoverers of artesian water.

(xiv.) *Leases and Licenses Current, 1901 to 1909.* On the 30th June, 1909, there were 58,026 leases and licenses current under the Lands Department and the Western Land Board, comprising 128,179,127 acres of Crown lands. Of these leases there were

40,130, comprising 22,452,715 acres, in the Eastern Division; 17,493, comprising 29,465,109 acres, in the Central; and 403, comprising 76,261,303 acres, in the Western Division.

The following table shews the areas held under various descriptions of leases and licenses at the end of the year 1901, and at the end of the financial years 1906, 1907 and 1908, and also the area and rental of leases current on the 30th June, 1909:—

The total annual rent derived from the leases and licenses issued by the Lands Department and the Western Lands Board amounted to £568,675, or an average of 1,065 pence per acre. Particulars regarding leases and licenses issued by the Mines Department are given in a later part of this section. (See § 9. *Occupation of Crown Lands for Mining Purposes.*)

3. **Victoria.**—The various types of leases and licenses (exclusive of Closer Settlement and Mines Department leases and licenses) under which Crown lands in this State may be issued are as follows:—(i.) Grazing area leases; (ii.) perpetual leases; (iii.) Mallee perpetual leases; (iv.) licenses of auriferous lands; (v.) swamp or reclaimed lands leases; (vi.) grazing licenses and pastoral leases; (vii.) leases and licenses for other than pastoral purposes; and (viii.) State forests and timber reserves licenses.

(i.) *Grazing Area Leases.* These leases may be granted for any term of years expiring not later than the 29th December, 1920. The area leased must not exceed 200, 640, or 1280 acres of first, second, or third-class land respectively, but may comprise two or more grazing areas, provided that the total acreage does not exceed the limit in each class. The annual rent is, according to the valuation and classification, not less than threepence an acre for first-class, twopence an acre for second, and one penny an acre for third-class land, payable half-yearly in advance. The lessee must fence the land within three years, or he may, if he prove to the Board that such fence is impracticable, or is not

required, expend on permanent improvements a sum equal to the cost of fencing. The written consent of the Board must be obtained before the lessee can assign, sublet, or divide his land, and before he can use growing timber for other purposes than for erecting fences and buildings on the land. The lessee must destroy all vermin, keep down the growth of all noxious weeds, and keep all improvements in good repair. He is also required to erect swing gates in places where there is a fence across any track required by any other pastoral lessee, or by the public. The right is reserved to the Crown to take at any time any portion of the area which may be required for railways or other public purposes, and to issue licenses to enter on the land for the purpose of obtaining timber, coal, stone, etc. The Crown also has a right to resume possession, after having given two years' notice in writing, upon payment to the lessee for his interest in such lease, together with the value of houses, fences, wells, reservoirs, tanks, dams, and all permanent improvements constructed by the lessee prior to such notice and during the currency of his lease. An outgoing lessee is entitled to payment from an incoming tenant for all fences, wells, reservoirs, tanks and dams constructed during the currency of his lease, but the sum to be paid in respect of such improvements must in no case exceed ten shillings, seven shillings and sixpence, or five shillings an acre for first, second, or third-class land respectively.

The lessee may select an agricultural or grazing allotment out of the land leased in the manner indicated above. (See § 6, 3 iii.)

(ii.) *Perpetual Leases.* Perpetual leases of any Crown lands available as agricultural or grazing lands, swamp or reclaimed lands, and Mallee lands may be granted to any person who is entitled to take up an agricultural or grazing allotment license in similar areas according to the classification of the land, but no person may hold under perpetual lease directly, or by transfer or otherwise, more than three times the areas that may be selected from the Crown. The lessee must destroy all vermin within two years, and must within six years from the date of issue of the lease enclose his land with a fence and keep the same in repair, or, if proved to the satisfaction of the Board that the erection of such fence is impracticable or not necessary, may expend on permanent improvements a sum equal to the cost of fencing. The lessee must reside on the land, or within five miles thereof (except in the case of swamp or reclaimed lands), for at least six months during the first year of his term, and for at least eight months during each of the following four years; but this covenant as to residence does not operate in the event of the cultivation by the lessee of at least one-fourth of his allotment within the first two years of his lease, and at least one-half thereof before the end of the fourth year. Permanent improvements must be made to the value of ten shillings an acre for first-class land, seven shillings and sixpence an acre for second-class land, and five shillings an acre for third-class land, before the end of the third year, and further improvements to the same values before the end of the sixth year of the lease. The lessee may not transfer, assign, mortgage, sublet, or part with the possession of the whole or any part of his allotment within the first six years of his lease, but at the end of that period, if no rent be owing and all conditions have been fulfilled, the lessee may, with the written consent of the Board, transfer, mortgage, sublet, or part with the land. The Crown reserves the right to resume any part of the lands demised, required for public or mining purposes, on payment to the lessee of the cost of moving and re-erecting his improvements and the loss sustained in relinquishing improvements not removable.

The rent payable by every perpetual lessee (other than for mallee and swamp or reclaimed lands, which is specially dealt with under the respective headings) is 4 per cent. on the unimproved value of the land, which is deemed to be twenty shillings an acre for first-class, fifteen shillings an acre for second-class, ten shillings an acre for third-class land until 29th December, 1909. For every successive period of ten years the unimproved value will be fixed by the Board, and the rent will be 4 per cent. of such value. The rent must be paid yearly in advance. Any lessee whose rent is not in arrears may surrender

his lease by making written application to the Board within six months of any successive period of ten years, after the 29th December, 1909, and if the Board is satisfied that the applicant holds the allotment *bonâ-fide* for his sole use and benefit, he may obtain a residential or non-residential agricultural or grazing allotment license. (See § 6, 3 i.) The value of all permanent improvements will be credited to the licensee.

(iii.) *Mallee Perpetual Leases.* Perpetual leases of mallee land may be granted to any person who is entitled to select under agricultural license in similar areas according to the classification of the land. The rent payable is 1¼ per cent. per annum on the estimated unimproved value of the land reviewed every ten years, and is payable annually in advance. The lessee must fence the land within six years, take up his residence on the land within six months after the grant of the lease, and continue to reside on or within five miles thereof for at least six months during the first year of his lease, and for at least eight months during each of the four following years. If, however, at least one-fourth of the allotment be cultivated within the first four years, and at least one-half before the end of the sixth year, or the allotment improved to the extent of ten shillings, seven shillings and sixpence, or five shillings per acre for first, second, or third-class lands respectively, the condition as to residence will not be enforced. The lessee must not cut or remove any live pine, box, or gum trees, and must protect all belts or clumps of such trees from fire. The perpetual lease conditions (previously explained) apply except that a perpetual lessee who so selects out of a Mallee allotment lease is entitled to transfer or mortgage within the first six years, and a Mallee perpetual lessee may *at any time* surrender and obtain a Mallee agricultural license (see above, § 6, 3 iii.), or if the necessary conditions required under license have already been fulfilled, including improvements and residence, a Mallee agricultural lease may be issued.

(iv.) *Licenses of Auriferous Lands.* The "auriferous lands" are distributed over various parts of the State. Annual licenses are issued for areas not exceeding twenty acres, entitling the holders to reside on or cultivate the area upon payment of a license fee of five shillings for areas of three acres or under, ten shillings for areas from three to ten acres, and one shilling per acre for areas over ten acres. Not more than one such license may be granted to or held by any one and the same person. The licensee is required to reside on the land during the continuance of the license, or to fence the land within four months from the date of issue of the license, and cultivate one-fifth of the area, allowance being made for any portion occupied by buildings; he cannot assign or sublet without permission. Notices must be posted on the land indicating that it is auriferous, and subject to Mining conditions. If the area can be separated from the auriferous land with the consent of the Minister of Mines, and has been improved to the value of £1 an acre, and if, in the opinion of the Board, the occupation is *bonâ-fide*, the licensee may surrender his annual license and obtain in lieu thereof a license for an agricultural or grazing allotment (see above, § 6, 3 i. and ii.), which will enable the freehold to be obtained. All rents paid and improvements effected may be credited, and the license will be antedated if the residence condition has been complied with.

(v.) *Swamp or Reclaimed Lands.* Swamp or reclaimed lands comprise the areas so classed under the Land Act 1901, and such other areas as may from time to time be drained or reclaimed, and proclaimed as swamp or reclaimed lands in the *Government Gazette*. The Governor in Council is empowered to cause any swamp lands to be drained and reclaimed by prison or other labour, and the Board and other persons authorised by them may enter upon any lands whatsoever for the purpose of making surveys and taking levels, and may also appropriate such parts of any lands as may be necessary for the construction of any canals or drainage works, provided that full satisfaction be made under the Lands Compensation Act 1890 to the owner or occupier of such lands for all damage sustained through the exercise of such powers.

These swamp or reclaimed lands are divided into allotments not exceeding 160 acres, and the value of each allotment is provisionally determined by a Land Classification Board; an allotment may be leased either for a term of twenty-one years, or under a perpetual lease, or under a conditional purchase lease (see § 6, 3 iv.), or may be disposed of by public auction (see § 5, 3). Every lease for twenty-one years, every perpetual lease, every conditional purchase lease, and every contract for sale of an allotment of swamp or reclaimed lands, must *inter alia* contain (*a*) a condition that the lessee or purchaser will keep open all canals, ditches, and drainage works on the land and adjacent to the land; and also (*b*) a condition that the lessee or purchaser will make permanent improvements on the land to the extent of ten shillings an acre in each of the three first years, unless the Minister is of opinion that such expenditure would not be advantageous or profitable, in which case the condition may be omitted or modified. The rent payable by the perpetual lessee of any swamp or reclaimed land is at the rate of 4 per cent. per annum on the value of the land, as fixed by the Classification Board and reassessed every ten years after the 29th December, 1909, not including any improvements which do not belong to the Crown. Conditional purchase leases are issued for a period of 31½ years, providing for the payment of the value of the allotment together with interest thereon at 4½ per cent. per annum, which, calculated over the whole term, is £3 half-yearly for every £100, and in sixty-three instalments pays off the purchase-money and interest. Residence is not necessary. Stringent conditions are imposed preventing assignment during the first six years. At any time after the expiration of six years from date of lease, if all conditions have been complied with, assignment is allowed on obtaining consent, and on payment of the balance of purchase-money at the end of any half-year, less interest for the unexpired term, the Crown grant may be obtained.

(vi.) *Grazing Licenses and Pastoral Leases.* Large areas of pastoral lands still remain in Victoria, chiefly in the north-eastern districts, but a considerable proportion of these areas, being mountainous, is difficult of access, and will be only made available for selection as the advancement of settlement demands. Provision is made in the Land Act for pastoral leases for a period of years, which expired on 29th December, 1909. These leases gave the right to select thereout a homestead of 200, 300, or 640 acres. Only a few such leases were issued, and no others are to be issued in the future. Pastoral lands are now occupied under annual grazing licenses.

Annual grazing licenses are also issued for lands set apart as reserves, and Crown lands, not required for other purposes. There is no limit to the area which may be so held, the rental charged varying according to the grazing value. Licenses may be renewed annually for any term not exceeding seven years, with the right to fence and make dams, but are subject to cancellation at any time if the land be required for other purposes.

(vii.) *Leases and Licenses for other than Pastoral or Agricultural Purposes.* Leases are granted of any Crown lands not exceeding (except in the case of leases for guano or other manure) three acres, for a term of not more than twenty-one years, and at an annual rent of not less than £5. These leases are granted for various purposes, such as—For obtaining guano, stone or earth; for sites of inns, stores, bridges, ferries, factories, quays, or landing places; for the working of mineral springs, and for the manufacture of salt. If the lessee fail to use the land *bonâ-fide* for the purpose for which he leased it, the lease may be cancelled at any time. Leases are also granted to persons who are willing to construct canals, docks, roads or tramways. Annual licenses are issued for any of the purposes for which leases are granted as above. If the licensee of a site for a butter factory or creamery, or for a residence, garden, inn, store, smithy, or similar building not within the boundaries of a city, has been in possession for five years and has constructed improvements on the land, provided that there are no objections to the alienation of the land on the ground of being auriferous or other reasons of a public nature, he may purchase the allotment at an appraised price and receive credit for all rent paid. No such licensee can purchase more than one site. Similar holdings under miner's right for

areas not exceeding one acre may be purchased under Sec. 36, Mines Act 1890, after two and a half years' possession.

Annual licenses may be granted at a rental of one shilling an acre for the purpose of a bee farm upon any Crown lands or upon any lands held under a pastoral or grazing lease or under an annual grazing license. No person may hold more than three bee-farm licenses, nor more than a total area of ten acres, and the holder of a grazing area or pastoral lease or of a grazing license may not keep more than ten hives of bees on his holding unless he is also the holder of a bee-farm license. The licenses may be renewable annually for seven years and cannot be sublet or transferred without consent. A bee-farm licensee may, at his own risk, erect buildings, fences, and improvements, but must remove same at any time if directed. No dog may be kept or allowed to remain on a bee-farm site. Any unalienated Crown lands may be proclaimed as available for being licensed for the purpose of being used for bee-range areas. Annual licenses are granted of areas, to be used as bee-range areas, at a rent of not less than one halfpenny for every acre within one mile of the site of the apiary as specified in the license.

(viii.) *State Forests and Timber Reserves Licenses.* Grazing licenses, residence licenses, and licenses to cut timber are issued for lands situated within State forests and timber reserves, which are now controlled by the Forest Branch of the Department of Mines under the Forests Act 1907.

(ix.) *Areas held under Leases and Licenses, 1901 to 1909.* The following statement shews the areas of Crown lands occupied under leases and licenses at the end of the year 1901, and from 1905 to 1909 inclusive:—

VICTORIA.—OCCUPATION OF CROWN LANDS UNDER LEASE OR LICENSE, 1901 to 1909.

4. **Queensland.**—In this State Crown lands may be occupied under the following types of leases and licenses:—(i.) Grazing farms; (ii.) grazing homesteads; (iii.) scrub selections; (iv.) occupation licenses; (v.) special leases; (vi.) perpetual lease selections; and (vii.) pastoral leases. General conditions as to applications for selections have been mentioned above. (See § 6, 4.)

(i.) *Grazing Farms.* Areas of land already surveyed are available for selection as grazing farms over a great extent of territory. The greatest area which may be applied for under any circumstances is 60,000 acres, but each proclamation opening land for grazing selection declares the maximum area which may be selected in the area to which it applies. In the event of lands open under different proclamations, and of a total area

exceeding 20,000 acres, being applied for by the same person, a rental limitation of £200 per annum must be observed. Thus, of lands open at twopence per acre, the maximum area obtainable would be 24,000 acres; at three halfpence per acre, 32,000 acres, and so on. The term may be fourteen, twenty-one, or twenty-eight years, as the opening proclamation may declare. The annual rent of the first period of seven years may range from one halfpenny an acre upwards, and may be proclaimed or tendered. Under the amending Act of 1909, the rent payable for a grazing selection during the first seven years may be either nominal or such as will encourage the selector to destroy certain specified noxious weeds or plants. The rent for each subsequent period of seven years will be determined by the Land Court.

A grazing farm must be continuously occupied by the selector residing personally on it, or by his manager or agent doing so. Within three years of the issue of the license to occupy, the selector must enclose the land with a substantial fence, and must keep it so fenced during the whole of the term. Within a period (not exceeding seven years) to be fixed by proclamation, the selector must eradicate specified noxious weeds. In the case of two or more contiguous farms, not exceeding in the aggregate 20,000 acres, the Court may permit the selectors to fence only the outside boundaries of the whole area. If so declared by proclamation, the enclosing fence must be of such a character as to prevent the passage of rabbits.

The applicant for a grazing farm must first obtain an occupation license, and as soon as the land is fenced in the manner prescribed, the selector becomes entitled to a lease of it, and may thereafter mortgage it; or with the permission of the Minister may subdivide or transfer it; or with the consent of the Land Court, may underlet it. The cost of survey—of which one-fifth must be paid when application is made—ranges from about £30 for a farm of 2560 acres to about £65 for 20,000 acres.

Particulars of grazing farms are given in paragraph (iii.) hereinafter.

(ii.) *Grazing Homesteads.* Lands available as grazing farms are also available for selection as grazing homesteads at the same rental and for the same term of lease. Under the amending Act of 1909, land opened for grazing selection is available at first for homesteads only, and can only become available as grazing farms if it remains unselected as homesteads for four weeks. The conditions and provisions stated above in respect of grazing farms are applicable also to grazing homesteads, with the following two exceptions:—(*a*) During the first five years of the term of a grazing homestead the conditions of occupation must be performed by the continuous personal residence of the selector on the land. (*b*) Before the expiration of five years from the commencement of the term, or the death of the original lessee, whichever first happens, a grazing homestead is not capable of being assigned or transferred. Unless with the special permission of the Minister, a grazing homestead may not be mortgaged.

Particulars of grazing homesteads are given in paragraph (iii.) hereinafter.

(iii.) *Scrub Selections.* Lands which are entirely or extensively overgrown with scrub are available for selection in different classes according to the proportion of the land covered with scrub. The area selected must not exceed 10,000 acres, and the term of the lease is thirty years, the rent ranging from a peppercorn an acre in the first five years, one halfpenny an acre for the next succeeding ten years, and one penny an acre for the remaining fifteen years in respect of lands in the first class; to a peppercorn for the first twenty years, and one penny an acre for the remaining ten years in respect of those in the fourth class. During the first period in which the selector pays a peppercorn rent he must clear the whole of the scrub in equal proportions each year, and must keep it cleared, and must enclose the selection with a good and substantial fence. A negotiable lease is issued to the selector when his application is approved.

The following table shews the number of grazing farms, grazing homesteads, and scrub selections, for which applications were accepted during each year from 1901 to 1909:—

QUEENSLAND.—GRAZING FARMS, HOMESTEAD AND SCRUB SELECTIONS, 1901 to 1909.

Year.	Grazing Farms.		Grazing Homesteads		Scrub Selections.		Total.	
	No.	Area.	No.	Area.	No.	Area.	No.	Area.
		Acres.		Acres.		Acres.		Acres.
1901 ...	247	1,371,283	47	290,785	19	48,450	313	1,710,518
1902 ...	245	1,410,364	38	171,104	10	51,058	293	1,632,526
1903 ...	106	709,183	25	123,026	6	5,423	137	837,632
1904 ...	150	1,244,072	21	176,435	1	200	172	1,420,707
1905 ...	210	1,738,882	23	120,982	7	31,457	240	1,891,321
1906 ...	262	2,067,275	56	404,499	3	9,562	321	2,481,336
1907 ...	374	3,028,696	54	315,444	8	58,954	436	3,403,094
1908 ...	314	2,459,653	91	870,325	4	16,401	409	3,346,379
1909 ...	304	3,114,593	116	1,509,210	2	8,489	422	4,632,292

The average rent in 1909 was 1d. per acre for grazing farms and $2\frac{5}{16}$d. per acre for grazing homesteads.

Particulars of total areas held under leases and licenses are given in a later part of this section. (See § 11.)

(iv.) *Occupation Licenses.* Annual licenses are granted to occupy Crown lands which have been declared open for such occupation by notification in the *Gazette*. The rent is as specified by the notification or as bid by the licensee, but the Minister may by notice before the 1st September in any year increase the rent by an amount not exceeding 25 per cent. The licensee is entitled to compensation for improvements effected of which the Land Court has approved. The total number of licenses in force at the end of the year 1909 was 1727, comprising an area of 59,472 square miles, the total rent being £28,338. Particulars of the area held under license for previous years are given in a later part of this section. (See § 11.)

(v.) *Special Leases.* Leases of any land not exceeding 250 acres in area may be issued for the erection of wharves, store-houses, ship-building yards, baths, waterworks, gas or electricity works, or for any manufacturing, industrial, residential, or business purposes, for a term not exceeding thirty years, and upon conditions to be determined by the Governor-in-Council. Leases for a similar term may be issued for any country lands reserved for public purposes and which are infested with noxious weeds, on the conditions that steps are taken to destroy such weeds and that the land is held so that it may be used for the public purpose for which it was reserved without undue obstruction.

During the year 1909 there were 89 leases for special purposes granted, comprising an area of 2595 acres, the total annual rent being £473, and there were extant at the end of the year 413 such leases, reserving rents amounting to £2361 per annum. In addition, 35 leases of reserves, aggregating 11,993 acres, were granted at rentals amounting to £152 per annum; the total number of these leases of reserves in force at the end of the year being 72, reserving rents amounting to £265. Particulars of special leases are given for previous years in a later part of this section. (See § 11.)

(vi.) *Perpetual Lease Selections.* This form of tenure was introduced by the Lands Act Amendment Act 1908. Land proclaimed to be open for agricultural farm selection (see § 6, 4, above) may also be opened for perpetual lease selection, and the latter mode may be conceded priority of application over the former. The rent for the first period of

ten years of the lease is 1½ per cent. on the proclaimed purchasing price of the land for agricultural farm selection. The rent for each succeeding period of ten years is determined by the Land Court. The same conditions of occupation and improvement as are prescribed for agricultural farms are attached to perpetual lease selections, and, except as specially prescribed, the provisions relating to agricultural farms apply to them also. As the name implies, the selections are leases in perpetuity, and are not capable of being converted to freeholds.

(vii.) *Special Licenses.* Licenses to cut timber or to dig for any stone, gravel, earth, shells, or guano, may be issued. The prescribed fees and a royalty must be paid.

(viii.) *Pastoral Leases.* By far the greater number of pastoral leases are now held under the Land Act 1897 in conjunction with the Act of 1902. Under the former Act existing lessees could surrender their leases and obtain new leases for one part of the areas surrendered for terms ranging from ten to forty-two years. The other part called "the resumed part" was deemed to be Crown lands subject to the lessee's right of depasturing. Under the Amendment Act of 1909, the right of depasturing on the resumed part is terminable at any time by six months' notice. Previously, so long as the rent was paid, a right of depasturing was only terminable in respect of such parts of the area as might be selected or otherwise disposed of under the selection or sale provisions of the Land Act. Another important provision of the Amending Act as affecting pastoral holdings (as well as other leases) is contained in Section 27. It empowers the Minister to require a lessee to entirely eradicate prickly pear growing on his holding within such time, not exceeding ten years, as the Land Court may allow, and permits the lessee with the approval of the Minister to surrender one-fourth of the holding. The Amending Act of 1909 repealed eleven Pastoral Land Acts which had become practically inoperative; all rights and obligations existing under these Acts are preserved.

The following table shews the total areas of pastoral leases (including resumed parts) occupied under the various Acts at the end of the year 1901 and from 1905 to 1909, inclusive:—

QUEENSLAND.—PASTORAL LEASES OCCUPIED UNDER VARIOUS ACTS, 1901 to 1909.

Particulars.	Area in Square Miles.					
	1901.	1905.	1906.	1907.	1908.	1909.
Pastoral Leases Act 1869	39,307	11,423	5,494	3,524	1,513	1,379
Crown Lands Act 1884	243,586	65,993	37,626	31,802	26,842	18,733
Land Act 1897	15,046	10,680	4,653	3,686	3,686	1,307
Pastoral Leases Act 1900	50,076	31,590	27,249	27,130	24,061	24,061
Pastoral Holdings New Leases Act 1901...	—	108	129	339	349	347
Land Act 1902	—	161,022	209,824	235,597	258,975	280,960
Total	348,015	280,816	284,975	302,078	315,426	326,787

The gross area held at the end of the year 1909 for purely pastoral purposes (under *Occupation Licenses and Pastoral Leases*) was 386,259 square miles, at rentals aggregating £311,334 per annum. The area was 8272 square miles greater than that for the previous year, and the rental was £11,749 greater. The average rent was 16s. 1½d. per square mile, as against 15s. 8¾d. for the previous year.

5. **South Australia.**—The following are the various types of leases and licenses which are issued in this State:—(i.) Perpetual leases; (ii.) miscellaneous leases; (iii.) grazing and cultivation leases; (iv.) reclaimed swamp leases; (v.) licenses for special purposes; (vi.) leases under the Pastoral Act 1904; and (vii.) leases with right of pur-

chase. General information regarding applications for leases and agreements has been given above. (See § 6, 5.) Leases of lands in the Northern Territory are dealt with in the next succeeding part of this sub-section.

(i.) *Perpetual Leases.* Any Crown lands which have been surveyed, or the boundaries thereof delineated on the public maps, are available for perpetual lease. The area and rent are determined by the Commissioner on the recommendation of the Land Board, and applications therefor must be accompanied by a deposit of 20 per cent. of the first year's rent, as notified in the *Gazette*. The lessee is required to execute and deliver the lease within twenty-eight days, and to pay the balance of the first year's rent and the prescribed fees within the same period. The land is vested in the lessee in perpetuity, and the rent is determined by the Board for each term of fourteen years, at least twelve months before the expiration of such period of fourteen years. If the lessee does not accept a revaluation of the rent within six months his lease determines at the then current period of fourteen years of his lease. All perpetual leases not subject to revaluation of rent are liable to the land tax, and the rent originally reserved is payable during the whole of the term. In respect of any land which, on account of deficiency of rainfall, is only suitable for pastoral purposes, the rent of such land is fixed at pastoral rates. The Crown reserves the right to resume any part of the land for the purposes of roads, tramways, railways, mining, etc., on making reasonable compensation to the lessee, and there is also in all leases a reservation to the Crown of all minerals, precious stones, coal, and mineral oils. The lessee may, after six years, with the consent of the Commissioner, sublet the whole or any part of his holding for a period not exceeding three years.

(ii.) *Miscellaneous Leases.* Leases of Crown lands, not exceeding 640 acres in extent, may be granted on such terms and conditions as the Governor may think fit to any *bonâ-fide* discoverer of any guano or other valuable substance or deposit (not including minerals).

The Governor has power to resume possession of any well or place where water has been found, and also of not more than one square mile of land contiguous thereto. If the water so found is artesian the area resumed may be increased to five square miles. The Governor may offer a lease of such land resumed by private contract or public auction.

Leases may also be granted by sale by auction for a term not exceeding twenty-one years of any Government buildings not required for Government purposes or of any Crown lands, for a variety of purposes, such as—for obtaining guano, stone, clay, or earth; for sites for inns, stores, factories, wharves, or for any other purpose approved by the Commissioner. Leases of lands comprised within any forest reserve may also be granted for any term not exceeding forty-two years.

(iii.) *Grazing and Cultivation Leases.* Every miscellaneous lease under any of the Crown Lands Acts for grazing and cultivation purposes, or grazing purposes only, is held to have been lawfully granted, and the power of resumption, if required for any purpose of public utility, is reserved to the Crown. Any lessee under any such miscellaneous lease may, with the consent of the Commissioner, cultivate the whole of the land without rendering the lease liable to forfeiture, provided that no trees be injured or timber be cut down or destroyed without the consent of the Commissioner.

(iv.) *Reclaimed Swamp Lands.* These are subdivided and offered on perpetual lease in the same manner as other lands are offered. The rent may not be less than 4 per cent. per annum on the cost of reclaiming and the unimproved value of the land. During the first year only one-quarter of the annual rent need be paid, one-half during the second year, three-quarters during the third year; afterwards the whole annual rent must be paid yearly. No person may hold more than two blocks of reclaimed lands. Any of these lands remaining unallotted for a year may be let at reduced rental, or on miscellaneous lease. (See also § 8, 6 iii. hereinafter.)

(v.) *Special Licenses.* Licenses to remove timber, stone, guano, manure, shell or seaweed from Crown lands, and for fishermen's residences and drying grounds, for manufactures, slaughter-houses or saw mills, for depasturing stock, or other approved purposes for any term not exceeding a year, may be granted by the Commissioner or any person authorised by him on payment of a fee as fixed by regulation.

(vi.) *Leases under the Pastoral Act 1904.* This Act deals with Crown lands which do not come within the scope of the Lands Acts. The Act is administered, under the Commissioner of Crown Lands, by a Board consisting of three members appointed by the Governor. The duties of the Board are to decide upon the area, rent, and term of lease of land, and to allot the same. In fixing the size of the blocks allotted regard is paid to natural features, so as to allocate improvements and water to each block as equally as possible. The amount to be paid for any improvement is fixed, distinguishing between amounts payable to the Crown and to the outgoing lessee.

(*a*) *General Provisions.* Notice of land available is published in the *Gazette*, shewing the area, situation, term of rent of each block, price to be paid for improvements, and the cost of valuing such improvements. Any land not applied for within a month of the date of the notice may be reoffered at a reduced price, and so on at intervals of three months until applied for. Each application must be accompanied by a quarter of a year's rent and 5 per cent. of the price payable for improvements, or 10 per cent. if the improvements do not belong to the Crown. The successful applicant must pay the balance of the first year's rent and the lease fee within one month after allotment. A lease does not entitle the holder to mining rights, or to remove timber, but only to use the surface of the land for pastoral purposes, or for other purposes approved by the Commissioner. The cost at the nearest port or railway station of barbed wire and netting required for vermin-proof boundary fences may be advanced to the lessee by the Commissioner in certain cases, upon the recommendation of the Board, after wire and netting to the amount of such cost have been utilised in vermin-proofing boundary fences. These advances bear interest at 4½ per cent. per annum, principal and interest being repaid in twenty equal annual instalments of £7 13s. 9d. for every £100 advanced. Leases may be granted to charitable incorporated bodies for any term not over twenty-one years, at such rent and terms as the Governor may think fit, of land for aboriginal reserves, in blocks not exceeding 1000 square miles, with right of renewal so long as the land is used for the aboriginals.

(*b*) *Terms and Conditions.* The term of the lease is forty-two years, unless the land is likely to be required for closer settlement, when the term is twenty-one years; forty-two-year leases are subject to revaluation of rent for the latter twenty-one years. In determining the rent the Board must in all cases have regard to the land's carrying capacity for stock, its value for other purposes, its proximity and facility of approach to railways, ports, rivers, or markets. Within twelve months of the expiry of a lease all improvements on the land must be valued, and their position indicated on a plan. Unless already improved up to £3, every lessee is required to expend in improvements on the land a sum fixed by the Board, not exceeding ten shillings per mile per annum, until at least £3 per mile has been so expended. Payment for improvements belonging to the Crown may be made by annual instalments, extending if desired over forty-two years, the lessee meanwhile keeping such improvements in repair. Improvements must consist of wells, tanks, dams of a permanent character, machinery, and appliances for raising water, vermin-proof or other fences, huts or sheds erected for residence or shearing or other purposes required in connection with live stock. The lessee must stock his holding in the proportion of five head of sheep or one head of cattle for every square mile within three years, and within seven

years in the proportion of twenty head of sheep or four head of cattle for every square mile. The average annual rental of pastoral lands is about three shillings and twopence per square mile.

(c) *Resumption and Free Leases of Pastoral Lands.* Any run may be resumed for public works, sites for a town or cemetery, for mining, or for park lands, on a month's notice; or for intense culture, after the first ten years of the term, after a year's notice. The lessee is entitled to compensation for land resumed from his run, or for loss or depreciation in value of his lease caused by such resumption, and for improvements. The Commissioner or any person authorised by him, may enter on any run to sink bores or wells, or to construct dams or other water conservation works, outside of one mile from any improvements consisting of well, dam, or building worth £100. If water is so discovered, an area of one square mile may be resumed, and a lease thereof granted to the discoverer. Where artesian water is discovered, five square miles may be resumed. If a lessee discover artesian water on his run, at least ten miles from any other artesian supply on his run, which yields not less than 5000 gallons per day of water suitable for stock, he is entitled to 100 square miles of land surrounding the well, rent free for ten years, for each well so discovered up to four.

Very little pastoral country was applied for or allotted during 1909, although 15,439 square miles at low rentals, once stocked, have been open to application for some years. In addition there is available about 148,000 square miles of unoccupied country. The reason for so little of this land being applied for is partially due to the large increase of wild dogs and the impossibility of keeping sheep without expensive fences, the absence of permanent water, and the distance from market. The area of land held under pastoral leases is 130,218 square miles, at an annual rent of £24,505 and yearly instalments of purchase-money for improvements £12,835 ; also 11,169 square miles are held on annual permits at a rental of £1004.

(vii.) *Leases with Right of Purchase.* Under the Crown Lands Act of 1888, now repealed by the Crown Lands Act 1903, and the Pastoral Act 1904, leases were granted with a right of purchase for a term of twenty-one years, containing a right of renewal for a further term of twenty-one years and a right of purchase, exercisable at any time after the first six years at a price of not less than five shillings an acre. The renewed leases are now governed by Part V. Division V. of the Act of 1903. The rent for the term of any renewed lease with a right of purchase is fixed by the Board by revaluation at least twelve months before the expiration of the original lease, and the renewed lease contains a right of purchase exercisable at any time during the term of the renewed lease. In fixing the purchase-money and rent for a renewed lease the Board, in cases of revaluation, does not consider the value of the improvements made.

(viii.) *Area held under Lease, 1901 to 1909.* The following table shews the area held under leases and licenses at the end of the year 1901, and from 1905 to 1909 :—

SOUTH AUSTRALIA (Proper).—AREA UNDER LEASES AND LICENSES, 1901 to 1909.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

Other Leases	3,905,729	2,273,383	2,113,718	1,985,866	1,812,959	1,513,032
Total held under Lease	85,577,155	94,147,909	94,969,554	98,522,100	102,516,713	106,871,714

6. **Northern Territory.**—In the Northern Territory the freehold of the land may only be acquired either by purchase at auction or by private agreement (see § 5, 5 (iii.) above) or by first taking a lease with right of purchase. The various types of leases and licenses issued are as follows:—(i.) Agricultural leases; (ii.) pastoral leases; (iii.) special leases; (iv.) leases with right of purchase; (v.) perpetual leases; (vi.) tropical products leases; (vii.) leases for horsebreeding stations; and (viii.) licenses.

(i.) *Agricultural Leases.* Leases may be granted for a term of five years at an annual rent of sixpence an acre for blocks, not exceeding 640 acres, of any lands north of 17° Lat. S. for the production of rice, sugar, coffee, tea, indigo, tobacco, cotton, or of any other agricultural product which may be allowed by the regulations. Leases for blocks not exceeding 160 acres may be granted, on residential conditions, at a rent of threepence an acre. The lessee must fence his holding during the term of the lease; within two years from the date of the lease he must cultivate at least one-tenth of the land, and during the third and every subsequent year must cultivate at least one-twentieth additional part of the area.

(ii.) *Pastoral Leases.* Leases for pastoral purposes are regulated by the Pastoral Act of 1899, which provides that leases may be granted for a term of forty-two years at an annual rental of sixpence per mile for the first seven years, not less than one shilling per mile for the second period of seven years, and two shillings for the third period of seven years; the rent for the remainder of the term is fixed by valuation. It is also provided that land which has been once leased for pastoral purposes may not be leased again for the same purposes unless a lease thereof has been offered for sale by auction at an upset yearly rent of sixpence per square mile. The lessee must stock the land before the end of the third year with five head of sheep or one head of cattle per square mile, and before the end of the seventh year must increase the stock to ten sheep or two head of cattle per square mile. The land may be resumed for public purposes upon three months' notice, or for other purposes upon two years' notice. Since the year 1902, long leases for pastoral purposes have not been granted. Land has been let only on annual permits; if the holder of a permit can shew that he is making good use of the land, and if no application has been made for it for agricultural purposes, the permit is extended.

(iii.) *Special Leases.* Discoverers' leases may be granted, on such terms as the Minister may think fit, for areas not exceeding 640 acres for coal, petroleum, guano, or other valuable substance (excluding minerals). Special leases may be sold at auction for the purpose of obtaining clay and stone as sites for stores, inns, wharves, factories, etc.

(iv.) *Leases with Right of Purchase.* These leases are granted for classified surveyed country lands, situated north of the 17th parallel, for twenty-one years with a right of renewal for a further period of twenty-one years and a right of purchase at a price to be fixed by the District Land Board, not being less than five shillings an acre. The rent is as notified in the *Gazette*. The land must be fenced within seven years. No person may hold more than 3000 acres under right of purchase or perpetual leases.

(v.) *Perpetual Leases.* These leases are granted for the same lands as right of purchase leases at a rent for the first fourteen years as notified in the *Gazette*, and for every subsequent period of fourteen years as fixed by the Board on revaluation. The land must be fenced within seven years. The maximum area which may be held either alone or with right of purchase lands is 3000 acres.

(vi.) *Tropical Products Leases.* Under the Tropical Products Act, 1904, areas (not exceeding 5000 acres to any one occupier) north of the 18th parallel and within 10 miles of Palmerston, may be held under agreement from the Crown. Not more than 100,000 acres may be so disposed of under the Act. The term is for fourteen years and the occupier must use the land for the cultivation of cotton or tropical products, as defined.

During the first three years he must plant one twenty-fifth and during the last four years, at least one-fifth of the land. After the first seven years a rental of one-and-a halfpenny per acre must be paid. The lessee may obtain the freehold on payment of two shillings and sixpence per acre and upon proof that he has expended ten shillings in the aggregate on each acre in cultivation and plant; that he has produced 200 lbs. weight of marketable cotton or tropical products of equal amount in value for every acre held; and that he has cultivated one-third of the land.

(vii.) *Leases for Horse-breeding Stations.* These leases may be granted for a maximum term of 42 years and in maximum blocks of 5000 square miles, for the first seven years at a peppercorn rent, and thereafter at a valuation, but not so as to exceed three shillings, nor be less than one shilling per mile.

(viii.) *Licenses.* Commonage licenses for depasturing sheep or cattle on Crown lands and annual licenses for any purpose approved by the Minister may be granted.

(ix.) *Area held under Lease, 1901 to 1909.* The following table shews the total area held under lease at the end of the year 1901 and from 1905 to 1909:—

NORTHERN TERRITORY.—AREAS HELD UNDER LEASE, 1901 to 1909.

Particulars.	1901.	1905.	1906.	1907.	1908.	1909.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

Other Leases	1,176,981	1,248,019	1,376,010	1,347,858	1,293,457	512,650
Total Leased	112,654,288	103,280,346	109,726,087	107,269,509	103,419,428	96,077,714

7. **Western Australia.**—The following are the various types of leases and licenses issued in this State:—(i.) Pastoral leases; (ii.) permits and licenses to cut timber; (iii.) special leases; and (iv.) licenses for quarrying.

(i.) *Pastoral Leases.* Leases are granted for pastoral purposes throughout the State, but such leases give no right to the soil, or to the timber, except to such timber as may be required for domestic purposes or for the construction of improvements, but the lands leased may be thrown open to selection by the Crown at any time upon giving twelve months' notice to the lessee. All pastoral leases expire on the 31st December, 1928; the following are the conditions upon which such leases are issued in the various divisions of the State:—(*a*) In the South-west Division in blocks of not less than 3000 acres, at an annual rent of £1 for each 1000 acres or part thereof. (*b*) In the Central and North-west Divisions, in blocks of not less than 20,000 acres at an annual rent of ten shillings for each 1000 acres or part thereof. (*c*) In the Eucla Division, in blocks of not less than 20,000 acres at an annual rent of three shillings for each 1000 acres or part thereof. (*d*) In the Eastern Division, in blocks of not less than 20,000 acres at an annual rent of five shillings for each 1000 acres or part thereof. (*e*) In the Kimberley Division, in blocks of not less than 50,000 acres when on a frontage, nor less than 20,000 acres when no part of the boundary is on a frontage, at an annual rent of ten shillings for each 1000 acres or part thereof. Any lessee in the Kimberley Division may obtain a reduction of one-half the rent due for the remaining years of his lease, who at any time during the term of his lease has, and for so long as he has, in his possession on the land the subject of the lease, or of any other lease not separated by a greater distance than twenty-five miles, owned and worked by the lessee as one station, ten head of sheep or one head of large stock for each 1000 acres leased. Under the Amendment Act of 1906, which is not retrospective, it is provided that if any pastoral lease or group of leases worked as one station is not kept stocked, after the first two years from the commencement of the term, at the rate of at least ten head of sheep or one head of large stock for every 1000 acres comprised therein, such lease or leases are liable to forfeiture. In order to facilitate settlement the

necessary twelve months' notice of resumption was given in the year 1908 to all pastoral lessees in that portion of the Eastern Division which was included in the South-western Division by the Amendment Act of 1906. Until the term of this notice expires no selections can take place in these leases without the consent of the lessees.

(ii.) *Permits and Licenses to Cut Timber.* The alienation of forests and timber lands is now regulated by the Lands Act Amendment Acts of 1904 and 1906, under which the Governor is authorised to appoint an Inspector-General of Forests and an Advisory Board consisting of three persons, whose duty it is to advise the Minister upon all matters relating to forest conservation and timber lands. The Governor is authorised to declare any Crown Lands to be a State forest or timber reserve, and to grant to persons desirous of erecting saw-mills permits to cut timber in any State forest or timber reserves, or on any Crown land, upon the following conditions:—(*a*) That the right of cutting timber is granted over an area proportional to the horse-power of the mill proposed to be erected on the basis of the provision of ten years' cutting; (*b*) that the railway or tramway connecting such mill with any Government railway shall be located in such manner as will best serve the country requiring an outlet in that vicinity; (*c*) that the permit is liable to forfeiture in the event of the mill being closed for a period of one month without the consent of the Governor, or in the event of any breach of any condition or provision; (*d*) such other conditions as may be prescribed. Licenses may also be granted to hew and fell timber for piles, poles, or baulks, subject to the payment by the licensee of royalties proportional to the measurement of the timber hewn or felled. The amount of all fees or royalties is fixed by the Governor.

(iii.) *Special Leases.* On receiving an application in the prescribed form the Governor may grant leases of any Crown land for any area not exceeding (except in the cases of leases for guano or other manure, or for the collection or manufacture of salt) twenty-five acres, for a term not exceeding twenty-one years, at a yearly rental of not less than £2, for a variety of purposes, such as:—For obtaining guano, stone, or earth; for sites for inns, stores, bridges, factories, wharves, and jetties; for the working of mineral springs; for the collection and manufacture of salt; for works for supplying water, gas, or electricity; or for any other purpose approved by the Governor. The lessee must pay a deposit of one-half of the first year's rent, and must also pay for the cost of survey. In all cases where it is proposed to grant a lease for a longer period than ten years, notice of the application for such lease and of the purpose and term thereof must be published in four consecutive numbers of the *Gazette*.

(iv.) *Licenses for Quarrying.* Licenses are granted to any person to quarry and dig for any rock, soil, or other material, on any lands vested in the Crown, not being on a goldfield or in a mining district, for building purposes and to make bricks or any other commodity. The fee to be paid for such license is determined by the Governor, not being, however, less than five shillings per month for each man employed.

(v.) *Areas Held under Leases and Licenses, 1901 to 1910.* The following table shews the number and area of leases and licenses issued during the year 1901, and from 1905 to 1910:—

WESTERN AUSTRALIA.—LEASES AND LICENSES ISSUED, 1901 to 1910.

1. For financial year ended the 30th June. 2. No timber leases granted since 1903.

Particulars as to the total area occupied under leases and licenses are given in a later part of this section. (See § 11.)

8. **Tasmania.**—The several forms of leases and licenses in this State are as follow:—(i.) Grazing leases; (ii.) miscellaneous leases; (iii.) timber licenses; and (iv.) occupation licenses.

(i.) *Grazing Leases.* Grazing leases of unoccupied country may be offered at auction, but such runs are liable at any time to be sold or occupied by virtue of a license for other than pastoral purposes, and to be otherwise alienated and dealt with. The rent is fixed by the Commissioner, and the run is put up for auction, the highest bidder receiving a lease to occupy the same for fourteen years, which may be transferred by the lessee with consent of the Commissioner, and on payment of a fee of one shilling in the pound on the annual rental. The rent is payable half-yearly in advance, and the lease is determinable, should the rent not be paid within one month of becoming due. In the event of the land being required for sale or for any public purpose, six months' notice must be given to the lessee, who becomes entitled to receive from the Crown compensation for the value of all permanent improvements he may have made during the currency of his lease.

(ii.) *Miscellaneous Leases.* The Governor in Council may grant leases for a period not exceeding fourteen years of any land bordering upon a navigable river, or on the sea, if required for the purpose of constructing wharves, docks, jetties, or any other works of public utility. For whatever purpose the land is leased, the lease may be determined in case of non-completion of the works. Leases may also be granted, on similar conditions and terms, for the purpose of constructing watercourses, or of erecting a manufactory, mill, or such other work, or for constructing railways or tramways.

(iii.) *Timber Licenses.* Temporary licenses for a period not exceeding five years may be granted for the purpose of felling timber, or for removing gravel, clay, or stone, etc., on or from particular localities.

(iv.) *Occupation Licenses.* Occupation licenses may be issued by the Commissioner for a period not exceeding twelve months, to any person of the age of twenty-one or over, upon payment of a fee of five shillings. The license must describe the position and area of the land; no person can hold more than one such license at any time. Any person holding an occupation license is entitled to occupy, during the current year, the surface of any Crown land within any mining area not exceeding one-quarter of an acre. An occupation license is not transferable, and the holder thereof is not entitled to any compensation in respect of any improvements effected on the land, should the same be resumed by the Crown. The license is terminable at any time by three months' notice.

Residence licenses are granted on similar terms upon payment of a fee of ten shillings, and any person holding a residence license is entitled to occupy as a domicile, during the current year, the surface of the land described, which cannot exceed one-quarter of an acre in extent, within any town situate within a mining area.

Business licenses are also granted on similar conditions upon payment of a fee of twenty shillings, and entitle the holder to occupy, during the current year, the surface of any Crown land situated within any mining area not exceeding one-quarter of an acre, not being within a town. Residence and business licenses may be transferred by endorsement to any person eligible.

(v.) *Area held under Leases and Licenses.* The following table shews the areas of Crown lands occupied under leases and licenses at the end of the year 1901 and from 1905 to 1909:—

TASMANIA.—LEASES AND LICENSES, 1901 to 1909.

§ 8. Closer Settlement.

1. **Introduction.**—In all the States, Acts have been passed authorising the Governments to repurchase alienated lands for the purpose of cutting them up into blocks of suitable size and throwing them open to settlement on easy terms and conditions. Special Acts have also been passed in several of the States authorising the establishment on particular lines of co-operative communities, village settlements, and labour colonies. Lands may be acquired either compulsorily or voluntarily in New South Wales, Victoria, Queensland, and Tasmania, but only voluntarily in South Australia and Western Australia.

The following table gives particulars up to the latest available date of operations under the Closer Settlement Acts for each State and the whole Commonwealth :—

CLOSER SETTLEMENT.—TOTAL AREAS ACQUIRED AND ALLOTTED UP TO 30th JUNE, 1910.

* Particulars are for calendar years. † Up to the 31st December, 1909.

2. **Government Loans to Settlers.**—For the purpose of promoting pastoral, agricultural, and similar pursuits, and with the object of assisting settlers in erecting buildings and carrying out improvements on their holdings, general systems have been established in all the States, under which financial aid is rendered to settlers by the State Governments. These general systems are more particularly referred to in the section in this book dealing with "Agriculture." In many of the Closer Settlement and similar Acts, however, special provisions have been inserted with the object of lending money to settlers taking up land under these Acts, with which to build homes or effect improvements. The principal features of these provisions are referred to below.

3. **New South Wales.**—Under the Closer Settlement Act of 1901 provision was made for the acquisition of private lands or of Crown lands held under lease, for the purpose of closer settlement. No power of compulsory resumption was conferred by the Act, which was consequently practically inoperative. Under the Closer Settlement Act of 1904, as amended in 1906, 1907, and 1909, the Government is empowered to resume private lands, either by agreement or by compulsory purchase, and to alienate them on favourable terms to persons who desire to settle and make homes for themselves and their families on the soil. The administration of the Closer Settlement Acts is in the hands of a Board, consisting of the President and Commissioners of the Land Appeal Court and the Chairman and members of the Local Land Board for the district in which the land under inquiry is situated. Under the Act of 1907 three Advisory Boards have been appointed, one for each of the northern, central-western, and southern portions of the State, embracing the whole of the Eastern and Central Territorial Divisions, to report to the Minister what private lands are suitable for closer settlement. This Act also gave power to acquire lands within fifteen miles of any approved railway line, exclusive of the enhancement in value on account of such railway. Land acquired under the Acts is subdivided into blocks or farms, and by notification in the *Government Gazette* is declared to be a settlement purchase area available for application. The *Gazette* notice also gives all necessary information as to the class and character of the land, and the capital value, area, etc., of each block or farm. Under the Amending Act of 1909 any land within a settlement purchase area unsuitable for disposal under the provisions of the Closer Settlement Act, may be disposed of by sale or lease, by auction or tender, upon terms and conditions to be determined.

(i.) *Closer Settlement Purchase.* Under this tenure a settler may acquire the freehold of the land under a system of deferred payments. A male applicant must not be under the age of eighteen years, or a female under twenty-one years. A deposit of 5 per cent. of the notified value of the settlement purchase must be lodged with the application, and a similar amount by way of instalment, paid annually until the purchase-money, together with interest at the rate of 4 per cent., is paid off. Under this system the balance due to the Crown will be paid off in thirty-eight years, the holding then becoming a freehold. A condition of residence for ten years attaches to every settlement purchase, and the purchaser must commence to reside on his holding within twelve months after the date of the Land Board's decision allowing the purchase, unless the commencement of residence is extended to some date within five years from the date of purchase, on such terms and conditions as to improvements and cultivation as may be agreed on between the Local Board and the purchaser. With the Board's permission, residence may be performed in any adjacent village or town. Under the amending Act of 1909 postponement of the payment of instalments may be granted by the Minister, subject to the conditions (*a*) that additional improvements to the value of the amount postponed be made on the land within twelve months, and (*b*) that interest at 4 per cent. per annum be paid on the amount postponed.

(ii.) *Closer Settlement Annual Leases.* Leases for areas not exceeding 320 acres may be obtained under the Closer Settlement Acts, subject to such conditions as the Governor may prescribe. Land so leased may not be improved without the written consent of the Minister, or of the Chairman of the Local Land Board, which Board fixes the annual

rent. These leases expire on the 31st day of December of the year in which they are granted, but may be renewed from year to year on payment of the yearly rent in advance, not later than the 10th December of each year. The granting of a lease of this kind will not exempt the land held thereunder from being granted as a settlement purchase, and on a valid application for a settlement purchase the lease of so much of the land as is applied for is thereby determined from the date of that application. In such cases the rent will be adjusted, and any balance paid in excess refunded. The Minister has power to cancel the lease at any time by giving not less than three months' notice in the *Gazette* of his intention to do so.

(iii.) *Sales by Auction.* Areas within closer settlement districts necessary for township settlement may be set apart by notification in the *Gazette*. Allotments, each of which may not exceed half an acre in extent, within such areas may be sold by auction.

(iv.) *Private Sub-division.* An important feature of the amending Act of 1909 is the power which is given to owners for private sub-division of lands which have been notified by proclamation for resumption. Upon the owner entering into an agreement with the Minister to sub-divide the land and to sell or lease in such areas and subject to such terms as may be agreed upon, the Minister is empowered to suspend the power of resumption for a period not exceeding two years. All sales and leases of the land must be notified to the Minister, who may refer the matter to the Local Land Board for inquiry as to whether the terms of the agreement have been carried out; in case it be decided that the owner has failed to fulfil these terms, the suspension of the power of resumption ceases. In August, 1910, two estates, covering an area of 25,000 acres, were being dealt with under the Act by private sub-division.

(v.) *The Closer Settlement Promotion Act 1910.* Under this Act any three or more persons who are qualified to hold settlement purchases and who desire to purchase from the same owner any private lands may, upon entering into an agreement with the owner and subject to valuation by the Advisory Board and the Savings Bank Commissioners, acquire such lands through the Minister on Closer Settlement conditions. The maximum sum which may be advanced for the purposes of this Act may not exceed £1,000,000 in any financial year.

(vi.) *Areas Acquired and Disposed of, 1901 to 1910.* Up to the 30th June, 1910, ten areas had been opened for settlement under the Closer Settlement Acts.

The following statement gives particulars of the areas opened up to the 30th June, in each year from 1906 to 1910:—

NEW SOUTH WALES.—CLOSER SETTLEMENT AREAS, 1908 to 1910.

Year Ended the 30th June.	Areas.			Capital Values.		
	Acquired Lands.	Adjoining Crown Lands.	Total.	Acquired Lands.	Adjoining Crown Lands.	Total.
	Acres.	Acres.	Acres.	£	£	£
1906 ...	53,523	13,166	66,689	137,795	24,589	162,384
1907 ...	142,403	25,712	168,115	438,490	37,178	475,668
1908 ...	142,403	25,719	168,122	438,362	37,192	475,554
1909 ...	321,209	28,064	349,273	1,246,508	42,878	1,289,386
1910 ...	461,723	83,045	544,768	1,624,858	147,977	1,772,835

The total area thus set apart has been divided into 1,023 farms comprising 524,217 acres, the remaining 20,551 acres being reserved for recreation areas, roads, stock routes, schools, etc. Up to the 30th June, 1910, 1001 of these farms had been allotted, while proclamations of the intended acquisition of fifteen estates, covering an area of 358,765

acres, had been gazetted. The following table gives particulars as to the disposal of the farms by closer settlement purchase for each year ended the 30th June, 1905 to 1910 :—

NEW SOUTH WALES.—CLOSER SETTLEMENT ALLOTMENTS, 1905 to 1910.

Year.	Farms Allotted by Board to Date.			Total Amount received in respect of Settlement Purchases.	Total Number of Applications received.

1909-10 ...	941	471,639	1,731,480	147,945	1,209

(vii.) *Labour Settlements.* These settlements were founded by the Labour Settlements Acts 1893 and 1894, which have now been amended and repealed by the Labour Settlements Act 1902. Land may be set apart for lease for a period of 28 years as a labour settlement under the superintendence of a Board of Control, consisting of from eight to sixteen members appointed by the Governor. The rent is fixed by the Minister after appraisement by the local board. The functions of the Board of Control are to enrol members of the settlement ; to make regulations concerning the work to be done ; to apportion the work among the members ; and to distribute the wages and profits. The Board may establish any trade or industry, and must distribute the profits among the enrolled members.

(*a*) *Government Aid to Settlers.* The Minister is empowered to grant financial assistance to the Board of Control to an amount not exceeding £50 for each enrolled member, who is the head of a family dependent upon him ; £40 for each married person without a family ; and £30 for each unmarried person. On the expiration of four years from the commencement of the lease, and at the end of each year following, 8 per cent. of the total sum advanced to the Board is a charge on its revenue, until the total amount, with interest at 4 per cent., is repaid.

(*b*) *Settlements Established.* Only two settlements had been established under the Act up to the 30th June, 1910. Particulars are given in the following statement :—

NEW SOUTH WALES.—PARTICULARS OF LABOUR SETTLEMENTS, 30th JUNE, 1910.

4. **Victoria.**—(i.) *Closer Settlement Acts, 1904 to 1909.* The Closer Settlement Acts (see § 2, p. 239, hereof) are administered by a Board consisting of three persons appointed by the Governor-in-Council, and intrusted with power to acquire, either compulsorily or

by agreement, private lands in any part of the State for the purpose of Closer Settlement. All private lands acquired by the Board must be paid for at the option of the owner by money, debentures, or stock. The Governor was authorised from time to time during the first five years from the date on which the Act of 1904 came into force to increase the amount of Victorian Government Stock by an amount not exceeding £500,000 in any one year, or to issue debentures for the whole or any part of such sum in lieu of increasing the amount of stock. Under the Act of 1909 power to raise money for the purposes of the Act was extended for a further period of twelve months. The Board may dispose of all lands acquired, either Crown lands or repurchased lands, on conditional purchase leases either as farm allotments, workmen's homes allotments, or agricultural labourers' allotments. The price of the land disposed of is to be so fixed as to cover the cost of original purchase, the cost of survey and subdivision, the value of lands absorbed by roads and reserves, and the cost of clearing, draining, fencing, or of other improvements which the Board may effect, or expenses which it may incur, prior to the disposal of the land. The land to be disposed of is divided into (*a*) farm allotments not exceeding £2500 in value, (*b*) workmen's homes allotments not exceeding £100 in value, and (*c*) agricultural labourers' allotments not exceeding £200 in value. Land acquired by the Board may also be sold in small areas in fee simple as sites for churches, public halls, butter factories, creameries, or recreation reserves, and if any land is not taken up under lease within one year after being declared available, it may be sold by auction. The Amendment Act of 1909 provided for the sale of areas for quarries for stone, gravel, etc.

The Board may approve of an agreement between an owner and one or more persons to purchase a farm or farms, not exceeding £2500 in value. On the property being acquired by the Board, the applicant obtains a lease under Closer Settlement conditions.

(*a*) *Closer Settlement Leases.* An application for a lease must be accompanied by a deposit equal to one instalment, equal to 3 per cent., of the purchase money of the allotment of the highest value of those applied for, and the registration and lease fees thereof. Not more than one allotment may be held by one lessee. Every conditional purchase lease is for such a term of years as may be agreed upon by the lessee and the Board, and payment must be made with interest at 4½ per cent. per annum by sixty-three half-yearly instalments, or such lesser number as may be agreed upon. Under the amending Act of 1906 postponement of payment of instalments may be granted by the Board up to 60 per cent. of the value of improvements, and payment of the areas may be made over a definite time, or the lease may be extended for a corresponding period. The lease is subject to the following conditions :—The lessee must destroy vermin and noxious weeds to the satisfaction of the Board within three years ; he must enclose the land within one year, or if he use the allotment for grazing purpose only, within three months ; he must personally reside during eight months in each year, during the currency of the lease, on his allotment ; he must make improvements equivalent in value to at least two instalments payable for the land before the end of the first year ; to the value of 10 per cent. of the purchase-money before the end of the third year, and to the value of a further 10 per cent. before the end of the sixth year, being a total of one-fifth of the value of the land. If all covenants and conditions have been duly complied with the lessee may, after six years, and with the written consent of the Board, transfer, assign, mortgage, or sublet his allotment. A Crown grant may be issued after the expiration of twelve years on payment of the balance of the purchase-money, if all conditions have been complied with. Any land may be resumed by the Crown for public purposes upon payment of compensation to the lessee for the loss of his allotment or part thereof, and for any improvements erected by him thereon. In the case of workmen's homes allotments the land must be fenced within one year, and a dwelling-house to the value of at least £50

must be erected within the same time; within two years further improvements must be made to the value of at least £25. As regards agricultural labourers' allotments, a dwelling-house to the value of at least £30 must be erected within one year, and in two years the allotment must be fenced.

(*b*) *Advances to Settlers.* The Board may make advances for the purpose of fencing and building dwelling-houses, and is empowered to erect dwelling-houses, outbuildings, or improvements on any allotment at a cost not exceeding £250 for any one allotment. Any sum so expended, together with interest at 5 per cent. per annum, is repayable by equal half-yearly, quarterly, or monthly instalments, extending over such a period not greater than twenty years as may be prescribed. Provision has been made to enable lessees, who, through unpropitious seasons or other adverse circumstances, are unable to meet their instalments as they fall due, to have them deferred, and those lessees who have expended all their available capital in improving their holdings, are enabled to obtain an advance to continue working and improving their allotments. All such deferred payments or moneys advanced carry interest at 5 per cent. Under the Closer Settlement Act 1909, any tenant of Crown Lands may obtain an advance from the Board to the amount of 60 per cent. of the value of the permanent improvements effected by him, the limit of such advance being £500. Special advances may also be granted to purchase wire-netting in rabbit-infested districts.

(*c*) *Loans to Municipalities.* The Amendment Act of 1907 provides that by approval of the Minister of Lands and under the certificate of the Inspector-General of Public Works, loans may be made to the council of any municipality out of the Closer Settlements Fund for the purpose of carrying out any road-making or other public works within the boundaries of an estate.

(*d*) *Areas acquired and made available for Closer Settlement, 1901 to 1910.* The following statement shews the operations which have taken place in Victoria under the provisions of the Closer Settlement Acts, 1898 to 1910, up to the 30th June in each year from 1901 to 1910, inclusive :—

VICTORIA.—CLOSER SETTLEMENT, 1901 to 1910.

(ii.) *The Small Improved Holdings Act 1906.* The object of this Act was to assist deserving persons to acquire small improved holdings in rural districts as close as possible to centres of population, where industrial employment may be obtained. The Governor was authorised to set apart any unoccupied Crown lands, or any land acquired under the Closer Settlements Acts, for the purpose of small improved holdings, and was empowered to raise money for the purpose of acquiring private land adapted for small holdings. All lands so set apart were to be divided into holdings not exceeding £200 in value, and power was given so that the land could be adapted for any purposes of husbandry by erecting improvements to the value of not more than £150 on any one allotment. This Act has, however, been superseded by the Closer Settlement Act 1909.

Land for settlement was purchased at Mordialloc, Thomastown, Geelong, Wangaratta, Bellarine, Daylesford, and Warragul, comprising in all 2822 acres of land at a cost of £53,568, and allotted to 260 settlers. The work of building houses for the settlers was undertaken by the Government (the settlers being employed on the work). The necessary teams and implements were provided, thereby assisting the settlers in making the land immediately productive.

The Small Improved Holdings Act has been repealed, the settlements made thereunder being now under the control of the Closer Settlement Board.

(iii.) *Village Communities.* Under the Settlement on Lands Act 1893, a system of small holdings was inaugurated, with monetary assistance granted to the holders by the Government, but owing to altered circumstances and the introduction of the Closer Settlement Act, the original enactment, although now embodied in the Land Act 1901, is not availed of to any extent. It provided that any unalienated Crown lands, not being auriferous or permanently reserved for any purpose, might be proclaimed and appropriated for the purposes of village communities. Such lands were originally surveyed into allotments of from one to twenty acres, according to the quality of the soil and the situation of the land, and the price fixed at not less than twenty shillings an acre, but under the Land Act 1901 (Secs. 344-346), additional areas may be acquired by conditional purchase, the value of which, together with the original holding, may not exceed £200. An applicant must not be under the age of eighteen years, nor the owner of the fee simple of two acres or over, nor the lessee of a pastoral allotment or grazing area, nor the holder of an agricultural allotment license. Permits to occupy may be granted for a period not exceeding three years at a nominal rental, and it is provided that monetary assistance not exceeding £50 may be advanced for the purpose of erecting buildings and improvements, but Parliament has not voted any money for this of recent years. Such loan is repayable in twenty equal annual instalments. The total amount of monetary aid advanced up to the 30th June, 1910, was £67,379, of which sum the amount repaid to date was

£35,233. On the expiration of the period for which the permit is granted a lease may be obtained, provided that the conditions of occupancy have been fulfilled. The lessee must pay the value of the allotment by forty equal half-yearly instalments and must also pay within five years the cost of survey in ten equal half-yearly instalments. Personal residence by the lessee or his family is essential. A Crown grant of the freehold may be obtained at any time after six years from date of lease on payment of the balance of amounts due if all the conditions have been fully complied with. Within one year from the date of the lease the land must be enclosed by a fence, and within two years one-tenth of the area must be cultivated, which must be increased to one-fifth by the end of the fourth year. Within six years, in addition to the cultivation, permanent improvements to the value of £1 for each acre must be effected. Any person in occupation of an allotment under permit or lease may surrender the same and acquire the land under a perpetual lease or a conditional purchase lease, when rents paid and improvements effected may be credited.

Homestead Associations, originally provided for under the Settlement on Lands Act 1893, did not prove successful. The provisions relating thereto were therefore repealed in 1904.

The area originally made available under the Settlement on Lands Act was 156,020 acres in eighty-five different localities in the State. A large proportion of that area was, however found to be unsuitable for village settlement purposes, and has been withdrawn from the operation of the Act. Particulars of areas in process of alienation under the Act are given below. (See § 11, 3.)

On the 30th June, 1910, there were 1262 settlers actually residing, and there were 153 not residing, but improving, making a total of 1415 in occupation. Including wives and children the total number in residence was 6247. At the same date the area under cultivation was 21,100 acres; the value of live stock £56,215, and of improvements £240,496.

5. **Queensland.**—Under the provisions of the Closer Settlement Act of 1906 private lands may be repurchased by the Crown, either by agreement or compulsorily. The price of all land so acquired is paid for in cash from the Consolidated Revenue Fund, or in cash the proceeds of the sales of debentures, or at the option of the Minister, and with the consent of the owner, wholly or in part by the issue to the owner of debentures. Any land which it is proposed to acquire under the provisions of the Act must be inspected by a member of the Land Court, who must furnish a report to the Minister; the land may thereupon be acquired by agreement, with the approval of the Governor-in-Council, at a price not exceeding by more than one-tenth the value thereof stated in the said report.

(i.) *Compulsory Acquisition.* The compulsory provisions of the Act only apply where the private land proposed to be acquired exceeds £20,000 in value, exclusive of improvements. All claims for compensation are determined by the Land Appeal Court, whose award is final and without appeal. The owner of an estate in possession, the whole of which is proposed to be taken compulsorily, has the right to retain in one block out of the estate, for the purpose of residence or business, land the value of which (exclusive of improvements) does not exceed £10,000, or £15,000 in the case of an estate the unimproved value whereof exceeds £50,000, or £20,000 in the case of an estate the unimproved value whereof exceeds £100,000. The maximum sum which may be expended on the acquisition of land for the purposes of closer settlement is £500,000 in any one year.

(ii.) *Disposal of Land.* A sufficient part of the land acquired must be set apart for roads, public reserves, and townships, and the remainder is proclaimed open for selection as agricultural farms under the Land Acts 1897 to 1909; the term of the lease is, however, twenty-five years instead of twenty years as provided by the Land Acts. The selector must fence the land within two years from the issue of the license to occupy, or must make permanent improvements of an equivalent value. The rent to be paid for the first year is equal to £10 for every £100 of the purchasing price; and (no payment being required during the second, third, or fourth years) an annual payment of £8 2s. 7d. for

every £100, continued from the fifth to the twenty-fifth year will, at the end of the term, have paid off the principal sum together with interest. Payment of the balance of the purchase-money may be made at any time after the expiration of the fifth year of the lease, and a rebate of interest will be made accordingly. Land remaining open for selection as agricultural farms for at least twelve months may thereafter be proclaimed also open for selection as unconditional selections.

(iii.) *Areas Acquired and Selected, 1901 to 1909.*—The operations under the Closer Settlement Acts resulted up to the end of the year 1909 in the acquisition by the Government of twenty-seven estates, of a total area of 497,095 acres, at a total cost of £1,349,251. The following table gives particulars of the operations under the above Acts at the end of each year from 1901 to 1909, inclusive:—

QUEENSLAND.—CLOSER SETTLEMENT, 1901 to 1909.

Year.	Number of Estates Acquired.	Total Area Acquired to Date.	Total Amount of Purchase Money.	Total Area Selected to Date.
		Acres.	£	Acres.
1901	15	132,760	335,056	124,710
1902	19	266,925	699,815	230,149
1903	20	286,952	790,445	253,096
1904	21	308,605	877,058	277,939
1905	21	308,605	877,058	289,873
1906	24	381,724	968,844	301,908
1907	26	409,563	1,057,463	340,405
1908	27	456,742	1,208,013	364,334[1]
1909	27	497,095	1,349,251	409,381

1. In addition there were at the end of the year 1909, 10,748 acres sold at auction and 3119 acres retained by the Government for experimental farms and other sales.

The total area opened for selection up to the end of the year 1909 was 434,027 acres, of which 409,381 acres had been selected by 1741 selectors at a total purchasing price of £1,218,121. There remained 24,646 acres unselected or reserved. The total amount of rent paid up to the same date was £578,726, the amount in arrear being £9627. At the end of the year 1909 there were 1741 selectors holding 1781 agricultural farms, 239 unconditional selections, and two prickly pear infested selections. In addition, land and improvements to the value of £72,889 had been sold at auction.

(iv.) *The Special Agricultural Selections Acts 1901 to 1905.* Under the Special Agricultural Selections Act 1901 to 1904, now repealed and amended by the Lands Acts Amendment Act 1909, land may be set apart as homesteads, farms, or prickly pear or perpetual lease selections, for any body of settlers, who, having some measure of common interest or capacity for mutual help, are desirous of acquiring land in the same locality. The procedure to be followed is for a request to be made to the Minister by the members of the body, explaining the grounds on which they are co-operating, and setting out the land they desire to acquire. Should the request be acceded to the land will be opened for selection in the usual way, but for a period to be stated in the proclamation it will only be available for the members of the body of settlers for whom it has been set apart. In the case of group selections, the maximum areas which may be selected are as follows:—Agricultural homestead, 320 acres; prickly pear selection, 2560 acres; grazing homestead, 3000 acres; and grazing farm, 2000 acres (the aggregate area of an agricultural farm and a grazing farm held in conjunction therewith may not exceed 3280 acres.) By the Land Act Amendment Act 1905 a new departure has been made in providing that lands may be set apart for exclusive selection in Great Britain. Application to select such lands should be made at the office of the Agent-General, and selectors of such land

will have credited towards the purchasing price the money paid for the passages of themselves and families to Queensland, not exceeding, however, £17 per "statute adult."

The Special Agricultural Selections Act 1905 (which, although an amendment to the Acts of 1901 and 1904, is not administered by the Department of Public Lands, but by the Department of Agriculture), provides that the Secretary for Agriculture may extend financial aid to all or any of the members of a body of selectors of agricultural homesteads under the principal Act. By regulations made under this Act it is provided that applicants for aid must be married men who desire to engage in farming, but do not possess sufficient money. For each body of selectors there must be an overseer, who acts as manager of the general business of the body during such period as the minister thinks proper. During such period each selector must be amenable to and must obey all lawful orders and decisions of the overseer, who also acts as arbitrator in all disputes between the settlers. The overseer must keep an advance account for each settler, shewing the amount of aid extended. This account must be debited with interest at 5 per cent. per annum. Railway fares for the settler and his family to the station nearest to the selection, as well as the rent and proportionate parts of the survey fees payable for the first and second years, may be debited to the advance account. Advances may also be made to each selector to a value not exceeding £80 for the purpose of buying rations and tools, and to a value not exceeding £60 for the purpose of buying stock and poultry. After the expiration of two years the selector must repay the amount of his debt, within a term of twenty-three years, by half-yearly instalments with interest at the rate of £3 7s. 4d. per cent.

The portions opened for "group settlement" in 1909 numbered 715, and comprised a gross area of 728,962 acres. Up to the end of that year 506 portions, comprising 568,627 acres, valued at £269,370, had been applied for by members of the bodies of settlers for whom they were opened. The greater part of the remaining lots have since been selected.

6. **South Australia.**—Under the provisions of the Crown Lands Acts the Commissioner may repurchase land for the purposes of closer settlement at a cost not exceeding £200,000 in any one year, subject to the conditions (*a*) that the repurchase be recommended and the improvements valued by the Board and the Surveyor-General, and (*b*) that full particulars as to the locality, area, and quality of the land, and the price paid, be laid before Parliament.

Reference has already been made to the provisions of the Irrigation and Reclaimed Lands Acts 1908, regarding the settlement of reclaimed lands. (See § 7, 5 iv.)

(i.) *Disposal of Land.* Repurchased areas, except such portions as may be required for town lands, which are sold by auction, or for reservation for public purposes, are cut up into blocks, each of which does not exceed £2000 in unimproved value, or in the case of improved blocks or grazing land does not exceed £4000. These blocks are offered for sale, and the purchaser must enter into an agreement to purchase his block and the improvements at the price fixed by the Board, and to pay the purchase-money and interest thereon at 4 per cent. per annum by seventy half-yearly instalments, the first ten payments being interest only. Purchase may be completed by paying the balance of the purchase-money after holding the land for nine years. Each person holding an agreement to purchase repurchased lands must spend in substantial improvements on his block, during each year for the first five years, a sum equal to £3 for every £100 of his purchase-money. Should any repurchased land remain unallotted over a year after being offered, it may be offered on miscellaneous lease on terms fixed by the Board, or, if the Board so recommend and the Commissioner approve, it may be sold by public auction, a reserve being fixed by the Board, the terms being 25 per cent. of the purchase-money in cash, and the balance in five yearly instalments, bearing interest at 4 per cent. per annum. Any amount in arrear on repurchased lands may, with interest at 5 per cent., be sued for in court by the Receiver of Rents.

(ii.) *Areas Acquired and Selected.* The following table shews the area of land acquired by the Government in South Australia for the purposes of closer settlement, and the manner in which the same has been disposed of under the provisions of the Crown Lands Acts:—

SOUTH AUSTRALIA (PROPER).—CLOSER SETTLEMENT, 1902 to 1909.

Year.	Area of Lands Repurchased to Date.	Agreements with Covenants to Purchase.	Total Area Leased as Homestead Blocks.		Perpetual Leases.	Miscellaneous Leases.	Sold.	Remainder Unoccupied (including Roads).
			Right of Purchase.	Perpetual Lease.				
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1902	156,481	—	2,717	3,073	90,128	309	403	59,851
1903	156,481	60,331	2,487	2,895	89,378	274	566	550
1904	174,963	81,556	2,268	2,795	86,881	295	626	542
1905	214,752	116,854	2,057	2,907	82,431	295	736	9,472
1906	260,355	168,930	1,930	2,482	78,642	295	1,987	6,089
1907	326,576	235,673	1,758	2,306	77,017	211	4,808	4,803
1908	354,454	261,457	1,590	1,953	74,651	281	9,142	5,380
1909	500,464	296,013	1,381	1,779	75,045	50,056	24,641	51,549

During the financial year 1909-10 four estates aggregating 62,719 acres were repurchased. The total area repurchased at the 30th June, 1910, was 521,629 acres the purchase money being £1,283,000. Of that area 494,483 acres had been allotted to 1503 persons, the average area to each being 329 acres.

(iii.) *Irrigation Areas.* Under the Irrigation and Reclaimed Lands Acts 1908 and 1909, special provisions are made for granting perpetual leases of reclaimed lands. The Governor is authorised to proclaim irrigation areas, and the Commissioner for Crown Lands must cause the land included in any such area to be divided into blocks. Any block may contain not more than fifty acres of reclaimed land, and fifty acres of land considered by the Commissioner to be irrigable, and may also contain any area of other land. Each block is offered on perpetual lease, at a rent not less than a sum equivalent to 4 per cent. on the unimproved value of the land, plus the cost of reclaiming and of providing pumping and irrigation channels. For the first year only one-quarter of the fixed rent is payable, for the second year one-half, and for the third year three-quarters.

(*a*) *Irrigation Boards.* When leases have been granted of not less than two thirds of the blocks in any irrigation area, the Governor may constitute a Board to take over the control and management thereof from the Commissioner, who may advance loans to the Board, repayable with interest at 4 per cent. by twenty annual instalments, the first instalment to be paid at the expiration of five years from the date of advance. The Irrigation Boards are vested with wide powers and exercise within the irrigation areas all the duties and powers of District Councils.

(*b*) *Government Loans to Settlers.* Under Part V. of the Act a fund is to be constituted, to be called the Lessees of Reclaimed Lands Loan Fund, consisting of moneys provided by Parliament. Advances may be made by the Commissioner to assist lessees (*a*) in erecting and completing permanent buildings and in making improvements on their lands, and (*b*) in making improvements which permanently increase the capital value of the land, such as grubbing, fencing, constructing drains, wells, tanks, and the like. Advances for the first purposes (*a*) may not exceed one-half the cost to the lessee of the permanent buildings and improvements then subsisting on his block, and for the second purposes (*b*) may not exceed one-half the value of the improvements, while the total amount owing by any lessee may not exceed £125. Loans must be repaid with interest at 4 per cent. by twenty equal annual instalments, the first instalment to be paid at the expiration

of five years from the date of advance. In cases of hardship the time may be extended by the Commissioner, the deferred payments carrying interest at 5 per cent.

In January, 1910, the Waikerie village district was proclaimed an irrigation area.

(iv.) *Village Settlements.* Out of the reserved lands the Commissioner is directed to set apart for the purpose of village settlement such land as he shall consider fit (*a*) for horticultural purposes, to be termed "horticultural land"; (*b*) for agricultural purposes, to be termed "commonage land"; and (*c*) land whereon any irrigation works are situated. Land so set apart is to be divided as follows:—Horticultural lands into blocks of as nearly as practicable equal unimproved value, and of about ten acres in extent; and the commonage lands into one or more blocks of such area as the Commissioner may determine, and the lands so set apart in each case form the district of the association. No person may hold more than two blocks. Commonage lands may only be leased to the association on perpetual lease, and all unleased horticultural blocks are under the control of the association. The annual rent reserved by any lease is fixed by the Board, and commences at a date fixed by the Commissioner. The value of the improvements on each horticultural block, and the value of irrigation works and of improvements on commonage lands, and interest thereon at 4½ per cent. per annum, are first charges upon the block and upon the property of the association respectively, and are to be paid by forty-two annual instalments. The Commissioner is empowered to expel any member from any association; to control the expenditure of any moneys by associations; to call upon any trustee of an association to retire; to require an association to increase the number of its members; to make, amend, and repeal rules for the management of an association, and for the regulation of any irrigation works. Every member of each association must provide or contribute towards the maintenance and regulation of irrigation works and the care and cultivation of the commonage lands, such labour (not being less than thirty-six days every six months) as the Commissioner may require, or an equivalent sum in cash. Every association must prepare an account once a year of the working of the commonage land, shewing all expenditure and income in connection therewith, and after providing for rent, working expenses, and for depreciation and renewal of plant, the surplus, after deducting 25 per cent. for sinking fund for renewal of plant, etc., may be divided among the members of the association.

As the Waikerie district has been proclaimed an irrigation area under the Irrigation and Reclaimed Lands Acts 1908 and 1909, and the settlers at both Ramco and Kingston have applied to be dealt with under the same Acts, this would only leave the Lyrup Village Settlement, which is in a better position, both financially and as regards population, than the others.

(v.) *Homestead Blocks.* The Commissioner may cause any Crown lands reserved for the use of aboriginals, except such lands as are reserved for the occupation of aboriginals at Point McLeay or Point Pearce, to be surveyed and offered as homestead blocks on perpetual lease or lease with a right of purchase, and may, subject to the approval of Parliament, by purchase, exchange, or otherwise, acquire lands suitable for homestead blocks, and lease them in a similar manner. Each block must not exceed £100 in value, and must be resided on at least nine months every year by the lessee or purchaser, or by his wife or a member of his family. The holder may have his lease or agreement endorsed "Protected Homestead Block," and the effect of such endorsement will be that no subsequent encumbrance on the land by the holder will be valid, nor will the block be liable to seizure for debt, except for rates and taxes, nor, unless so willed, will it become assets for payment of debts after the death of the holder. If a holder is unable to continue in occupation of his block he may, on the recommendation of the Land Board, and with the Commissioner's consent, assign or sublet it.

There is now hardly any demand for homestead blocks, persons generally preferring small blocks of repurchased or Crown lands on ordinary conditions. The system appears

to be only of value in centres of population where work can be obtained, and within a reasonable distance of a school.

(*a*) *Advances to Blockholders.* Advances up to £50 may be made by the Commissioner to any homestead blockholder who has complied with the conditions of his lease or agreement, to assist in erecting permanent buildings on the blocks and other improvements which permanently increase the capital value thereof, such as clearing the land, fencing the same, erecting or making thereon permanent water improvements, such as dams, wells, reservoirs, watercourses, windmills, etc. The advances must not exceed half the cost to the blocker of the improvements then in good repair on the land. Advances must be repaid, with interest at 4 per cent. per annum, by twenty equal instalments, commencing twelve months from the date of advance. The whole amount may, however, be repaid at an earlier date. Failure to repay renders the holding liable to cancellation, and a grant of the land cannot issue until the advance is repaid. The Commissioner may, in case of hardship, extend the time for repayment, deferred payments bearing interest at 5 per cent. per annum. The total amount advanced up to the 30th June, 1910, was £40,028, of which £36,421 had been repaid.

(*b*) *Particulars of Homestead Blocks.* The total number of leases and agreements of which purchase had been completed to the 31st December, 1909, was 1497, comprising 22,583 acres, at a purchase price of £50,793 or an average of £2 5s. per acre, the average of each holding of which purchase was completed being 15 acres.

7. **Western Australia.**—Under the Agricultural Lands Purchase Act 1909, which repealed and consolidated the Agricultural Lands Purchase Acts 1896 to 1904, the Colonial Treasurer, with the approval of the Governor, is authorised to expend from time to time sums not exceeding in the aggregate, with the moneys expended under the Acts repealed, £400,000 on the repurchase of Crown lands near the railways, suitable for immediate cultivation.

(i.) *Acquisition of Land by the Government.* For the purpose of carrying out the provisions of the Acts, a Land Purchase Board, consisting of not more than five persons, appointed by the Governor, is constituted. The duties of this Board are to report on various matters in connection with the repurchase of any lands, such as the fair value of the land to the owner, the demand for land in the neighbourhood for agricultural settlement, and the suitability for agricultural settlement, and the distance from a railway of the land proposed to be acquired. If the report of the Board be favourable, the Minister, with the approval of the Governor, may make a contract for the acquisition of the land by surrender at the price fixed by the Board, or at any lesser price.

(ii.) *Sale of Repurchased Land.* All land repurchased may be improved prior to disposing of it and the cost of the improvements is added to the price to be paid for the land when sold. Reserves may be set aside for public purposes, roads, and town sites; and town and suburban lands may be disposed of in the same way as such lands are alienated under the provisions of the Land Acts 1898 to 1906. The remainder of the land is thrown open to selection. The maximum quantity held by one person must not exceed 1000 acres or its equivalent as prescribed by the Land Act 1906, except in special cases approved of by the Governor when the maximum may be increased to 2000 acres or its equivalent as aforesaid. No person under the age of sixteen years is eligible as a selector, nor is any person who is the beneficial owner of land exceeding 1000 acres in area held either in freehold or under any of the provisions of the Land Acts. If land thrown open to selection is not applied for, it may be put up for sale by public auction.

(iii.) *Conditions of Sale to Selectors.* The selling price of any repurchased land is ascertained by adding a sum equal to one-twentieth part of the price actually paid for the

land and for any improvements made upon it, and the total is the least price at which it may be selected. Applications must be in the prescribed form and must be accompanied by the first half-year's instalment of the purchase-money, at the rate of £3 17s. 9d. for each £100 of the selling price; on approval of the application, a lease for twenty years is issued at a rent, the half-yearly instalments of which are to be at the same rate at which the first instalment was paid. The improvements required are the same as those under residential or non-residential conditional purchase, but any improvements charged for by the State are considered as part of the expenditure required. No improvements are required to the value of more than £1 per acre under residence conditions or £1 10s. under non-residence conditions, notwithstanding that the price of the land be at a higher rate. Improvements must be made to the value of one-fifth of the purchase-money every two years of the first ten years of the lease. One-half of the land must be fenced within the first five years and the whole within ten years. Loans may be granted to selectors under the provisions of the Agricultural Bank Acts.

(iv.) *Areas Acquired and Selected, 1901 to 1910.* The transactions conducted under the provisions of the Agricultural Lands Purchase Acts are shewn for each year since 1901 in the subjoined table :—

WESTERN AUSTRALIA.—CLOSER SETTLEMENT, 1901 to 1910.*

Year.	Total Area Acquired.	Total Purchase-money.	Roads, Reserves, etc.	Area available for Selection.	Area Selected during the Year.	Total Area occupied to Date.	Balance of Area available for Selection.	Total Revenue received to Date.
	Acres.	£	Acres.	Acres.	Acres.	Acres.	Acres.	£
1901 ...	46,624	52,764	1,459	45,165	4,295	37,235	7,929	14,451
1902 ...	55,439	60,514	1,712	53,727	11,540	48,616	5,111	23,538
1903 ...	72,372	73,395	2,665	69,707	16,232	65,368	4,339	29,815
1904* ...	131,283	82,580	4,734	126,549	42,305	105,106	21,443	37,371
1905-6*	165,945	100,811	9,009	156,936	24,933	139,553	17,383	52,445
1906-7 ...	170,881	109,373	8,624	162,257	11,673	147,817	9,504	65,420
1907-8 ...	170,881	109,373	8,652	162,229	8,201	155,436	6,793	82,030
1908-9 ...	215,822	131,373	11,142	204,680	30,950	189,520	15,531	94,438
1909-10	249,522	158,041	10,757	228,823	25,134	213,416	15,407	111,125

* Since the year 1904 the figures are given as up to the 30th June instead of the 31st December; 1905 figures are therefore omitted.

On the 30th June, 1910, the total expenditure exclusive of purchase-money but including interest was £50,049, which left a balance of £61,076. At the same date the amount invested as sinking fund was £60,698. During the year 1909-10, three properties, namely those at Oakabella, Narra Tarra, and Kojunup, having a total area of 78,591 acres, were thrown open to settlement.

(v.) *Working Men's Blocks.* Any person not already holding land within the State is entitled to obtain a lease of lands which have been surveyed and thrown open for selection as working men's blocks. The maximum area that may be selected by one person is, if within any town or goldfield, half an acre, or five acres elsewhere. The price is not less than twenty shillings per acre, payable in ten years by half-yearly instalments. The application must be in the prescribed form and must be accompanied by the first instalment of the purchase-money and a lease fee of ten shillings. The selector must take personal possession within three months, and must reside upon the land for nine months in each of the first five years, but residence by the wife, parent, or child over sixteen years of age, may be accepted. Within three years the land must be fenced with a great and small stock-proof fence, and within five years an amount equal to double the purchase-money must be expended upon prescribed improvements, in addition to the cost of the exterior fencing. One-half the cost of any house may be allowed towards the improvements required. At the expiration of the lease, or at any time after five years from the date of the commencement of the lease, upon compliance with all conditions and upon payment of the full purchase-money and fee, a Crown grant will be issued. No

person who has once held a working man's block is allowed to select another, except under very special circumstances.

The following table shews the number and area of accepted applications for working men's blocks during each year, as well as the total number and area in existence at the end of the year 1901 and for each year from 1904 to 1910, inclusive:—

WESTERN AUSTRALIA.—PARTICULARS OF WORKING MEN'S BLOCKS, 1901 to 1910.

Year	1901.	1904.	1905.	1906.[1]	1907.[1]	1908.[1]	1909.[1]	1910.[1]

Area in Acres	6	154	106	104	149	131	189	148
NUMBER AND AREA OF BLOCKS OCCUPIED AT END OF YEAR.								
Number	7	228	211	229	401	387	408	440
Area in Acres	31	273	333	393	489	537	667	719

1. For financial year ended the 30th June.

During the years 1907 to 1910 residential blocks on the goldfields were made available as workingmen's blocks, instead of under residential lease, as before.

8. **Tasmania.**—The principles of closer settlement were not introduced into Tasmania until the Closer Settlement Act of 1906 was passed. Under this Act, which was amended in 1908, power is given to the Minister for Lands, on the recommendation of the Closer Settlement Board, to purchase by agreement private land in any part of Tasmania for the purpose of closer settlement, and also to deal with and dispose of any unoccupied Crown land for the same purpose. Repurchased lands are to be paid for at the option of the owner by debentures, stock, or money, which may be raised by the Treasurer up to an amount not exceeding £50,000 in each financial year, provided that the total amount so raised may not exceed £250,000. An important amending Bill was passed by the House of Assembly in August, 1910. This Bill provides for the compulsory acquisition of private lands exceeding £8000 in unimproved value.

(i.) *Lease of Allotments.* Lands so bought under the Act are subdivided into farm allotments of a suitable size—not exceeding £1500 in value—and are disposed of by way of lease for ninety-nine years. The capital value of each allotment is fixed by the Closer Settlement Board, and the rental is determined by the Board at a rate not exceeding 5 per cent. per annum on the capital value of the land. In the case of the Cheshunt Estate, which has recently been subdivided for disposal under the Act, the rent was fixed at the rate of 4 per cent. on the capital value. Although the allotments are in the first place leased, any lessee, after the expiration of ten years of the term of his lease, may acquire and purchase the land leased to him, provided that he does not then hold land (exclusive of the land leased under the Act) of a value exceeding £1500, and that he has duly complied with the terms and conditions imposed by the Act, regulations, and his lease. At the expiration of five years from the date of lease, a lessee may dispose of his interest to any eligible person, the consent of the Board being first obtained. Under the

Amendment Act of 1908 the Minister is authorised to lease any allotment of land exceeding £1500, but not exceeding £4000 in value, exclusive of buildings. Any land acquired for the purposes of closer settlement not suitable for leasing may be sold by auction or private contract for cash or on credit.

(ii.) *Improvements.* A lessee must improve his holding to a value equal to 2½ per cent. on the capital value of the land in each of the first ten years of the term of his lease, and he must, within two years of the date of the lease, personally reside on his allotment during at least eight months of each of the following nine years.

(iii.) *Qualifications of Lessees.* Persons who apply for land under the provisions of the above Act must not be less than eighteen years of age, and those applicants who are landless have preference over those who are not. A person is deemed to be landless, if, at the time of making his application, he does not hold, under any tenure, such area of land as is, in the opinion of the Board, sufficient for the maintenance of himself and his family (if any). In the case of husband and wife, unless each of them is landless, neither of them is deemed to be landless. Only one allotment is granted to one person.

(iv.) *Advances to Settlers.* Under the Act provision is also made for advances to lessees, in aid of the cost of fencing the allotments and building dwelling-houses thereon; the total advance to any one lessee must not exceed one-fifth of the capital value of such lessee's allotment, and must not exceed pound for pound the sum expended by him in fencing and building. Such advances must be repaid, together with interest at 5 per cent., in equal half-yearly instalments.

(v.) *Special Sales.* The fee-simple of land acquired may be disposed of by sale on the recommendation of the Board as sites for churches, public halls, dairy factories, fruit-preserving factories, mills, or creameries. The area sold may not exceed one acre in the case of a church or public hall, or five acres in other cases.

(vi.) *Areas Acquired and Selected.* Up to the 30th June, 1910, six areas, viz., Cheshunt, Mount Pleasant, Forester, Isandula, Brinktop and Frogmore had been opened up for closer settlement. Particulars are given in the following statement:—

TASMANIA.—CLOSER SETTLEMENT, 1907 to 1910.

Year.	Number of Farms made Available.	Number of Farms Allotted.	Area of Farms Allotted.	Rental of Farms Allotted.	Total Area Purchased.
			Acres.	£	Acres.
1907	61	54	10,365	1,923	13,397
1908	28	26	8,191	634	11,780
1909	49	45	9,117	789	7,902
1910	9	15	1,872	539	1,369
Total	147	140	29,545	3,885	34,448

The total purchase-money paid by the Government up to the 30th June, 1910, was £98,142.

§ 9. Occupation of Crown Lands under Leases and Licenses Issued by Mines Departments.

1. **Introduction.**—Leases and licenses for the occupation of Crown lands for mining and other purposes are issued by the Mines Departments in all the States. Such leases and licenses may be issued with respect to all Crown lands, whether otherwise unoccupied or whether occupied also under leases and licenses issued by the Lands Departments. Certain Crown lands, such as reserves, etc., are, however, subject to special conditions.

(i.) *Mining on Private Lands.* Certain of the Crown lands of the several States have been alienated from time to time, subject to various reservations in respect of gold and other minerals which might afterwards be found therein. Other lands have been alienated without such reservation, but as the mineral gold does not pass from the Crown unless by express conveyance, it has remained the property of the State on all alienated lands. All lands alienated or in process of alienation are open to mining for gold, but to mining for other minerals, those lands only are open in respect of which the rights are reserved in the grants. There are, however, generally certain reservations, such as those with reference to town or village lands and lands which have been built on or are used for special purposes. The working of minerals on private lands is regulated in the several States either by special Acts or by special provisions of the Acts relating to mining.

(ii.) *Leases and Licenses Issued and Total Areas of Crown Lands Occupied, 1901 to 1909.* The following tables shew the total areas of Crown lands for which leases and licenses for mining purposes were issued in each State during each year from 1901 to 1909 inclusive, and also the total areas of Crown lands occupied for mining purposes at the end of each year during the same period:—

CROWN LANDS, LEASES AND LICENSES FOR MINING PURPOSES, 1901 to 1909.

Particulars.	N.S.W.	Victoria.[1]	Qld.[2]	S. Aust.[3]	W. Aust.	Tas.	Cwlth.

TOTAL AREA OCCUPIED AT END OF YEAR.							
1901	134,209	Not available.	124,182	14,140	66,682	50,362	[4] 389,575
1902	131,690		143,861	103,334	115,703	47,692	542,280
1903	127,514		163,792	793,583	102,919	45,298	1,233,106
1904	124,773		111,180	130,281	121,439	44,341	532,014
1905	147,074		102,952	128,045	116,390	45,075	539,536
1906	134,723		112,013	213,492	110,670	53,122	624,020
1907	183,916		123,321	170,204	117,361	79,163	673,965
1908	218,931		140,735	100,387	130,970	56,693	647,716
1909	236,265		147,010	84,293	128,129	55,819	651,516

1. Including private lands, leases, and water right licenses only. 2. Exclusive of lands held under miners' rights only, amounting in 1908 to approximately 27,500 acres. 3. Exclusive of miners' rights. 4. Excluding Victoria.

The increase in the area held during 1903 is due to the unusually large number of search licenses issued in South Australia during that year, no less than 466 being registered with areas varying from 640 to 3200 acres each.

2. **New South Wales.**—Under the provisions of the Mining Act 1906 and the regulations made thereunder, Crown lands may be occupied for mining or other purposes by virtue of (i.) miners' rights; (ii.) business licenses; (iii.) authorities to prospect; or (iv.) leases.

(i.) *Miners' Rights.* A miners' right may be issued for any term not less than six months and not exceeding twenty years from the date of issue, at a fee calculated at the rate of two shillings and sixpence for every half-year of the term. The holder is entitled to take possession of and exclusively occupy for mining purposes Crown lands not expressly exempted from such occupation. Areas so occupied are styled tenements, which are divided into nine classes, viz.:—(*a*) prospecting areas; (*b*) dams or reservoirs; (*c*) roads; (*d*) claims; (*e*) races; (*f*) machinery areas; (*g*) tramways; (*h*) water rights; and (*i*) tunnel sites. Any holder of a miner's right may occupy one tenement of any or each of the foregoing classes, but for every additional tenement of the same class he must hold an additional miner's right. The holder of a miner's right may, in addition to the above, occupy a residence area not exceeding one-quarter acre within the boundaries of a town or village, or two acres outside such boundaries.

(ii.) *Business Licenses.* A business license may be issued for any term not less than six months and not exceeding twenty years at a fee calculated at the rate of ten shillings for every half-year of the term. It entitles the holder to occupy as a business area not more than one-quarter acre within the boundaries of a town or village, or one acre outside such boundaries.

(iii.) *Authorities to Prospect.* Under the Mining Act 1906 the Minister for Mines may grant to the holder of a miner's right an authority to prospect upon any area of Crown lands, whether exempted from ordinary occupation under a miner's right or not. These authorities are protective titles during prospecting operations only, and do not authorise mining.

(iv.) *Leases.* The Governor may grant leases of Crown lands for (*a*) mining, (*b*) mining purposes, or (*c*) dredging.

(*a*) *Mining Leases.* These leases may be either *gold-mining leases*, for which the rental is at the rate of five shillings per acre per annum, the maximum area which may be demised being twenty-five acres; *mineral leases* (other than coal or shale), for which the rental is at the rate of five shillings per acre per annum, the maximum area being eighty acres; *coal or shale leases*, for which the rental is at the rate of one shilling per acre per annum, with a royalty of sixpence per ton on all shale or large coal, and threepence per ton on all small coal raised, the maximum area being 640 acres. *Special leases* may be granted for gold or minerals, other than shale or coal, if by reason of unusual circumstances the Minister is of the opinion that it is necessary that an area in excess of the limit prescribed for ordinary leases should be leased.

(*b*) *Leases for Mining Purposes* are granted for the surface of the land and to a limited depth below the surface. Such leases do not authorise mining on the land, but are for such purposes as the construction of dams and reservoirs, tramways, buildings, and machinery.

(*c*) *Dredging Leases* may be granted for the purpose of mining for gold or any other mineral by dredging, pumping, sluicing, etc., on any Crown lands

forming the bed of any river or other suitable land. The rent is two shillings and sixpence per acre per annum, and a royalty of 1 per cent. on the value of all gold and other minerals won must be paid to the Crown. Labour and capital expenditure conditions are attached to dredging leases.

(v.) *Particulars of Leases and Licenses Issued 1909.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1909:—

NEW SOUTH WALES.—LEASES AND LICENSES

ISSUED BY MINES DEPARTMENT DURING YEAR 1909.

Particulars.	Act under which Issued.	Purpose for which Issued.	Area.
		To mine for—	Acres.
Leases—	Mining Act 1874 & amending Acts	Minerals other than coal ...	40

Total	134,209	147,074	134,723	183,916	218,931	236,265

3. **Victoria.**—Leases of Crown lands for mining and auxiliary purposes in this State are issued by the Department of Mines and Forests under the Mines Acts 1890 to 1907. Miners' rights are issued by the Treasury under the authority of the same Acts.

(i.) *Mining Leases.* These are of three kinds—(*a*) Gold-mining leases; (*b*) mineral leases; and (*c*) dredging leases. (*a*) *Gold-mining Leases* are granted for a term of fifteen years in such areas as the Minister may recommend. The annual rent is two shillings and sixpence an acre. (*b*) *Mineral Leases* are granted for a term of 15 years, the maximum area being 640 acres. The annual rent varies from one shilling to £1 per acre. (*c*) *Dredging Leases* are issued upon the recommendation of the Sludge Abatement Board and on the approval of the Minister. The annual rent is five shillings an acre.

(ii.) *Special Licenses.* Special licenses are also granted by the Department of Mines and Forests. (*a*) *Searching Licenses* are granted to search for minerals over Crown lands for a term of three months at a minimum rent of £1. (*b*) *Tailings Licenses* are issued over tailings, which have become the property of the Crown, for a term of five years at a rent of one penny per 100 cubic yards, the minimum rent being ten shillings. (*c*) *Water-right Licenses* are issued, to divert water by cutting races, etc., over Crown lands, for a term of fifteen years, at a rent fixed according to the length of race, the quantity of water diverted, and the size of the reservoir.

(iii.) *Miners' Rights, Business Licenses, and Residence Areas.* Miners' rights are issued by the Treasury Department upon payment of a fee of two shillings and sixpence, and are available for a period of twelve months. The holder is entitled to take possession for mining purposes of Crown lands, not otherwise exempted, in any mining district. Upon registration and payment of the prescribed fees the holder of a miner's right may occupy not more than one acre of Crown lands on any goldfield as a business or residence area.

Licenses of auriferous lands not for mining purposes may be issued by the Lands Department. (§ 7, 3 iv.)

(iv.) *Leases and Licenses Issued and Areas Occupied for Mining.* Particulars of leases and licenses for mining purposes of Crown lands alone are not available, the official returns including private lands also. During the year 1909 the number of mining leases, licenses, etc., issued was 510, covering an area of 36,114 acres; the rent, fees, etc., received amounted to £2559. No particulars are available as to the total area of either Crown or private lands occupied for mining purposes.

4. **Queensland.**—The occupation of Crown lands for mining purposes in this State is regulated by the Mining Acts 1898 to 1902. Under these Acts the Department of Mines is authorised to issue—(i.) Miners' rights; (ii.) mining leases; (iii.) coal-mining leases and licenses; and (iv.) miners' homestead leases.

(i.) *Miners' Rights.* The foundation of title under a miner's right is prior appropriation, and the permanency of any such title depends upon compliance by the occupier with certain prescribed conditions of use and working. The ground occupied under a miner's right is known as a "claim," which term may include an area taken up for purposes auxiliary to the actual operation of mining, such as machine areas. Water rights and residence areas do not come within the definition of "claim," being licenses which may be granted or refused. The forfeiture of a claim on account of non-compliance with the prescribed conditions may be decreed by the Warden on the application of any holder of a miner's right. The forfeiture of water rights or of residence areas may be declared only by the Crown, who alone can challenge the title of the occupier.

(ii.) *Mining Leases.* These leases are divided into two classes—(*a*) Gold-mining leases, and (*b*) mineral leases. Both classes contain certain covenants as to rent and the employment of labour and other matters. Special leases may be granted for auxiliary purposes, such as constructing tramways, erecting buildings, cutting water-races, etc. (*a*) *Gold-mining Leases.* The maximum area is fifty acres, the term twenty-one years, renewable for a further term of like duration, and the annual rent is £1 an acre. (*b*) *Mineral Leases.* The maximum area is 160 acres (except for coal, as mentioned hereinafter), the term twenty-one years, renewable for a like period, and the annual rent is ten shillings an acre.

(iii.) *Coal-mining Leases and Licenses.* Mineral leases for coal may be granted for a term of twenty-one years at an annual rent of sixpence an acre, together with a royalty of threepence per ton of coal raised during the first ten years of the lease and of sixpence per ton during the remainder of the term. Special concessions may be granted to discoverers of payable seams of coal. Licenses to occupy not more than 640 acres may be granted to any person desiring to prospect Crown lands for coal upon payment of sixpence for every acre comprised in the application.

(iv.) *Miners' Homestead Leases.* These leases are issued to holders of miners' rights who reside on gold or mineral fields, for the purpose of residence or carrying on business, and range in area from one to eighty acres, in accordance with the proximity to a proclaimed township. The rent ranges from sixpence to five shillings an acre. In the case of homesteads situated outside the limits of a township, after thirty years' rent has been paid the rent ceases to be payable, and in lieu thereof the rent shall be one shilling, if demanded.

(v.) *Particulars of Leases and Licenses Issued, 1909.* The subjoined table gives particulars of the leases and licenses of Crown lands issued for mining purposes during the year 1909:—

QUEENSLAND.—MINING LEASES AND LICENSES ISSUED, 1909.

* Exclusive of lands held under miners' rights only.

5. **South Australia.**—In this State leases and licenses for mining purposes are issued by the Department of Mines under the authority of the Mining Act 1893, as amended in 1900. Under these Acts mining and prospecting are permitted in virtue of (i) miner's rights; (ii.) mining leases; (iii.) coal or oil leases; and (iv.) miscellaneous leases, and in addition occupation of Crown lands is permitted by virtue of (v.) business claims, and (vi.) occupation licenses.

(i.) *Miners' Rights.* These rights are issued for a period of one year upon payment of five shillings. The holder is authorised to prospect for any mineral or oil, and to peg out a claim in the prescribed manner on any Crown lands. Under the Amendment Act of 1900, special licenses to search, on specific mineral lands not exceeding five square miles in extent, may be granted for (*a*) precious stones; (*b*) mineral phosphates; (*c*) oil; and (*d*) rare metals, minerals, and earths, the mining for which has not proved payable in any portion of the State.

(ii.) *Mining Leases.* These leases are of two classes—(*a*) Gold leases and (*b*) mineral leases. (*a*) *Gold Leases* may be issued for a term not exceeding forty-two years to holders of miners' rights at an annual rent of one shilling an acre. The maximum area which may be so leased is twenty acres. (*b*) *Mineral Leases* may be issued to holders of miners' rights for lands not comprised in a goldfield. The area leased may not exceed forty acres, nor the term forty-two years. The annual rent is one shilling an acre, together with a royalty of sixpence in the pound on the net profits.

(iii.) *Coal or Oil Leases.* These leases are issued to holders of miners' rights for Crown lands not comprised in goldfields. The maximum area is 640 acres, and the maximum term forty-two years. The rent and conditions are as prescribed. In addition to the rent a royalty of sixpence in the pound on the net profits must be paid.

(iv.) *Miscellaneous Leases.* Leases for any term not exceeding forty-two years may be granted to holders of miners' rights on the prescribed terms and conditions (*a*) for manufacturing or obtaining salt or gypsum; (*b*) as sites for smelting or mining works. The maximum area, if the land leased is on a water frontage, is twenty-one acres. A royalty of sixpence in the pound on the net profits must be paid.

(v.) *Business Claims.* Business licenses are granted on payment at the rate of ten shillings for six months, entitling the holder to peg out and occupy for business and residential purposes a claim not exceeding a quarter of an acre in extent, if within a township, or one acre on other lands.

(vi.) *Occupation Licenses.* Licenses are granted authorising the holder to occupy, for purposes of residence and cultivation, any Crown lands not exceeding half an acre in extent for a term of fourteen years at an annual rent not exceeding two shillings an acre.

(vii.) *Particulars of Leases and Licenses, 1909.* The following table gives particulars of leases and licenses of Crown lands issued by the Mines Department during the year 1909:—

SOUTH AUSTRALIA.—LEASES AND LICENSES.

ISSUED BY THE MINES DEPARTMENT DURING YEAR 1909.

Occupation licenses ...	219	108	Total	1,174	84,293

6. **Western Australia.**—The issue of leases and licenses by the Mines Department is regulated by the Mining Act 1904. Under this Act Crown lands may be occupied by virtue of (i.) Miners' rights; (ii.) mining leases; and (iii.) miners' homestead leases.

(i.) *Miners' Rights.* Any holder of a miner's right may take up and occupy ground, subject to the approval of the Warden, for the following purposes:—Prospecting for any minerals; claims, water rights, residence and business areas, and machinery, tailings, washing, or market garden areas. Lands may be occupied by the holder of a miner's right for the purpose of mining for alluvial gold without registration, the only restriction being that the occupier must peg out his holding according to the prescribed regulations.

(ii.) *Mining Leases.* These leases are granted for mining and auxiliary purposes, and are of three descriptions, viz.:—(*a*) Gold-mining leases; (*b*) mineral leases; and (*c*) coal leases. (*a*) *Gold-mining Leases.* The maximum area is twenty-four acres, except in the case of a mine which has already been worked and abandoned, is excessively wet, or requires costly appliances, when the maximum area is forty-eight acres. (*b*) *Mineral Leases.* The maximum area is forty-eight acres, except under the special circumstances referred to in the case of gold-mining leases, when the maximum area is ninety-six acres. (*c*) *Coal Leases.* The maximum area is 320 acres, but special leases of larger areas may be granted to the discoverer of a payable seam.

(iii.) *Miners' Homestead Leases.* These leases are granted for agricultural purposes on land within goldfields. The area is restricted to twenty acres, if within two miles of a township, and if beyond that distance to 500 acres. Improvement conditions are imposed.

(iv.) *Particulars of Leases and Licenses Issued, 1909.* The following table gives particulars of mining leases and licenses of Crown lands issued during 1909 :—

* Exclusive of miners' rights.

7. **Tasmania.**—Under the provisions of the Mining Act 1905, Crown lands in this State may be occupied for mining and auxiliary purposes by virtue of (i.) prospectors' licenses; (ii.) miners' rights; (iii.) mining leases; and (iv.) miscellaneous licenses. Business and residence licenses within mining areas may be issued by the Lands Department. (See § 7, 8 iv.)

(i.) *Prospectors' Licenses.* These licenses are granted to the end of the calendar year in which they are applied for, upon payment of the sum of ten shillings if applied for before the 30th June, or five shillings if after that date. They confer the right to prospect upon prescribed Crown lands, and any discoveries made may be protected in the prescribed manner.

(ii.) *Miners' Rights.* These rights are also issued each year upon payment of five shillings if applied for before the 30th June, or of two shillings and sixpence after that date. They confer the right to occupy specified Crown lands and to mine thereon.

(iii.) *Mining Leases.* Mining leases are of three kinds—(*a*) gold-mining leases; (*b*) mineral leases; and (*c*) miscellaneous leases. (*a*) *Gold-mining Leases* are granted for a term not exceeding twenty-one years at an annual rent of £1 an acre. The maximum area which may be so leased is forty acres. The lessee has the exclusive right to mine for gold and other minerals on the land demised. (*b*) *Mineral Leases* are issued for mining for minerals other than gold on areas not exceeding eighty acres for a term of not more than twenty-one years, and at an annual rent of five shillings an acre. Leases to mine for coal, shale, slate, freestone, or limestone, may be issued for areas not exceeding 320 acres at an annual rent of two shillings and sixpence an acre. (*c*) *Miscellaneous Leases.* The Minister may grant leases for mining purposes, for a term not exceeding ten years, of the bed or banks of any river flowing through Crown lands, at a rent of five shillings an acre. The area leased may not exceed forty chains in length by five chains on either side from the centre of the river. Special leases may be granted by the Governor upon resolutions assenting thereto passed by both Houses of Parliament.

(iv.) *Miscellaneous Licenses.* Licenses granting easements for various purposes may be issued, for a term not exceeding twenty-one years, to persons holding mining leases or miner's right for the more advantageous working of the land occupied.

(v.) *Particulars of Leases and Licenses Issued, 1909.* The following table shews particulars of leases and licenses of Crown lands, exclusive of prospectors' licenses and miners' rights, issued by the Mines Department during the year 1909 : —

§ 10. Resumption by Crown of Alienated Lands.

1. **General.**—Under various Acts alienated lands may be compulsorily resumed by the Crown in the several States for certain purposes, generally connected with works of a public nature. Resumptions for closer settlement purposes have already been referred to (see § 8, above). In most of the States there are Lands Clauses or similar Acts providing the machinery, and indicating the procedure to be adopted in assessing the compensation to be paid by the Crown to private owners in cases where the parties have failed to agree as to the amount to be paid. The provisions of these Acts are generally incorporated in the special Acts specifying the purposes for which alienated lands may be resumed. Lands leased for pastoral purposes may generally be resumed by the Crown on short notice. The lessee is ordinarily entitled to compensation for land resumed, for loss or depreciation in value of the lease caused by such resumption, and for improvements.

(*a*) *New South Wales.* Alienated lands may be recovered by the Crown for authorised works and certain public purposes under the provisions of the Public Works Act 1900, and in other cases may be acquired by the Crown by purchase, gift, or surrender under Executive authority. Alienated lands required for public roads may be resumed under the Public Roads Act 1902, and if containing gold may be resumed for mining under Section 72 of the Mining Act 1906. Lands dedicated or granted by the Crown for public purposes may be resumed under Section 105 of the Crown Lands Act 1884, Section 41 of the Crown Lands Act 1889, and Section 1 of the Public Trusts Act 1897. Surrender and exchange of lands alienated or in process of alienation may be carried out under Section 47 of the Crown Lands Act 1895.

(*b*) *Victoria.* In Victoria lands may be resumed in accordance with the provisions of the Lands Compensation Act 1890, the Public Works Act 1890, the Railways Acts, the Land Act 1901, the Local Government Act 1903, the Water Act 1905, the Vacant Unclaimed Lands Act 1906, and the Forests Act 1907.

(*c*) *Queensland.* In this State alienated lands may be resumed under the provisions of the Public Works Land Resumption Act 1906, for any of the purposes specified in section 4 of that Act.

(*d*) *South Australia.* In this State the principal Acts under which land is repurchased for public works are the Railways Commissioners Act 1887, the Water Conservations Acts 1886, 1889, and 1900, the Waterworks Act 1882, and the Sewers Act 1878.

(*e*) *Western Australia.* In Western Australia private lands may be resumed under the provisions of the Land Act 1898, the Roads Act 1902, and the Public Works Act 1902.

(*f*) *Tasmania.* In the greatest number of cases private lands have been resumed in this State for the purpose of roads by agreement under the Lands Vesting Act 1894 and the Roads Acts, which were to a large extent repealed and consolidated by the Local Government Act 1906. In case of the owners failing to agree as to price, the land is acquired under the Lands Clauses Act 1857, incorporated in the Public Works and the Crown Land Acts. The Lands Resumption Acts 1891 and 1892 provide for the compulsory acquisition of land without waiting for the usual formalities. Under that Act a notification may be given to the owner that the land is required; after the expiration of thirty days the land may be resumed by notification in the *Gazette*, the amount of purchase-money being afterwards decided by arbitration, as provided by the Lands Clauses Act. A Bill amending and consolidating the Land for Public Purposes Act 1884, and the Lands Resumption Acts 1891 and 1892, was passed by the House of Assembly in August, 1910.

2. **Areas Resumed, 1901 to 1909.**—The subjoined table shews, so far as particulars are available, the areas of private lands resumed, exclusive of resumptions for closer settlement purposes, in each State during each year from 1901 to 1909 inclusive:—

AREAS OF PRIVATE LANDS RESUMED BY THE CROWN

(EXCLUSIVE OF RESUMPTIONS FOR CLOSER SETTLEMENT), 1901 TO 1909.

* Exclusive of resumptions for railway purposes, which for the years 1901 to 1906, inclusive, amounted to 13,081 acres. † Not available. ‡ Exclusive of South Australia.

§ 11. Alienation and Occupation of Crown Lands in the Several States.

1. **Introduction.**— The tables given in the previous parts of this section shew separately the areas alienated, in process of alienation, and occupied under various tenures in the several States. The tables given below shew collectively the general condition of the public estate in each State, having regard to (*a*) the area alienated absolutely, which includes free grants, sales, and conditional purchases for which grants have been issued, the conditions having been complied with; (*b*) the area in process of alienation, comprising holdings for which the fee-simple has not yet been alienated, but which

are in process of sale under systems of deferred payments; (*c*) the area occupied under all descriptions of leases and licenses; and (*d*) the area unoccupied, which, ordinarily, includes roads, permanent reserves, forests, etc. In some cases, however, lands which are permanently reserved from alienation are occupied under leases and licenses, so that in such cases the areas reserved are comprised in class (*c*) and not in class (*d*). Particulars of leases and licenses of reserved areas, as distinguished from leases and licenses of other lands, are not available. It should be observed that in many cases lands occupied under leases or licenses for pastoral purposes are held on short tenures only, and could thus be made available for settlement practically whenever required.

2. **New South Wales.**—The total area of the State of New South Wales is 198,638,080 acres, of which on the 30th June, 1910, 37,999,049 acres, or nearly one-fifth were alienated absolutely, 15,460,919 acres, or about one-twelfth, were in process of alienation, 125,733,630 acres, or about three-fifths, were occupied under Lands Department, Western Land Board, or Mines Department leases and licenses, and the remaining 19,444,482 acres, or about one-tenth, were unoccupied. The next table shews the areas alienated, in process of alienation, held under leases and licenses, and unoccupied in 1901 and from 1907 to 1910.

During the year 1909-10, a total area of 1,638,492 acres became available for conditional purchase, conditional lease, conditional purchase lease, homestead selection, and settlement lease, special conditional purchase lease, and additional holdings. Of this area, 715,625 acres were made available for additional holdings only, so as to enable selectors with insufficient areas to increase their holdings, and 197,113 acres were made available for closer settlement purchase.

NEW SOUTH WALES.—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901-1910.[1]

Particulars.	Area in Acres.				
	1901.	1906-7.	1907-8.	1908-9.	1909-10.
1. *Alienated.*

4. *Unoccupied*	23,543,468	21,915,132	18,222,434	18,245,580	19,444,482
Area of State—198,638,080 acres.					

1. The figures for 1901 are up to the 31st December, while for the other years given they are up to the 30th June. 2. On the 31st Dec., 1908. 3. Includes 495,052 acres acquired for closer settlement.

3. **Victoria.**—The total area of the State of Victoria is 56,245,760 acres, of which 23,107,613 acres, or about three-eighths, had been alienated absolutely up to the end of the year 1909; 5,358,496 acres, or about one-eleventh, were in process of alienation under deferred payments; and 16,384,395 acres were occupied under leases and licenses, while the remaining 11,395,256 acres were unoccupied. The following table shews the areas alienated and in process of alienation, together with the areas reserved, leased, and available for occupation at the end of the year 1901 and from 1905 to 1909:—

VICTORIA.—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901 to 1909.

Particulars.	Area in Acres					
	1901.	1905.	1906.	1907.	1908.	1909.
1. *Alienated*	20,066,875	22,584,092	22,816,538	22,940,143	23,074,634	23,107,613
2. *In Process of Alienation*—

Total	3,730,351	3,819,783	4,040,209	4,488,346	4,890,021	5,358,496
3. *Leases and Licenses Held*—						
Under Lands Department	17,110,709	17,938,838	16,683,992	16,565,917	15,955,346	16,384,395
Under Mines Department*	...	...	...	...	...	...
4. *Unoccupied Crown Lands*	15,337,825	11,903,047	12,705,021	12,251,354	12,325,759	11,395,256

Total area of State—56,245,760 acres.

* Not available.

Crown lands in Victoria include roads, 1,679,478 acres; water reserves, 285,180 acres; agricultural colleges, etc., 155,483 acres; State forests and timber reserves (now under Forests Act 1907), 3,999,482 acres; permanent reserves for public purposes, 1,592,400 acres; reserves in the Mallee, 397,881 acres; unsold land in towns, etc., 1,600,998 acres; and other reserves (including State forest and timber reserves under the Land Acts), 927,224 acres. A Bill has been introduced in Parliament revoking permanent reserves for public purposes, in order that the areas may be dealt with as unoccupied Crown lands.

4. **Queensland.**—The total area of this State is 429,120,000 acres, of which, on the 31st December, 1909, 15,296,688 acres, or about one-twenty-eighth, were alienated absolutely; 6,806,467 acres, or about one-seventieth, were in process of alienation; 283,023,871, or about five-eighths, were occupied under leases and licenses, the remaining 123,992,974 acres being unoccupied. From 1901 to 1909 the area alienated absolutely increased by 3,040,738 acres or 15 per cent., and the area in process of alienation by 1,628,145 acres or 44 per cent.

The following table shews the area alienated absolutely, the area in process of alienation, and the area held under various forms of lease and license at the end of the year 1901 and from 1905 to 1909:—

QUEENSLAND.—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901 TO 1909.

Particulars.	Area in Acres.					
	1901.	1905.	1906.	1907.	1908.	1909.
1. *Alienated Absolutely*—

4. *Unoccupied*	132,770,889	171,297,172	163,728,817	145,197,475	134,503,266	123,992,974

Total area of State—429,120,000 acres.

* Approximate; the area under timber licenses is constantly fluctuating.

The area open for selection (as distinguished from occupation for purely pastoral or special purposes) under every mode at the beginning of the year 1909 was 8,834,807 acres, and the area opened during the year was 5,876,020 acres, while the area withdrawn was 4,442,845 acres. The area selected was 5,956,323 acres, and the area remaining open at the end of the year was 4,311,659 acres. The area selected in 1909 exceeded even the high record of the previous year, and this result was secured by the very large area selected as grazing selections, which area was 4,623,803 acres in 1909 as compared with 3,329,978 acres in 1908. The area surveyed during 1909 was 10,351,031 acres, at a total cost of £81,664.

5. **South Australia and Northern Territory.**— The area of the State of South Australia south of lat. 26° S. is 243,244,800 acres, and of the Northern Territory, 335,116,800 acres, making a total of 578,361,600 acres. In South Australia (proper) at the end of the year 1909, there were 8,670,874 acres, or about one-twenty-eighth, alienated absolutely; 1,297,277 acres, or about one-two hundred and fortieth, were in process of alienation; 106,956,007 acres, or about three-sevenths, were occupied under leases and licenses; while the remaining 126,320,642 acres were unoccupied. The subjoined tables shew for South Australia proper and for the Northern Territory respectively the area of land alienated absolutely, and in process of alienation under deferred payments, and the area held under different forms of leases:—

SOUTH AUSTRALIA (PROPER).—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901 to 1909.

Particulars.	Area in Acres.					
	1901.	1905.	1906.	1907.	1908.	1909.

Total area of Northern Territory—335,116,800 acres.

6. **Western Australia.**—The total area of Western Australia is 624,588,800 acres, of which on the 30th June, 1910, 4,449,329 acres, or about a one-hundred-and-forty-fifth part, were alienated absolutely; 12,880,195 acres, or about one-fifty-fifth part, were in process of alienation; while 167,236,201 acres, or about one-quarter, were occupied under leases and licenses issued either by the Lands or the Mines Departments. The remaining 440,023,075 acres, or about two-thirds, were unoccupied.

The following table shews the area alienated absolutely and conditionally, and the areas held under leases and licenses at the end of the years 1901 and 1904 and on 30th June, 1907 to 1910:—

WESTERN AUSTRALIA.—ALIENATION AND OCCUPATION OF CROWN LANDS, 1901 TO 1910.

Total area of State—624,588,800 acres.

* Figures are now given as up to the 30th June, instead of as up to 31st December. Figures previous years may be obtained from the Statistical Registers of Western Australia. † On the December, 1908. ‡ On the 31st December, 1909.

During the year 1909-10 large areas of land were surveyed by the Lands Department prior to selection, and a large area of land lying north and south of the main Eastern railway was classified, and portions of it are being surveyed. The classification has proved the existence of an immense extent of good country, having a sufficient rainfall to make it suitable for mixed farming, and intending settlers are now turning their attention to this locality.

7. **Tasmania.**—Of the total area of Tasmania, namely, 16,777,600 acres, there were at the end of the year 1909, 4,890,000 acres, or about one-quarter, alienated absolutely; 1,006,642 acres, or about one-twentieth, were in process of alienation; 1,447,497 acres, or about one-eleventh, were occupied under leases and licenses for either pastoral, agricultural, timber, or mining purposes; the remaining 9,433,461 acres, or about five-eighths, being unoccupied. The following table shews the areas alienated, in process of alienation, and held under lease or license, and the area unoccupied at the end of the year 1901 and from 1905 to 1909:—

TASMANIA.—ALIENATION AND OCCUPATION OF CROWN LANDS. 1901 to 1909.

Total area of State—16,777,600 acres.

§ 12. Classification of Holdings according to Size.

1. **General.**—The classification of holdings according to their area is of interest chiefly in relation to the efforts made by the several States in recent years to promote settlement on the land on blocks of suitable size, especially by means of the Closer Settlement Acts. Returns shewing such a classification are not available for two of the States, viz., Queensland and South Australia.

The following table gives particulars of the number and aggregate area of holdings of lands alienated and in process of alienation in area series, as returned to the collectors of agricultural statistics, in New South Wales, Victoria, Western Australia, and Tasmania, for the season 1909-10:—

CLASSIFICATION OF HOLDINGS (ONE ACRE AND OVER) IN AREA SERIES, 1909 to 1910.

Size of Holdings.	N.S.W.	Victoria.	W. Australia.	Tasmania.	Total.
		NUMBER.			
Acres.

2. **New South Wales.**—The total number of holdings of one acre and over in area in this State on the 31st March, 1901, was 69,439. On the 31st March, 1910, the corresponding number was 85,178, shewing an increase of 15,739, or about 22.7 per cent. The following table shews the number of holdings of various sizes alienated absolutely, and in process of alienation, on the 31st March, 1901, and from 1905 to 1910:—

NEW SOUTH WALES.—CLASSIFICATION OF HOLDINGS ALIENATED AND IN PROCESS OF ALIENATION, 1901 to 1910.

§ 13. The Progress of Land Settlement, 1900 to 1909.

1. **Recent Progress.**—The progress of settlement and the growth of land alienation in the States of the Commonwealth under recent legislation is seen in the subjoined statement which shews concisely the condition of the public estate in each State and in the Commonwealth at the end of each year from 1900 to 1909, inclusive. The effect of the land laws during that period has been generally to diminish the number of large holdings, at the same time decreasing the area held under lease, while both the area alienated and the area in process of alienation have increased. As leases of large areas fall in or are otherwise terminated they are in many cases not renewed, but the land leased is cut up for the purpose of settlement under systems of deferred payment; the State Governments, also, have in many cases acquired by repurchase considerable areas under the provisions of the various Closer Settlement Acts. Further; greater facilities have been granted to the working classes to acquire possession of the soil, and special inducements have been offered to *bonâ fide* settlers by the introduction of new forms of tenure on easy terms and conditions.

From 1900 to 1909 the area alienated absolutely in the whole Commonwealth increased by 18,459,970 acres, or 25 per cent.; the area in process of alienation increased by 9,452,822 acres, or 30 per cent.; the area leased by 11,559,331 acres, or 1 per cent.; while the area unoccupied decreased by 39,472,123 acres, or 4 per cent.

TOTAL AREAS ALIENATED, IN PROCESS OF ALIENATION,

HELD UNDER LEASE OR LICENSE, AND UNOCCUPIED, IN EACH STATE AND IN THE COMMONWEALTH AT THE END OF EACH YEAR FROM 1900 TO 1909 INCLUSIVE, EXPRESSED ABSOLUTELY AND AS PERCENTAGES OF AREA OF ENTIRE STATE.

NEW SOUTH WALES.—AREA, 198,638,080 ACRES.

2. **Diagram shewing Condition of Public Estate.**—The following diagram shews the condition of the public estate in the Commonwealth at the end of the year 1909. The square itself represents the total area of the Commonwealth, while the relative areas of individual States are shewn by the vertical rectangles. The areas alienated absolutely, in process of alienation under systems of deferred payments, and the areas held under leases or licenses, are designated by the differently-shaded areas as described in the reference given below the diagram, while the areas unoccupied are left unshaded:—

SECTION VII.

PASTORAL PRODUCTION.

§ 1. Initiation and Growth of Pastoral Industry.

1. **Early Statistics.**—The live stock which Captain Phillip brought with him when establishing the first settlement in Australia, in January, 1788, is stated to have comprised seven horses, six cattle, twenty-nine sheep, twelve pigs, and a few goats. Later in the same year, in a letter from Captain Phillip to Lord Sydney, then Secretary of State for the Colonies, an enclosure signed by "Andrew Miller, Commissary," sets forth in detail the numbers of each kind of live stock in the colony on 1st May, 1788. A summary of the particulars supplied is as follows:—Horses, 7; cattle, 7; sheep, 29; pigs, 74; rabbits, 5; turkeys, 18; geese, 29; ducks, 35; fowls, 209. In view of the depredation since caused by rabbits their inclusion in this return as part of the live stock of the Commonwealth is of interest.

2. **Subsequent Development.**—During the years immediately succeeding the first settlement the growth of the number of live stock was slow, and notwithstanding importations from India and the Cape of Good Hope the total of the flocks and herds of Australia amounted in 1800 to only 203 horses, 1044 cattle, 6124 sheep, and 4017 pigs. During the next fifty years, however, the pastoral industry made rapid strides, and at the end thereof (1850) the totals reached were 159,951 horses, 1,894,834 cattle, 15,993,954 sheep, and 114,000 pigs.

The statistical records of live stock in Australia prior to the year 1860 are somewhat defective, but from that year onwards fairly complete particulars are available in most of the States. At the present time statistics of live stock are collected annually in all the States, principally through the agency of the police, but in the years 1885 to 1888 inclusive, and 1893 to 1895 inclusive, no such particulars were collected in South Australia, and similar gaps occur in the Victorian records for the periods 1895 to 1899 inclusive, and 1901 to 1903. In order to obtain totals for the Commonwealth for these years the missing numbers have been supplied by interpolation. The results so obtained probably differ but slightly from the actual numbers for the respective years.

3. **Increase in Numbers.**—Particulars concerning the numbers of each kind of live stock in the Commonwealth at quinquennial intervals from 1860 to 1900, and thence onwards in single years, are given in the following table, and are shewn continuously in the graphs as given hereinafter.

During the forty-nine years covered by the table the live stock of the Commonwealth increased considerably, horses by 369 per cent., cattle 179 per cent., sheep 355 per cent., and pigs 118 per cent. The average annual increases which these aggregates represent are as follows:—Horses, 3.20 per cent. per annum; cattle, 2.12 per cent.; sheep, 3.14 per cent.; and pigs, 1.60 per cent.

COMMONWEALTH LIVE STOCK, 1860 to 1909.

Year.	Horses.	Cattle.	Sheep.	Pigs.
1860	431,525	3,957,915	20,135,286	351,096

1885	1,143,064	7,397,947	67,491,976	748,908
1890	1,521,588	10,299,913	97,881,221	891,138
1895	1,680,419	11,767,488	90,689,727	822,750
1900	1,609,654	8,640,225	70,602,995	950,349
1901	1,620,420	8,491,428	72,040,211	931,309
1902	1,524,601	7,062,742	53,668,347	777,289
1903	1,546,054	7,247,508	56,932,705	837,368
1904	1,595,256	7,840,520	65,823,918	1,062,703
1905	1,673,805	8,525,025	74,403,704	1,014,853
1906	1,765,186	9,349,409	83,687,655	813,569
1907	1,871,714	10,128,486	87,650,263	754,101
1908	1,927,731	10,547,679	87,043,266	695,689
1909	2,022,917	11,040,391	91,676,281	765,137

4. **Fluctuations.**—The increases referred to, however, have not been continuous, marked fluctuations having taken place during the period, mainly on account of the droughts which have from time to time left their impress on the pastoral history of Australia. These were in evidence in 1869, 1877, 1884, 1895 and subsequent years, 1902, and to some extent in 1908. The drought of 1902 was one of the most severe experienced in Australia, the number of sheep in the Commonwealth diminishing under its influence from 72,040,211 on 31st December, 1901, to 53,668,347 at the same date in 1902—a decrease of more than 25 per cent.

The extraordinary recuperative power of Australia is evidenced by the large increases in the numbers of stock which the good seasons, supervening on the various droughts, have witnessed. Thus, in the seven years from 1902 to 1909, horses increased by 498,308, cattle by 3,977,626, and sheep by 37,993,034, the corresponding increases per cent. per annum being horses 4.12 per cent., cattle 6.59 per cent., and sheep 7.95 per cent.

The number of horses in the Commonwealth at the end of 1909 was higher than for any previous year. The number of cattle was higher than for any year since 1896, and the number of sheep higher than for any year since 1894. The years in which the numbers of live stock attained their maxima are as follows:—Horses, 1909, 2,022,909; cattle, 1894, 12,311,617; sheep, 1891, 106,421,068; and pigs, 1904, 1,062,703.

5. **Live Stock in Relation to Population.**—The number of each kind of live stock per head of the population of the Commonwealth has varied during the past forty-nine years in the manner shewn in the succeeding table:—

NUMBER OF LIVE STOCK PER HEAD OF POPULATION, 1860 to 1909.

Year.	Horses.	Cattle.	Sheep.	Pigs.	Year.	Horses.	Cattle.	Sheep.	Pigs.
1860 ...	0.38	3.45	17.58	0.31	1901 ...	0.42	2.22	18.83	0.24
1865 ...	0.41	2.68	21.25	0.25	1902 ...	0.39	1.82	13.82	0.20
1870 ...	0.43	2.60	25.24	0.33	1903 ...	0.39	1.85	14.50	0.21
1875 ...	0.44	3.37	27.99	0.29	1904 ...	0.40	1.97	16.52	0.27
1880 ...	0.48	3.37	27.87	0.37	1905 ...	0.41	2.10	18.36	0.25
1885 ...	0.42	2.75	25.05	0.28	1906 ...	0.43	2.27	20.31	0.20
1890 ...	0.48	3.27	31.06	0.28	1907 ...	0.45	2.41	20.88	0.18
1895 ...	0.48	3.36	25.93	0.24	1908 ...	0.45	2.47	20.36	0.16
1900 ...	0.43	2.29	18.75	0.25	1909 ...	0.46	2.52	20.94	0.17

Considered in relation to population, the live stock attained its maximum in the period 1890-5, and its minimum in the year 1902. During the period of forty-nine years under review, the number of horses varied but slightly in proportion to population, the range being from 0.38 to 0.48 per head. In the case of cattle, the limits of variation were 1.82 and 3.45; sheep, 13.82 and 31.06; and pigs, 0.16 and 0.37.

6. **Live Stock in Relation to Area.**—The numbers of live stock per square mile in the several States of the Commonwealth on 31st December, 1909, were as follows:—

NUMBER OF LIVE STOCK PER SQUARE MILE, 31st DECEMBER, 1909.

State.	Horses.	Cattle.	Sheep.	Pigs.
New South Wales	1.95	9.76	148.86	0.77
Victoria	5.04	17.63	147.22	2.48
Queensland	0.83	7.03	29.22	0.19
South Australia...	0.28	0.84	7.17	0.09
Western Australia	0.13	0.81	4.85	0.05
Tasmania	1.54	7.63	66.17	2.12
Commonwealth	0.68	3.71	30.81	0.26

7. **Net Exports of Principal Pastoral Products.**—The quantities by which the exports of the principal pastoral products of the Commonwealth exceeded the imports for the years 1905 to 1909 are as follows:—

QUANTITIES OF NET EXPORTS OF PRINCIPAL PASTORAL PRODUCTS OF THE COMMONWEALTH, 1905 to 1909.

Note. — signifies net imports.

§ 2. Horses.

1. **Suitability of Australia for Horse-breeding.**—From the earliest times the suitability of the climate and pastures of Australia for the production of serviceable breeds of horses has been fully recognised. By the importation of high-class sires, and the careful selection of breeding mares, these natural advantages were utilised to the fullest extent, all classes of horses being bred. As a consequence of this combination of advantages the Australian horse, whether of the heavy draught, medium weight or light saddle and carriage variety, compares more than favourably with the product of other lands. The Australian horse has been found suitable for the army in India, and large numbers are obtained annually for remount purposes.

2. **Distribution throughout the Commonwealth.**—As regards numbers, the State of New South Wales, the earliest settled of the group, established a lead, which it has ever since retained. The figures for the several States for a series of years are as follows:—

NUMBER OF HORSES, STATES AND COMMONWEALTH, 1860 to 1909.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
1860...	251,497	76,536	23,504	49,399	9,555	21,034	431,525
1865...	282,587	121,051	51,091	73,993	15,700	22,152	566,574
1870...	337,597	167,220	83,358	83,744	22,174	22,679	716,772

1903...	458,014	377,357	401,984	192,411	82,747	33,541	1,546,054
1904...	482,663	372,397	413,165	200,241	90,225	36,565	1,595,256
1905...	506,884	385,513	430,565	216,345	97,397	37,101	1,673,805
1906...	537,762	406,840	452,916	224,447	104,922	38,299	1,765,186
1907...	578,326	424,648	488,486	226,532	113,330	40,392	1,871,714
1908...	591,045	424,903	519,969	235,136	116,795	39,883	1,927,731
1909...	604,784	442,829	555,613	253,884	125.315	40,492	2,022,917

3. **Proportion in the Several States.** — The percentages of the numbers of horses in the several States on the totals for the Commonwealth for the past ten years are as follows:—

PERCENTAGE OF HORSES IN EACH STATE ON TOTAL FOR COMMONWEALTH,

1900 TO 1909.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	%	%	%	%	%	%	%
1900...	29.91	24.37	28.38	11.14	4.24	1.96	100.00
1901...	30.03	23.90	28.52	11.00	4.55	2.00	100.00
1902...	29.52	25.08	26.18	11.77	5.26	2.19	100.00
1903...	29.62	24.41	26.00	12.45	5.35	2.17	100.00
1904...	30.26	23.34	25.90	12.55	5.66	2.29	100.00
1905...	30.28	23.03	25.72	12.93	5.82	2.22	100.00
1906...	30.47	23.05	25.66	12.71	5.94	2.17	100.00
1907...	30.90	22.69	26.10	12.10	6.05	2.16	100.00
1908...	30.66	22.04	26.97	12.20	6.06	2.07	100.00
1909...	29.90	21.89	27.47	12.55	6.19	2.00	100.00

During the period under review, the proportions in South Australia and Western Australia have increased, those in Victoria and Queensland have diminished, while in the case of New South Wales and Tasmania the proportion in 1909 was practically identical with that in 1900.

4. **Oversea Export Trade in Horses.**—Australia's export trade in horses is a fairly considerable, though somewhat fluctuating, one. During the past five years it has varied in number between 20,808 for the year 1905 and 7807 in 1909, and in value between £366,730 and £173,012 respectively for the same two years. The total number of horses exported during the five years amounted to 61,687, an average of 12,337 per annum. The total value of the exports for the period was £1,341,686, or £268,337 per annum.

The average export value per head for the period was £21 15s. The numbers exported to the principal countries concerned in this trade are as follows:—

NUMBER AND DESTINATION OF HORSES EXPORTED FROM THE COMMONWEALTH, 1905 TO 1909.

Country to which Exported.	1905.	1906.	1907.	1908.	1909.	Total for 5 years.
	No.	No.	No.	No.	No.	No.
India	7,706	7,931	9,136	6,276	6,079	37,128

China	2,671	5,942	3,299	892	295	13,099
German S.W. Africa ...	...	...	...	13,255	...	13,255
Ceylon	...	4,335	4,886	3,418	2,201	14,840
New Zealand	13,206	8,261	4,020	3,436	2,847	31,770
Mauritius	1,140	1,791	...	2,385	480	5,796
Burma	2,625	1,500	960	360	1,055	6,500
Cape of Good Hope	1,190	1,030	70	75	80	2,445
Other Countries	3,940	4,024	7,403	2,616	1,153	19,136
Total	366,730	258,256	319,470	224,218	173,012	1,341,686

It will be seen from the foregoing tables that the export trade in horses with India, the Straits Settlements, and Java has been fairly uniform throughout the five years under review, but that the particulars for some of the other countries specified exhibit

marked fluctuations. Thus the exports to Hong Kong and Japan were exceptionally large in 1905.

The number of horses imported into the Commonwealth is comparatively small, consisting mainly of valuable animals introduced for breeding purposes, and imported principally from New Zealand and the United Kingdom. The average value per head of the horses imported during the five years was £94 0s. 6d., as compared with £21 15s. per head for the exports for the same period. The average number imported per annum was, however, only 648, and the average annual value £60,908. The following table furnishes a comparison of imports and exports of horses during the five years 1905 to 1909:—

COMMONWEALTH IMPORTS AND EXPORTS OF HORSES, 1905 to 1909.

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
		£		£		£
1905	321	39,283	20,808	366,730	20,487	327,447
1906	426	52,250	10,772	258,256	10,346	206,006
1907	516	53,145	12,632	319,470	12,116	266,325
1908	504	71,546	9,668	224,218	9,164	152,672
1909	1,472	88,317	7,807	173,012	6,335	84,695
Total for 5 years	3,239	304,541	61,687	1,341,686	58,448	1,037,145

5. **Interstate Trade in Horses.**—From the following table shewing the number of horses which each of the States imported from or exported to other States during the year 1909 it will be seen that the only States shewing an excess of exports over imports were Queensland and Tasmania:—

INTERSTATE TRADE IN HORSES, 1909.

State.	Imports from other States of the Commonwealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.	
	Number.	Value.	Number.	Value.	Number.	Value.
		£		£		£

Mexico	1902	859,217	Orange River Col'ny	1907	127,579

1. Preliminary figures. 2. Austria, 1902; Hungary, 1895. 3. Employed on farms. 4. Exclusive of British Columbia. 5. Agricultural horses, unbroken horses, and breeding mares only. 6. Exclusive of Formosa. 7. Exclusive of Bengal.

7. **Relation to Population.**—In proportion to population, horses are much more numerous in Queensland than in any of the other States. South Australia is next in order, while Tasmania has the smallest number of horses per head. In all the States the number of horses per head of population was somewhat higher in 1909 than in 1900. Particulars for the past ten years are as follows :—

NUMBER OF HORSES PER HEAD OF POPULATION, COMMONWEALTH AND STATES, 1900 TO 1909.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1900	0.35	0.33	0.92	0.50	0.38	0.18	0.43
1901	0.35	0.32	0.91	0.49	0.38	0.19	0.42

§ 3. Cattle.

1. **Purposes for which Raised.**—In all the States of the Commonwealth cattle-raising is carried out on a more or less extensive scale, the main object in certain districts being the production of stock suitable for slaughtering purposes, and in others the raising of profitable dairy herds. The great impetus which the development of the export trade in Australian butter gave to the dairying industry in the Commonwealth led to a considerable increase in the numbers and quality of the dairy herds of the States of Victoria, New South Wales, and Southern Queensland in particular, the sub-tropical portion of Australia being apparently the best adapted to this industry. On the other hand, by far the finest specimens of beef-producing cattle are those raised in the tropical districts of the Commonwealth, *i.e.*, in the northern parts of Queensland, in the Northern Territory of South Australia, and in the Kimberley districts in the north of Western Australia.

2. **Distribution throughout Commonwealth.**—Until 1880 New South Wales occupied the eading position in the Commonwealth group as a cattle-raising State, but in that year Queensland forged ahead and obtained a lead which it has since maintained. The extent of this lead has, however, varied considerably, owing principally to the effects produced by the tick fever and droughts, from both of which causes the Queensland herds suffered more severely than those of the other States. In fact, during the period from 1894, when the number of cattle in Queensland attained its maximum of rather more than 7,000,000, to 1903, when the number recorded was less than 2,500,000, an uninterrupted decline was experienced. During the past six years, however, a rapid improvement has taken place, and the total reached on 31st December, 1909, was over 4,700,000.

The numbers of cattle in the several States at quinquennial intervals from 1860 to 1900 and thence onwards for each year are as follows :—

NUMBER OF CATTLE IN STATES AND COMMONWEALTH, 1860 to 1909.

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1860	2,408,586	722,332	432,890	278,265	32,476	83,366	3,957,915
1865	1,961,905	621,337	848,346	158,057	45,148	90,020	3,724,813
1870	2,195,096	721,096	1,076,630	136,832	45,213	101,459	4,276,326
1875	3,134,086	1,054,598	1,812,576	219,240	50,416	118,694	6,389,610
1880	2,580,040	1,286,267	3,162,752	307,177	63,719	127,187	7,527,142

1902	1,741,226	1,644,180	2,543,471	519,163	437,136	177,566	7,062,742
1903	1,880,578	1,665,078	2,481,717	536,580	497,617	185,938	7,247,508
1904	2,149,129	1,685,976	2,722,340	520,379	561,490	201,206	7,840,520
1905	2,337,973	1,737,690	2,963,695	647,631	631,825	206,211	8,525,025
1906	2,549,944	1,804,323	3,413,919	680,095	690,011	211,117	9,349,409
1907	2,751,193	1,842,807	3,892,232	709,354	717,377	215,523	10,128,486
1908	2,955,934	1,574,162	4,321,600	748,368	741,788	205,827	10,547,679
1909	3,027,727	1,549,640	4,711,782	758,080	793,217	199,945	11,040,391

3. **Proportion in each State.**—During the period elapsing between 1900 and 1909 the proportion of cattle in the several States has varied considerably, as shewn hereunder :—

PERCENTAGE OF CATTLE IN EACH STATE ON TOTAL FOR COMMONWEALTH, 1900 TO 1909.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	%	%	%	%	%	%	%
1900	22.95	18.55	47.20	5.47	3.92	1.91	100.00
1901	24.11	19.12	44.43	5.66	4.69	1.99	100.00
1902	24.65	23.28	36.01	7.35	6.19	2.52	100.00
1903	25.95	22.97	34.24	7.40	6.87	2.57	100.00
1904	27.41	21.50	34.72	6.64	7.16	2.57	100.00
1905	27.42	20.38	34.77	7.60	7.41	2.42	100.00
1906	27.27	19.30	36.52	7.27	7.38	2.26	100.00
1907	27.16	18.20	38.43	7.00	7.08	2.13	100.00
1908	28.02	14.92	40.97	7.10	7.04	1.95	100.00
1909	27.42	14.04	42.68	6.87	7.18	1.81	100.00

A comparison of the positions of the several States in 1900 and 1909 shews that, while Queensland's proportion of the Commonwealth herds and those of Victoria and Tasmania suffered diminution, fairly large increases were in evidence in New South Wales, South Australia and Western Australia. The most noticeable increase in proportion is that of Western Australia, from 3.92% in 1900 to 7.18% in 1909.

4. **Imports and Exports of Cattle.**—Although the various products of the cattle-raising industry bulk largely in the export trade of the Commonwealth, the export of live cattle from Australia has never been considerable. The number of cattle imported is also small, consisting, as in the case of horses, mainly of valuable animals for breeding. One effect of this is that although considerably more than twice as many cattle were exported during the past nine years as were imported, the value of imports exceeded the value of exports by no less than £6181. Details are as follows :—

COMMONWEALTH IMPORTS AND EXPORTS OF CATTLE, 1901 to 1909.

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.*
		£		£		£
1901	114	3,591	2,413	22,088	2,299	18,497
1902	2,929	49,231	4,489	19,002	1,560	— 30,229
1903	161	9,569	939	9,302	778	— 267
1904	145	7,903	770	7,115	625	— 788
1905	1,022	10,591	1,280	15,451	258	4,860
1906	161	6,762	552	5,373	391	— 1,389
1907	183	10,204	687	8,759	504	— 1,445
1908	112	11,020	953	11,724	841	704
1909	81	5,710	975	9,586	894	3,876
Total for 9 years...	4,908	114,581	13,058	108,400	8,150	— 6,181

* — signifies net imports.

The comparatively large export figures for 1901 and 1902 were due to exports to Natal and Cape of Good Hope.

5. **Interstate Trade in Cattle.**—The trade in cattle between the various States is considerable, the total number transferred from one State to another during 1909 being no less than 365,198, representing an aggregate value of £2,009,900, or about £5 10s. per head. The principal exporting State was Queensland. Details of the interstate trade in cattle during the year are as follows :—

INTERSTATE TRADE IN CATTLE, 1909.

State.	Imports from other States of the Commonwealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.	
	Number.	Value.	Number.	Value.	Number.	Value.
		£		£		£
New South Wales	208,422	1,056,830	111,364	690,781	—97,058	—366,049
Victoria ...	90,531	595,511	81,732	365,781	—8,799	—229,730
Queensland ...	41,796	163,481	145,500	844,667	103,704	681,186

Western Australia	333	4,205	...	...	—333	—4,205
Tasmania ...	395	5,179	4	36	—391	—5,143

Note. — signifies net imports.

6. **Cattle Slaughtered.**—Complete returns of the number of cattle slaughtered annually in the Commonwealth are not obtainable, as these particulars are collected in Tasmania for Hobart and Launceston only, and were collected in South Australia for the first time in 1908. Estimates for the missing years for these States have, however, been made, as shewn in the following table :—

CATTLE (INCLUDING CALVES) SLAUGHTERED, COMMONWEALTH AND STATES, 1901 TO 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1901	335,823	251,477	377,433	72,000	39,424	34,000	1,110,157
1902	288,131	233,206	344,731	72,000	43,882	34,000	1,015,950
1903	275,199	235,284	262,423	73,000	40,501	35,000	921,407
1904	299,089	243,937	210,715	73,000	44,199	35,000	905,940
1905	320,857	249,454	214,462	74,000	51,758	35,000	945,531
1906	358,877	261,034	223,469	75,000	55,034	35,000	1,008,414
1907	380,042	289,709	228,457	60,527	53,505	36,000	1,048,240
1908	376,574	281,087	243,069	71,128	46,975	36,000	1,054,833
1909	411,876	287,548	305,026	86,435	49,716	37,000	1,177,601

For Hobart and Launceston only, the figures for the years 1901 to 1909 were, respectively, 8815, 10,193, 9842, 10,708, 12,035, 10,503, 12,037, 11,907, and 10,059.

7. **Export of Beef Preserved by Cold Process.**—A large export trade in beef preserved by cold process is carried on by the Commonwealth, mainly with South Africa,

the United Kingdom, and the Philippine Islands. The quantities so exported during the five years 1905 to 1909 are as follows:—

QUANTITY OF BEEF PRESERVED BY COLD PROCESS EXPORTED FROM THE COMMONWEALTH, 1905 to 1909.

Country to which Exported.	1905.	1906.	1907.	1908.	1909.	Total for 5 years.

Other countries	4,453	523	1,704	2,471	3,419	12,570
Total	441,925	434,455	575,732	451,551	733,210	2,636,873

During the five years under review the largest of Australia's customers for beef preserved by cold process has been the United Kingdom, while the most consistent and the second largest customer has been the Philippine Islands; Natal, Russia, the Cape of Good Hope and Egypt ranked next in order of importance. The exporting States were Queensland, 68,503,154 lbs., valued at £704,550; Victoria, 1,616,977 lbs., valued at £16,714; and New South Wales, 1,022,164 lbs., valued at £11,946.

8. **Comparison with other Countries.**—In the following comparison of the herds of Australia with those of some of the principal cattle-raising countries of the world, the latest available figures have been inserted in each case:—

NUMBER OF CATTLE IN VARIOUS COUNTRIES.

Country.	Date.	No. of Cattle.	Country.	Date.	No. of Cattle.
United States of America	1908	71,099,000	Cape of Good Hope ...	1904	1,954,390
Russian Empire ...	1907	43,507,101	Denmark	1903	1,840,466
British India[1] ...	1907	52,357,895	Belgium	1907	1,812,689
Argentine Republic ...	1908	29,116,625	New Zealand ...	1908	1,773,326
Germany	1907	20,630,544	Bulgaria	1905	1,695,535
Austria-Hungary[2] ...	1895[2]	15,763,622	Netherlands ...	1904	1,690,463
France	1907	13,949,722	Switzerland ...	1906	1,498,144
United Kingdom ...	1908	11,738,792	Japan[4]	1907	1,237,161
Australia	**1909**	**11,040,391**	Algeria	1907	1,081,734
Canada[3]	1908	7,547,582	Ceylon	1908	1,054,102
Italy	1908	6,190,990	Norway	1900	950,201

1. Exclusive of Bengal. 2. Austria 1902, Hungary 1895. 3. Exclusive of British Columbia. 4. Exclusive of Formosa.

9. **Relation to Population.**—The number of cattle per head of population differs considerably in the several States, and is also subject to marked variation from year to year in the same State. Particulars for the past ten years are as follows:—

NUMBER OF CATTLE PER HEAD OF POPULATION, 1900 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.Aust.	Tas.	C'wealth.
1900	1.46	1.34	8.26	1.30	1.88	0.96	2.29
1901	1.49	1.34	7.46	1.31	2.05	0.97	2.22
1902	1.24	1.36	4.98	1.42	2.05	1.00	1.82
1903	1.32	1.38	4.81	1.45	2.19	1.04	1.85
1904	1.47	1.39	5.22	1.40	2.32	1.12	1.97
1905	1.57	1.43	5.61	1.71	2.48	1.14	2.10
1906	1.67	1.46	6.38	1.77	2.64	1.17	2.27
1907	1.75	1.48	7.18	1.81	2.74	1.17	2.43
1908	1.86	1.24	7.82	1.84	2.78	1.11	2.47
1909	1.87	1.19	8.23	1.82	2.90	1.07	2.52

For the Commonwealth as a whole the ratio of cattle to population is 10 per cent. greater for 1909 than for 1900, and has exhibited a continuous increase from 1902 onwards. The excess of the 1909 figures over those for 1900 is in evidence in all the States except Queensland and Victoria, and is most marked in the case of Western Australia. In Queensland the ratio has increased very rapidly during the past six years, and that for 1909 is greater than for any year since 1900. In Victoria the ratio for 1909 is the lowest for the period under review.

§ 4. Sheep.

1. **The Founding of the Commonwealth Pastoral Industry.**—Fortunately for Australia, the suitability of its climate and general conditions for the production of a high class of wool was, at an early date in the history of its settlement, surmised and tested by Captain Macarthur, one of the pioneer sheep-breeders of New South Wales. To the energy of this enterprising pastoralist is due in large measure the rapid and extremely satisfactory development of Australia as a producer of fine wool, and though it would appear that the introduction of the Merino sheep into Australia was not due to Macarthur, a great deal of the credit for having successfully established the pastoral industry in Australia must certainly be his.

2. **Distribution throughout Commonwealth.**—With the exception of a short period in the early sixties, when the flocks of Victoria outnumbered those of the mother State, New South Wales has maintained amongst the Commonwealth group the lead in sheep production which naturally attached to it as the portion of the Commonwealth in which settlement was first effected. From 1878 onwards, the number of sheep in New South Wales has, in every year except 1902 and 1908, represented more than half the total for the Commonwealth, and even in these years it fell but little short of half the total.

The number of sheep in the several States at quinquennial intervals from 1860 to 1900, and for each year onwards to 1909, is as follows:—

NUMBER OF SHEEP, STATES AND COMMONWEALTH, 1860 to 1909.

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Total C'wealth.
1860	6,119,163	5,780,896	3,449,350	2,824,811	260,136	1,700,930	20,135,286

1909	46,202,578	12,937,983	19,593,791	6,475,431	4,731,737	1,734,761	91,676,281

3. **Proportion in the Several States.**—Particulars concerning the relative positions of the several States with respect to the total flocks of Australia, and the variations in such positions which have taken place during the past ten years, are as hereunder.

During the period the proportion of total Commonwealth flocks declined considerably in the case of New South Wales and Tasmania, and in a less marked degree in Victoria and South Australia, while in the case of Queensland and Western Australia a marked advance in proportion was experienced.

PERCENTAGE OF SHEEP IN EACH STATE ON TOTAL FOR COMMONWEALTH, 1900 TO 1909.

Year.	N.S.W.	Vic.	Q'nsland.	S. Aust.	W. Aust.	Tas.	C'wealth.
	%	%	%	%	%	%	%
1900 ...	56.68	15.36	14.64	7.48	3.45	2.39	100.00
1901 ...	58.10	14.82	13.92	7.02	3.65	2.49	100.00
1902 ...	49.66	19.57	13.44	9.17	5.04	3.12	100.00
1903 ...	50.33	18.16	14.74	9.40	4.57	2.80	100.00

1907 ...	50.73	16.14	19.10	7.84	4.20	1.99	100.00
1908 ...	49.83	14.41	21.08	7.99	4.71	1.98	100.00
1909 ...	50.40	14.11	21.37	7.07	5.16	1.89	100.00

4. **Oversea Imports and Exports of Sheep.**—As in the case of cattle, the oversea exports of live sheep from Australia are of comparatively small importance. The principal countries to which such exports have been consigned during recent years are Natal, Cape of Good Hope, Straits Settlements, and New Caledonia. The following are the particulars of the imports and exports for the past nine years :—

COMMONWEALTH IMPORTS AND EXPORTS OF SHEEP, 1901 to 1909.

Year.	Imports.		Exports.		Net Exports.	
	No.	Value.	No.	Value.	No.	Value.
		£		£		£
1901	553	12,134	12,094	12,104	11,541	—30
1902	47,654	66,042	24,296	15,558	—23,358	—50,484
1903	4,727	9,840	18,111	24,468	13,384	14,628
1904	2,614	13,056	7,746	11,219	5,132	—1,837
1905	5,521	24,263	12,090	17,429	6,569	—6,834
1906	11,502	51,403	17,979	48,699	6,477	—2,704
1907	11,759	42,167	11,361	40,040	—398	—2,127
1908	4,020	18,717	13,021	24,452	9,001	5,735
1909	2,775	14,213	5,315	20,243	2,540	6,030
Total for 9 years	91,125	251,835	122,013	214,212	30,888	—37,623

Note. — signifies net imports.

5. **Interstate Trade in Sheep.**—The number and value of the sheep passing from one State to another are considerable, and for 1909 amounted to a total of 3,753,535, valued at £1,891,907, or an average of about 10s. per head. The exporting States were Queensland and New South Wales, whilst the heaviest importing State was Victoria. Details are as follows :—

INTERSTATE TRADE IN SHEEP, 1909.

State.	Imports from other States of the Commonwealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.	
	Number.	Value.	Number.	Value.	Number.	Value.
		£		£		£
New South Wales	1,590,402	746,987	1,862,734	951,277	272,332	204,290
Victoria ...	1,649,839	832,595	841,865	440,016	—807,974	—392,579
Queensland ...	178,714	116,339	908,308	382,139	729,594	265,800

Tasmania ...	61,175	45,197	5,186	33,732	—55,989	—11,465

Note. — signifies net imports.

6. **Sheep Slaughtered.**—The numbers of sheep slaughtered in the several States during the past nine years are as follows :—

SHEEP (INCLUDING LAMBS) SLAUGHTERED, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	Sth. Aust.[1]	West Aust.	Tasmania.[2]	C'wealth.
1901	4,519,133	2,469,797	554,705	678,000	428,534	322,000	8,972,169
1902	4,635,850	2,827,938	715,443	681,000	482,882	325,000	9,668,113
1903	3,277,120	2,652,569	453,666	684,000	412,549	332,000	7,811,904
1904	3,058,536	2,305,729	400,688	691,000	499,585	334,000	7,289,538
1905	4,283,631	2,576,316	587,406	700,000	476,010	335,000	8,958,363
1906	4,482,055	2,826,144	449,547	710,000	468,759	335,000	9,271,505
1907	5,185,057	3,226,141	642,740	1,020,355	465,196	336,000	10,875,489
1908	5,201,492	3,309,865	705,776	1,213,168	423,056	340,000	11,193,357
1909	6,390,486	3,708,512	1,076,718	1,336,037	491,103	344,000	13,346,856

1. Estimated for years 1901 to 1906. 2. Estimated.

For Hobart and Launceston only the figures for the years 1901 to 1909 were respectively :—101,627, 114,900, 122,223, 109,992, 101,863, 104,081, 107,859, 115,560, and 111,445.

7. **Exports of Mutton and Lamb Preserved by Cold Process.**—Australia's export trade in mutton and lamb preserved by cold process is one which has, in recent years, advanced rapidly, and at the present time amounts to more than £1,200,000 per annum. In all the States considerable attention is now being paid to the breeding of a class of sheep that will best meet the requirements of consumers. Crosses between the Merino and the Lincoln, or between the Merino and the Leicester breeds, have proved exceedingly valuable, as they furnish both a good quality of wool and also an excellent carcase for export purposes. The breeding of Shropshire and Southdown sheep with a view to combining meat production with that of wool is also on the increase. Special attention is being paid to the raising of lambs for the home markets, as it is becoming very widely recognised that with suitable breeds, the export trade in lambs is a very profitable one.

Australia's principal customers in this trade are the United Kingdom and South Africa, while in Egypt and Canada a demand for Australian mutton and lamb has developed in recent years. A regular, though not very extensive, trade is also done with the Philippine Islands. The quantities exported to various countries are as follows :—

QUANTITY OF MUTTON AND LAMB PRESERVED BY COLD PROCESS EXPORTED FROM THE COMMONWEALTH, 1905 to 1909.

Country to which Exported.	1905.	1906.	1907.	1908.	1909.	Total for 5 years.

§ 5. Wool.

1. **Importance of Wool Production.**—The chief contributing factor to the pastoral wealth of Australia is the production of wool, the value of the output for the year 1909 being about £28,000,000. Most of the wool produced in the Commonwealth is exported, but with the increased activity of the local woollen mills there has, in recent years, been an increasing quantity used in Australia, although even now the quantity so used represents less than 1¼ per cent. of the whole clip.

2. **Greasy and Scoured Wool.**—In the returns of imports and exports of wool furnished to the Customs Department the quantities are usually shewn as "greasy," or as "scoured and washed," but for the purposes of comparing the clips of the several States or of the Commonwealth as a whole for a series of years, it is convenient to have the total production expressed in terms of greasy wool.

The total quantity of Australian wool, scoured and washed before export, is on the average somewhat less than 25 per cent. of the total clip. The ratio of loss of weight in scouring varies largely with season, locality, breed, and condition. It seems preferable to express "scoured and washed" wool in terms of "greasy" rather than *vice versa*, since the absolute error arising from any uncertainty as to the average loss of weight has thus the least effect.

3. **Total Production.**—In the following tables, relative to the production of wool in the several States for the five years 1905 to 1909, wool returned as "scoured and washed" has been converted into the estimated equivalent amount of "greasy" on the assumption that two pounds of "greasy" wool are on the average required to produce one pound of "scoured and washed." An allowance has also been made for the quantity of wool exported on sheepskins. On this basis the estimated total production of wool (in the grease) in the several States of the Commonwealth for the years 1905 to 1909 may be said to be as in the following table:—

PRODUCTION OF WOOL, ESTIMATED AS "GREASY," COMMONWEALTH AND STATES, 1905 TO 1909.

State.	1905.	1906.	1907.	1908.	1909.
	lbs.	lbs.	lbs.	lbs.	lbs.
New South Wales	302,494,870	332,380,646	375,224,448	344,550,707	379,388,356
Victoria	74,746,552	78,258,113	120,017,787	93,999,156	112,102,445
Queensland	72,323,361	88,068,089	104,173,964	115,283,309	127,531,834
South Australia	41,221,437	48,928,116	57,830,794	52,040,731	56,415,539
Western Australia	19,523,003	17,437,645	22,013,541	22,450,624	30,048,360
Tasmania...	11,752,777	12,600,822	10,878,478	13,859,755	12,550,598
Commonwealth	522,062,000	577,673,431	690,139,012	642,184,282	718,037,132

4. **Wool Locally Used.**—Of this production the quantity used in the local manufactories of the several States of the Commonwealth was approximately as follows:—

LOCALLY USED WOOL, ESTIMATED AS "GREASY," COMMONWEALTH AND STATES, 1905 TO 1909.

State.	1905.	1906.	1907.	1908.	1909.
	lbs.	lbs.	lbs.	lbs.	lbs.
New South Wales	729,470	836,730	963,408	1,020,456	1,095,136
Victoria	4,493,041	4,765,687	5,600,873	6,152,250	5,239,806
Queensland	224,860	253,842	211,362	224,460	301,078
South Australia	376,615	387,264	603,848	672,112	634,250
Western Australia	...	...	...	...	...
Tasmania	1,067,050	1,005,628	929,572	1,244,879	991,388
Commonwealth	6,891,036	7,249,151	8,309,063	9,314,157	8,261,658

5. **Bounties on Combed Wool or Tops Exported.**—Under the Bounties Act 1907, bounties are payable on combed wool or tops exported from the Commonwealth provided they were produced therein. The maximum amount which may be paid in any one year is £10,000. For the three years commencing 1st January, 1909, the rate of bounty granted is 1½d. per lb.; and for the two years commencing 1st January, 1912, 1d. per lb. is payable. During the year 1908-9, an amount of £326 was paid in bounties, while in 1909-10 the amount so distributed was £4933. The quantities of wool on which these amounts were paid were 52,085 and 789,216 lbs. respectively.

6. **Exports of Wool.**—Nearly half of the exports of wool from the Commonwealth are despatched to the United Kingdom, the other leading consignees being France, Germany, Belgium, and the United States of America. The following table shews for the years 1905 to 1909, the quantities of "greasy" wool exported from the Commonwealth to the principal countries of destination:—

COMMONWEALTH EXPORTS OF WOOL IN THE GREASE, 1905 to 1909.

Country to which Exported.	1905.	1906.	1907.	1908.	1909.	Total for 5 Years.
	lbs.	lbs.	lbs.	lbs.	lbs.	lbs.

The figures for 1909 include for the first time an export of tops, amounting to 496,492 lbs. and valued at £58,638. This has been included in the above tables with scoured and washed wool.

The total value of the wool exported from the Commonwealth to each of the various countries during the five years under review was:—

TOTAL VALUE OF WOOL EXPORTED FROM THE COMMONWEALTH, 1905 to 1909.

Country to which Exported.	1905.	1906.	1907.	1908.	1909.	Total for 5 Years.

Total	19,822,216	22,645,769	28,891,830	22,914,236	25,483,110	119,757,161

7. **Care needed in Comparing Clips.**—The Customs returns, from which statistics of wool production are usually compiled, do not furnish a reliable indication of increase or decrease in successive clips, since in each case they relate to the year ended 31st December. Ordinarily, therefore, they include for any year imports and exports of wool belonging to two distinct clips. A further defect in the comparability of successive clips arises as follows:—Owing to climatic or other conditions the time of shearing may be so far delayed that one clip may include almost thirteen months' growth of wool, while the succeeding one may include little more than eleven months' growth. An instance of this occurred in some portions of the Commonwealth in connection with the clips of 1906 and 1907. The shearing in the former case was somewhat late, while in the latter it took place at the usual time, the result being that the 1906 clip was above and that of 1907 below the normal.

Similar circumstances have operated to make the 1909 clip somewhat higher and the 1910 clip somewhat lower than would have been the case had the interval between shearings been exactly a year.

8. **Wool-producing Countries in Southern Hemisphere.**— The next table, compiled by Messrs. Helmuth Schwartze and Co., the well-known firm of English wool

brokers, furnishes interesting evidence of the relative importance of the three great wool-producing countries of the Southern Hemisphere. The figures given represent for the respective years the imports of wool into Europe and North America :—

IMPORTS OF WOOL INTO EUROPE AND NORTH AMERICA.

Year.	Commonwealth and New Zealand.	Cape of Good Hope.	River Plate.	Total
	Bales.	Bales.	Bales.	Bales.
1901	1,745,000	217,000	532,000	2,494,000
1902	1,699,000	234,000	512,000	2,445,000
1903	1,451,000	234,000	558,000	2,243,000
1904	1,371,000	201,000	476,000	2,048,000
1905	1,633,000	209,000	488,000	2,330,000
1906	1,833,000	238,000	487,000	2,558,000
1907	2,103,000	287,000	478,000	2,868,000
1908	2,072,000	276,000	484,000	2,832,000
1909	2,296,000	380,000	571,000	3,247,000

It will be seen that of the total importations shewn in this table, the Commonwealth of Australia and the Dominion of New Zealand account for about 70 per cent.

9. **England's Importation of Wool.**—The quantity and value of wool imported into the United Kingdom during the year 1909 from the principal wool-producing countries, furnish evidence of the important position which the Commonwealth occupies in the supply of wool to the mother country. This is shewn in the following table :—

IMPORTS OF WOOL INTO THE UNITED KINGDOM, 1909.

Country from which Imported.	Quantity.	Value.	Country from which Imported.	Quantity.	Value.
	lbs.	£		lbs.	£
Australia ...	312,710,067	13,668,466	Germany ...	2,917,594	115,177
New Zealand ...	176,457,150	6,935,431	Peru	2,537,886	100,719
Cape of Good Hope	87,467,251	3,279,816	Egypt	3,161,964	85,788
Argentine Republic	42,208,120	1,630,611	Portugal ...	2,798,673	79,850
British India ...	56,225,193	1,516,123	China	2,225,447	76,036
France	26,956,677	1,506,593	Italy	1,530,586	50,641
Natal	28,429,347	955,438	Netherlands ...	1,290,548	48,281
Chile	23,083,341	723,226	Persia	1,187,780	34,817
Turkey	9,727,855	259,492	Spain	537,205	20,820
Belgium ...	5,559,329	228,591	U.S. of America ...	518,881	17,202
Uruguay ...	4,370,784	173,738	Other Countries ...	2,008,927	65,884
Falkland Islands	4,555,541	157,179			
Russia	4,966,402	156,456	Total ...	803,432,548	31,886,375

It will be seen that of the total importations of wool into the United Kingdom, Australian wool represented about 44 per cent. of both quantity and value.

10. **The Wool Market.**—About 85 per cent. of the wool grown in Australia is now disposed of at the local sales held in Sydney, Melbourne, Geelong, Brisbane, Adelaide, Fremantle, Hobart and Launceston. These sales are attended by buyers from England and America, as well as by representatives of the principal European manufacturing countries. The market for wool, which had been for some years steadily improving, received a severe set-back in the early portion of the season 1907-8 by the disastrous financial crisis which occurred in America soon after the commencement of that season. The result was that buying was restricted, prices fell, and a considerable quantity of wool was withdrawn from sale and held over until the succeeding season. The season

1908-9 consequently opened rather inauspiciously, but, although prices did not reach the high level attained in 1906-7, the demand, particularly in the latter part of the season, was much more spirited than in 1907-8, and the sales must be regarded as having been very satisfactory. The season 1909-10 opened favourably and prices exhibited a distinctly upward tendency, with the result that the price averaged over 20 per cent. more than was obtained during the preceding year.

During the sales of 1909-10 the prices realised for greasy merino wool ranged up to 21d. per lb. for a few lines of extra super. Western District (Victoria) wool, super. to 17½d., good to 14½d., average to 13d., and inferior from 6¾d. to 9½d. Amongst other classes of wool extra super. comebacks brought as high as 18¾d., and super. to 16½d. Super. crossbreds sold up to 16d., fine to 14½d., medium to 11d., and coarse to 10½d. Scoured wool ranged from 17d. to 25¼d.

The average values per lb. of Australian greasy wool according to the export returns for the past nine years have been as follows:—

EXPORT VALUE PER LB. OF AUSTRALIAN GREASY WOOL, 1901 to 1909.

Year ...	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.
Average value per lb. ...	d. 7.27	d. 8.04	d. 8.75	d. 9.30	d. 9.83	d. 10.14	d. 10.73	d. 9.17	d. 9.35

§ 6. Hides and Sheepskins.

1. **Extent of Trade.**—In addition to the hides and sheepskins locally treated in the tanneries of the several States a very considerable export trade is carried on, the total value of the hides and sheepskins exported from Australia during the five years 1905 to 1909 being no less a sum than £9,071,345, or an average of £1,814,269 per annum.

2. **Sheepskins with Wool.**—By far the largest item included in the amount mentioned in the preceding paragraph arises from the value of sheepskins with wool exported, which are shipped principally to France and the United Kingdom. Details concerning the number so exported during the five years 1905 to 1909 are as follows:—

COMMONWEALTH EXPORTS OF SHEEPSKINS WITH WOOL, 1905 to 1909.

4. **Hides.**—The Commonwealth trade in hides has now assumed considerable proportions, and during 1909 the total value of hides exported amounted to £412,790. The exports took place principally to the United Kingdom, Belgium, the United States of America, Germany and France. Large quantities of hides are also imported into the Commonwealth, mainly from New Zealand and the Pacific Islands. The total value of hides imported during 1909 was £173,251.

Particulars concerning the export of hides during the past five years are as follows:—

COMMONWEALTH EXPORTS OF HIDES FROM 1905 to 1909.

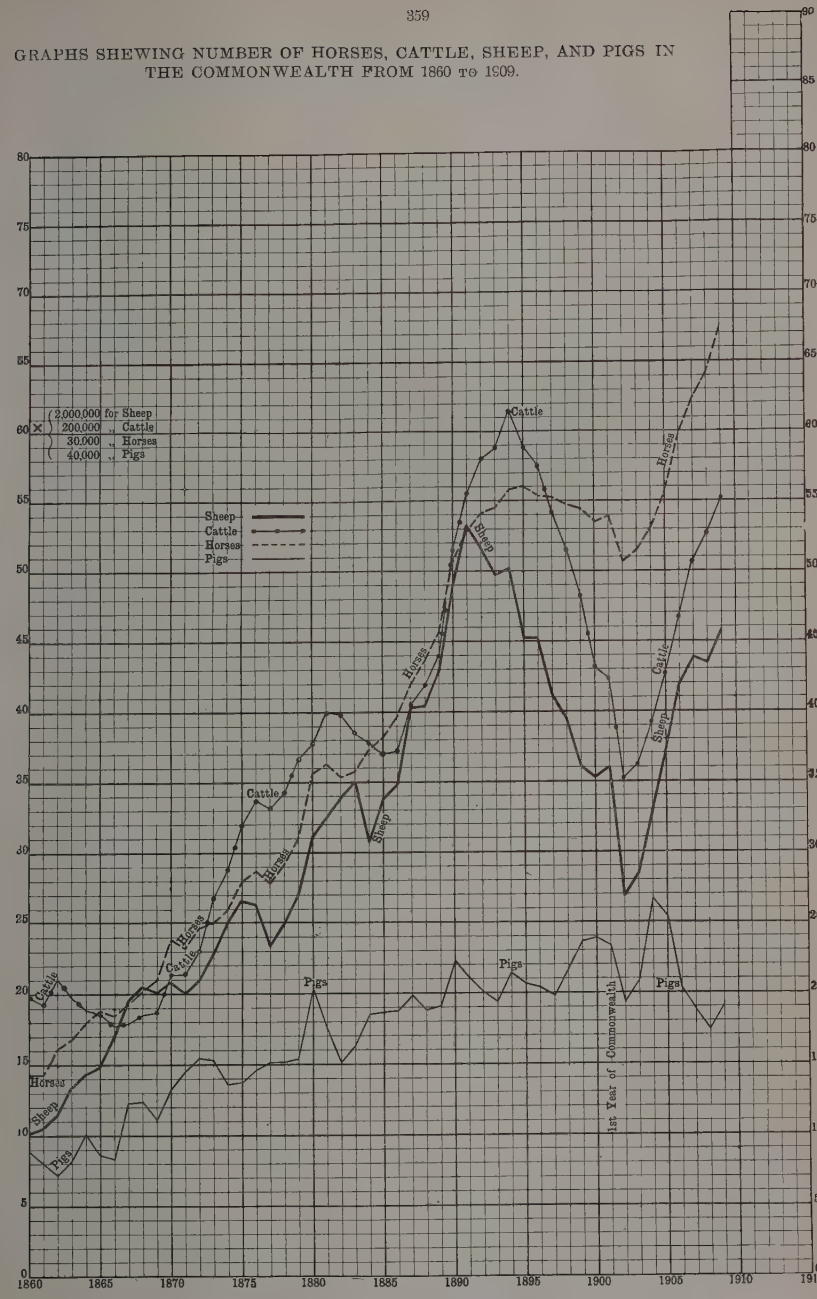
§ 7. Graphical Representation of Pastoral Production.

1. **General.**—As comparatively complete statistics relative to the number of horses, cattle, sheep and pigs are available from 1860, the graphical representation of the increase in numbers for the Commonwealth as a whole, shewn on page 359, covers the period from 1860 to 1909.

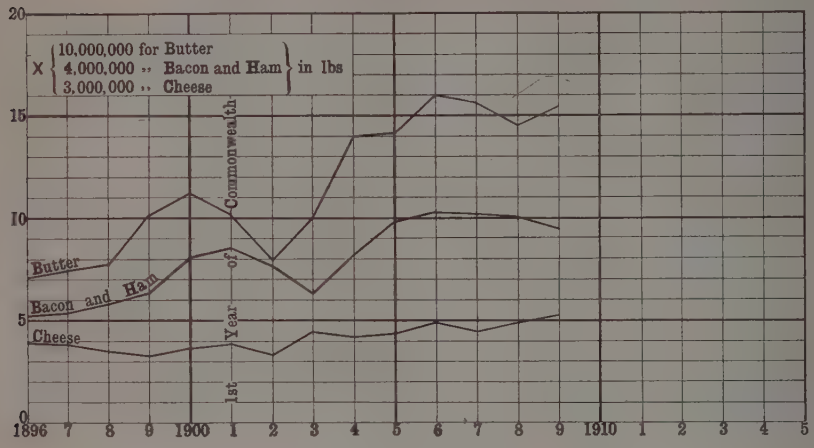


2. **Horses.**—With relatively unimportant fluctuations the number of horses in the Commonwealth increased at a fairly consistent rate until 1895, when a decline set in culminating in the losses of the disastrous drought of 1902. At this latter point the number is practically identical with that for 1890. From 1902 onwards a rapid improvement has been experienced, and in 1906 the previous maximum attained in 1895 was passed. Previous periods of decline were experienced in 1866, 1871, 1877 and 1882.

2. **Cattle.**—The graph for cattle furnishes evidence of rapid increases in number, interrupted by three marked periods of decline, of which the first extended from 1862 to 1866, the second from 1881 to 1885, and the third from 1894 to 1902. So extensive was this last-mentioned decline that the number receded to that of 1879. Since 1902 a rapid recovery has been effected, and the total for 1909 corresponds with that existing at the middle of the year 1897, though still considerably short of the maximum attained in 1894.

4. **Sheep.**—In the case of sheep the graph furnishes evidence of four periods in which the upward movement in number has been arrested or reversed. The first of these occurred between 1868 and 1871, the second between 1875 and 1877, the third during 1884, and the fourth, by far the most serious, between 1891 and 1902. From 1902 to 1907 a rapid increase took place, succeeded by a slight decline in 1908, and a rapid advance in 1909. The point now reached corresponds approximately with that which obtained in the latter portion of 1895.

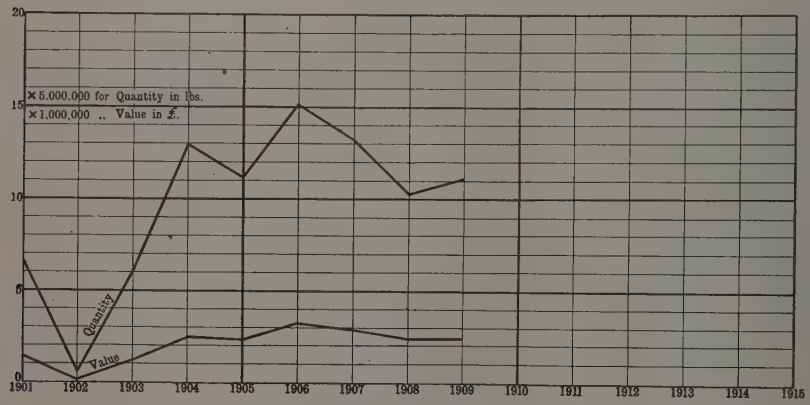
5. **Pigs.**—The graph for pigs exhibits more numerous fluctuations than that for either of the other classes of live stock represented, and from 1904 to 1908 furnished evidence of a persistent decline. In 1909, however, an upward movement took place, the total for that year being higher than for either of the two preceding years.



GRAPHS SHEWING NUMBER OF HORSES, CATTLE, SHEEP, AND PIGS IN THE COMMONWEALTH FROM 1860 TO 1909.

(See pages 338, 342, 347, and 450.)

EXPLANATION OF GRAPH.—The base of each small square represents an interval of one year. The totals of the sheep, cattle, horses, and pigs for the Commonwealth are indicated by the several curves or graphs, the vertical side of a small square representing 2,000,000 in the case of sheep; 200,000 for cattle; 30,000 for horses; 40,000 for pigs.



GRAPHS SHEWING THE PRODUCTION OF BUTTER AND CHEESE, AND BACON AND HAM, IN THE COMMONWEALTH, FROM 1896 TO 1909.

(See pages 447 and 450.)

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each rectangle denotes in the case of butter 10,000,000 lbs.; in the case of bacon and ham, 4,000,000 lbs.; and in the case of cheese, 3,000,000 lbs.

GRAPHS SHEWING THE QUANTITY AND VALUE OF NET EXPORTS OF BUTTER FROM THE COMMONWEALTH, FROM 1901 TO 1909.

(See page 448.)

EXPLANATION OF GRAPH.—The base of each small rectangle represents an interval of one year, and the vertical height of each small rectangle represents 5,000,000 lbs. in weight, or £1,000,000 in value.

SECTION VIII.

AGRICULTURAL PRODUCTION.

§ 1. Introductory.

1. **Early Attempts at Agriculture.**—The instructions issued to Captain Phillip on the 25th April, 1787, directed him, amongst other things, to proceed as soon as possible to the cultivation of the soil "under such regulations as may appear to be necessary and best calculated for securing supplies of grain and provisions." When the settlers landed at Botany Bay, however, it was found that the glowing accounts published in England by members of Captain Cook's expedition of the fertility of the soil in that locality were considerably overdrawn. Even when Phillip and his company moved round to Port Jackson on the 26th January, 1788, matters were for a time in no better case. The ground in the immediate neighbourhood of the settlement was not suitable for the cultivation of cereal crops, and when the time came to cultivate the soil it was found that there were very few who possessed the slightest acquaintance with the art of husbandry.

2. **The First Sowing.**—In his despatch of the 15th May, 1788, Captain Phillip states that it was proposed to sow eight acres with wheat and barley, although, owing to the depredations of field mice and ants, he was doubtful of the success of the crops.

3. **Discovery of Suitable Agricultural Land.**—A branch settlement was formed at Rosehill, on the Parramatta River, towards the close of 1788, and here corn crops were successfully raised. In his despatch of 12th February, 1790, Phillip refers to the harvest at Rosehill at the end of December, 1789, as consisting of 200 bushels of wheat and sixty of barley, in addition to small quantities of oats, Indian corn, and flax. By the year 1791 there were 213 acres under crop in this locality. In 1792 a new settlement was formed at Toongabbie, about three miles westward of Parramatta, where Phillip states "there are several thousand acres of exceeding good ground." The Hawkesbury Valley, which probably contains some of the richest land in the world, was first settled in 1794. For a long time agricultural operations in Australia were restricted to the narrow belt of country between the tableland and the east coast of New South Wales, as it was not until the year 1813 that a passage was discovered across the Blue Mountains to the fertile plains of the west.

§ 2. Progress of Agriculture.

1. **Early Records.**—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797," Governor Hunter gives the acreage under crop as follows:—Wheat, 3361 acres; maize, 1527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

At a muster taken in 1808 the following was the return of crops:—Wheat, 6877 acres; maize, 3389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 34 acres.

By the year 1850 the area under crop had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area under crop declining from 491,000 acres in 1850 to 458,000 acres in 1854; the area under cultivation in New South Wales decreased by nearly 66,000 acres, while in Tasmania a falling-off of over 41,000 acres was experienced. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia totalled over a million acres. The largest increase took place in Victoria, which returned an area of 299,000 acres. For the same year South Australia had 264,000 acres in cultivation, Tasmania 229,000 acres, and New South Wales 223,000 acres.

2. **Progress of Cultivation since 1860.**—The following table shews the area under crop in each of the Commonwealth States at quinquennial intervals since 1860 and during each year of the period 1901-10. The area under permanent artificially-sown grasses is excluded in all the States, except for the years 1860-79 in the case of New South Wales, where the acreage cannot be separated. During those years, however, the area laid down under permanent grasses could not have been very large:—

AREA UNDER CROP IN AUSTRALIA, 1860-1 to 1909-10.

1905-6 ...	2,840,235	3,219,962	522,748	2,255,569	364,704	230,237	9,433,455
1906-7 ...	2,826,657	3,303,586	559,753	2,157,235	460,825	244,744	9,552,800
1907-8 ...	2,572,873	3,232,523	532,624	2,265,017	493,837	257,028	9,353,902
1908-9 ...	2,717,085	3,461,761	535,900	2,321,812	585,339	269,346	9,891,243
1909-10 ...	3,180,561	3,658,535	606,790	2,530,301	722,086	274,026	10,972,299

The increase in the area under crop during the past nine years has been most marked in the case of New South Wales, the total advancing from 2,445,564 acres in the season 1900-1 to 3,180,561 in 1909-10, an increase of 734,997 acres. During the same period an increase of 544,403 acres was experienced in Victoria, 520,748 acres in Western Australia, 160,621 acres in South Australia, 149,393 in Queensland, and 49,674 acres in Tasmania. The total area under crop in the Commonwealth increased during the period by 2,159,836 acres, and the total for 1909-10 was the highest ever attained by the Commonwealth. The 1909-10 figures were also the highest ever attained by any of the States.

3. **Relation to Population.**—From the following table it will be seen that for the Commonwealth as a whole the area under crop has, during the past nine seasons, increased at a rate which is somewhat greater than that at which the population of the Commonwealth has increased. Only in the case of Western Australia however, has the ratio of area under crop to total population made any very marked advance during the period under review, In South Australia the ratio for 1909-10 was practically identical with that for 1901-2. Details for the nine seasons are as follows:—

TOTAL AREA UNDER CROP PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2	1,671	2,463	964	6,164	1,154	1,349	2,219
1902-3	1,617	2,682	540	6,103	1,117	1,419	2,197
1903-4	1,798	2,804	1,105	6,168	1,282	1,463	2,384
1904-5	1,855	2,751	1,039	6,157	1,384	1,265	2,368
1905-6	1,926	2,656	994	6,020	1,457	1,285	2,348
1906-7	1,872	2,699	1,051	5,660	1,773	1,368	2,337
1907-8	1,659	2,609	988	5,872	1,887	1,433	2,251
1908-9	1,719	2,751	975	5,832	2,213	1,482	2,337
1909-10	1,981	2,848	1,074	6,161	2,665	1,488	2,539

4. **Relation to Total Area.**—The next table furnishes a comparison of the area under crop in the Commonwealth and the several States with the respective total areas. For the Commonwealth as a whole the area under crop represented for 1909-10 only about one acre in every 174. In Victoria the area under crop was about one acre in every 15, in Tasmania one in 61, in New South Wales one in 62, in South Australia one in 229, in Queensland one in 709, and in Western Australia one in 862.

PERCENTAGE OF AREA UNDER CROP TO TOTAL AREA OF EACH STATE AND OF COMMONWEALTH FOR SEASONS 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	%	%	%	%	%	%	%
1901-2	1.147	5.273	0.113	0.387	0.035	1.386	0.442
1902-3	1.132	5.772	0.064	0.385	0.037	1.472	0.445
1903-4	1.282	6.025	0.132	0.390	0.045	1.547	0.489
1904-5	1.347	5.906	0.126	0.393	0.052	1.348	0.492
1905-6	1.430	5.725	0.122	0.390	0.058	1.372	0.496
1906-7	1.423	5.873	0.130	0.372	0.074	1.459	0.501
1907-8	1.295	5.747	0.124	0.392	0.079	1.532	0.491
1908-9	1.368	6.155	0.125	0.401	0.094	1.605	0.520
1909-10	1.601	6.505	0.141	0.437	0.116	1.633	0.576

5. **Artificially-Sown Grasses.**—In all the States considerable areas are devoted to artificially-sown grasses, frequently sown on uncultivated land after burning off. Complete statistics regarding the area under such grasses are available for the whole of the States only since the year 1896, and are as shewn hereunder:—

AREA UNDER SOWN GRASSES, 1896-7 to 1909-10.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1896-7	384,016	172,582	11,960	20,027	4,044	253,306	845,935
1901-2	467,839	162,954	34,679	23,510	3,711	314,422	1,007,115
1902-3	477,629	565,635	24,286	23,636	3,228	319,090	1,413,504
1903-4	552,501	962,665	15,639	24,118	2,952	343,284	1,901,159
1904-5	607,997	953,543	35,589	24,912	3,964	378,346	2,004,351
1905-6	627,530	1,040,335	40,802	26,082	5,456	404,653	2,144,858
1906-7	697,631	1,095,642	45,990	23,679	6,787	432,128	2,301,857
1907-8	736,080	1,095,471	76,943	34,635	7,990	465,673	2,416,792
1908-9	807,924	1,029,711	82,784	23,297	10,265	491,422	2,445,403
1909-10	888,937	988,671	108,438	23,343	9,017	439,450	2,457,856

The considerable increase in the area of the grass lands of the Commonwealth is due in large measure to the great development of the dairying industry which has taken place during the last ten years, and which is referred to in the succeeding section. The areas contained in the above table relate in most cases to grasses sown for grazing purposes on uncultivated land, generally after burning off, and are consequently not included with "area under crop."

§ 3. Relative Importance of Crops.

1. **Various Crops.**—In the following table are furnished details concerning the areas in the several States under each of the principal crops for the season 1909-10 :—

DISTRIBUTION OF CROPS IN AUSTRALIA, 1909-10.

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total for C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Wheat ...	1,990,180	2,097,162	117,160	1,895,738	448,918	37,078	6,586,236

2. **Relative Areas of Crops in States.**—Taking the principal crops, *i.e.*, those in the case of which the cultivation amounts to more than 50,000 acres in the Commonwealth, the proportion of each in the various States to the total area under crop for the season 1909-10 is shewn in the next table. In four of the States, viz., New South Wales, Victoria, South Australia, and Western Australia, wheat-growing for grain is by far the most extensive form of cultivation, while in each of these States the hay crop is second in importance. In New South Wales maize ranks third, but in Victoria, South Australia, and Western Australia, and also in the Commonwealth as a whole, the oat crop occupies third position. In Queensland, on the other hand, the three principal crops in the order of importance are maize, sugar cane, and wheat, while in Tasmania hay, oats, and wheat occupy the leading positions. For the Commonwealth as a whole, the wheat, hay, and oat crops represent nearly 87 per cent. of the total area under crop.

PROPORTION OF AREA UNDER CHIEF CROPS, 1909-10.

Crop.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	%	%	%	%	%	%	%

3. **Acreage of Principal Crops, Commonwealth.**—The acreage devoted to each of the principal crops in the whole Commonwealth during the last five seasons is shewn below :—

ACREAGE OF CHIEF COMMONWEALTH CROPS, 1905-6 to 1909-10.

Crop.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	Acres.	Acres.	Acres.	Acres.	Acres.
Wheat	6,122,746	5,977,794	5,383,911	5,262,473	6,586,236
Hay	1,574,412	1,654,399	1,811,579	2,452,682	2,228,029
Oats	466,567	581,843	642,814	676,156	698,448
Maize	314,901	325,581	299,579	323,875	364,585
Green Forage	225,879	236,484	439,725	413,511	306,082
Orchards and Fruit Gardens ...	159,724	162,274	169,299	173,388	178,798
Barley	90,945	106,436	131,099	140,243	143,013
Sugar Cane	155,912	153,864	144,763	140,883	142,261
Potatoes	118,533	146,681	143,511	125,685	137,070
Vineyards	64,344	62,546	61,232	59,450	58,151
All other Crops	139,492	144,898	126,390	122,897	129,626
Total	9,433,455	9,552,800	9,353,902	9,891,243	10,972,299

During the period under review the area devoted to the several crops has varied considerably, that under wheat attaining a maximum for the period in the season 1909-10, and a minimum in 1908-9, while hay reached its maximum area in 1908-9 and its minimum in 1905-6. Of the other crops oats, maize, orchards and fruit gardens, and barley attained their maximum averages in 1909-10, green forage in 1907-8, sugar cane and vineyards in 1905-6, and potatoes in 1906-7.

§ 4. Wheat.

1. **Progress of Wheat-Growing.**—(i.) *Acreage.* The area under wheat for grain is given below for each State at various periods since 1860, and is shewn diagrammatically in the graph hereinafter :—

AREA UNDER WHEAT, 1860-1 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1860-1	128,829	161,252	196	273,672	13,584	66,450	643,983
1865-6	131,653	178,628	2,068	410,608	22,249	73,270	818,476
1870-1	147,997	284,167	2,892	604,761	26,640	57,382	1,123,839
1875-6	133,609	321,401	4,478	898,820	21,561	42,745	1,422,614
1880-1	253,138	977,285	12,632	1,733,542	27,686	50,022	3,054,305
1885-6	264,867	1,020,082	10,093	1,922,555	29,511	30,266	3,277,374
1890-1	333,233	1,145,163	10,390	1,673,573	33,820	32,452	3,228,631

1900-1	1,530,609	2,017,321	79,304	1,913,247	74,308	51,825	5,666,614
1901-2	1,392,070	1,754,417	87,232	1,743,452	94,710	44,084	5,115,965
1902-3	1,279,760	1,994,271	1,880	1,746,842	92,398	40,898	5,156,049
1903-4	1,561,111	1,968,599	138,096	1,711,174	137,946	49,414	5,566,340
1904-5	1,775,955	2,277,537	150,958	1,840,157	182,080	43,091	6,269,778
1905-6	1,939,447	2,070,517	119,356	1,757,036	195,071	41,319	6,122,746
1906-7	1,866,253	2,031,893	114,575	1,686,374	250,283	32,808	5,982,186
1907-8	1,390,171	1,847,121	82,461	1,753,755	279,609	30,794	5,383,911
1908-9	1,394,056	1,779,905	80,898	1,693,501	285,011	29,102	5,262,473
1909-10	1,990,180	2,097,162	117,160	1,895,738	448,918	37,078	6,586,236

The area devoted in the Commonwealth to the production of wheat for grain was higher for the season 1909-10 than for any previous season, exceeding the area for 1904-5, the previous record season, by 316,458 acres, and that for 1908-9 by no less than 1,323,763 acres. The maximum area under wheat for grain was attained by the several States in the following seasons :—New South Wales, and Western Australia, 1909-10 ; Victoria and Queensland 1904-5 ; South Australia 1884-5 ; Tasmania, 1897-8. The average area under wheat in the Commonwealth in the past ten seasons was 5,711,230 acres. The seasons 1904-5, 1905-6, 1906-7, and 1909-10 exceeded this average, while the remaining six seasons fell short of it. According to the preliminary reports available it appears that the area of wheat reaped for grain in 1910-11 will shew a marked advance on that for 1909-10 and will probably exceed 7,000,000 acres.

(ii.) *Yield.* The production during the same period for each State and for the Commonwealth as a whole is given below :—

PRODUCTION OF WHEAT, 1860-1 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.

1902-3	1,585,097	2,569,364	6,165	6,354,912	985,559	876,971	12,378,068
1903-4	27,334,141	28,525,579	2,436,799	13,209,465	1,876,252	767,398	74,149,634
1904-5	16,464,415	21,092,139	2,149,663	12,023,172	2,013,237	792,956	54,535,582
1905-6	20,737,200	23,417,670	1,137,321	20,143,798	2,308,305	776,478	68,520,772
1906-7	21,817,938	22,618,043	1,108,902	17,466,501	2,758,567	651,408	66,421,359
1907-8	9,155,884	12,100,780	693,527	19,135,557	2,925,690	644,235	44,655,673
1908-9	15,483,276	23,345,649	1,202,799	19,397,672	2,460,823	700,777	62,590,996
1909-10	28,532,029	28,780,100	1,571,589	25,133,851	5,602,368	793,660	90,413,597

The wheat harvest of 1909-10 was the largest ever reaped in the Commonwealth, and exceeded by no less than 16,263,963 bushels that of 1903-4, the next largest harvest. The only other occasions on which a yield exceeding 60,000,000 bushels has been reaped were the seasons 1905-6, 1906-7 and 1908-9. The prospects for the forthcoming harvest of 1910-11 are very good, and taking into account the extensive areas reported as being under crop it appears probable that the aggregate yield for the season will exceed 80,000,000 bushels.

(iii.) *Average Yields.* In the next table will be found the average yield of wheat per acre in each of the last nine seasons :—

YIELD OF WHEAT PER ACRE, 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2	10.64	6.91	19.40	4.60	10.10	21.86	7.54
1902-3	1.24	1.29	3.28	3.64	10.67	21.44	2.40
1903-4	17.51	14.49	17.65	7.72	13.60	15.53	13.32
1904-5	9.27	9.26	14.24	6.53	11.06	18.40	8.70
1905-6	10.69	11.31	9.53	11.46	11.83	18.79	11.19
1906-7	11.69	11.13	9.68	10.36	11.02	19.86	11.10
1907-8	6.59	6.55	8.41	10.91	10.46	20.92	8.29
1908-9	11.11	13.12	14.87	11.45	8.63	24.08	11.89
1909-10	14.34	13.72	13.41	13.26	12.48	21.41	13.73

As the above figures shew, there were remarkable variations in the average yields, chiefly due of course to the vagaries of the season. The season 1902-3 was an especially lean one in all the States except Western Australia and Tasmania. A large proportion of the area sown with wheat had to be ploughed in or else fed off by stock, but the comparatively heavy yields in the succeeding year shew that this additional cultivation

was very beneficial. For the Commonwealth as a whole the average yield per acre for 1909-10 was the best since 1866-7, when, however, the area under wheat was only about one-seventh of the area so cropped in 1909-10.

(iv.) *Relation to Population.* During the past nine seasons the Commonwealth's production of wheat per head of population has varied between 3¼ bushels in 1902-3 and 21 bushels in 1909-10. The State in which wheat-growing occupies the most important position relatively to population is South Australia, which in 1909-10 had a yield which averaged 61¼ bushels per head. Queensland is the State in which the average production of wheat per head is least. Particulars for the past nine seasons are as follows:—

AUSTRALIAN WHEAT PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels	Bushels	Bushels
1901-2	10,860	10,073	3,375	22,082	5,077	5,591	10,168
1902-3	1,140	2,122	12	17,433	4,787	5,041	3,210
1903-4	19,311	23,598	4,753	36,099	8,476	4,324	19,005
1904-5	11,415	17,469	4,141	32,530	8,509	4,435	13,793
1905-6	14,065	19,314	2,163	53,760	9,222	4,332	17,058
1906-7	14,448	18,481	2,081	45,127	10,614	3,642	16,180
1907-8	5,905	9,767	1,287	49,616	11,154	3,592	10,746
1908-9	9,790	18,552	2,189	48,726	9,285	3,856	14,784
1909-10	17,767	22,402	2,781	61,200	20,677	4,310	20,922

2. **Australian and Foreign Wheat Yields.**—In the next table will be found a statement of the average return per acre in the principal wheat-growing countries of the world ranging from Denmark with a maximum of 42 bushels per acre to Russia in Europe with a minimum of 7⅔ bushels per acre. Australia with 13¾ occupies a middle position:—

AVERAGE YIELD OF WHEAT IN VARIOUS COUNTRIES.

Country.	Year.	Average Yield in bushels per acre.	Country.	Year.	Average Yield in bushels per acre.
Denmark	1907	42.10	Australia	1909	13.73
Belgium...	1907	40.35	United States... ...	1908	13.55
Netherlands	1908	35.70	Italy	1904	12.76
United Kingdom ...	1908	32.42	Siberia (Russia) ...	1907	12.34

Argentina	1908	14.05	Russia in Europe ...	1907	7.64

*Exclusive of British Columbia.

3. **Wheat Crops of the World.**—The latest available official statistics of the production of wheat in various countries are given in the following table :—

WHEAT YIELDS OF VARIOUS COUNTRIES.

Country.	Year.	Yield in Bushels.	Country.	Year.	Yield in Bushels.
United States ...	1908	644,398,104	United Kingdom ...	1908	53,929,440
Russia in Europe ...	1907	357,470,220	Rumania	1908	53,119,328
France	1908	307,944,120	Algeria	1907	31,251,990
India	1909	283,016,536	Bulgaria	1907	23,538,560
Argentina	1908	192,435,096	Japan	1907	22,087,208
Hungary	1908	157,449,032	Belgium	1907	15,830,230
Italy	1905	155,542,752	Servia	1905	11,258,450
Germany	1908	138,402,640	Mexico	1904	9,390,670
Canada*	1908	112,434,000	New Zealand ...	1909	8,661,000
Spain	1907	100,303,080	Uruguay	1907	6,846,220
Australia	1909	90,413,597	Sweden	1908	6,546,928
Caucasia (Russia) ...	1907	78,999,660	Netherlands ...	1908	4,962,264
Siberia (Russia) ...	1907	72,628,620	Denmark	1908	4,155,968
Austria	1908	60,695,008			

*Exclusive of British Columbia.

Various estimates of the total quantity of wheat produced in the world have been made. That furnished by the United States Department of Agriculture gives the following figures for the five years 1904 to 1908 :—

WORLD'S PRODUCTION OF WHEAT.

Year	1904.	1905.	1906.	1907.	1908.
	1,000,000 bushels.	1,000,000 bushels.	1,000,000 bushels.	1,000,000 bushels.	1,000,000 bushels.
Production	3,067	3,229	3,328	3,049	3,084

In this estimate the figures given for Australia and New Zealand relate to the agricultural year ending on 31st March in the year specified.

For the five years referred to the Australian production of wheat aggregated 308,000,000 bushels, thus representing about 2 per cent. of the world's production. The total quantity of wheat produced in the British Empire during the same period of five years was approximately 2,598,000,000 bushels, so that the Australian production of wheat represented about 12 per cent. of that of the British Empire, while the British Empire production represented about 16½ per cent. of the world's total.

4. **Prices of Wheat.**—(i.) *British Wheat.* Since the United Kingdom is the largest importer of Australian wheat, the price of wheat in the British markets is a matter of considerable interest to the local producer. The table below gives the average prices per Imperial quarter realised for British-grown wheat :—

PRICES OF BRITISH WHEAT PER QUARTER, 1861 to 1909.

Year.	Average for Year.	Highest Weekly Average.	Lowest Weekly Average.	Year.	Average for Year.	Highest Weekly Average.	Lowest Weekly Average.
	s. d.	s. d.	s. d.		s. d.	s. d.	s. d.
1861 ...	55 4	61 6	50 0	1904 ...	28 4	30 6	26 3
1871 ...	56 8	60 0	52 6	1905 ...	29 8	32 3	26 8
1881 ...	45 4	55 2	40 9	1906 ...	28 3	30 9	25 9
1891 ...	37 0	41 8	32 3	1907 ...	30 7	36 3	26 0
1901 ...	26 9	27 8	25 8	1908 ...	32 0	35 6	30 5
1902 ...	28 1	31 8	24 10	1909 ...	36 11	44 9	31 4
1903 ...	26 9	30 3	24 11				

(ii.) *Australian and other Wheat.* Generally speaking, Australian wheat shews a grain of bright clear texture, rich in gluten, and of fine milling quality. Its excellence is attested by the high price which it realises in the Home markets. The statement below shews, for the last five years, the average value per Imperial quarter of the wheat imported into the United Kingdom from the chief producing countries:—

AVERAGE PRICE OF FOREIGN WHEAT IMPORTED INTO THE UNITED KINGDOM, 1905 TO 1909.

Country.	Average Price per Imperial Quarter.					Country.	Average Price per Imperial Quarter.				
	1905.	1906.	1907.	1908.	1909.		1905.	1906.	1907.	1908.	1909.

Sthn. Ports	31 9	29 10	32 8	38 3	39 3						

In the next table will be found a statement of the export values of Australian wheat during each of the last nine years:—

EXPORT VALUES OF AUSTRALIAN WHEAT, 1901 to 1909.

Year ...	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.
Price per bushel	2s. 9d.	3s. 1d.	3s. 1d.	3s. 2d.	3s. 5d.	3s. 3d.	3s. 4d.	4s. 1d.	4s. 2d.

The export values here shewn are the average declared values for the successive years at the several ports of shipment in the Commonwealth.

5. **Imports and Exports of Wheat and Flour.**—(i.) *Quantities.* The table hereunder shews the imports, exports, and net exports of wheat and flour during each year of the period 1901-9. For the sake of convenience flour has been expressed at its equivalent in wheat, one ton of flour being taken as equal to 50 bushels of grain. As shewn in this table, the Commonwealth imports of wheat and flour during 1903 were equivalent to 12,607,940 bushels of wheat. This importation was necessitated by the failure of the crop in the preceding season. The principal sources of supply were the United States, which contributed 5,000,000 bushels of wheat and 56,000 tons of flour, the Argentine which sent 3,000,000 bushels of wheat and 2000 tons of flour, and Canada

which sent 57,000 bushels of wheat in addition to 11,000 tons of flour. Wheat to the extent of 134,000 bushels was obtained from India, while Brazil furnished 122,000 bushels. In ordinary seasons the import of wheat and flour is negligible. During the past five years the export has ranged between 20,900,000 bushels in 1908 and 38,600,000 bushels in 1906, the net exports for that period averaging 33,340,000 bushels.

IMPORTS AND EXPORTS OF WHEAT AND FLOUR, COMMONWEALTH, 1901 TO 1909.

Year.	Imports.			Exports.			Net Exports.
	Wheat.	Flour.	Total.	Wheat.	Flour.	Total

1909	128	4,000	4,128	31,549,498	6,498,450	38,047,948	38,043,820

1. Equivalent in bushels of wheat. 2. — denotes net imports.

(ii.) *Destination of Exported Breadstuffs.* In the next two tables will be found the principal countries to which the Commonwealth exported wheat and flour during each year of the period 1905-9. The countries are as shewn in the Australian Customs returns, but owing to the fact that wheat ships are frequently instructed to call for orders at various African ports, some of these African countries cannot be properly considered as the ultimate destination of the whole of the wheat said to be exported to them.

EXPORTS OF WHEAT FROM THE COMMONWEALTH, 1905 to 1909.

Total ...	154,317	166,881	163,438	116,803	129,969	731,408

During the five years under review the export of wheat to the United Kingdom totalled 96,106,113 bushels or about 74 per cent. of the total export for the period. On the other hand, the export of flour to the United Kingdom aggregated only 134,669 tons or about 18 per cent. of the total export. During the five years the heaviest exports of flour have taken place to the United Kingdom, South Africa, Portuguese East Africa, Java, Hong Kong, the Philippine Islands and the Straits Settlements.

(iii.) *Interstate Trade in Wheat.* A fairly considerable trade in wheat is carried on between the several States, the net result for 1909 shewing South Australia and New South Wales as exporters, and Tasmania, Queensland, Victoria, and Western Australia as importers. The total quantity of wheat consigned from the several States to other States of the Commonwealth during 1909 was 1,419,561 bushels. Details for the year are as follows:—

INTERSTATE TRADE IN WHEAT, 1909.

State.	Imports from other States of the C'wealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
New South Wales	347,392	75,614	519,703	96,762	172,311	21,148

Tasmania ...	432,738	95,560	1,880	427	—430,858	— 95,133

* — denotes net imports.

(iv.) *Interstate Trade in Flour.* In the case of flour the importing States are Queensland, Tasmania, and Western Australia, while the exporters are South Australia, Victoria, and New South Wales. For 1909 New South Wales was the heaviest Interstate exporter and Queensland the heaviest importer. The total quantity of flour passing from one State to another in 1909 was 46,495 tons, valued at £475,655, or £10 4s. 7d. per ton. The following table contains particulars for the year 1909:—

INTERSTATE TRADE IN FLOUR, 1909.

State.	Imports from other States of the C'wealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity	Value.
	Tons.	£	Tons.	£	Tons.	£
New South Wales	10,123	102,814	22,848	239,381	12,725	136,567

Tasmania ...	1,157	10,625	1,003	8,980	— 154	— 1,645

* — denotes net imports.

(v.) *Interstate Trade in Bran, Pollard, and Sharps.* Bran, pollard, and sharps, collectively known as wheat offal, represent about 33 per cent. of the total wheat ground, and figure somewhat largely in the interstate exports of Victoria and the interstate imports of Western Australia for 1909. Queensland and South Australia are also interstate importers, and New South Wales and Tasmania exporters. In the case of Tasmania it may be noted that this State appears for the past three years as an importer of wheat and flour and an exporter of wheat offal. Details for 1909 are as follows :—

INTERSTATE TRADE IN BRAN, POLLARD, AND SHARPS, 1909.

State.	Imports from other States of the C'wealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.*

* — denotes net imports.

(vi.) *Exports of Wheat and Flour.* From the foregoing returns it will be seen that the quantity of Australian wheat exported in the form of flour represents, on the average, somewhat less than 20 per cent. of the total wheat export of the Commonwealth. One cause of this, and probably the chief one, is the fact that Australian wheats are in con-

siderable demand with the English millers for mixing purposes, while the Australian flour has not, up to the present, received that consideration from the English bakers which its admitted qualities undoubtedly merit. Steps which have recently been taken for bringing these qualities before the British public may possibly have the effect of increasing the proportion of wheat exported in the form of flour.

A point of some interest in connection with the export of wheat, and one which bears also on the proportions of wheat and flour exports just referred to, is that concerning the quantity of phosphoric acid which this export has the effect of removing from the Commonwealth, and the necessity which exists for the return to the soil of this substance in some form.

According to an estimate furnished by the chemist to the New South Wales Department of Agriculture (F. B. Guthrie, Esq., F.C.S., etc.), the proportions of milled product from a bushel (60 lbs.) of wheat are, approximately, 42 lbs. of flour, 9 lbs. of bran, and 9 lbs. of pollard, while the percentage of phosphoric acid contained in these products is as follows:—

Flour	0.32	per cent., or	0.13	lbs.	per bushel.
Bran	3.00	„	0.27	„	
Pollard	0.90	„	0.08	„	

The total amount of phosphoric acid contained in a bushel of wheat is, therefore, 0.48 lbs., of which 0.13 lbs. is in the flour and 0.35 lbs. in the offal.

During the past nine years the net exports from the Commonwealth of wheat and its milled products have amounted to 185,088,926 bushels of wheat, 883,627 tons of flour, and 3,767,203 bushels of bran, pollard, and sharps. On the basis of the figures quoted above this export would contain no less than 96,000,000 lbs. of phosphoric acid, the value of which as a fertiliser would be about £600,000.

6. **Value of the Wheat Crop.**—The estimated value of the wheat crop in each State and in the Commonwealth during the season 1909-10 is shewn below :—

VALUE OF THE WHEAT CROP, 1909-10.

State.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
	£	£	£	£	£	£	£

Value per acre	£2/17/4	£2/13/9	£3/4/10	£2/10/10	£2/19/3	£4/16/4	£2/14/10

§ 5. Oats.

1. **Progress of Cultivation.**- Oats comes next in importance to wheat amongst the grain crops cultivated last season, but while wheat grown for grain accounted for more than 60 per cent., oats represented less than 6½ per cent. of the area under crop in the Commonwealth. The progress of cultivation of oats since 1860 is shewn in the table hereunder, and more fully in the graphs hereinafter:—

CULTIVATION OF OATS, 1860-1 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

1908-9 ...	1,119,558	11,124,940	38,811	1,280,235	739,303	1,946,010	16,248,857
1909-10 ...	1,966,586	7,913,423	50,018	1,209,131	1,248,162	2,347,548	14,734,868

The principal oat-growing State of the Commonwealth is Victoria. During the past ten seasons it has produced about 67 per cent. of the total quantity of oats grown in the Commonwealth; Tasmania, New South Wales, and South Australia come next in order of importance. In New South Wales, Western Australia and Tasmania, the highest production of oats for any season was that of 1909-10, while Victoria and Queensland experienced a maximum yield in 1903-4, and South Australia in 1908-9. For the Commonwealth as a whole the record yield was that of 17,541,210 bushels in the season 1903-4, while the yield of 14,734,868 bushels for 1909-10 ranks third.

3. **Average Yield.**—The average yield per acre of the oat crop of the Commonwealth varies considerably in the different States, being highest in Tasmania and lowest in South Australia. Particulars as to average yield for the past nine seasons are given in the succeeding table:—

AVERAGE YIELD OF OATS PER ACRE.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2 ...	21.31	20.43	27.50	13.54	16.78	31.48	21.22
1902-3 ...	8.18	10.16	6.67	12.34	16.25	31.83	12.32
1903-4 ...	24.26	30.98	25.18	15.69	17.74	26.74	28.25
1904-5 ...	16.13	18.03	23.54	10.98	16.32	26.98	17.90
1905-6 ...	22.91	23.18	10.99	15.26	18.07	28.05	22.45
1906-7 ...	24.89	23.25	23.37	15.72	16.12	33.94	23.39
1907-8 ...	11.24	13.04	13.85	13.19	15.47	27.94	14.29
1908-9 ...	18.70	26.50	21.60	16.31	12.43	34.35	24.03
1909-10 ...	24.14	20.60	17.93	14.17	17.02	32.93	21.10

It will be seen that as in the case of the wheat crop, the smallest average yield per acre for the Commonwealth for the period was that experienced in the season 1902-3, while the largest was that of the succeeding season.

4. **Relation to Population.**—The State in which oat production occupies the most important position in relation to population is Tasmania, the yield for that State representing for 1909-10 about 12¾ bushels per head, as compared with 3½ bushels per head for the Commonwealth as a whole. Particulars for the past nine seasons are furnished in the succeeding table:—

OAT PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels	Bushels.
1901-2	504	5,586	84	1,293	868	9,879	2,581
1902-3	253	3,637	1	1,703	815	10,076	1,892
1903-4	885	11,114	138	2,467	1,168	9,139	4,496
1904-5	453	5,138	29	1,503	957	6,593	2,234
1905-6	599	5,965	11	2,320	1,135	6,695	2,608
1906-7	930	7,228	54	2,359	1,759	11,068	3,332
1907-8	549	4,198	18	2,267	2,752	8,508	2,210
1908-9	707	8,841	71	3,216	2,789	10,707	3,838
1909-10	1,225	6,160	89	2,944	4,607	12,747	3,410

5. **Value of Oat Crop.**—The estimated value of the oat crop of the several States of the Commonwealth for the season 1909-10 is as follows:—

VALUE OF OAT CROP, 1909-10.

State.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aus.	Tas.	C'wealth.
Aggregate value	£237,630	£857,287	£8,545	£115,875	£156,020	£352,132	£1,727,489
Value per acre ...	£2/18/4	£2/4/8	£3/1/3	£1/7/2	£2/2/7	£4/18/9	£2/9/6

6. **Imports and Exports.**—The production of oats in the Commonwealth has not yet reached such a stage as to admit of a regular export trade in this cereal; in fact in certain years the imports have exceeded the exports, notably in 1903, 1906, and 1908. The quantities and values of oats imported into and exported from the Commonwealth during the nine years 1901 to 1909 are given hereunder:—

COMMONWEALTH IMPORT AND EXPORTS OF OATS, 1901 to 1909.

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901	1,526,599	153,674	2,874,334	285,347	1,347,735	131,673
1902	1,037,596	157,981	1,427,620	181,450	390,024	23,469
1903	2,066,365	229,395	184,823	23,305	—1,881,542	— 206,090
1904	185,652	15,921	1,713,578	115,659	1,527,926	99,738
1905	392,400	45,460	882,740	83,479	490,340	38,019

1907	21,945	2,850	533,485	60,204	511,540	57,354
1908	1,401,870	206,283	67,058	10,594	—1,334,812	— 195,689
1909	320,543	32,607	339,258	35,375	18,715	2,768

* — signifies net imports.

The principal countries from which the Commonwealth imports of oats have been obtained are the Dominion of New Zealand and the South African colonies, while the principal countries to which oats were exported during the period under review were the South African colonies in the earlier, and New Zealand, the United Kingdom, and the Philippine Islands in the later years.

7. **Oatmeal, etc.**—Importations of oatmeal, etc., into the Commonwealth take place principally from the United Kingdom, the United States, and Canada. The total importations of oatmeal, wheatmeal, and rolled oats during 1909 amounted to 714,902 lbs., and represented a value of £8514.

8. **Comparison with other Countries.**—A comparison of the Australian production of oats with that of the leading oat-producing countries of the world, is furnished in the following table :—

PRODUCTION OF OATS IN VARIOUS COUNTRIES, 1908.

Country.	Quantity of Oats produced	Country.	Quantity of Oats produced	Country.	Quantity of Oats produced.
	Bushels.		Bushels.		Bushels
Russian Empire	787,820,000	Austria-Hungary ...	184,079,000	Argentina ...	27,848,000
United States ...	782,618,000	U'd. Kingdom	176,008,000	Netherlands	19,075,000
Germany ...	434,857,000	Sweden ...	70,524,000	New Zealand	18,907,000
France ...	277,003,000	Denmark ...	38,922,000	Rumania ...	16,680,000
Canada ...	250,377,000			**Australia ...**	**16,249,000**

9. **Comparison of Yields.**—The average yield per acre of oats in Australia is a somewhat low one compared with the results obtained in other countries, where the cultivation of this cereal is more extensively carried on. Arranging the countries contained in the foregoing table, with the exception of Denmark, for which particulars are not available, according to the magnitude of the average yield of oats for the year 1908, the results are as follow :—

YIELD OF OATS PER ACRE, 1908.

Country.	Average per Acre.	Country.	Average per Acre.	Country.	Average per Acre.
	Bushels.		Bushels.		Bushels.
Netherlands ...	55.23	Canada	31.53	United States ...	24.20

Germany	41.18	Austria	27.39	Russian Empire...	17.23
				Rumania... ...	13.77

10. **Interstate Trade.**—Particulars concerning the interstate trade in oats for the year 1909 are contained in the following table. These shew that Victoria and Tasmania are the largest interstate exporters, while New South Wales is the largest importer of oats:—

INTERSTATE TRADE IN OATS, 1909.

State.	Imports from Other States of the Commonwealth.		Exports to Other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

* — signifies net imports.

11. **Price of Oats.**—The average wholesale prices of oats in the markets of the several capitals for the year 1909 are given in the following table:—

AVERAGE WHOLESALE PRICE OF OATS PER BUSHEL.

Particulars.	Sydney.	Melbourne.	Brisbane.	Adelaide.	Perth.	Hobart.
Average price per bushel ...	s. d. 2 5	s. d. 1 11	s. d. 3 5	s. d. 2 2	s. d. 2 7	s. d. 2 2

§ 6. Maize.

1. **States Growing Maize.**—The only States in which maize is at all extensively grown for grain are those of New South Wales and Queensland, the area so cropped in these two States during the season 1909-10 being 345,110 acres, or nearly 95 per cent. of the total for the Commonwealth. Of the balance, Victoria contributed 19,112 acres, South Australia 210 acres, and Western Australia 153 acres. The climate of Tasmania prevents the growing of maize for grain in that State. In South Australia prior to 1908 particulars concerning maize had not been specially asked for on the form used in the collection of agricultural statistics. In all the States maize is grown to a greater or less extent as green forage, particularly in connection with the dairying industry.

2. **Area under Maize.**—The area devoted to the growing of maize for grain in each State, from 1875 onwards, is given in the following table, and the actual fluctuations from year to year are shewn more fully on the graph hereinafter.

The total area under maize in the Commonwealth exceeded 300,000 acres for the first time in the season 1890-1, and although it has fluctuated somewhat since then, it may be considered to have remained practically stationary at about that figure. The greatest divergence occurred in 1903-4, when a record total of 371,906 acres was harvested. The area cropped with maize in New South Wales, which had declined rapidly from a maximum of 226,834 acres in 1903-4 to 160,980 acres in 1907-8, shewed a marked

improvement in 1908-9, when a total area of 180,812 acres was cropped, and a further improvement to 212,797 acres in 1909-10. In Queensland the area appears to be on the increase, and that for 1906-7 was the highest ever attained in that State, while the area cropped in 1909-10 has only twice been exceeded, viz., in 1906-7 and 1903-4. The area under maize in New South Wales in 1909-10 represents less than 7 per cent. of that State's total area under crop, while in the case of Queensland the maize crop represents nearly 22 per cent. of the total.

AREA UNDER MAIZE, STATES AND COMMONWEALTH, 1875-6 to 1909-10.

Season.	N.S.W.	Victoria.	Queensland.	South Aust.	West Aust.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

* Particulars for previous years not available.

3. **Total Yield.**—Notwithstanding the fact that the area under maize in the Commonwealth for 1909-10 fell short of that for the season 1903-4, the 1909-10 production established a record, the total attained being 10,770,648 bushels. Only twice previously had a total exceeding ten millions been reached, viz., in the season 1897-8, when 10,036,083 bushels were harvested and in 1906-7, when a total of 10,172,154 bushels was attained. Particulars concerning the yield from 1875 onwards are as hereunder:—

MAIZE CROP, STATES AND COMMONWEALTH, 1875-6 to 1909-10.

Season.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	C'wealth.

* Particulars for previous years not available.

4. **Average Yield.**—In the following table particulars are given of the average yield per acre of the maize crops of the several States for the nine seasons, 1901-2 to 1909-10:—

AVERAGE YIELD OF MAIZE PER ACRE, COMMONWEALTH AND STATES, 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2 ...	22.98	61.42	21.96	...	10.16	23.86
1902-3 ...	15.06	68.82	11.49	...	19.36	15.94
1903-4 ...	30.14	76.57	14.45	...	15.26	25.99

1908-9 ...	28.85	46.45	21.68	15.57	11.80	26.72
1909-10 ...	33.36	60.59	18.96	16.00	14.64	29.54

* Particulars for previous years not available.

The extraordinarily high average yield obtained in Victoria is due, in large measure, to the fact that the area under maize in that State is comparatively small and is situated in districts that are peculiarly suited to the production of this grain. The yield in New South Wales is appreciably higher than that obtained in Queensland.

5. **Value of Maize Crop.**—The value of the Commonwealth maize crop for the season 1909-10 has been estimated at £1,621,996, made up as follows:—

VALUE OF MAIZE CROP, 1909-10.

State.	New South Wales.	Victoria.	Queensland.	S. Aust.	Western Australia.	Common-wealth.
Aggregate value	£946,430	£172,498	£501,752	£672	£644	£1,621,996
Value per acre	£4 8/11	£8 16/6	£3 15/11	£3 4/	£4 4/2	£4 9/

6. **Relation to Population.**—During the past nine seasons the Commonwealth production of maize has ranged between 1¼ bushels per head of population in 1902-3 and 2½ bushels per head in 1906-7 and 1909-10. The production in Queensland, the State in which the maize yield per head of population is highest, ranged during the same period between 2 bushels per head in 1902-3 and 7 bushels per head in 1906-7. Details for the several States for the nine seasons are as follows:—

MAIZE PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'and.	S. Aust.	W. Aust.	Tas.	C'wealth.

* Particulars for previous years not available.

7. **Oversea Imports and Exports.**—Except in the years 1902 and 1903, when, owing to the severe drought experienced in Australia, many of the maize crops failed, the

Commonwealth oversea trade in maize has been practically insignificant. In the former of the years mentioned nearly two million, and in the latter considerably more than a million bushels were imported. In 1908 and 1909 also, owing to the small harvests of seasons 1907-8 and 1908-9, the imports of maize were largely in excess of the exports. Details of imports and exports for the past nine years are as follows:—

COMMONWEALTH IMPORTS AND EXPORTS OF MAIZE, 1901 to 1909.

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901 ...	188,423	24,764	533	75	— 187,890	— 24,689
1902 ...	1,910,587	319,859	1,450	351	— 1,909,137	— 319,508
1903 ...	1,346,702	204,484	17,296	2,749	— 1,329,406	— 201,735
1904 ...	35,096	3,018	48,109	5,421	13,013	2,403
1905 ...	9,785	1,922	7,033	985	— 2,752	— 937

1908 ...	271,723	49,291	2,018	444	— 269,705	— 48,847
1909 ...	628,063	104,367	5,054	999	— 623,009	— 103,368

* — signifies net imports.

The principal countries to which maize has been exported from the Commonwealth are South Africa, New Zealand, and China, while the principal countries from which importations have taken place are the Argentine Republic, New Zealand, the United States, the Pacific Islands, South Africa, and Java.

8. **Prepared Maize.**—A fairly large quantity of corn-flour is imported annually into the Commonwealth, the principal countries of supply being the United Kingdom and the United States. During the year 1909 these importations amounted to 551,734 lbs., and represented a value of £8096.

9. **Maize-growing in other Countries.**—The world's production of maize for the year 1908 has been estimated by the United States Department of Agriculture at 3,372,000,000 bushels, and of this quantity the United States of America was responsible for 2,587,000,000 bushels, or nearly 77 per cent. The other leading maize-producing countries of the world are Austria-Hungary, Argentina, Italy, Rumania, Mexico, and Russia, in the order mentioned.

10. **Interstate Trade in Maize.**—In addition to being the largest producer of maize in the Commonwealth, New South Wales is also the largest importer from the other States. Particulars of the interstate imports and exports are contained in the table given hereunder:—

INTERSTATE TRADE IN MAIZE, 1909.

State.	Imports from other States of the Commonwealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.*

§ 7. Barley.

1. **Area under Barley.**—The area devoted to barley in the Commonwealth is one which has fluctuated very considerably, but up to the season 1906-7 the net result of these fluctuations had left it in practically the same position as that which it occupied twenty-six years previously. During the last three seasons, however, a satisfactory advance has been made and the area under barley for 1909-10, viz., 143,013 acres, is the highest ever attained in the Commonwealth. The principal barley-growing State is Victoria, which, for the season 1909-10, accounted for 41 per cent. of the Commonwealth area devoted to this crop. The figures here given relate to the areas harvested for grain; only small areas are cropped for hay, while more considerable quantities are cut for green forage. These, however, are not included in this sub-section. The area under barley for grain in the several States from 1875 onwards is shewn in the following table:—

COMMONWEALTH AREA UNDER BARLEY, 1875-6 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres
1875-6	4,817	31,568	613	13,969	5,014	5,939	61,920
1880-1	8,056	68,630	1,499	13,074	6,363	8,297	105,919
1885-6	5,298	74,112	406	16,493	6,178	6,833	109,320
1890-1	4,937	87,751	584	14,472	5,322	4,376	117,442
1895-6	7,590	78,438	721	14,184	1,932	6,178	109,043
1900-1	9,435	58,853	7,533	15,352	2,536	4,502	98,211
1901-2	6,023	32,423	11,775	15,517	2,669	6,104	74,511
1902-3	4,557	37,716	430	21,493	3,783	8,281	76,260
1903-4	10,057	47,760	22,881	28,697	3,609	8,084	121,088
1904-5	14,930	46,089	17,387	23,904	3,251	7,646	113,207
1905-6	9,519	40,938	5,201	26,250	3,665	5,372	90,945
1906-7	7,979	52,816	8,601	28,122	3,590	5,328	106,436
1907-8	11,890	63,074	6,943	37,321	6,019	5,852	131,099
1908-9	9,517	64,648	7,385	44,911	7,308	6,474	140,243
1909-10	15,091	58,603	13,109	41,895	8,022	6,293	143,013

New South Wales, Queensland, and Western Australia shewed substantial increases in area under barley for 1909-10 as compared with the cropping of previous season, while decreases were experienced in Victoria, South Australia, and Tasmania.

2. **Malting and other Barley.**—In recent years the statistics of all the States have distinguished between "malting" and "other" barley. Particulars for the Commonwealth are as follows:—

AREA UNDER MALTING AND OTHER BARLEY, 1909-10.

State.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres	Acres.	Acres.	Acres.	Acres.	Acres.
Malting barley	8,411	38,762	7,439	27,873	4,342	4,987	91,814
Other barley ...	6,680	19,841	5,670	14,022	3,680	1,306	51,199
Total ...	15,091	58,603	13,109	41,895	8,022	6,293	143,013

It will be seen that, taking the Commonwealth as a whole, about 64 per cent. of the area devoted to this grain in 1909-10 was cropped with malting barley. The proportion varies considerably in the several States.

3. **Total Yield.**—The total production of barley in the Commonwealth for the season 1909-10 amounted to 2,436,384 bushels, and although falling short of the record yield of 1908-9, it exceeded that of any previous season except 1903-4. Particulars concerning the yields of the several States from 1875 onwards are as follows :—

COMMONWEALTH BARLEY CROP, 1875-6 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.

1904-5	266,781	874,099	331,772	346,718	37,332	163,194	2,019,896
1905-6	111,266	1,062,139	61,816	505,916	49,497	106,042	1,896,676
1906-7	152,739	1,255,442	158,283	491,246	48,827	141,895	2,248,432
1907-8	75,148	1,059,295	64,881	566,937	76,205	149,186	1,991,652
1908-9	166,538	1,511,181	137,667	825,740	74,433	158,645	2,874,204
1909-10	272,663	1,023,384	193,586	691,424	101,673	153,654	2,436,384

4. **Value of Barley Crop.**—The estimated value of the total barley crop of the Commonwealth for the season 1909-10 was £445,201, the extent to which the several States have contributed to this total being shewn in the following table :—

VALUE OF BARLEY CROP.

State.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
Total value ...	£56,030	£177,661	£42,021	£119,617	£19,141	£30,731	£445,201
Value per acre	£3/14/3	£3/0/8	£3/4/1	£2/17/1	£2/7/9	£4/17/8	£3/2/3

5. **Relation to Population.**—During the nine seasons 1901-2 to 1909-10, the quantity of barley produced in the Commonwealth has averaged about half a bushel per head of population. For the season 1909-10 the production ranged from about 1⅔ bushels per head in South Australia to one-sixth of a bushel in New South Wales. Details for the period are as follows :—

BARLEY PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.	Bushels.
1901-2	76	576	553	671	184	972	401
1902-3	13	464	7	870	225	1,156	298
1903-4	123	1,008	996	1,333	240	1,197	681
1904-5	184	724	639	938	158	913	511
1905-6	75	876	118	1,350	198	517	469
1906-7	101	1,026	297	1,293	188	793	550
1907-8	48	855	120	1,470	291	832	479
1908-9	105	1,201	251	2,074	281	873	679
1909-10	170	797	343	1,684	375	834	564

6. **Commonwealth Imports and Exports.**—The Commonwealth oversea trade in barley is not extensive, and in most years the imports exceed the exports. In 1902 and 1903 somewhat extensive importations of barley from the United States and New Zealand took place, owing to the shortage in local supply resulting from the severe drought of that period. In 1904, the excellent crop of the season 1903-4 furnished the material for a heavy exportation to Japan, the total exported thither during that year being 551,825 bushels. In 1909 also a fairly heavy export took place, mainly to the United Kingdom. Particulars of the Commonwealth oversea imports and exports of barley for the nine years 1901 to 1909 are contained in the following table:—

COMMONWEALTH IMPORTS AND EXPORTS OF BARLEY, 1901 to 1909.

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Bushels.	£	Bushels.	£	Bushels.	£
1901 ...	55,508	7,208	17,474	1,942	— 38,034	— 5,266
1902 ...	686,478	123,194	8,267	1,465	—678,211	—121,729
1903 ...	731,494	136,997	14,286	5,561	—717,208	—131,436
1904 ...	246,908	39,012	568,640	65,950	321,732	26,938
1905 ...	124,850	19,672	244,456	28,618	119,606	8,946
1906 ...	210,586	34,468	3,150	562	—207,436	— 33,906
1907 ...	232,154	53,802	38,350	5,533	—193,804	— 48,269
1908 ...	452,462	107,126	1,148	290	—451,314	—106,836
1909 ...	51,332	12,356	188,946	28,774	137,614	16,418

* — signifies net imports.

It will be seen that in only three years out of the nine dealt with have the Commonwealth exports of barley exceeded the imports, viz., in 1904, 1905, and 1909. During the nine years the total importations amounted to 2,791,772 bushels, valued at £533,835, and the total exports to 1,084,717 bushels, valued at £138,695, giving a net importation of 1,707,055 bushels in quantity and £395,140 in value.

In addition to the above, which relates to the unprepared grain, there is a small importation into the Commonwealth of pearl and Scotch barley, mainly from the United Kingdom, Germany, China and Japan. The total imported during 1909 amounted to only 4880 lbs. in weight, with a value of £47.

A more considerable export trade in Australian pearl and Scotch barley is carried on, mainly with the United Kingdom and New Zealand, the total exports for 1909 reaching 1,155,346 lbs. valued at £3573.

7. **Commonwealth Imports and Exports of Malt.**—The importations of malt into the Commonwealth are fairly extensive, the bulk of the supply being obtained from the

United Kingdom, Austria-Hungary, and Germany, but principally from the United Kingdom. Details of imports and exports for the past nine years are given hereunder :—

COMMONWEALTH IMPORTS AND EXPORTS OF MALT, 1901 to 1909.

Year.	Imports.		Exports.		Net Imports.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

8. **Interstate Trade in Barley and Malt.**—Victoria, as well as being the largest grower of barley in the Commonwealth, is also the largest importer from the other States, the supply being chiefly obtained from South Australia, the principal interstate exporter during 1909. In the cases of both pearl barley and malt Victoria was the largest exporter to the other States, while Western Australia was the largest importer of pearl barley, and New South Wales the largest importer of malt.

9. **Comparison with other Countries.**—In comparison with the barley production of other countries of the world that of Australia appears very small indeed. Particulars for some of the leading countries for the year 1908 are as follows, the Australian figures being added for the sake of comparison:—

PRODUCTION OF BARLEY IN VARIOUS COUNTRIES, 1908.

Country.	Production of Barley.	Country.	Production of Barley.
	Bushels.		Bushels.
Russian Empire ...	366,428,000	France	39,388,000

Canada*	46,762,000		

* Exclusive of British Columbia.

10. **Average Yield.**—The average yield per acre of barley varies considerably in the different States, being as a rule highest in Tasmania and Victoria, and lowest in Western Australia and Queensland. Details for each State for the nine seasons 1901-2 to 1909-10 are given in the following table:—

AVERAGE YIELD PER ACRE OF BARLEY, 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West Aust.	Tas.	C'wealth.

§ 8. Other Grain and Pulse Crops.

In addition to the grain crops already specified, the only grain and pulse crops at all extensively grown in the Commonwealth are beans, peas and rye. The total area under the two former for the season 1909-10 was 34,819 acres, giving a total yield of 669,538 bushels, or an average of 19.23 bushels per acre. The States in which the greatest area is devoted to beans and peas are Tasmania, Victoria and South Australia. The total area under rye in the Commonwealth during the season 1909-10 was 11,697 acres, yielding 135,024 bushels, and giving an average of 11.54 bushels per acre. More than 47 per cent. of the rye grown during the season was produced in New South Wales. In addition to these grain crops a small area of rice was for some years cultivated in Queensland. The results obtained, however, have not offered sufficient inducement to growers to continue this crop, and the total area devoted to it declined from 1113 acres in 1892-3 to 7 acres in 1908-9 and disappeared from the records for 1909-10. Should rice-growing ever be seriously taken up in Australia, it is probable that large tracts of country in the northern parts of Western Australia and in the Northern Territory will be found well suited to its cultivation.

§ 9. Potatoes.

1. **Area.**—The principal potato-growing State of the Commonwealth as regards area is Victoria, Tasmania usually ranking second and New South Wales third. For the season 1909-10, however, owing mainly to the prevalence of the Irish potato blight the Tasmanian area fell to 21,375 acres, a lower figure than has been recorded for any season since 1898-9. In consequence of this, the second place for 1909-10 was occupied by New South Wales, Tasmania being third. The area devoted to this crop in the Commonwealth, which has fluctuated somewhat, reached its highest point in the season 1906-7, with a total of 146,681 acres.

The area under potatoes in each State from 1890 onwards is given hereunder :—

COMMONWEALTH AREA UNDER POTATOES, 1890-1 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1890-1	19,406	53,818	6,270	6,626	511	20,133	106,764
1895-6	24,722	43,895	9,240	6,448	668	19,247	104,220

1906-7	36,815	55,372	8,031	9,894	2,264	34,305	146,681
1907-8	31,917	54,149	7,889	9,062	1,854	38,640	143,511
1908-9	26,301	47,903	6,227	8,069	2,026	35,159	125,685
1909-10	35,725	62,390	7,708	8,131	1,741	21,375	137,070

2. **Total Yield.**—For the season 1909-10, Victoria's production represented about 45 per cent. of the total for the Commonwealth, New South Wales and Tasmania coming

next in order. The total Commonwealth production for the season 1906-7, viz., 507,153 tons, was the highest ever attained, the yield which most nearly approached it being 449,383 tons in 1903-4. Details as to production in the several States during the period from 1890 onwards are as follows :—

COMMONWEALTH PRODUCTION OF POTATOES, 1890-1 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tasmania.	C'wealth.

1909-10	100,143	174,970	13,544	18,569	5,948	73,862	387,036

3. **Average Yield per Acre.**—The suitability of the soil, climate, and general conditions of Tasmania for potato growing is evidenced by the high yields per acre which are almost invariably obtained in the island State. The lowest average yield is that obtained in Queensland. Particulars for each State for the nine seasons 1901-2 to 1909-10 are given hereunder:—

AVERAGE YIELD OF POTATOES, COMMONWEALTH AND STATES,

1901-2 TO 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1901-2	1.50	3.13	2.25	2.41	3.14	4.51	2.94
1902-3	1.58	3.40	1.12	3.65	3.11	4.72	3.44
1903-4	2.72	3.43	2.62	3.65	2.49	5.87	3.87
1904-5	2.04	1.98	1.97	2.35	2.95	4.26	2.54
1905-6	1.89	2.58	1.58	2.13	2.94	2.26	2.26
1906-7	3.12	3.01	1.97	2.25	2.22	5.31	3.46
1907-8	1.75	2.50	1.67	2.24	3.06	3.77	2.62
1908-9	2.73	3.19	1.85	2.67	3.30	3.46	3.07
1909-10	2.80	2.80	1.76	2.28	3.42	3.46	2.82

4. **Value of Potato Crop.**—The estimated value of the potato crop of each State for the season 1909-10 is furnished in the following table together with the value per acre :—

VALUE OF POTATO CROP, 1909-10.

State.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
Total value	£461,130	£673,635	£94,808	£102,129	£59,480	£246,206	£1,637,388
Value per acre	£12/18/2	£10/15/11	£12/6/-	£12/11/2	£34/3/3	£11/10/4	£11/18/11

5. **Relation to Population.**—The average production of potatoes per annum per head of the population of the Commonwealth for the past nine seasons has been approximately 1⅞ cwt. In Tasmania, where this crop is of far greater importance in relation to population than is the case in any other State, the production per head in 1906-7 was more than a ton, and in 1909-10 about 8 cwt. Details for the past nine seasons are as follows :—

POTATO PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1901-2	29	104	45	42	30	665	85
1902-3	22	139	6	78	32	940	104
1903-4	44	139	34	86	25	965	115
1904-5	34	77	37	53	24	618	75
1905-6	34	95	22	54	25	360	67
1906-7	76	136	30	59	19	1,019	124
1907-8	36	109	24	53	22	811	90
1908-9	45	121	21	54	25	669	91
1909-10	62	136	24	45	22	401	90

6. **Commonwealth Imports and Exports.**—Under normal conditions there is usually a fairly large export trade in potatoes carried on by the Commonwealth, principally with New Zealand, the Pacific Islands, and the Philippine Islands. Thus, during 1907, out of a total export of 17,842 tons, 13,346 tons went to New Zealand, 2102 tons to the Pacific Islands, and 2112 tons to the Philippine Islands. On the other hand, when in 1902 and 1903 the drought of that period had brought about a shortage in the Australian supplies, importations from New Zealand took place to the extent of 11,471 tons in the former and 2279 tons in the latter year. The quantities and values of the Commonwealth oversea imports and exports of potatoes for the nine years 1901 to 1909 are contained in the following table :—

COMMONWEALTH IMPORTS AND EXPORTS OF POTATOES, 1901 to 1909.

Year.	Imports.		Exports.		Net Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Tons.	£	Tons.	£
1901 ...	17,655	86,067	6,028	45,485	— 11,627	— 40,582
1902 ...	11,608	53,919	3,383	20,192	— 8,225	— 33,727

1908 ...	129	1,112	3,375	18,560	3,246	17,448
1909 ...	138	1,202	2,604	16,370	2,466	15,168

* — signifies net imports.

7. **Interstate Trade in Potatoes.**—A large trade in potatoes is carried on between the States of the Commonwealth, the principal exporting State being Tasmania, and the chief importers New South Wales, Queensland and Western Australia. Particulars for each State for the year 1909 are given hereunder :—

INTERSTATE TRADE IN POTATOES, 1909.

State.	Imports from Other States of the Commonwealth.		Exports to Other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

United States ...	6,763,000	**Australia** ...	**386,000**
Belgium (1907) ...	2,362,000	New Zealand ...	195,000
Netherlands	2,343,000	Luxemburg ...	195,000

§ 10. Other Root and Tuber Crops.

1. **Nature and Extent.**—Root crops, other than potatoes, are not extensively grown in Australia, the total area devoted to them for the season 1909-10 being only 20,301 acres. The principal of these crops are onions, mangolds, turnips, and "sweet potatoes" *(Batatas edulis)*. Of these, onions are most largely grown in Victoria, mangolds in Tasmania and Victoria, turnips in Tasmania, and sweet potatoes in Queensland. The total area under onions in the Commonwealth during the season 1909-10 was 7271 acres, giving a total yield of 36,283 tons, and averaging 4.99 tons per acre. The area devoted in 1909-10 to root crops other than potatoes and onions, viz., 13,030 acres, yielded 105,423 tons, and gave an average of 8.09 tons per acre. The areas and yields here given are exclusive of the production of "market gardens," a reference to which will be made later.

2. **Commonwealth Imports and Exports.**—The only root crop, other than potatoes, in which any considerable oversea trade is carried on by the Commonwealth is that of onions. During the year 1909 oversea imports of onions amounted to 2670 tons, the principal countries from which they were obtained being New Zealand and Japan. For the same year the exports of onions totalled 2647 tons, the principal countries to which they were exported being New Zealand, Canada, the Philippine Islands, and the United States of America.

3. **Interstate Trade.**—A fairly extensive trade in onions is carried on between the several States of the Commonwealth. Victoria, the largest producer of onions, is also the largest exporter, while New South Wales, Queensland, and Western Australia are the principal importers. During the year 1909 the interstate onion trade was as follows:—

INTERSTATE TRADE IN ONIONS, 1909.

State.	Imports from Other States of the Commonwealth.		Exports to Other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

§ 11. Hay.

1. **Nature and Extent.**—As already stated, the most important crop of the Commonwealth is that of wheat grown for grain. Next to this in importance is the hay crop, which for the season 1909-10 represented about 20.3 per cent. of the area under crop in the Commonwealth. In most European countries the hay crop consists almost entirely of meadow and other grasses, whilst in Australia a very large proportion of the area under hay comprises cereal crops, mainly wheat and oats. A considerable quantity of lucerne hay is also made, particularly in New South Wales and Queensland. The area under hay of all kinds in the several States from 1860 onwards is given hereunder:—

AREA UNDER HAY, 1860-1 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1860-1	46,584	90,921	276	55,818	6,626	31,837	232,062
1865-6	61,909	97,902	1,449	101,996	8,824	30,244	302,324
1870-1	65,404	163,181	3,671	140,316	17,173	33,612	423,357
1875-6	77,125	155,274	8,531	161,429	17,319	34,758	454,436

1900-1	466,236	502,105	42,497	341,330	104,254	61,541	1,517,963
1901-2	442,163	659,239	63,055	369,796	92,654	61,495	1,688,402
1902-3	491,918	580,884	20,068	325,789	105,791	66,038	1,590,488
1903-4	496,017	733,353	78,393	370,152	109,002	66,947	1,853,864
1904-5	435,704	452,459	48,740	269,626	105,247	55,545	1,367,321
1905-6	438,036	591,771	37,425	317,924	124,906	64,350	1,574,412
1906-7	458,172	621,139	64,498	298,396	149,830	64,965	1,657,000
1907-8	542,761	682,194	54,037	328,672	131,056	73,859	1,812,579
1908-9	715,896	956,371	65,004	424,924	201,874	88,613	2,452,682
1909-10	630,491	864,359	72,298	424,448	158,629	77,804	2,228,029

It will be seen from this table that in all the States marked fluctuations occur in the area devoted to the hay crop from year to year. These fluctuations are due to various causes, the principal being the variations in the relative prices of grain and hay, and the favourableness or otherwise of the season for a grain crop. Thus crops originally

sown for grain are frequently cut for hay owing to the improved price of that commodity, or owing to the fact that the outlook for the due development of the grain is not a satisfactory one. On the other hand, improved grain prices or the prospect of a heavy yield will frequently cause crops originally intended for hay to be left for grain. The area under hay in the Commonwealth for the season 1909-10 was, with the exception of that for the previous season, the highest on record.

2. **Kinds of Hay.**—Particulars concerning the kind of crop cut for hay are furnished for a series of years in the returns prepared by four of the States. Totals only were shewn in the cases of South Australia and Tasmania until the season 1907-8, when a specification of details was obtained in South Australia also. Details for the past five seasons are given in the following table :—

KINDS OF HAY GROWN, 1905-6 to 1909-10.

* Details not available.

It will be seen that wheat is the principal hay crop in New South Wales, South Australia, and Western Australia, oats in Victoria, and lucerne in Queensland. Details for Tasmania are not available.

3. **Total Yield.**—The Commonwealth hay crop for the season 1909-10 amounted to 3,153,196 tons, or 15,822 tons more than were produced in 1908-9. This represents the largest hay crop ever harvested in the Commonwealth, the highest previous record being that of 3,137,374 tons for the season 1908-9. For many years past the State of Victoria has been the largest hay producer in the Commonwealth, and in the season 1909-10 accounted for more than 37 per cent. of the total production. The total yields of the several States from 1860 onwards are given hereunder:—

COMMONWEALTH HAY CROP, 1860-1 to 1909-10.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.

4. **Value of Hay Crop.**—The following table furnishes particulars concerning the total value and the value per acre of the hay crop of the several States of the Commonwealth for the season 1909-10:—

VALUE OF HAY CROP, 1909-10.

Particulars.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.
							£
Total value...	£3,850,873	£2,610,824	£423,058	£1,321,292	£878,748	£445,297	9,530,092
Value per acre	£6/2/2	£3/0/5	£5/17/0	£3/2/3	£5/10/10	£5/14/6	£4/5/7

5. **Average Yield per Acre.**—The States of the Commonwealth in which the highest average yields per acre have been obtained are those of Queensland and Tasmania, these being also the States in which the smallest areas are devoted to this crop. For the past nine seasons the lowest yield for the Commonwealth as a whole was that of 17 cwt. per acre in 1902-3, and the highest that of 31 cwt. in 1903-4. Particulars for the several States for the seasons 1901-2 to 1909-10 are given hereunder:—

AVERAGE YIELD OF HAY PER ACRE, 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1901-2	1.07	1.34	1.94	0.94	0.97	1.78	1.20
1902-3	0.49	1.04	1.16	0.95	0.89	1.35	0.86
1903-4	1.65	1.68	1.74	1.30	1.12	1.73	1.57
1904-5	0.84	1.14	1.65	1.09	1.08	1.32	1.06
1905-6	1.05	1.46	1.52	1.37	1.12	1.40	1.30
1906-7	1.36	1.42	1.46	1.34	1.06	1.61	1.36
1907-8	0.69	1.00	1.44	1.14	1.04	1.33	0.96
1908-9	1.02	1.48	1.43	1.39	0.84	1.55	1.28
1909-10	1.56	1.37	1.34	1.35	1.23	1.53	1.42

6. **Relation to Population.**—During the past nine seasons the Commonwealth hay production per head of population has varied between 7 cwt. in 1902-3 and 15 cwt. in 1903-4 and 1908-9; averaging about 11 cwt. per head for the period. The State in which the hay production per head of population is highest is South Australia. Details for the past nine seasons are given hereunder:—

HAY PRODUCTION PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1901-2	347	735	243	955	476	635	534
1902-3	175	497	45	847	457	513	353
1903-4	577	1,018	266	1,311	551	651	744
1904-5	254	426	155	796	481	411	365
1905-6	311	713	108	1,162	557	503	509
1906-7	412	720	177	1,042	608	586	552
1907-8	237	551	144	975	524	549	419
1908-9	461	1,125	169	1,485	638	757	741
1909-10	611	924	171	1,399	720	645	730

7. **Oversea Imports and Exports.**—Under normal conditions hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not in such circumstances figure largely amongst the imports and exports of the Commonwealth. In 1901 and 1902, however, the exceptional demand which was created by the South African war brought about a fairly large export of hay and chaff to Natal and the Cape of Good Hope. These colonies also took and are still taking a considerable quantity of Australian compressed fodder. During the year 1904, when the war between Japan and Russia was being carried on, the exports of compressed fodder to Hong Kong were valued at £42,759 and those to Japan at £23,608. The total value of the hay and chaff exported during 1901 was £406,455, as compared with £9510 only in 1909, while the exports of fodder, which amounted in value to £142,472 in 1904, had shrunk to £25,430 in 1909.

During 1909 the principal consignees of the hay and chaff exported from the Commonwealth were India, the Straits Settlements, Ceylon, the Philippine Islands, and Java, while the principal countries to which compressed fodder was exported were the Philippine Islands, Cape of Good Hope, and Ceylon.

Imports of hay and chaff into the Commonwealth are usually unimportant, and for the year 1909 totalled 71 tons, valued at £302, obtained principally from New Zealand.

8. **Interstate Trade in Hay and Chaff.**—A considerable trade in hay and chaff is carried on between the several States of the Commonwealth, the exporting States during the year 1909 being Victoria and South Australia, and the importing States New South Wales, Queensland, Western Australia, and Tasmania. Particulars of interstate imports and exports for 1909 are given in the following table:—

INTERSTATE TRADE IN HAY AND CHAFF, 1909.

State.	Imports from other States of the Commonwealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

* — signifies net imports.

9. **Hay Production in Other Countries.**—As already noted, the hay crops of most European countries consist of grasses of various kinds, amongst which clover, lucerne, sainfoin and rye grass occupy a prominent place. The statistics of hay production in these countries are not prepared on a uniform basis, and consequently any attempt to furnish an extensive comparison of the production of hay in the various countries would probably be misleading. It may be noted, however, that in the United Kingdom the production of hay from clover, sainfoin, etc., was for the year 1908 represented by 5,131,663 tons from 3,081,380 acres, while from permanent grasses a yield of 9,505,663 tons of hay was obtained from 6,399,567 acres, giving a total of 14,637,326 tons from 9,480,947 acres, or about 31 cwt. per acre.

§ 12. Green Forage.

1. **Nature and Extent.**—In all the States of the Commonwealth a considerable area is devoted to the production of green forage, mainly in connection with the dairying industry. The total area so cropped during the season 1909-10 was 306,082 acres, which was 107,429 acres less than the corresponding area for 1908-9. Of this total the New South Wales area represented about 39 per cent., while that in Queensland amounted to about 33 per cent. of the total. The principal crops cut for green forage are maize, sorghum, oats, barley, rye, rape, and lucerne, while small quantities of sugar-cane also are so used. Particulars concerning the area under green forage in the several States from 1890 onwards are furnished in the following table:—

AREA UNDER GREEN FORAGE, 1890-1 to 1909-10.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.

1905-6 ...	95,058	34,041	66,183	23,842	1,873	4,882	225,879
1906-7 ...	122,914	36,502	50,513	17,985	3,265	5,326	236,505
1907-8 ...	260,810	59,897	91,444	15,434	4,773	6,367	438,725
1908-9 ...	235,539	63,066	87,675	16,086	4,902	6,243	413,511
1909-10 ...	118,960	56,586	100,493	17,226	6,068	6,749	306,082

2. **Value of Green Forage Crops.**—The value of these crops is variously estimated in the several States, and the Commonwealth total for the season 1909-10 may be taken approximately as £1,169,000, or about £3 16s. 5d. per acre.

3. **Relation to Population.**—Particulars concerning the area under green forage per 1000 of the population of the Commonwealth and the several States for the past nine seasons are given hereunder :—

AREA UNDER GREEN FORAGE PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.

1909-10	73	43	175	41	22	36	69

§ 13. Sugar-Cane.

1. **Area.**—Sugar-cane is grown for sugar-making purposes in only two of the States of the Commonwealth, viz., Queensland and New South Wales, and much more extensively in the former than the latter. Thus of the total area of 142,261 acres under sugar-cane in the Commonwealth for the season 1909-10 there were 128,178 acres, or about 90 per cent., in Queensland. Sugar-cane growing appears to have been started in the Commonwealth in or about 1862, as the earliest statistical record of sugar-cane as a crop is that which credits Queensland with an area of twenty acres for the season 1862-3. In the following season the New South Wales records shew that an area of two acres was devoted to the crop in the mother State. The area under cane in New South Wales reached its maximum in 1895-6 with a total of 32,927 acres. It then fell continuously to 1902-3, when it was lower than for any previous season since 1889-90. From 1902-3 to 1906-7 it remained practically stationary, but since then it has fallen every year and in 1909-10 had dropped to 14,083 acres, the lowest area under sugar-cane since 1882-3. In Queensland, on the other hand, although fluctuations in area are in evidence throughout, the general trend has been one of satisfactory increase, the area under cane for the season 1905-6 being the highest on record, and that for 1906-7 only a little short of it. In 1907-8 the area in Queensland declined to 126,810 acres, and in 1908-9 still further to 123,902 acres, but there was a marked increase in 1909-10, when it rose to 128,178 acres. The area under sugar-cane in the Commonwealth from 1865 onwards is given in the following table :—

AREA UNDER SUGAR-CANE, 1865-6 to 1909-10.

Season.	N.S.W.	Queensland.	C'wealth.	Season.	N.S.W.	Queensland.	C'wealth.
	Acres.	Acres.	Acres.		Acres.	Acres.	Acres.
1865-6	141	450	591	1902-3	20,160	85,338	105,498
1870-1	4,082	6,342	10,424	1903-4	20,182	111,516	131,698
1875-6	6,454	13,459	19,913	1904-5	21,525	120,317	141,842
1880-1	10,971	20,224	31,195	1905-6	21,805	134,107	155,912
1885-6	16,419	59,186	75,605	1906-7	20,580	133,284	153,864
1890-1	20,446	50,922	71,368	1907-8	17,953	126,810	144,763
1895-6	32,927	77,247	110,174	1908-9	16,981	123,902	140,883
1900-1	22,114	108,535	130,649	1909-10	14,083	128,178	142,261
1901-2	20,809	112,031	132,840				

2. **Productive and Unproductive Cane.**—The areas given in the preceding table represent the total area on which sugar-cane was grown during the seasons specified for purposes other than green forage. The whole area, however, was not in any case cut for crushing during that seas on, there being always a considerable amount of "stand over" cane, as well as a small quantity required for plants. In the season 1909-10 the New South Wales total comprised 6480 acres of productive and 7603 acres of unproductive cane, while in the case of Queensland the productive cane amounted to 80,095 acres and the unproductive to 48,083 acres, the latter including 2274 acres for plants.

3. **Yield of Cane.**—Queensland statistics of the production of sugar-cane are not available for dates prior to the season 1897-8. In that season the total for the Commonwealth was 1,073,883 tons, as against 1,294,575 tons for 1909-10. The average yield per acre of productive cane is much higher in New South Wales than in Queensland, and during the six seasons 1901-2 to 1906-7 in the case of the former State remained practically constant at about 21 tons per acre. In 1907-8 the yield in New South Wales was so excellent that, notwithstanding the comparative smallness of the area cultivated, the aggregate amount of cane produced was the largest in that State since 1898-9. In 1909-10, on the other hand, owing mainly to the decline in area of productive cane, the total yield amounted to only 131,081 tons, the lowest for the State since 1888. The average yield per acre for New South Wales for 1909-10 was 20¼ tons. In Queensland the average yield per acre for 1909-10 was much lower than for the three preceding seasons. Particulars relative to the total and average yields of the Commonwealth sugar crops for the seasons 1901-2 to 1909-10 are as follows:—

YIELD OF SUGAR-CANE, 1901-2 to 1909-10.

Season.	Total Yield of Cane.			Average Yield per Acre of Productive Cane.		
	N.S.W.	Queensland.	C'wealth.	N.S.W.	Queensland.	C'wealth.
	Tons.	Tons.	Tons	Tons.	Tons.	Tons.
1901-2 ...	187,711	1,180,091	1,367,802	21.36	15.10	15.73
1902-3 ...	183,105	641,927	825,032	20.90	10.86	12.16
1903-4 ...	227,511	823,875	1,051,386	21.94	13.65	14.86
1904-5 ...	199,640	1,326,989	1,526,629	20.43	16.04	16.50
1905-6 ...	201,998	1,415,745	1,617,743	19.59	14.73	15.20
1906-7 ...	221,560	1,728,780	1,950,340	21.35	17.61	17.96
1907-8 ...	277,390	1,665,028	1,942,418	27.97	17.64	18.62
1908-9 ...	144,760	1,433,315	1,578,075	20.83	15.54	15.91
1909-10 ...	131,081	1,163,494	1,294,575	20.23	14.53	14.95

A preliminary estimate for Queensland for the season 1910-11, places the total yield of cane in that State at 1,818,781 tons of cane, and the estimated production of sugar therefrom at 207,340 tons, or about 11½ per cent. of the weight of cane crushed.

4. **Relation to Population.**—The sugar-cane production of the Commonwealth during the past five seasons has averaged about 8 cwt. per head of population. In Queensland, the principal sugar-producing State, the production of cane per head has ranged between 2⅞ tons in 1905-6 and 3¼ tons in 1906-7. Details for the period 1905-6 to 1909-10 are as follows:—

SUGAR-CANE PRODUCTION PER 1000 OF POPULATION.

State.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.
	Tons.	Tons.	Tons.	Tons.	Tons.
New South Wales	137	147	179	92	81
Queensland	2,693	3,244	3,090	2,609	2,032
Commonwealth	403	477	467	373	297

5. **Quality of Cane.**—The quantity of cane required to produce a ton of sugar varies considerably not only with the district in which the cane is grown but also with the season. In Queensland, for instance, during the seasons 1902-3 to 1906-7 the sugar content of the cane crushed continuously diminished, so that whilst in 1902-3 the quantity of cane used in producing a ton of sugar was 8.38 tons, in the season 1906-7 the quantity required was 9.38 tons, the production in the former case being approximately 12 per cent. and in the latter 10⅔ per cent. of the weight of cane crushed. For the season 1907-8, the cane was of much better quality, and the quantity required to produce a ton of sugar was only 8.84 tons, the sugar content representing in this case somewhat more than 11¼ per cent. of the weight of cane crushed. In 1908-9, owing in large measure to the effect of frosts, the quantity of cane required to produce one ton of sugar was increased to 9.49 tons, the sugar thus representing only about 10½ per cent. of the weight of cane crushed, while in 1909-10 only 8.65 tons of cane were required to each ton of sugar, the sugar representing about 11½ per cent. of the weight of cane crushed. It should be noted also that in 1901-2 no less than 9.76 tons of cane were needed to produce a ton of sugar. It may be remarked in this connection that the systematic study of the beet in Germany shewed that by suitable culture its sugar content might be greatly increased, and this is by no means impossible in the case of sugar-cane.

6. **Sugar Bounties.**—The provision of bounties or similar aids to the sugar-growers of the Commonwealth early occupied the attention of the Commonwealth Parliament, the object in view being that of assisting the industry whilst at the same time diminishing the employment of coloured labour in connection therewith. The earliest legislative provision made with this object in view was that contained in the Excise Tariff 1902, under which an excise duty of three shillings per cwt. of manufactured sugar was charged, and a rebate of four shillings per ton allowed on all sugar-cane delivered for manufacture in the production of which white labour only had been employed after 28th February, 1902. This rebate was calculated on the basis of cane giving 10 per cent. of sugar, and was increased or reduced proportionately according to any variation from this standard, that is to say, the rebate amounted to two shillings per cwt. of the sugar content of the cane treated. In actual practice it was found that this system of rebates was producing effects that had not been anticipated at the time the legislation was passed, and that the greater part of the cost of substituting white for black labour in the sugar-growing industry was thereby being imposed upon the States engaged in the industry, viz., Queensland and New South Wales, instead of being a charge upon the whole Commonwealth. To remedy this state of affairs the Sugar Rebate Abolition Act of 1903 was passed on 30th July, 1903, and the Sugar Bounty Act 1903 received assent on the same day. The rate of bounty provided by this latter Act was, as in the case of the rebate mentioned above, four shillings per ton of cane grown by white labour giving 10 per cent. of sugar, the bounty to be increased or reduced proportionately according to any variation from this standard. This Act remained in force until 31st December, 1906, when it was superseded by the provisions of the Sugar Bounty Act 1905, which extended the principle of bounties to the end of the year 1912, but stipulated that during the years 1911 and 1912 the rates payable on cane delivered should be respectively two-thirds and one-third of the rates prevailing during the earlier years of the period. During the 1910 Session of the Commonwealth Parliament an amending Act (the Sugar Bounty Act 1910) was passed repealing the provision for successive decrements in the amount of bounty payable, and thus leaving the bounty at full rate applicable for an indefinite time. The rate of bonus allowed under this Act is six shillings per ton of cane of 10 per cent. quality grown by white labour, provided that the rates of wages and conditions of employment of such labour are fair and reasonable, in accordance with the provisions of the Act. Under the Excise Tariff 1905, assented to on 21st December, 1905, the excise duty on sugar was, from 1st January, 1907, increased to four shillings per cwt. of manufactured sugar in place of three shillings formerly imposed. This rate of duty was, under the original Act, to continue in force until 31st December, 1910, reducing to 2s. 8d. per cwt. for 1911, 1s. 4d. per cwt. for 1912, and being abolished after 31st December, 1912. The Excise (Sugar

Act 1910, however, repealed these provisions for reduction and abolition, leaving the duty in force at the full rate for an indefinite time.

7. **Cost of Bounties.**—The amounts paid by the Commonwealth Government in sugar bounties and the expenses in connection therewith during the seven years 1902-3 to 1908-9, as well as the manner in which this expenditure was allocated to the several States, is shewn in the following table:—

TOTAL EXPENDITURE ON SUGAR BOUNTIES, 1902-3 to 1908-9.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	£	£	£	£	£	£	£
1902-3 ...	21,999	18,923	8,003	5,743	3,378	2,781	60,827
1903-4 ...	35,273	29,873	12,740	9,115	5,608	4,436	97,045
1904-5 ...	46,880	38,935	16,781	11,990	7,794	5,798	128,178
1905-6 ...	56,950	46,520	20,159	14,439	9,727	6,914	154,709
1906-7 ...	124,492	100,456	43,635	31,299	21,344	14,690	335,916
1907-8 ...	218,543	173,855	75,463	54,697	36,434	25,630	584,622
1908-9 ...	180,079	143,820	62,490	46,068	30,222	21,027	483,706
1909-10 ...	151,181	121,505	53,386	38,786	25,501	17,420	407,779

The above figures comprise for all the years except 1902-3 the expenses connected with the payment of bounties, as well as the amount actually paid in bounties to the growers. Separately stated the bounties and expenses for the period are as follows:—

SUGAR BOUNTIES AND EXPENSES, 1902-3 to 1909-10.

Year ...	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.

8. **Collection of Sugar Excise.**—The table hereunder contains particulars concerning the net amount of excise duty on sugar collected in respect of the several States for the nine years 1901-2 to 1909-10. In this table refunds and drawbacks have been deducted and the requisite adjustment has been made between the States:—

SUGAR EXCISE, 1901-2 to 1909-10.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	£	£	£	£	£	£	£

9. **Production by White and Black Labour.**—The following table contains particulars concerning the production of sugar in New South Wales and Queensland during the past

eight seasons, and furnishes an indication of the decline in the employment of black labour in the sugar industry during that period:—

SUGAR PRODUCTION, 1902-3 to 1909-10.

Season.	New South Wales.			Queensland.			Commonwealth.		
	Sugar Produced by			Sugar Produced by			Sugar Produced by		
	White Labour.	Black Labour.	Total.	White Labour.	Black Labour.	Total.	White Labour.	Black Labour.	Total.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1902-3 ...	19,434	1,526	20,960	12,254	65,581	77,835	31,688	67,107	98,795
1903-4 ...	19,236	2,561	21,797	24,406	65,456	89,862	43,642	68,017	111,659
1904-5 ...	17,812	1,838	19,650	39,404	105,616	145,020	57,216	107,454	164,670
1905-6 ...	18,019	1,964	19,983	50,897	101,362	152,259	68,916	103,326	172,242
1906-7 ...	21,805	1,613	23,418	127,539	54,619	182,158	149,344	56,232	205,576
1907-8 ...	28,247	934	29,181	162,480	22,583	185,063	190,727	23,517	214,244
1908-9 ...	14,351	964	15,315	132,078	18,322	150,400	146,429	19,286	165,715
1909-10 ...	13,839	815	14,654	118,364	14,452	132,816	132,203	15,267	147,470

During the period under review the proportion of sugar produced by black labour declined from 68 per cent. of the total for 1902-3 to less than 10½ per cent. of the total for 1909-10.

10. **Imports and Exports of Sugar.**—Notwithstanding the increase in the production of sugar in evidence in the Commonwealth during recent years, Australia's oversea import trade in cane sugar remained fairly extensive until 1906, the principal countries engaged in supplying this commodity being Java, Mauritius, and Fiji. In 1907 the exports of sugar exceeded the imports for the first time, the value of the net exports being £166,121. In 1908 the imports exceeded the exports by 96,218 cwt. in quantity, and £37,080 in value, while in the following year the excess of imports over exports was 1,832,943 cwt., valued £1,004,308. The principal countries to which Australian sugar is exported are Natal, Cape Colony, New Zealand and New Caledonia, but the bulk of the sugar exported from the Commonwealth is not of Australian origin, but merely a re-export of sugar produced elsewhere. Thus of 161,024 cwt. exported during 1909, only 4099 cwt. were of Australian origin. The sugar so re-exported comes mainly from Fiji, Java, and Mauritius. Particulars concerning the imports and exports of cane sugar for the years 1901 to 1909 are as follows:—

IMPORTS AND EXPORTS OF CANE SUGAR, 1901 to 1909.

Year.	Oversea Imports.		Oversea Exports.		Net Imports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

* — signifies net exports.

11. **Interstate Trade in Sugar.**—The interstate trade in sugar is an extensive one, the exports from Queensland to the other States of the Commonwealth representing a

value of £1,124,537 for the year 1909. The manner in which this trade is distributed amongst the several States is furnished in the table given hereunder:—

* — signifies net imports.

§ 14. Vineyards.

1. **Nature and Extent.**—The introduction of the vine into Australia has been set down by different investigators as at various dates, of which 1815 and 1828 appear to have had some measure of support. It would seem, however, that the vine really came out with the First Fleet, which initiated the colonisation of Australia, in 1788, and that consequently the Australian vine is as old as Australian settlement. As already mentioned a report of Governor Hunter's gives the area under vines in 1797 as 8 acres. From New South Wales the vine spread to Victoria and South Australia, and these States have now far outstripped the mother State in the area which they have devoted to its cultivation. In Queensland and Western Australia also, vine-growing has been carried on for many years, but in neither State has the industry progressed with the rapidity attained in Victoria and South Australia. In Tasmania the climate is not favourable to the growth of grapes. The purposes for which grapes are grown in Australia are three in number, viz.—(i.) for wine-making, (ii.) for table use, (iii.) for drying. The total area under vines in the several States from 1860 onwards is given in the following table:—

COMMONWEALTH VINEYARDS, 1860-1 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.

There are no vineyards in Tasmania.

The area devoted to vines in the Commonwealth attained its highest point in the season 1904-5, when a total of 65,673 acres was reached. In the course of the five following seasons this area diminished by 7522 acres, the decline being in evidence in all the States.

The wine-growing industry in Australia, more particularly in Victoria and New South Wales, received a severe check on account of various outbreaks of phylloxera which took place in different parts of these States. With a view to its eradication extensive uprooting of vineyards in the infested areas was undertaken, while further planting within such areas, except with phylloxera-resisting vines, was prohibited.

In three of the States, viz.; New South Wales, Queensland, and South Australia, small increases in the area under vines were in evidence in 1909-10, while in Victoria and Western Australia fairly considerable decreases were shewn.

2. **Wine Production.**—The production of wine in Australia has not increased as rapidly as the suitability of soil and general favourableness of conditions would appear to warrant. The cause of this is probably twofold, being in the first place due to the fact that the Australians are not a wine-drinking people and consequently do not provide a local market for this product, and in the second to the fact that the new and comparatively unknown wines of Australia find it difficult to establish a footing in the markets of the old world, owing to the competition of well-known brands. Active steps are being taken in various ways to bring the Australian wines under notice, and it may be confidently expected that when their qualities are duly recognised the wine production of Australia will exhibit a rapid development. Particulars concerning the quantity of wine produced in the several States during the past nine seasons are contained in the table given hereunder:—

AUSTRALIAN WINE PRODUCTION, 1901-2 to 1909-10.

Season.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Commonwealth.

3. **Relation to Population.**—In relation to population the area of the vineyards of the several States exhibits a well-marked decline during the past eight seasons, the Commonwealth total having fallen during the period from 17 to 13 acres per 1000 of the population. Details for the period are furnished in the succeeding table:—

AREA OF VINEYARDS PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2	6	24	4	57	19	...	17
1902-3	6	23	3	60	17	...	17

1908-9	5	19	3	55	12	...	14
1909-10	5	17	3	54	11	...	13

4. **Imports and Exports.**—During the past nine years the importations of wine into the Commonwealth have exhibited a marked fluctuation, declining continuously in value from £161,945 in 1901 to £96,870 in 1904, thence increasing continuously to £133,114 in 1908 and decreasing again in 1909 to £116,021. The increase in recent years has, however, been entirely in the case of sparkling wine, other wines having declined almost continuously in quantity and value throughout the period. The principal countries of origin of wine imported into Australia are France, Spain, Portugal, and Germany, the greater portion of the sparkling wines coming from France and of still wines from Spain and Portugal. Particulars relative to the importations of wine into the Commonwealth during the past nine years are given hereunder:—

COMMONWEALTH IMPORTS OF WINE, 1901 to 1909.

Year.	Quantity.			Value.

1902	46,824	134,513	181,337	80,941	46,828	127,769
1903	41,211	81,222	122,433	78,869	29,014	107,883
1904	38,738	70,982	109,720	69,643	27,227	96,870
1905	38,933	74,358	113,291	71,753	28,231	99,984
1906	43,324	71,980	115,304	81,448	24,685	106,133
1907	50,393	67,906	118,299	94,549	26,397	120,946
1908	56,806	68,252	125,058	106,108	27,006	133,114
1909	47,669	60,946	108,615	91,046	24,975	116,021

The principal countries to which wine is exported from Australia are the United Kingdom and New Zealand, a small but fairly regular export trade being also carried on with India, Ceylon, Fiji, and the South Sea Islands. Details concerning the exports of wine from Australia during the nine years 1901 to 1909 are given in the following table:—

COMMONWEALTH EXPORTS OF WINE, 1901 to 1909.

Year.	Quantity.			Value.		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
	Gallons.	Gallons.	Gallons.	£	£	£
1901	2,936	863,147	866,083	6,972	122,751	129,723
1902	3,201	1,075,713	1,078,914	5,989	142,994	148,983
1903	2,194	718,284	720,478	4,161	101,016	105,177
1904	2,525	789,032	791,557	4,440	103,272	107,712
1905	2,749	937,932	940,681	4,990	107,988	112,978
1906	2,439	717,821	720,260	4,637	93,046	97,683
1907	2,771	979,527	982,298	5,233	121,811	127,044
1908	2,824	728,421	731,245	4,541	98,333	102,874
1909	2,649	974,413	977,062	4,455	121,116	125,571

The sparkling wine included in the foregoing table consists mainly of foreign wine re-exported.

5. **Interstate Trade.**—A fairly extensive trade in wine is carried on between the States, South Australia being the principal exporting State. Particulars for the year 1909 are furnished hereunder:—

INTERSTATE TRADE IN WINE, 1909.

State.	Imports from other States of the Commonwealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

* — signifies net imports.

6. **Other Viticultural Products.**—In addition to grapes for wine-making purposes large quantities are grown in all the States for table use, whilst, particularly in Victoria and South Australia, the drying of raisins and currants is also carried on. The quantities of table grapes grown in the several States during the past nine seasons are as follows:—

TABLE GRAPES, 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.*	S. Aust.*	W. Aust.*	Tasmania.	C'wealth.

1906-7	10,990,224	1,805,776	1,313,760	1,608,432
1907-8	7,685,104	2,742,656	1,169,280	2,235,184
1908-9	7,788,032	3,136,784	1,336,048	2,738,288
1909-10	9,076,928	3,114,496	3,069,696	4,037,824

In New South Wales, Queensland, and Western Australia also small quantities of raisins and currants are dried, but until recently no statistics were collected. The quantity so produced in New South Wales amounted to 100,912 lbs. in 1907-8, 160,720 lbs. in 1908-9, and 165,984 lbs. in 1909-10. For Queensland and Western Australia there are no particulars available.

§ 15. Orchards and Fruit Gardens.

1. **Nature and Extent.**—Fruit-growing has made rapid progress in the Commonwealth during recent years, the area devoted thereto having increased in the past eight years by no less than 32,023 acres. The States in which the increase was most marked were:—Tasmania, 12,584 acres; Western Australia, 9533 acres; Victoria, 6053 acres; and South Australia, 5445 acres. During the same period the Queensland fruit-growing area increased slightly, while that in New South Wales exhibited a decline of 2556 acres. The increased areas in Tasmania and Western Australia are mainly due to extensive plantings of apple trees with a view to the possibilities of the London market for fresh fruit. The total area devoted to orchards and fruit gardens in the several States is given hereunder:—

COMMONWEALTH ORCHARDS AND FRUIT GARDENS, 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2	48,448	50,055	14,396	16,315	6,076	11,485	146,775
1902-3	48,019	50,478	12,818	17,376	6,872	12,675	148,238
1903-4	48,832	51,357	15,607	18,725	7,938	14,134	156,593
1904-5	47,340	52,751	15,882	18,872	9,756	15,461	160,062
1905-6	46,615	52,274	15,390	19,320	11,026	16,519	161,144
1906-7	46,177	54,021	14,249	18,199	12,517	18,050	163,213
1907-8	46,714	54,111	14,397	20,736	13,900	19,441	169,299
1908-9	45,880	54,946	14,104	20,855	15,016	20,757	171,558
1909-10 ...	45,892	56,108	15,360	21,760	15,609	24,069	178,798

The varieties of fruit grown differ materially in various parts of the several States, and range between such fruits as the pineapple, paw-paw, mango, and guava of the tropics, and the strawberry, the raspberry, and the currant of the colder parts of the temperate zone. The principal varieties grown in Victoria are the apple, plum, peach, apricot, cherry, and pear. In New South Wales citrus fruits (orange, lemon, etc.) occupy the leading position, although apples, pears, peaches, plums, and apricots are also extensively grown. In Queensland the banana, the orange, the pineapple, the apple, the peach, the mango, and the plum are the varieties most largely grown. In South Australia, in addition to the apple, pear, peach, apricot, plum, orange, and lemon, the almond and the olive are also largely grown. In Western Australia the apple, orange, peach, pear, plum, fig, and apricot are the sorts chiefly grown, while in Tasmania, although the apple represents more than two-thirds of the area in that State devoted to fruit-growing, small fruits, such as the currant, raspberry, and gooseberry, are very extensively grown, and the balance of the area is mainly occupied with the pear, plum, apricot, peach, and cherry.

2. **Relation to Population.**—In relation to population the orchards and fruit gardens of the Commonwealth have exhibited an increase during the past eight seasons equal to the decline which was experienced in the case of vineyards. Taking the two in conjunction the relative area under vineyards and orchards has, during the period,

remained practically stationary at about 55 acres per 1000 of population. Details for the nine seasons 1901-2 to 1909-10 are as follows :—

AREA OF ORCHARDS AND FRUIT GARDENS PER 1000 OF POPULATION.

Season.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	W. Aust.	Tas.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2	35	42	28	45	32	67	38
1902-3	34	42	25	48	33	73	38
1903-4	34	42	30	51	36	80	40

1908-9	29	44	26	52	56	112	40
1909-10	28	43	27	52	57	129	41

3. **Commonwealth Imports and Exports.**—A very considerable fruit trade, both import and export, is carried on by the Commonwealth with oversea countries, the major portion of the importations consisting of dried fruits, while the bulk of the exports is made up of fresh fruits. Amongst the imports the principal dried fruits are currants, dates, sultanas, and raisins, and the principal fresh fruits bananas, oranges, lemons, and apples. The currants imported are mainly of Greek origin, the dates of Arabian, Persian, and Turkish, the raisins mainly of French and Turkish, and the sultanas of Turkish origin. Of the fresh fruits imported during 1909 the bananas were chiefly from Fiji, the oranges and lemons from Italy, and the apples from the United States. The dried fruits imported during the year were valued at £121,059, and the fresh at £146,081. In 1907 a very marked development in the trade in Australian dried fruits took place, the total export for the year being valued at £76,872, of which £71,506 represented Australian fruits and £5366 re-exports of foreign fruits. In 1908 the total export of dried fruits from Australia was valued at £35,359, of which £33,111 represented Australian fruits, and £2248 re-exports of foreign fruits. There was a further decline in 1909, when the total value of exports was only £13,013, made up of £11,826 of Australian produce, and £1187 of re-exports. The Australian dried fruits exported consisted mainly of raisins, the principal consignees being the United Kingdom, Canada, and New Zealand. The fresh fruits exported during the year were valued at £243,699, and consisted mainly of apples. The principal countries to which these were sent were the United Kingdom, France, New Zealand, Brazil, Java, and India. Particulars concerning the oversea imports and exports of dried fruits for the nine years 1901 to 1909 are as follows :—

COMMONWEALTH OVERSEA IMPORTS AND EXPORTS OF DRIED FRUITS,

4. **Interstate Trade.**—The interstate trade in fresh fruits is very considerable, and for 1909 represented a value of over £576,000. Details concerning the interstate exports of the several States for that year are as follows :—

INTERSTATE EXPORTS OF FRESH FRUITS, 1909.

Total ...	273,953	122,013	98,565	29,129	21,206	31,304	576,170

From the foregoing tables it will be seen that the value of the fresh fruits imported from other States exceeded the value of the exports to other States in three cases, viz., in New South Wales, Victoria, and Western Australia, while in the other three States the interstate exports exceeded the imports. The heaviest interstate exportation of apples for the year took place from Tasmania, of bananas and pineapples from Queensland, of citrus fruits from New South Wales, and of "other fresh fruits" from Victoria. On the other hand, the heaviest importer of apples, pineapples, and "other fresh fruits" was New South Wales, while Victoria was the heaviest importer of citrus fruits and bananas.

A very large interstate trade in dried fruits is also carried on, the trade of 1909 representing a value of £236,704. Particulars concerning the interstate exports of the veral States are given hereunder :—

Total ...	112,424	14,302	69,938	2,260	21,656	16,124	236,704

A large proportion of the dried fruits recorded in the above tables is the production of the irrigation colonies of Mildura in Victoria, and Renmark, in South Australia. The heaviest interstate export of sultanas and "other raisins" took place from Victoria, while South Australia headed the list with interstate exports of currants and "other dried fruits." The only other State which exported at all largely was Tasmania with 447,479 lbs. of "other dried fruits," valued at £11,584. The principal importing States were New South Wales, Queensland, and Western Australia, in the order named. The principal fruits included above under the head of "other dried fruits" are prunes, apricots, and apples.

5. **Jams and Jellies.**—A small oversea trade in jams and jellies is carried on by the Commonwealth, the value of the imports for the year 1909 amounting to £7956, and of the exports to £26,124. The country of origin of the bulk of the importations is the United Kingdom, while the destinations of the exports are principally Portuguese East Africa, South Africa, the Philippine Islands, Ceylon, and Fiji. Particulars relative to imports and exports for the nine years 1901 to 1909 are as follows:—

COMMONWEALTH OVERSEA TRADE IN JAMS AND JELLIES, 1901 to 1909.

Year.	Oversea Imports.		Oversea Exports.		Net Exports.

The trade carried on in jams and jellies between the States of the Commonwealth is a much more extensive one, the exporting States being Tasmania and Victoria, and the importing States Queensland, Western Australia, New South Wales, and South Australia. Details for the year 1909 are furnished in the table hereunder:—

INTERSTATE TRADE IN JAMS AND JELLIES, 1909.

State.	Imports from other States of the Commonwealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.*	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

* — signifies net imports.

6. **Preserved Fruit.**—Details concerning the quantities and values of preserved fruit imported into and exported from the Commonwealth cannot readily be obtained, owing to the fact that in the Customs returns particulars concerning fruit and vegetables are in certain cases combined. The total value of fruit and vegetables, other than fresh fruits, dried fruits, potatoes, and onions, imported into Australia during 1909 was £44,666, and the corresponding value of exports was £22,128.

§ 16. Minor Crops.

1. **Nature and Extent.**—In addition to the leading crops which in the foregoing pages have been dealt with in some detail, there are many others which, owing either to their nature or to the fact that their cultivation has advanced but little beyond the experimental stage, do not occupy so prominent a position. Some of the more important of these are those which may be classed under the heads of Market Gardens, Nurseries, Grass Seed, Tobacco, Hops, and Millet, while the possibilities of Cotton-growing in the tropical portions of the Commonwealth have in recent years received considerable attention, although the industry cannot yet be said to have assumed definite shape. The total area in the Commonwealth during the season 1909-10 devoted to minor crops was 69,798 acres, of which market gardens accounted for 31,130 acres.

2. **Market Gardens.**—Under this head are included all areas on which are grown mixed vegetables for sale. Where considerable areas are devoted to the production of one vegetable, such for instance as the potato, the onion, the melon, the tomato, etc., these crops are usually not included with market gardens, but are shewn either under some specific head, or under some such general head as "Other Root Crops," or "All other Crops." The area under market gardens in the several States of the Commonwealth during each of the nine seasons 1901-2 to 1909-10 is given in the table hereunder:—

COMMONWEALTH MARKET GARDENS, 1901-2 to 1909-10.

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1901-2 ...	7,834	8,752	2,328	9,005	2,142	1,746	31,807
1902-3 ...	8,263	7,937	2,171	9,489	2,262	1,893	32,015
1903-4 ...	8,754	8,455	2,563	9,964	2,463	1,685	33,884
1904-5 ...	8,827	7,904	2,099	10,160	3,538	1,759	34,287
1905-6 ...	9,119	7,333	2,089	10,688	3,550	1,778	34,557
1906-7 ...	9,550	7,906	1,953	8,379	3,789	2,210	33,787
1907-8 ...	10,052	9,022	2,365	2,961	3,543	1,791	29,734
1908-9 ...	10,331	9,279	2,875	2,818	3,471	1,603	30,377
1909-10 ...	10,254	10,214	2,677	2,784	3,481	1,720	31,130

The decline in the Commonwealth total for the season 1907-8 is due to the marked decrease in the area devoted to market gardens in South Australia, and to the smaller falling-off in the cases of Western Australia and Tasmania. In all the other States the area for 1907-8 was in excess of that for 1906-7. In the case of South Australia the falling-off is more apparent than real, being in large part due to a change in the classification of such crops introduced in connection with the new system of collection which came into force for 1907-8. It is believed that the figures given for the earlier years are considerably in excess of the truth.

3. **Grass Seed.**—Particulars concerning the growth of grass seed are available for 1909-10 for all the States except Western Australia. The total area under this crop during that season was 5505 acres, of which 2890 acres were in Tasmania, 1595 acres in Victoria, 705 acres in Queensland, 207 acres in New South Wales, and 108 acres in South Australia. The total yield for 1909-10 was 79,234 bushels, or 14.39 bushels per acre.

4. **Tobacco.**—The tobacco-growing industry is one which has experienced marked fluctuations in Australia and which once promised to occupy an important place amongst the agricultural industries of the Commonwealth. Thus, as early as the season 1888-9 the area under this crop amounted to as much as 6641 acres, of which

4833 were in New South Wales, 1685 in Victoria, and 123 in Queensland. This promise of prosperity was, however, not fulfilled, and after numerous fluctuations, in the course of which the Victorian area rose in 1895 to over 2000 acres, and that in Queensland to over 1000 acres, the total area under tobacco for the season 1908-9 was only 1874 acres, distributed as follows:—New South Wales, 959 acres; Victoria, 321 acres; and Queensland, 594 acres. This decline in production appears to have been due to the comparatively small demand which existed in Australia for the locally-produced leaf, and to the fact that the cost of production and preparation in the Commonwealth prevented the Australian leaf from obtaining a footing in the outside markets. Probably under more favourable circumstances, and with greater attention given to the production of leaf of the best quality only, the industry is one which will eventually, in Australia, assume considerable proportions. In all the States in which its cultivation has been tried the soil and climate appear to be very suitable for the growth of the plant, and the enormous importations of tobacco in its various forms into the Commonwealth furnish an indication of the extensive local market which exists for an article grown and prepared in such a manner as to meet with the requirements of consumers. The value of the net importations of tobacco into the Commonwealth during the year 1909 amounted to £486,738, comprising unmanufactured tobacco (£327,492), cigars (£105,736), cigarettes £34,530), manufactured tobacco (£18,093), and snuff (£887).

5. **Hops.**—Hop-growing in the Commonwealth is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for the season 1909-10 being 1084 acres, of which 944 acres were in Tasmania, and 140 acres in Victoria. The Tasmanian area, though still small, has increased rapidly during the past eight years, the total for the season 1901-2 being only 599 acres. On the other hand, the Victorian area, which in 1901-2 was 307 acres, has diminished to 140 acres in 1909-10. The cultivation of hops was much more extensive in Victoria twenty-five years ago than at present, the area devoted to this crop in 1883-4 being no less than 1758 acres. During the year 1909 the net importations of hops into the Commonwealth represented a weight of 790,665 lbs. and a value of £35,510. The total value of the net importations of hops into Australia during the past eight years amounted to £440,821, thus indicating the existence of a regular and extensive local demand.

6. **Millet.**—Millet appears in the statistical records of three of the Commonwealth States, viz., New South Wales, Victoria, and Queensland. The total area devoted thereto in 1909-10 was 2514 acres, by far the greater portion, viz., 2099 acres, being in New South Wales. The particulars here given relate to millet grown for grain and fibre. That grown for green forage is dealt with in the section relating thereto.

7. **Nurseries.**—In all the States somewhat extensive areas are devoted to nurseries for raising plants, trees, etc., but statistics concerning the area so occupied for flowers, fruit trees, etc., are not available, and so far as they relate to forestry are given elsewhere.

8. **Cotton.**—Cotton-growing on a small scale has been tried in Queensland, but so far without very marked success. The area under cotton has fluctuated very considerably during the past five years, ranging during that period between 138 acres in 1906-7 and 540 acres in 1908-9. During 1909-10, 509 acres were devoted to this crop, giving a yield of 129,245 lbs of seed cotton, valued at £3231. Hopes are entertained that with the invention of a mechanical device for the picking of the cotton the industry will become firmly established, since the soil and conditions appear eminently suitable for the growth of this crop. Small areas in the Northern Territory have also been planted with cotton, while the tropical portions of Western Australia have long been regarded as suitable for its cultivation.

9. **Coffee.**—Queensland is the only State of the Commonwealth in which coffee-growing has been at all extensively tried, and here the results have up to the present

time been far from satisfactory. The total area devoted to this crop reached its highest point in the season 1901-2, when an area of 547 acres was recorded. Since then the area continuously declined to 1906-7, when it was as low as 256 acres. During the season 1907-8 an improvement occurred and the total reached was 304 acres, succeeded by a fall to 285 acres in 1908-9 and 194 acres in 1909-10. In the last-mentioned season the yield amounted to 89,070 lbs., valued at £3340.

10. **Other Crops.**—Miscellaneous small crops are grown in the several States, amongst which may be mentioned pumpkins, melons, tomatoes, rhubarb, artichokes, arrowroot, chicory, and flowers.

§ 17. Bounties on Agricultural Products.

1. **General.**—The Bounties Act of 1907 passed by the Federal Parliament in order to encourage the manufacture and production of certain articles in the Commonwealth, includes among the number of items on which bonuses are payable, several agricultural products. The most important of these, viz., sugar, has been referred to on page 398 of this publication. Minor products of the soil on which these bounties are payable are as set out in the following table :—

AGRICULTURAL PRODUCTS (OTHER THAN SUGAR) ON WHICH BOUNTIES ARE PAYABLE.

Article.	Period dating from 1st July, 1907, during or in respect of which Bounty may be paid.	Rates of Bounty.	Maximum amounts which may be paid in any one year.

Dried (except currants and raisins) or candied, and exported ...	5 „	10 % on market value	6,000

Although the rate of bonus on the several articles, is, as shewn above, fairly liberal, the bounties have not been availed of to any great extent, as will be seen from the following table, which gives particulars as to the quantity of the articles raised and the amount paid as bounties in respect therewith for the three financial years which have elapsed since the operation of the Act :—

PARTICULARS OF BOUNTIES PAID ON AGRICULTURAL PRODUCTS (OTHER THAN SUGAR), 1907-8 to 1909-10.

Article.	Quantity produced on which Bounties were paid.			Amount paid as Bounties.		
	1907-8.	1908-9.	1909-10	1907-8.	1908-9.	1909-10.
				£	£	£

Fruits—						
Dried (except currants and raisins) or candied, and exported lbs.	54,992	12,096	23,932	1,061	28	104

During the year 1909-10 the total amount paid in respect of cotton, sisal hemp, cottonseed, and coffee was claimed by the State of Queensland. Tasmania collected the whole of the fruit bonus, while £270 of the bounty paid for tobacco leaf was paid to Queensland, the remaining £6 being earned in Victoria. The lastmentioned State also claimed the total amount paid for flax and hemp.

No bounties have yet been paid on New Zealand flax, jute, uncleaned rice or dates.

§ 18. Fertilisers.

1. **General.**—In the early days of settlement and cultivation in the Commonwealth, scientific cultivation was in a much less developed state than it is to-day. The early farmers were neither under the necessity, nor were they as a rule aware of the need, of supplying the constituents to the soil demanded by each class of crop. The widely-divergent character of the soils in the Commonwealth, their degeneration by repeated cropping, the limitations of climatic conditions, the difficulties of following any desired order of rotation of crops, all rendered it necessary to give attention to artificial manuring. The introduction of the modern seed-drill, acting also as a fertiliser distributor, has greatly facilitated the use of artificial manures, and much land formerly regarded as useless for cultivation has now been made available. There is reason to believe that this feature will be even more strikingly characteristic of the future.

2. **Fertilisers Acts.**—In order to protect the interests of users of artificial manures legislation has been passed in each of the States, regulating the sale and preventing the adulteration of fertilisers. The following is a list of such Acts in force:—

New South Wales ...	The Fertilisers Act of 1904.
Victoria	The Artificial Manures Acts of 1904 and 1910.
Queensland ...	The Fertilisers Act of 1905.
South Australia ...	The Fertilisers Act of 1900; amended 1903.
Western Australia ...	The Fertilisers and Feeding Stuffs Act of 1904; amended 1905.
Tasmania	The Manures Adulteration Acts of 1893 and 1898.

As regards their main features these measures are practically identical. The words "fertiliser" and "manure," as used in these Acts, mean any substance containing nitrogen, phosphoric acid, or potash, manufactured, produced, or prepared in any manner for the purpose of fertilising the soil or supplying nutriment to plants, but do not include farm-yard or stable manure or similar articles in their natural or unmanufactured state. The Acts provide that every vendor of fertilisers must, within a stated period, forward to the Secretary of Agriculture, or corresponding officer, samples of the fertilisers on sale by him, together with the distinctive name or brands by which they are known, and the price at which he intends to sell during the year. On every bag, package, or bundle of fertiliser sold, or exposed for sale, he must attach a printed label shewing thereon:—

(i.) The number of net pounds of fertiliser in such bag or parcel;

(ii.) The figure or trade mark attached to the fertiliser and intended to identify it;

(iii.) The proportion per centum of nitrogen, phosphoric acid, and potash contained therein.

In addition to the above the vendor must furnish every purchaser with an invoice certificate, signed by himself or his agent, stating his full name and place of business and the quality of the fertiliser sold.

Any officer or analyst appointed under the Acts may enter any manufactory, warehouse, store, vessel, wharf, railway station, conveyance, or other place where fertiliser is manufactured, stored, exposed for sale, or in course of delivery or transit, and demand and take samples of such fertiliser. Every sample so taken must be divided by such officer into three parts, and each marked, sealed, and fastened by him in the presence of the person in charge, and disposed of as follows:—

(i.) One part to be taken by person in charge.

(ii.) One part to be used for analysis.

(iii.) One part to be retained by the officer for future comparison.

Every buyer of fertiliser is entitled to submit a sample to the analyst appointed under the Act, and receive a certificate of its analysis. If the analysis prove it to be under what it is represented to be, the vendor must pay the cost of analysis.

3. **Imports.**—The local production of artificial manures falls short of the existing demand, and large quantities are consequently imported.

The importation of fertilisers has increased over 100 per cent. during the nine years of Federation. The chief items, both as regards quantity and value, are those relating to phosphates, a fertiliser apparently very suitable for the growing of cereals in Australian soils. The greater quantity of the manufactured superphosphates is obtained from the United Kingdom, whence came over 66 per cent. of the total imported during 1909, while the Netherlands contributed about 30 per cent. Ocean Island with about 80 per cent. is the principal contributor of rock phosphates, the balance being obtained from Christmas Island. Guano is imported chiefly from Ocean Island, one of the South Sea group, and in lesser quantities from Malden and Surprise Island, while India has practically a monopoly of the bone-dust trade with the Commonwealth.

The increasing demand for artificial manures is shewn in the following table. It will be noticed that the quantity of rock phosphates imported during the last two years has shewn a marked increase over previous years, while the figures for the manufactured superphosphates shew a corresponding decrease.

COMMONWEALTH IMPORTS OF FERTILISERS, 1905 to 1909.

Fertiliser.		1905.	1906.	1907.	1908.	1909.

5. **Statistics of Use of Fertilisers.**—The only statistics available in connection with the use of manures in the Commonwealth are those of Victoria, South Australia, and Western Australia. Particulars concerning the first-mentioned State are given hereunder :—

FERTILISERS USED IN VICTORIA, 1901-2 to 1909-10.

Season.	Total Area of Crops.	Farmers Using Manure.	Area Manured.		Manure Used.	
			Aggregate.	Percentage to Total Area of Crop.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	No.	Acres.	%	Tons.	Tons.
1901-2 ...	2,965,681	11,439	556,777	18.77	153,611	23,535
1902-3 ...	3,246,568	18,537	1,099,686	33.87	206,676	36,630
1903-4 ...	3,389,069	19,921	1,205,443	35.57	207,817	41,639
1904-5 ...	3,321,785	20,167	1,521,946	45.82	190,903	45,940
1905-6 ...	3,219,962	21,586	1,791,537	55.64	210,507	54,674
1906-7 ...	3,303,586	23,072	1,985,148	60.09	205,906	60,871
1907-8 ...	3,232,523	23,733	2,018,079	62.43	232,394	62,337
1908-9 ...	3,461,761	24,437	2,053,987	59.33	235,492	64,715
1909-10 ...	3,658,535	26,690	2,407,331	65.80	197,446	77,579

The figures relating to the use of fertilisers in South Australia, for the only years for which they are available, are shewn in the table below :—

FERTILISERS USED IN SOUTH AUSTRALIA, 1907-8 to 1909-10.

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage to Total Area of Crop.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1907-8	2,265,017	1,573,861	69.49	124,092	60,008
1908-9	2,321,812	1,712,394	73.75	120,648	64,842
1909-10 ...	2,530,301	2,031,832	80.30	133,935	76,413

Corresponding particulars relative to Western Australia for the seasons 1904-5 to 1908-9 are given in the following table, and furnish interesting evidence of the rapid extension of the use of manures in that State:—

FERTILISERS USED IN WESTERN AUSTRALIA, 1904-5 to 1908-9.

Season.	Total Area of Crops.	Area Manured.		Manure Used.	
		Aggregate.	Percentage to Total Area of Crops.	Natural (Stable-yard, etc.).	Artificial.
	Acres.	Acres.	%	Loads.	Tons.
1904-5	327,391	205,923	63.90	72,523	10,787
1905-6	364,704	257,469	70.60	83,033	12,676
1906-7	460,825	340,401	73.87	81,653	16,127
1907-8	493,837	391,146	79.21	73,809	17,273
1908-9	585,339	493,545	84.32	61,834	21,358

A marked increase in the proportion of cropped land treated with manure is in evidence in all three of the States for which returns are available. Thus in Victoria the area of manured land represented in 1901-2 only 18¾ per cent. of the area under crop, as against 65¾ per cent. in 1909-10. Similarly in South Australia the percentage increased from 69½ per cent. in 1907-8 to 80¾ per cent. in 1909-10, and in Western Australia from 64 per cent. in 1904-5 to 84¼ per cent. in 1908-9.

6. **Local Production of Fertilisers.**—Statistics relative to the local production of fertilisers are necessarily very incomplete, and detailed returns for fertiliser factories other than bone mills are not available. The number of firms engaged in the manufacture of artificial manures in the Commonwealth during the year 1909 was 108, made up as follows:—New South Wales, 23; Victoria, 37; Queensland, 15; South Australia, 14; Western Australia, 7; and Tasmania, 12. If, however, approximately complete returns of the quantities of fertilisers used in the various States could be given, a comparison with the importations would give valuable information, but, as already mentioned, such particulars are only available for three of the States, and even then do not furnish the whole of the information necessary.

7. **Benefits Derived from the Use of Fertilisers.**—There is little doubt that the increased and increasing use throughout the Commonwealth of fertilisers, natural and artificial, combined with the greater attention being devoted to fallowing and to the combination of sheep-farming with agriculture, is having the effect of improving the prospects of those dependent for a livelihood on the products of the soil. Reference has previously been made to the loss to the soil of phosphoric acid which the Commonwealth export of wheat and its milled products involves, and the necessity which thus arises for returning this ingredient in some form. Similarly, other staple products exported impose their respective tolls upon the soil of the Commonwealth, and the increased use of fertilisers furnishes evidence that producers are alive to the necessity for making good the deficiency so arising.

§ 19. Ensilage.

1. **Value to Stockowners.**—The use of ensilage as a substitute for green fodder during periods of drought or spells of dry weather, or for winter use, is less extensive in Australia than the circumstances would appear to warrant. There is, however, a growing disposition on the part of dairy farmers to make silos on their holdings, as they find that dairy cattle eat ensilage greedily, and that by its means the output of milk, both in regard to quantity and quality, may be kept up long after the supply of ordinary green food is exhausted. Sheepbreeders are also recognising the fact that during protracted periods of dry weather the silo enables them to keep their stock in good condition, and that lambing can take place satisfactorily. Ensilage thus obviates the expense of travelling or trucking sheep for hundreds of miles to get beyond the drought area, or the equally costly and even ruinous alternative of providing chaff for food at high prices and costly freight. In the rearing of lambs for the London market, ensilage appears to be destined to play an important part, as the lambs thrive upon it much better than upon dry food. By the judicious economising of the surplus growth of green food with the use of the silo, farmers and squatters can carry more stock on their holdings than they otherwise would be justified in doing. Not only is the great waste of superabundant food thus avoided, but it becomes possible to change into a succulent and nutritious food much growth that in any other state would not be eaten by stock. Thus such vegetation as marsh mallows, thistles, weeds of all sorts, and even the swamp reed *Arundo phragmites*, which grows in great quantities in lagoons, billabongs, and swamps, are all eaten with avidity when offered to stock in the form of ensilage. The pit and stack silos are rapidly being superseded by those built of red gum and hardwood or concrete. This is found to a great extent to obviate the loss sustained by mould, at the same time reducing the risk of fire. The silos vary in capacity from forty to 130 tons. A portable silo made of iron which has been devised, is made in sections of such size and weight as to admit of ready handling. These silos can be increased in diameter or height by the addition of further sections.

2. **Government Assistance in the Production of Ensilage.**—The Government of Victoria, recognising the fact that defective methods of making ensilage have often been adopted, leading to partial or total failure, is making special efforts to educate the farming community in this respect, so that mistakes may be avoided and the conditions essential for the production of good ensilage may be better appreciated. These conditions vary with the climate and with the locality.

3. **Quantity Made.**—Particulars concerning the number of silos and the quantity of ensilage made in the several States of the Commonwealth in the seasons 1905-6 to 1909-10 are furnished in the table given hereunder:—

COMMONWEALTH ENSILAGE-MAKING, 1905-6 to 1909-10.

State.	1905-6.		1906-7.		1907-8.		1908-9.		1909-10.

* No. of holdings on which ensilage was made. † Figures not available. ‡ Exclusive of Tasmania.

Since the drought of 1902-3 greater attention has been paid to ensilage than was previously the case, and during the past five seasons a continuous and fairly rapid increase has been in evidence in all the States, both in the number of holdings on which ensilage was made, and in the quantity produced.

§ 20. Agricultural Colleges and Experimental Farms.

1. **Introduction.**—It has been thought preferable to refer to what may be called the effort in the direction of agricultural education in this section rather than under the heading of education.

The virgin soil of a new country rendered attention to scientific methods of farming less necessary in the earlier days of Australian colonisation than at the present time, and it may also be said that the knowledge of scientific farming was then but little developed. In many parts of Australia, moreover, the regular rotation of crops, of vast importance to all agricultural countries, would appear hardly possible owing to the peculiar climatic conditions. These conditions may, however, be utilised, or made less adverse by a more skilful tillage of the soil, and the restoring to it or adding to it such chemical constituents as may be necessary for particular crops. The fostering of industries, other than those pertaining merely to the production of cereals, is also becoming a matter of consequence, and considerable extensions of knowledge have been made in the past few years in respect to the co-ordination of other industries with agricultural industry. In most of the States agricultural colleges and experimental farms have been established with a view to promoting agriculture and of establishing improved and more scientific systems of stock-breeding and dairying. In these colleges and in some of the farms provision is made for the accommodation of pupils, to whom both practical and theoretical instruction is given by experts in various branches of agriculture. Analyses of soils and fertilisers are made, manures are tested, and elementary veterinary science, etc., is taught, while general experimental work is carried on with cereal and other crops, not merely for the purpose of shewing that it is practicable to produce certain crops in a given place, but also to shew how it is possible to make farming pay best in that locality. Opportunities are afforded for practice in general agricultural work, and instruction is given in the conservation of fodder, in cheese and butter making, in the management, breeding, and preparation for the market of live stock, in the eradication of pests and weeds, and in the carpenters', blacksmiths' and other trades.

Travelling expert lecturers are sent to the various agricultural and dairying centres, and there is a wide distribution of periodical agricultural gazettes and bulletins on matters of importance at special seasons. Lectures are given on agricultural, pastoral, horticultural, and viticultural subjects, according as they have bearing on the industries of the district in which they are given, and practical demonstrations are frequently held with a view of obtaining the best results. Seeds of cereals, potatoes, and fodder plants are distributed throughout the several States for experimental purposes, on the understanding that result reports will be furnished to the department from which the seed was sent. The object of this is to ascertain the varieties of seed best adapted to the soil in the different localities. Attention is also paid to the proper supervision of exports of produce in order to ensure their being placed on the home markets in the best possible condition. In some of the States agricultural instruction is given at technical schools, while experimental elementary agriculture—practically a form of nature study—is taught at many of the primary schools. Courses for the instruction of school-teachers during the holiday recesses have been established at some of the agricultural colleges.

(i.) *Australian Bureau of Agriculture.* In July, 1909, a Bill to establish a Bureau of Agriculture was introduced into the House of Representatives. Under this Bill it

was proposed that the Bureau be charged with any of the following functions:—(*a*) the acquisition and diffusion among the people of the Commonwealth of information connected with agriculture, dairying, horticulture, viticulture, live stock and forestry; (*b*) the collection, propagation and distribution of new and valuable seeds and plants; (*c*) the carrying out of experiments and investigations; (*d*) the investigation of pests or diseases affecting plants or live stock, and the means for preventing their spread or effecting their eradication; (*e*) the publication of reports of the experiments of experimental farms; (*f*) the publication of reports and bulletins dealing with any matter of importance in regard to production in Australia, and (*g*) such other functions as may be prescribed. It was also proposed that arrangements be made with the Government of any State in respect to the carrying out of experiments and investigations, the supply and distribution of information, the exchange and distribution of seeds and plants; and any matters conducing to the development in Australia of agricultural, pastoral, dairying, horticultural and viticultural industries and forestry. Each year a report was to be furnished to Parliament shewing the condition of the various industries and forestry in Australia and of the nature of the work done by the Bureau during the preceding year. This Bill, however, lapsed.

(ii.) *Particulars of Agricultural Colleges and Experimental Farms.* In the table given below particulars of agricultural colleges and experimental farms in the several States of the Commonwealth in 1909-10 are shewn. Tasmania is the only State in which such colleges or farms are not established:—

PARTICULARS OF AGRICULTURAL COLLEGES AND EXPERIMENTAL FARMS IN THE COMMONWEALTH, 1909-10.

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	C'wealth
Number of colleges	1	2	1	1	...	5

Value of produce for year ... £	22,715	9,827	6,474	5,526	2,342	46,884

2. **New South Wales.**—In order to meet the demand for agricultural training, and for the purpose of conducting experiments in various branches of agriculture and of disseminating agricultural knowledge, an agricultural college and farm and fourteen experimental farms have been established by the New South Wales Government. Theoretical instruction in agriculture, with practical illustrations, forms part of the curriculum of the Sydney Technical College. At the Hurlstone Continuation College there is a special course in both theoretical and practical agriculture for teachers. Instruction in "nature knowledge" is given in the State primary schools, many of which have their own experimental plots. As a means of further encouraging the study of agriculture the Department of Public Instruction has a travelling inspector in agriculture, whose duty it is to visit the country and metropolitan schools, giving lectures on the value, necessity, and advantages of agricultural knowledge, and giving practical demonstrations wherever practicable.

(i.) *The Hawkesbury Agricultural College*, situated near the town of Richmond, on the Hawkesbury River, about thirty-eight miles from Sydney, is under the control of the Agricultural Department and provides accommodation for about 250 students. Attached to the college is a farm of 3551 acres, of which 1060 acres were under crop in the season 1909-10.

(*a*) *The course of instruction* comprises the principles of agriculture; the breeding, rearing, feeding, and management of live stock; agricultural chemistry, botany, vegetable pathology, and entomology; veterinary science and practice; bacteriology; meteorology; agricultural mechanics; elements of surveying and farm book-keeping; all kinds of practical farm work, including the use of farm implements and machinery; dairying, carpentry, saddlery, blacksmithing, and elementary agricultural engineering; the management of poultry and bees and all branches of orchard and garden work. The course extends over two years, and is divided into four sessions. At the end of the course students may undergo examination for the purpose of obtaining the college diploma.

(*b*) *Experimental Work.* In addition to the education of the students extensive experimental operations are carried on at the farm for the general benefit of agriculturists. Large numbers of farmers visit the institution in quest of information. During the winter vacation arrangements are made for a winter school for farmers. This school has been in operation for five years. The course extends over one month.

(ii.) *Experimental Farms, Orchards, and Vineyards.* Experimental farms have been established at Wagga, Bathurst, Coolabah, Grafton, Glen Innes, Cowra, Wollongbar, Dural, and Nyngan. There are irrigation farms at Moree, Pera, and Yanco, and a dairy stud farm at Berry, while viticultural stations have been established at Howlong and Raymond Terrace. At the farms at Wagga, Bathurst, Wollongbar, and Berry, accommodation is provided for students. The educational work undertaken at the four farms where students are received is more practical than academic. Scientific lectures are given as far as possible, and the students, at the end of the full course, undergo an examination for the purpose of obtaining the farm certificate. The fees payable are not large, amounting, as a rule, to about £25 per annum for residential students. With regard to the farm operations, the objects of each farm are to demonstrate the most economic and effective systems of producing and harvesting crops; to carry out experiments to determine the suitability or otherwise of crops, not only for the district where the farm is situated but for other districts having similar climate and soils; and to carry out scientific agricultural experiments generally.

(iii.) *Particulars of Agricultural College and Experimental Farms.* The following table shews the number of students at the Hawkesbury College and at the four experimental farms at which students are received for each year from 1905 to 1909 inclusive:—

NEW SOUTH WALES.—NUMBER OF STUDENTS AT GOVERNMENT AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS, 1905 to 1909.

Name.	1905.	1906.	1907.	1908.	1909.
Hawkesbury Agricultural College	144	201	230	190	188
Wagga Farm	41	40	63	52	49
Bathurst Farm	18	25	23	25	32
Wollongbar Farm...	14	9	18	7	11
Berry Dairy Stud Farm	11	7	11	2	...
Total	228	282	345	276	280

At the Wagga farm a specialty is made of growing seed wheats and fruits for drying, and of breeding dairy stock and swine. The Bathurst farm is devoted to the cross-breeding of sheep, fruit-growing, cereal culture, and general mixed farming. At Coolabah experiments in the dry districts have been carried on, while at Wollongbar experiments have been made on a large scale with grasses for the grazing of dairy cattle, and steps have been taken to assist the dairying industry in the surrounding districts.

The following table gives particulars of the Hawkesbury College and of fourteen experimental farms for the year ended the 31st March, 1910.

Coolabah and Moree farms were closed in May, 1910, the operations of the former being transferred to Nyngan.

NEW SOUTH WALES.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS AT THE 31st MARCH, 1910.

Name of College or Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees and Vines.	Area under all other Crops.	Number of Hands Employ'd	Value of Plant and Machinery.	Value of Produce for the Year.

Dural ...	35	3	...	3	...	1	...	60

1. The total area of this farm is 15,000 acres, but 12,718 acres have been let for grazing purposes
2. Irrigation farm. 3. Dairy stud farm. 4. Viticultural station.

(iv.) *Other Forms of Agricultural Instruction.* Agricultural education at the Technical College at Sydney includes the following studies:—The character and prospects of Australian agriculture; climate and rainfall; selection of land, clearing, fencing, building and draining; irrigation and water storage; the cultivation of crops; manures; live stock; dairying; sheep and wool; farm and dairy chemistry; the treatment of fungus and insect pests; fruit-growing and preserving; vine-growing and wine-making; pigs, poultry and bee-keeping; and horticulture and home-gardening. Elementary agriculture forms the first year's course, and advanced agriculture is dealt with during the second year. With the object of giving lectures and demonstrations on various subjects, the scientific and expert staff of the agricultural laboratories in Sydney as well as those attached to the college and farm staffs are from time to time placed at the disposal of the farming community, and are constantly in demand by agricultural societies, farmers' and settlers' associations, and other similar bodies. The publication of the *Agricultural Gazette* is a valuable means of imparting knowledge on agricultural matters. Seeds grown at the experimental farms are distributed from a central depôt in Sydney for trial purposes among the farmers, and are also available to State school teachers for use in connection with the experimental plots, which are now attached to many of the primary schools throughout the State. The only condition in the granting of such samples is that the recipients shall in due course forward a report of their experiments to the Agricultural Department.

3. **Victoria.**—In 1884, the Agricultural Colleges Act, passed to make provision for the establishment of agricultural colleges and experimental farms in Victoria, provided for the permanent reservation from sale of 150,000 acres of Crown lands by way of endowment of agricultural colleges and experimental farms, which, together with other lands reserved as sites for such institutions prior to the passing of the Act, are vested in three trustees appointed by the Governor. Provision was made for the appointment of a Council of Agricultural Education, consisting of eleven members, five of whom are elected by the members of the Agricultural Societies of the State, five are nominated by the Governor, whilst the Secretary for Agriculture is also a member of the Council and its Treasurer. Two agricultural colleges and nine experimental farms, orchards and vineyards have now been established in different parts of the State. There are five Agricultural High Schools under the control of the Education Department, while elementary experimental agriculture is taught at many of the State primary schools. Instruction in agriculture is also given at the technical schools at Melbourne and Bairnsdale.

(i.) *Agricultural Colleges.* The two colleges are situated respectively (*a*) at Dookie, in the Goulburn Valley district, and (*b*) at Longerenong, in the Wimmera district.

(*a*) *The Dookie Agricultural College*, with its farm of 5118 acres, is situated in a rich agricultural country, eminently suited for farming, grazing, viticulture, and horticulture. The college buildings were erected during 1886, and since then numerous additions have been made, so that at the present time accommodation is provided for over 100 students, and provision will shortly be made to accommodate more. The farm is equipped with modern dairy and cowbyres, piggeries, poultry plant, cellars, etc., also large stables and stallion boxes, shearing shed, slaughterhouse, mechanics' and carpenters' shops, silos, barn, sheds, cattle and sheep yards, steam and oil engines, and numerous modern implements of agriculture. Half the students' time is devoted to practical work on the farm, and half to scientific, theoretical, and other work. On the farm the student is taught to manage live stock, handle implements and machinery, work the separator, drive engines, prune vines and trees, break-in horses, shoe horses, mend a break, and erect buildings. At the college instruction is given in determining the fertility of soils, the effects of manuring, the importance of drainage, the improvement of stock and crops, irrigation, and the treatment and eradication of diseases in plants and animals. Considerable attention is paid to experimental work in connection with cereals. The rearing of new varieties of wheat, suitable for the different parts of the State of Victoria, has special attention paid to it. Manurial tests are carried out each year and the results published for the benefit of the farmers. The stock comprise over eighty horses, as well as good herds and flocks of pedigreed cattle, sheep, pigs, and poultry. The annual charge made to residential students is £28 per head. The number of students during 1909 was 108.

(*b*) *The Longerenong Agricultural College*, reopened in 1905, can accommodate forty students, and thirty-five were on the rolls during last year. The farm contains an area of 2386 acres, and is particularly adapted for demonstrating what can be done in farming with irrigation, water being supplied by one of the channels of the Western Wimmera Irrigation Trust. Including fallow land, about 800 acres are under cultivation each season; the orchard and vineyard cover an area of about thirty acres. In addition to a number of well-bred horses and cattle, there is a small flock of pedigree sheep. Lamb-raising is one of the principal industries. The course may be taken by either resident or non-resident students, the former doing both class and farm work, while the latter attend for class work only on alternate days. The syllabus of instruction includes the principles and practice of agriculture, agricultural chemistry, agricultural physics and mechanics,

botany, entomology, geology, surveying, bookkeeping, mathematics, and English. The fees for resident students amount to £18 5s. per annum, and for non-resident students to £5 per annum.

(ii.) *Agricultural High Schools and Technical Colleges.* At the end of the year 1910 there were in operation, five agricultural high schools controlled by the Education Department, viz., Warrnambool, Sale, Shepparton, Wangaratta, and Ballarat. Similar institutions are to be established in the near future at Mildura and Leongatha, the sites having already been acquired, the direct aims being to give to boys such an education as will direct their attention specially towards the land as a means of gaining a livelihood; to promote agriculture as an occupation and a profession; to provide a central institution for the dissemination of agricultural information by evening lectures, conferences, and literature; to superintend the Government experimental plots; to record and interpret their results; and to provide a summer school in agriculture for primary school teachers. The course of instruction comprises agricultural science, climatology, physics, chemistry, geography, drawing, English, mathematics, and farm practice. At the Working Men's College at Melbourne lectures are given on agricultural chemistry, wool-classing, poultry-breeding, etc., and at the School of Mines at Bairnsdale a complete course in theoretical and practical agriculture is given, extending over a period of two years. Agricultural courses are also held at the Ballarat School of Mines and at the Gordon College, Geelong.

(iii.) *Experimental Farms.* Experimental farms have been established at Rutherglen, Whitfield, Wyuna, Heytesbury, Burnley, Mount Xavier (Ballarat), Moe, Rosedale, and Marlo (Gippsland), demonstrating different methods of cultivation, manuring, stock-breeding, the cultivation of economic plants, the improvement of varieties of cereals by selection and cross fertilisation, and the testing of fodder plants. Six demonstration orchards have been established to shew the effect of proper cultivation and pruning of fruit trees in various districts and the suitability of the trees for the district. At Burnley Horticultural Gardens students are trained in horticulture. Areas have been planted at Rutherglen and Wahgunyah with phylloxera-resistant vines for distribution to vignerons to enable them to reconstitute their vineyards. In several districts experimental plots are conducted by the local agricultural society.

(iv.) *Other Forms of Agricultural Instruction.* The *Journal of the Department of Agriculture*, published monthly, deals with various matters relating to agriculture, and is a valuable means of disseminating information. Since the establishment of butter factories throughout Victoria a travelling dairy formerly utilised has been discontinued. Demonstrations in cheese-making are, however, still given by an expert, while other experts also visit the factories and supply information and instruction. Practical lessons are also given by experts in fruit-preserving, drying, and candying, also in flax manufacture, cider-making, poultry-dressing, and the preparation of poultry for export. In addition to these lectures a system of short course classes in agriculture has been established. These classes are held at various centres, and lectures are given on the principles of agriculture, the care of farm stock, sheep-breeding and management, dairy-farming, agricultural engineering, and orchard and garden work. In many of the State schools of Victoria elementary agriculture is taught. In connection with these schools there are experimental plots varying in area from half an acre to rather less than a quarter of an acre. Experiments are conducted to shew the benefits of cultivation, drainage, and rotation of crops, to ascertain fodder and other crops suitable for the locality, and to test manures. In some of the schools milk-testing is taught, and the economic native woods, common weeds, and insects are dealt with. Agricultural societies have been formed in many country towns. They arrange lectures, competitions, and form experimental plots, etc., and receive subsidies from the State for such purposes. There is a course of agriculture at the Melbourne University by which students can attain the degrees of the Diploma of Agriculture, and Bachelor of Agricultural science.

(v.) *Particulars of Agricultural Colleges and Experimental Farms.* The table given hereunder furnishes particulars relating to the agricultural colleges of Dookie and Longerenong, and the nine experimental farms :—

VICTORIA.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGES AND EXPERIMENTAL FARMS FOR THE YEAR 1909-10.

Name of College or Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees & Vines.	Area under all other Crops.	Number of Hands Employed.	Value of Plant and Machinery.	Value of Produce for the Year.

4. **Queensland.**—Organised experimental agriculture in Queensland dates from the establishment of the Department of Agriculture and Stock, but such work as has been done in connection with stock-breeding, other than that carried on by private individuals, has been of later birth, and has been confined to dairy stock and draught horses. Agriculture in Queensland in the early nineties was upon the well-defined lines of the other States, so that the knowledge to be gained as to what could be profitably adapted to Queensland, with its varied climate and rainfall, covered a wide field. Instructors were appointed conversant with the different lines of agriculture, of which grain cultivation, dairying, fruit-growing, tobacco cultivation, and tropical agriculture, such as sugar, rubber, and spices, are the most important. This has been followed by the establishment of an agricultural college, of farms in the temperate parts of the State, and of nurseries in the tropical parts. With wheaten grain a system of experiments has been carried out for some years with the distinctive object of evolving a type of wheat adapted for Queensland, and as far as possible resistant to the attacks of rust. In dairying, a commencement was made by despatching to the different farming centres properly equipped travelling dairies with the latest appliances. The export of Queensland dairy produce has arisen through this effort. No travelling dairies are, however, now employed. A fruit farm has been established, at which fruits suitable for or likely to adapt themselves to the Queensland climate and conditions have been experimented with during a series of years. To cope with the insect and fungus pests to which such fruits are peculiarly susceptible, careful inspection is made of fruits in the markets and for export, and every effort is put forth to prevent the introduction of fresh diseases and to exterminate those which are already within the State.

(i.) *Gatton Agricultural College.* In 1897 the Queensland Government established an agricultural college at Gatton, about fifty-eight miles west of Brisbane, with an associated farm of 1692 acres. Accommodation is provided for sixty residential students. Instruction is afforded in various branches of practical farming and theoretical agriculture, the practical feature being regarded as the more important. Elementary science and physics, dairying, gardening, elementary chemistry, veterinary science, horticulture, stock-breeding, elementary bacteriology, and agricultural chemistry are also taught. A dairy herd of the best known and favoured breeds has been established at the college, whence the young stock of pure breed have been distributed throughout the State. A

course for the instruction of school teachers during the summer recess has been established at the college by the Education Department, and the knowledge thus acquired is imparted by the teachers, not only to the school children, but also to the farmers and dairymen. On the 31st December, 1909, there were forty students on the books of the college.

(ii.) *Experimental Farms and Technical Colleges.*

(*a*) *Experimental Farms* are carried on by the Government at Westbrook (near Toowoomba), Gindie, Biggenden, Hermitage (near Warwick), Warren, and Roma. At the Hermitage farm arrangements were made during the year 1906, whereby instruction in general farm work is given to a number of boys who, from circumstances, are unable to receive the advantages of the college course, and this system has now been applied to the farm at Biggenden. The pupils are apprenticed for a term of three years and are instructed in experimental and acclimatisation work, stock-breeding, hybridising, orchard work, etc. These youths are paid nothing for the first twelve months, £12 for the second, and £24 for the third. A state nursery has been established at Kamerunga, near Cairns, and a sugar experimental station at Mackay, but the State tobacco farm at Texas was relinquished during 1906.

(*b*) *Technical Colleges.* At the technical colleges established in various parts of the State instruction is given in certain agricultural subjects. Thus, at Brisbane, Ipswich, and Maryborough, botany, milk and cream testing, fruit preserving and pickling are dealt with, and at Brisbane wool-classing also. At Bundaberg, Gympie, Rockhampton, South Brisbane, and Toowoomba milk and cream testing is taught, whilst instruction is given in dairy-farming at Warwick.

(iii.) *Other Forms of Agricultural Instruction.* Free lectures are from time to time given at different centres by the Agricultural Department's technical instructors on all agricultural, horticultural, and pastoral subjects. A monthly *Agricultural Journal* is issued, in addition to pamphlets on special subjects. Seeds which are new to the country are distributed free. In the primary schools instruction is given in nature study and in economic gardening, prizes being awarded both for practical and theoretical work.

(iv.) *Particulars of Agricultural College and Experimental Farms.* The table given below contains particulars of the Gatton Agricultural College and the seven experimental farms. Figures relating to the technical colleges are not available:—

QUEENSLAND.—PARTICULARS OF GOVERNMENT AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS FOR THE YEAR 1909.

Name of College or Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees and Vines.	Area under all other Crops.	Number of Hands Employ'd	Value of Plant and Machinery.	Value of Produce for the Year.

Hermitage ...	433	224	124	8	92	4	750	700

5. **South Australia.**—To this State belongs the honour of starting the first experimental farm in the Commonwealth. As far back as the year 1879 a resolution was passed by the local Parliament in favour of the establishment of a School of Agriculture, with an experimental farm, under the charge of a professor of agriculture. Active operations in this connection were commenced in 1882, when the first series of plots of wheat were sown at Roseworthy. Experimental work, chiefly directed towards improving the wheat yield, has been developed along three main lines, viz.: (*a*) The improvement of varieties of wheat, (*b*) the improvement of methods of cultivation, and (*c*) the use of manures. The Central Agricultural Bureau, established at Adelaide under the control of an Advisory Board, has an extensive membership distributed throughout the agricultural districts of the State. It assists farmers by the dissemination of knowledge; by helping to introduce new economic plants; by improving the breed of stock; and it acts as a means of keeping the Agricultural Department in touch with the producers. The branches of the bureau hold meetings at regular intervals in their several districts, ideas and methods as regards practical subjects are interchanged, and discussions are held on matters of general interest to agriculturists.

(i.) *The Roseworthy Agricultural College.* The Roseworthy College, situated seven miles from Gawler, and affording accommodation for about fifty resident pupils—who must be at least sixteen years of age on admission—has two main objects, viz.: (*a*) To train young men for the practice of agriculture, horticulture, and viticulture, and (*b*) to conduct experiments with a view to the advancement of the rural industries in South Australia. The attached farm is 1890 acres in extent. The course extends over a period of three years, the fees for residential students being £30 per annum. The curriculum includes both scientific and technical subjects, viz., chemistry, physics, anatomy, physiology, botany, and entomology; agriculture, viticulture, œnology, fruit culture, veterinary science, dairying, book-keeping, surveying, wool-classing, and general rural economy. Fifty-two students were on the roll during 1909.

(ii.) *Experimental Farms.* During the year 1905-6 three experimental farms were handed over to the Agricultural Department, namely, the homestead block at Kybybolite of 1040 (now 2256) acres, 59 acres of reclaimed swamp at Murray Bridge, and 84 acres at Parafield. A similar farm which has recently been established at Loxton, is carried on in conjunction with one at Veitch's Well. On these, experiments are carried on with regard to the growing of different varieties of wheat, oats, and barley, both for grain and for hay crops, and also with regard to the growing of root and fodder crops. Investigations cover the manuring of crops, different methods of cultivation, rotation of crops, irrigation, the hybridisation and selection of cereals, feeding of animals, fruit-growing, and wine-making.

(iii.) *Government Dairy Farm.* Towards the close of 1908 the Government acquired a property of 1600 acres of good agricultural land at Turretfield, nine miles from Gawler, with the object of converting it into a model dairy farm. About 500 acres were cultivated during 1909, the produce of which is to be set aside mainly for ensilage purposes. Special provision has been made for the conservation of fodder, and large silos have been erected for the storage of the green feed. There were about sixty cows in milk during the latter part of 1909, particular care being taken to obtain the best strains for milking purposes. A feature of the farm is its piggery, and baconers are sent to the Adelaide market with advantageous results. Cheese and pasteurised cream are also marketed profitably.

(iv.) *Other Forms of Agricultural Instruction.* Lectures are given by the experts of the Agricultural Department under arrangement with the School of Mines at Adelaide and at country branches of that institution, while practical demonstrations are also given by the horticultural instructor. No instruction is given by travelling dairies, but the dairy instructor visits districts as arranged and gives instruction and advice on all matters pertaining to dairying. Lectures and practical demonstrations are given by experts all

over the State, principally under the auspices of the Agricultural Bureau or local committees. Though no systematic scheme for agricultural teaching in the primary schools exists, numbers of individual teachers have taken up experimental elementary agriculture —practically a form of nature study—with satisfactory results. Seed of special varieties of wheat is from time to time distributed gratis to applicants; also seed of barley and oats, and of fodder plants of a special character, likely to suit prevailing conditions. The *Journal of the Department of Agriculture* is issued monthly and special bulletins and pamphlets regarding cultivation, manuring, diseases of stock, etc., are published from time to time. It is proposed to establish a training school of agriculture in the near future.

(v.) *Particulars of Agricultural College and Experimental Farms.* The subjoined table gives details of the several farms in the State during 1909-10 :—

SOUTH AUSTRALIA.—PARTICULARS OF AGRICULTURAL COLLEGE AND EXPERIMENTAL FARMS FOR THE YEAR 1909-10.

Name of College or Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees and Vines.	Area under all other Crops.	No. of Hands Employ'd	Value of Plant and Machinery.	Value of Produce for the Year.

* Information not available.

6. **Western Australia.**— A considerable amount of developmental work has been done of late years towards the promulgation of agricultural knowledge on the three State farms at Chapman, Narrogin, and Hamel, and, more recently still, on the experimental farms at Brunswick and Nangeenan.

(i.) *The Chapman Farm* stands in the centre of a vast stretch of country lying twenty-five miles north of Geraldton and fifteen miles east of Northampton. Until a few years ago the expanse of land referred to was almost exclusively devoted to grazing, and it was mainly to prove its capabilities, and thus promote settlement, that the farm was established. The whole of the available land has since been selected, and settlement has outrun the extent of the area in question. Collaterally the object of the farm has been extended; it has become the medium whereby practical instruction in farming is provided for intending settlers in quest of a training which will fit them for their work. The farm, which has an area of 1280 acres, is well watered by the Chapman River and by wells served by windmills; it is securely fenced and subdivided. Stud stock are kept and bred, the young stock being sold annually. The stock consists of a stud of Suffolk Punch horses, a herd of Dexter Kerries, a flock of pure-bred Shropshire ewes and rams, Angora goats, and various kinds of poultry.

(ii.) *The Narrogin Farm.* The initial object of this farm was to practically demonstrate the larger return consequent upon improved cultivation of the land; to raise stud stock for the benefit of the farmers, to raise clean seeds for sowing their land, and to offer a field for training farmers' sons and others wishing to settle on the land. Students are admitted at an annual fee of £10; they are taught the practical farm work, such as handling live stock, and the use of various farm implements. Lectures are given at intervals by the scientific staff attached to the Agricultural Department. Experimental work is a merely subsidiary feature. The total area is 2826 acres. During the year 1909 there were sixteen students on the rolls.

(iii.) *The Hamel State Farm.* This farm, which formerly carried out experimental work consisting chiefly of testing new varieties of grasses and fodder plants, cereals, fruits and tubers, was closed in September, 1909.

(iv.) *Other Forms of Agricultural Instruction.* The Government dairy expert is continually travelling and lecturing on dairying, and lectures are also given by the field-officer, the horticultural and viticultural experts, and others. Demonstrations are also given in the cultivation of vines and fruit trees, including budding, grafting, and pruning. A regular monthly journal and bulletins at frequent intervals on matters of importance are issued by the Agricultural Department. The distribution of seeds and plants is now practically confined to seeds of fodder plants. While there are no specific regulations, recipients are asked, with a view to collating information as to the most suitable varieties in different localities, to report results. Experimental plots are conducted at some of the State schools under the direction of the teachers. A special feature of the entomological work carried out by the Department of Agriculture is the collection, breeding and distribution of parasites on insect pests. This work has been carried out with excellent results, several pests which were formerly a great source of trouble and expense being now practically non-existent. Experimental farms have been established at Brunswick, Nangeenan and Chapman.

(v.) *Particulars of State and Experimental Farms.* Particulars of the farms at Narrogin, Chapman, Brunswick, and Nangeenan for the year 1909 are given hereunder:—

WESTERN AUSTRALIA.—PARTICULARS OF STATE AND EXPERIMENTAL FARMS FOR THE YEAR 1909.

Name of Farm.	Total Area of Farm.	Total Area under Crop.	Area under Cereals and Hay.	Area under Fruit Trees and Vines.	Area under all other Crops.	Number of Hands Employed	Value of Plant and Machinery.	Value of Produce for Year.

7. **Tasmania.**—In Tasmania there is a Council of Agriculture consisting of eleven members, whose duties are to collect and publish information of every kind calculated to prove beneficial to agriculturists, such as suitableness of various districts for growth or production of animal and vegetable products, information respecting plants, methods of cultivation, of breeding and feeding animals, and how best to improve the same: to prevent as far as possible the introduction and spread of diseases and pests, and to publish bulletins, abstracts, and reports containing all such information as may be desirable. Other matters embrace the employment of experts in any branch of agricultural science, distribution of plants and seeds for experiment, and the establishment of local boards of agriculture in different parts of the State. Lectures are given by the experts from time to time, and useful information and knowledge is diffused by means of the monthly gazette published by the Council, and also by means of special bulletins. There are no agricultural colleges or experimental farms, and practically no agricultural teaching is given in the elementary schools.

§ 21. Government Loans to Farmers.

1. **Introduction.**—All the Australian States have established systems under which financial aid is rendered to agriculturists by the Government. The principle upon which such aid is founded was probably first practically applied in Germany, viz., in the year 1770, when the *Landschaften Bank* was created. The establishment of the *Crédit Foncier* nearly a century later in France was a creation of a similar character. This latter institution was designed to enable house and land owners to raise money on mortgage at a low rate of interest, with facility for repayment by an annuity including redemption of the capital. It dates from 1852, but the mortgage bank known as the *Caisse Hypothécaire*, which, after a struggling existence, was finally liquidated in 1846, was based essentially on the same principle. Over the operations of the *Crédit Foncier*, created under governmental patronage and invested with such special privileges as to virtually constitute it a monopoly, the Government exercised a direct control, viz., by appointing its governor and its two deputy-governors. The *Crédit Foncier* was empowered to lend money only on a first mortgage, and to the amount of one-half of the estimated value of houses and farms, and one-third that of vineyards, woods, and other plantations, and the commission charged could not exceed six-tenths per cent. The system developed and adopted in the Commonwealth, with the object of assisting farmers to make improvements or to develop or utilise the agricultural or pastoral resources of the land, is analogous. Particulars of advances made under the Closer Settlement and similar Acts are dealt with in the section on Closer Settlement. (See page 294.)

2. **Particulars of Transactions in each State, 1907 to 1910.**—The subjoined table gives particulars of transactions in each State in which advances to farmers are made, for the years 1907 to 1910 inclusive. Tasmanian figures are not available :—

* Compiled from figures furnished by the Government Savings Bank of Victoria. † Returns ot available. ‡ Balance after deduction of special principal payments in advances. § Includes loans to farmers and other producers and to local bodies on the security of their own rates.

3. **New South Wales.**—(i.) *Initial Legislation.* New South Wales adopted the principle of advances to settlers on 4th April, 1899, when the Advances to Settlers Act received assent. The objects of this Act were to authorise the raising of a loan for making temporary advances to settlers; to provide for the making and repayment of such advances; and for purposes incidental to, or consequent on, those objects. In order to provide the funds necessary for the carrying out of this Act, the Colonial Treasurer was authorised to sell inscribed stock, secured upon the Consolidated Revenue, to an amount not exceeding £500,000, to be sold in amounts of £10 or some multiple of £10, and bearing interest at the rate of 3½ per cent. per annum, payable half-yearly. A board, consisting of not more than three members appointed by the Governor, called the Advances to Settlers Board, was appointed to deal with applications for loans and to decide whether they should be granted. The maximum amount that was authorised to be advanced to any one person was £200, and was to be repaid in full, together with interest at the rate of 4 per cent., within ten years of the making of the loan, but on no account was a loan to be granted except on the recommendation of the Board and when the security given was deemed satisfactory. An Amendment Act was passed in 1902, by which the advance limit of £200 was increased to £500, and the period within which repayments were to be made was extended to thirty-one years. In the latter part of the same year a further Amendment Act came into force. Under the provisions of this Act, the amount of inscribed stock was increased to £1,000,000, and the maximum amount of advance to any person was raised to £1500, interest on the latter being payable at the rate of not less than 4 per cent. per annum.

(ii.) *Legislation now in Force.* The above Acts were all repealed by the Government Savings Bank Act of 1906, which received assent on 21st December of that year. All property held by the Advances to Settlers Board was to be vested in three Commissioners appointed under this Act, who were styled "The Commissioners of the Government Savings Bank of New South Wales." An Advances Department of the Savings Bank was constituted, and debentures to the amount of £305,000 (that being the amount of stock issued under the Advances to Settlers Acts and held at the beginning of this Act) were issued, an equivalent amount of Government stock transferred to the Savings Bank Department being, at the same time, cancelled. All moneys, securities, documents, property, etc., held by or on behalf of the Advances to Settlers Board were transferred to, and became vested in, the Commissioners, and were carried to the accounts of the Advances Department of the Savings Bank.

(iii.) *Security on which, and Objects for which, Advances are made.* The Commissioners are authorised to issue debentures to the amount of £2,000,000, bearing interest at a rate not exceeding 4 per cent. per annum. They may lend moneys from the Advances Department (*a*) upon mortgage of an estate of inheritance in fee simple in any land in the State; (*b*) upon mortgage of conditional purchases with or without associated conditional leases, homestead grants or selections, settlement leases or purchases, or conditional purchase leases; and (*c*) on deposit at call or short notice in the Treasury on any bank of issue in the State, or on deposit in the Savings Bank Department. Loans may be made for any of the following purposes:—(*a*) To pay off existing encumbrances or to purchase the land; (*b*) to pay off money to the Crown in respect of the land; (*c*) to make improvements or to develop the agricultural or horticultural resources of the land; and (*d*) to build homes on the land.

(iv.) *Amount and Repayment of Advances.* No loan to any one person may amount to less than £50 or more than £2000, and applications for loans not exceeding £500 have priority over those of a larger amount. In no case does the amount of the advance exceed 80 per cent. of the Commissioners' valuation of the security. Advances may be made up to two-thirds of the value of the interest of the borrower in the land, buildings and improvements, except where the land is held as a conditional lease, homestead grant, settlement lease, homestead selection, settlement purchase, or conditional purchase as to which the first five years' certificate has not issued, in which cases the amount advanced

may not exceed one-half of the holder's interest in the improvements. Loans are made only in respect of first mortgages, and except in the case of loans on the security of freeholds or certificated conditional purchases, are repayable by equal half-yearly instalments within such period, not exceeding thirty-one years, as the Commissioners think fit. Loans granted on the security of freeholds and certificated conditional purchases are repayable either in the same manner as loans on other securities just mentioned, or at the expiration of a fixed term not exceeding five years, during which period interest only is payable.

(v.) *Advances on Purchases of Farms.* To facilitate close settlement on private estates suitable for the purpose, the Commissioners are authorised to make advances in order to assist persons in purchasing land. In the case of such advances the title to the land must be either freehold or a certificated conditional purchase, and the amount advanced may not exceed 80 per cent. of the Commissioners' valuation.

(vi.) *Particulars of Advances to Farmers, 1905 to 1909.* The following table shews particulars of the advances made up to the 30th June in the years 1905 and 1906, and to the 31st December in 1907, 1908, and 1909:—

* Year ended 30th June. † Year ended 31st December.

4. **Victoria.**—(i.) *Legislation.* The Advances Department of the Government Savings Bank of Victoria was established by the Savings Bank Act of 1896, amended in 1901 and again in 1903. The funds for the purpose of making advances are raised by the issue of mortgage bonds, the total amount of which is limited to £3,000,000.

(ii.) *Security on which Advances Granted.* In order to assist farmers, graziers, market gardeners, or other persons employed in agricultural, horticultural, viticultural, or pastoral pursuits, the Savings Bank Commissioners are empowered to make advances, either by instalments or otherwise, upon the security of any lands held by such person either (*a*) in fee simple, or (*b*) under a Crown lease in which the rent received is taken by the Crown in part payment of the lands demised. Security must be, in every case, a first mortgage. A loan may be either in cash or in mortgage bonds at par face value at the option of the Commissioners.

(iii.) *Amount of Advances.* The limits of the advances are £50 and £2000, as in New South Wales, applications for advances under £500 having also similar priority. In the case of land held in fee simple or under lease as specified in (*b*) above, the amount of the advance which may be made must not exceed two-thirds of the actual value of such land at the time of advance, which is reduced by the amount of all rent payable in respect of the land, previous to the issue of a Crown grant for such. If the person appointed by the Commissioners as valuator of any land certify that the improvements effected thereon increase the productive power of the land and exceed £2 per acre, the Commissioners may make, notwithstanding anything contained above, an advance of fifteen shillings for every acre so improved.

(iv.) *Special Provision for Vineyards, Orchards, etc.* In the case of land which has acquired a special value by reason of being cultivated as vineyards, hop-grounds, orchards, fruit-growing plantations, etc., advances may be made on the following terms:—(*a*) The total amount which may be at any time advanced upon any such land may not be more than £100,000 in the whole. (*b*) The amount of two-thirds of the actual value referred to above may be increased by one-quarter of any special increase in value, but such increase is in no case to be considered as greater than £30 an acre. (*c*) No advance may be for a longer period than fifteen years.

(v.) *Purposes for which Advances Granted.* Advances are made for the following purposes only:—(*a*) To pay off existing liabilities; (*b*) to pay off money owing to the Crown in respect of the land; (*c*) to make improvements or to improve and develop the agricultural, horticultural, viticultural, or pastoral resources of the land.

(vi.) *Repayment of Advances.* The rate of interest charged on loans, originally fixed at 4½ per cent. per annum, may, by the Amendment Act of 1903, be altered by the Commissioners with the approval of the Governor-in-Council, up to but not beyond 5 per cent. per annum. All advances, together with interest, must be repaid by sixty-three half-yearly instalments, or such smaller number as may be agreed upon between the borrower and the Commissioners.

(vii.) *Particulars of Advances to Farmers, 1905 to 1910.* The following table gives particulars as to the loans raised and repaid by the Advances Department, the number and amount of applications received and granted, and the amounts advanced and repaid for each financial year from 1905-6 to 1909-10 inclusive:—

LOANS TO FARMERS.—TRANSACTIONS OF ADVANCES DEPARTMENT OF GOVERNMENT SAVINGS BANK, VICTORIA, DURING EACH FINANCIAL YEAR, 1905 to 1910.

Particulars.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.	Total to the 30th June, 1910.
Bonds & debentures issued £	100,000	100,000	100,000	100,000	200,000	2,783,600
,, ,, redeemed £	79,675	104,675	79,500	30,000	125,025	1,128,775
Applications received No.	788	550	704	825	669	12,503
,, ,, Amount, £	319,650	217,572	344,703	468,085	319,060	6,023,035
Applications granted No.	371	295	390	502	416	6,770
,, ,, Amount, £	143,515	98,840	162,615	250,895	177,765	*2,906,515
Amounts advanced ... £	131,034	89,975	143,180	238,210	165,015	2,657,713
,, repaid ... £	152,626	189,547	168,800	151,437	153,355	1,333,849

* Of this amount £2,657,713 has been actually paid over to borrowers, a further sum of £25,770 being in course of settlement; the balance represents applications withdrawn or lapsed, or amounts offered but not accepted.

The number of loans at the 30th June, 1910, was 3131, and the average balance of each loan was £422 16s. 6d. The falling-off in the number of applications and amount of advances during the year 1906-7 was due, no doubt, partly to the fact that farmers had been favoured with good seasons during several years past, and partly also to the gradual fall in the rates charged for loans by other lenders. The number of repayments by farmers which became due during the year 1909-10 was 7051, representing amounts of £59,247 for interest and £29,006 for principal. These instalments have been well met, and on 30th June, 1910, there were only ten farmers in arrear, the amount of principal in arrear amounting to £42, and of interest to £59.

(viii.) *Seed Advances Acts.* In 1896 and 1903, Acts were passed to enable seed and fodder to be advanced on certain terms to cultivators of land. These measures applied only to the season in which they were passed. Under the first-mentioned Act the Treasurer was authorised to pay out of the Consolidated Revenue a sum not exceeding £15,000, but no cultivator was to receive such quantity of seed as would sow more than

100 acres, and he had to give a preferable lien over the produce of all crop harvested within twelve months. By the Act of 1903 the amount authorised to be lent was £100,000, in sums not exceeding value of £65 where granted on the security of a mortgage or license lien, or £40 where granted on the security of a preferable lien on crops. The borrower was required to give, as security, a mortgage over his farm or a license lien over the improvements thereon, and also, if required, a preferable lien on crops somewhat similar to that laid down in the previous Act. In 1904 an Act was passed to enable seed and manure to be advanced on certain terms to cultivators of land within the area controlled by the Carrum Irrigation and Water Supply Trust.

5. **Queensland.**—(i.) *Legislation.* The Queensland Government was authorised, under the Agricultural Bank Act of 1901, to establish a bank for the purpose of promoting the occupation, cultivation, and improvement of the agricultural lands of the State, and a body of three trustees was appointed to administer the Act. The Government was empowered to raise a sum not exceeding £250,000 by the issue of debentures, bearing interest at a rate of not more than 4 per cent. The original Act was amended in 1904 and again in 1905, the latter amendment specifying that no advance be made to any alien.

(ii.) *Security on which and Purposes for which Advances are made.* Advances may be made to owners of agricultural lands or to occupiers of Crown lands held either as agricultural farms or homesteads, grazing farms or homesteads, unconditional selections, or miners' homestead leases, and may be for any of the following purposes:—(*a*) The payment of existing liabilities; (*b*) agricultural, dairying, horticultural, or viticultural pursuits on the holding; (*c*) making improvements or adding to improvements already made; (*d*) the purchase of stock, machinery, or implements. Advances are only made on the security of first mortgages.

(iii.) *Amount and Repayment of Advances.* No advance may exceed ten shillings in the pound of the fair estimated value of the holding in the cases of (*a*) and (*b*) above, while in the other cases the limit of the amount of the advance is twelve shillings in the pound of such value, and the advance at any time must not exceed £800. Applications for amounts not larger than £200 have priority over those for a larger amount. During the first five years following the date of the loan the borrower must pay interest at the rate of 5 per cent. per annum. After the expiration of that period the loan, together with the interest, must be repaid by half-yearly instalments within twenty years, the amount of such half-yearly instalment being £4 0s. 3d. for each £100 advanced. In the case of advances for the purposes of paying off existing liabilities or of buying stock, machinery, or implements, the loan must be repaid by equal half-yearly instalments of the amount of £3 11s. for every £100 advanced within twenty-five years from the date of its granting.

(iv.) *Transactions of Agricultural Bank, 1906 to 1910.* The subjoined table shews particulars of the transactions of the Agricultural Bank for each year ended 30th June, from 1906 to 1910 inclusive:—

6. **South Australia.**—(i.) *Legislation.* Under the State Advances Act of 1895, amended in 1896 and 1901, a State Bank has been established in South Australia for the purpose of making advances (i.) to farmers and other producers, (ii.) in aid of industries on the security of lands held in fee simple or under Crown leases, and (iii.) to local authorities upon the security of their rates. The bank, managed by a board consisting of five trustees appointed by the Governor, has funds raised by the issue of mortgage bonds, carrying interest at a rate not exceeding 4 per cent., to an amount not greater than the total amount due to the bank for State advances, and in any case not greater than £3,000,000. On 23rd December, 1908, the Advances to Settlers on Crown Lands Act was passed. This measure is referred to in (iv.) below. Several Acts have, from time to time, been passed dealing with seed wheat advances. These were, in the main, similar to those enacted in Victoria, referred to in 4 (viii.) above.

(ii.) *Amount and Repayment of Advances.* No advance to farmers or to other producers, or in aid of any industry, may exceed three-fifths of the unimproved value of the fee simple of the land and permanent improvements thereon, and if the land has acquired a special additional value by reason of cultivation as a vineyard or orchard, *plus* one-third of such special additional value. If the advance be on the security of a Crown lease, the amount of the loan may not exceed one-half the selling value of the lease, including the interest of the holder in any improvements on the land. The amount lent to any one person at any time may not exceed £5000. Advances are repayable by half-yearly instalments, the rate of interest, up to the limit of 5 per cent. per annum, being a matter of arrangement between the bank and the borrower.

(iii.) *Transactions of the State Bank, 1905 to 1909.* In addition to assisting farmers and other producers, the State Bank makes, as mentioned above, advances in aid of industries and also to local authorities. The following table shews particulars of the transactions with farmers of the State Bank for each year from 1905 to 1909 inclusive:—

SOUTH AUSTRALIA.—PARTICULARS OF TRANSACTIONS OF THE STATE BANK

(iv.) *The Advances to Settlers on Crown Lands Acts 1908 and 1909.* Under the 1908 Act a Board, called the Advances to Settlers Board, was created. The Treasurer is authorised to set apart a sum not exceeding £200,000 in any one financial year for the purpose of loans to settlers. The maximum amount which may be advanced to any one settler is £600, and for a period of five years following the date on which the advance is made the settler is required to pay interest at the rate of 5 per cent. per annum, payable half-yearly. At the expiration of that period it is provided that he must repay the amount advanced by fifty equal half-yearly instalments, together with interest at 5 per cent. on the balance outstanding. A rebate of 1 per cent. interest is allowed if the half-yearly payment is made within fourteen days of the date on which it falls due. Advances may be made on prescribed security for the purpose of making improvements on a holding,

such as ring-barking, clearing, boring for water, etc.; or for discharging a mortgage existing on a holding; or for stocking a holding, provided that the necessary improvements have been made on the land. The amount of the advance may not exceed a sum equal to fifteen shillings in the pound on the value of improvements already made, and may not exceed twelve shillings in the pound on improvements made if the land be mortgaged.

During the year ended 30th June, 1909, thirty-four applications, amounting to £6095 were received for advances under this Act. Of these, eleven, representing a value of £1775, were granted, the amount actually advanced being £276. For the year 1909-10, the number of applications for advances was 102, aggregating £19,577, and fifty-five, totalling £9418, were approved of. As, however, some of these were granted by instalments, the actual amount advanced was £8087.

7. **Western Australia.**—(i.) *Legislation.* By the Agricultural Bank Act of 1894 the Governor of Western Australia was empowered to establish a bank for the purpose of promoting the occupation, cultivation, and improvement of the agricultural lands of the State. This Act was amended from time to time until a consolidating Act was passed in the year 1906 repealing all previous enactments on the subject. Under this last Act the bank was placed under the control of three trustees, appointed by the Governor, in whom is vested the whole of the bank property. The necessary funds are provided for by the issue of mortgage bonds bearing interest at a rate not exceeding 4 per cent. per annum. The amount authorised to be raised was £1,000,000, but by an Amendment Act in 1907 this sum was increased to £1,500,000, and by a further amendment in 1909 it was increased to £2,000,000. In the latter half of the year 1910, a Bill was introduced into Parliament by which it was proposed to make the amount authorised to be raised £2,500,000.

(ii.) *Purposes for which Advances may be made.* The bank is authorised to make advances for (*a*) ringbarking, clearing, fencing, draining, or water conservation; (*b*) for discharging any existing mortgage; (*c*) for the purchase of stock for breeding purposes; or (*d*) for the purchase of agricultural machinery manufactured in Western Australia subject to the employees engaged in the manufacture of such machinery being paid the ruling rate of wages.

(iii.) *Amount of Advances.* Advances may be made to an amount not exceeding £400 up to the full value of the improvements proposed to be made. Further advances may be made to an amount not exceeding £250 up to half the value of additional improvements proposed to be made. No advance, however, for the purpose of discharging existing mortgages may be made to an amount exceeding three-quarters of the value of improvements already made, and the total advances to any one person may not at any time exceed £750. Not more than £100 may be advanced to any person for the purpose of purchasing stock or agricultural machinery. Advances are made only on a first mortgage, but a second mortgage may be taken as collateral security. When any land is held by two or more persons as joint proprietors, the amount to be advanced may be multiplied by the number of such joint proprietors.

(iv.) *Repayment of Advances.* During the five years following the date of the loan the borrower pays interest only, at the rate of 5 per cent. per annum. After the expiration of that period the amount advanced, with interest at 5 per cent., must be repaid within twenty-five years by equal half-yearly instalments. In the case of advances for the purpose of buying stock the bank fixes the time and manner of repayment.

(v.) *Particulars of Transactions of Agricultural Bank, 1904 to 1909.* The following table gives particulars of transactions of the Agricultural Bank for each year from 1904 to 1909 inclusive:—

PARTICULARS OF TRANSACTIONS OF AGRICULTURAL BANK, 1904 to 1909.

AMOUNTS ADVANCED FOR WHICH IMPROVEMENTS HAVE BEEN EFFECTED—

Year ended the 30th June.	Amounts Advanced.	Improvements Effected.							
		Clearing.	Cultivating.	Ring-barking.	Fencing.	Draining.	Wells and Reservoirs.	Buildings	Total.
	£	£	£	£	£	£	£	£	£
1904	215,000	243,870	60,454	10,787	17,265	1,675	9,861	33,168	377,080

8. **Tasmania.**—(i.) *Legislation.* Under the State Advances Act 1907, assented to 22nd November of that year, authority is given to make advances to persons holding land on credit purchase. Three persons called "the Trustees of the Agricultural Bank of Tasmania" have power to administer the provisions of the Act. Funds were raised by the issue of debentures or inscribed stock for a sum not exceeding £50,000, interest at 4 per cent. per annum being payable on same.

(ii.) *Purposes for which Advances may be made.* Loans may be granted for any of the following purposes:—(*a*) payment of liabilities already existing on the holding; (*b*) carrying on agricultural, dairying, grazing, or horticultural pursuits; (*c*) making or adding to improvements.

(iii.) *Amount of Loans.* The minimum amount of any loan must not be less than £25, and the maximum not greater than £500. No advance may exceed one-half of the amount actually paid to the Crown in respect of the land held by the borrower under purchase upon the credit system, *plus* one-half of the present value of any improvements upon such land.

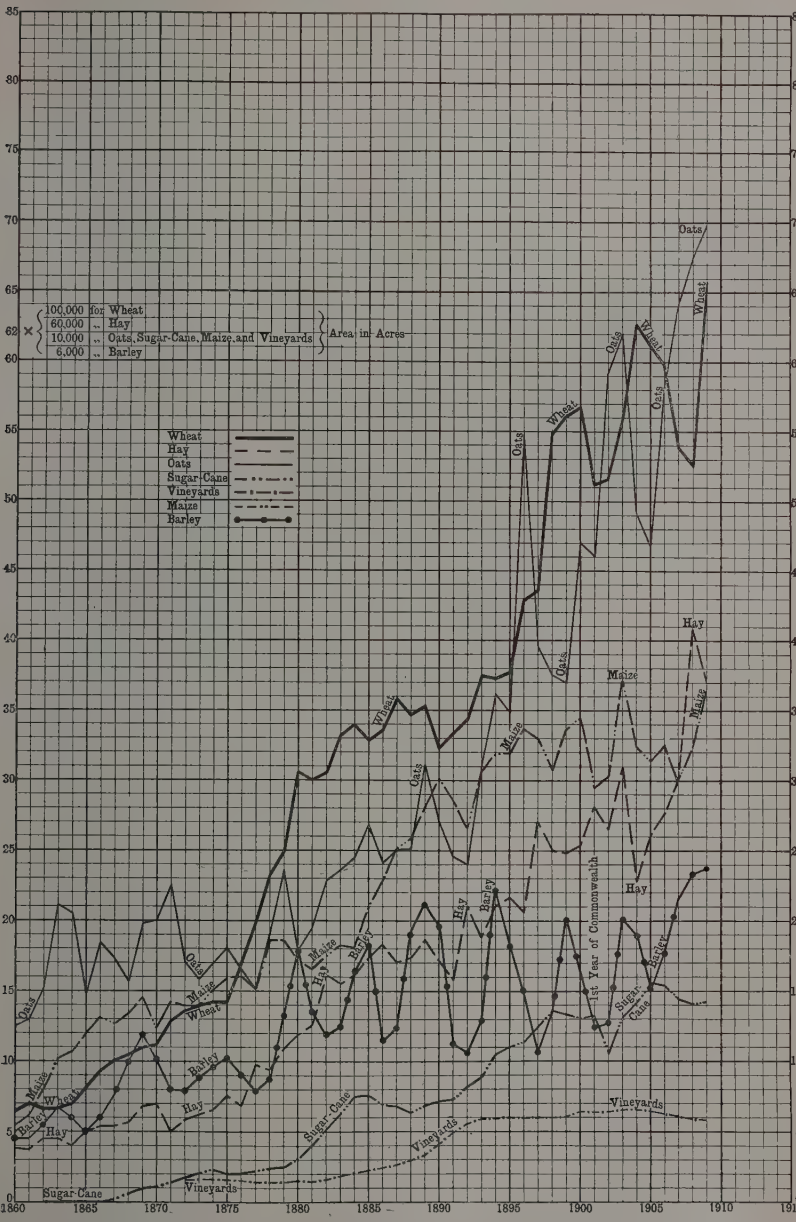
(iv.) *Repayment of Loans.* Interest at the rate of 6 per cent. per annum is payable on all advances made. After five years the borrower must begin to pay off the principal

in fifty half-yearly instalments, but the advance may, at the option of the borrower, be repaid at any time sooner than is provided, and in larger instalments.

(v.) *Particulars of the operations of the Agricultural Bank.* During the eighteen months ended 30th June, 1909, seventy-seven applications for advances were made, which, with forty-nine carried over from the previous year, made a total of 126 applications, representing £11,110. Of these, ninety-four, of a value of £6571, were granted, the amount advanced being £5687. The amount repaid during the period was £30, leaving a balance of £5657 outstanding. For the year 1909-10, the number of applications for loans was eighty-two, totalling £5845. The trustees of the bank approved of sixty-one of these, amounting to £3593, and refused eleven, representing a value of £850, owing to the applicants not being entitled to loans in accordance with the Act. During the year one borrower failed to comply with the requirements of his mortgage deed and his selection was sold.

§ 22. Graphical Representation of Crops.

1. **Areas of Principal Crops.**—A graphical representation of the areas in the Commonwealth devoted to each of the leading crops from 1860 to the present time is furnished on page 439.

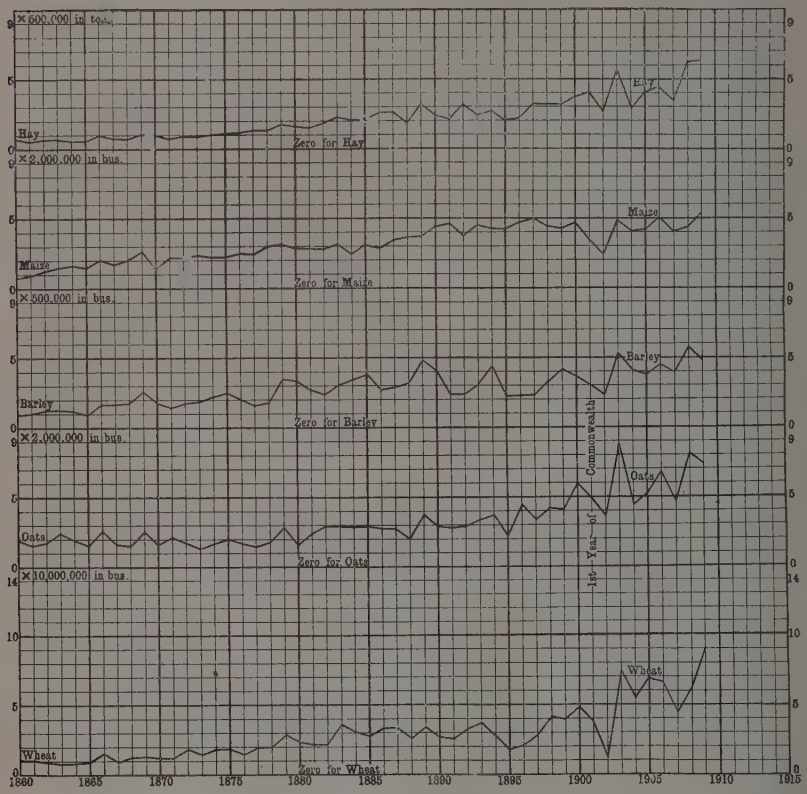


(i.) *Wheat.* In the case of wheat, the Commonwealth's principal crop, the graph indicates that the fifty seasons under review divide themselves naturally into five distinct periods, three of moderate and fluctuating increases and two of extremely rapid increases. Thus, between the seasons 1860-1 and 1875-6, a moderate rate of increase was in evidence, the area increasing from 640,000 to 1,420,000 acres. During the five succeeding seasons a very rapid increase took place, the total in 1880-1 amounting to over 3,000,000 acres. For fifteen years thereafter the increase in area was not large, and in two seasons, viz., 1885-6 and 1890-1, marked decreases were experienced. The total increase for the fifteen years was about 700,000 acres, the total for 1895-6 being rather more than 3,750,000 acres. The succeeding five years witnessed a rapid increase in area to a total of more than 5,600,000 acres, followed by a further period of marked fluctuations; this latter period, however, contained the season of maximum wheat-cropping, viz., that of 1904-5, when an area of 6,586,000 acres was so cropped.

(ii.) *Hay.* Hay-growing, which, next to the growing of wheat for grain, is the most important branch of agriculture in the Commonwealth, will be seen from the graph to have fluctuated very considerably from year to year during the period under review, these fluctuations being due in the main to seasonal variations and to variations in the relative prices of grain and hay crops. It will be seen that the features of the graphs are a moderate increase from 1860-1 to 1875-6, a fairly rapid increase from 1875-6 to 1882-3, moderate increase thence to 1896-7, succeeded by marked fluctuations from this point onwards with, on the whole, a moderate rate of increase until 1908-9 when the maximum of 2,450,000 acres was attained, succeeded by a decline in 1909-10 to 2,228,000 acres.

(iii.) *Oats.* The graph relating to oats exhibits extremely marked fluctuations from year to year in the area devoted to this crop, the general tendency, however, being one of increase. This feature was specially marked from 1892-3 to 1896-7, while the succeeding years were characterised by very extensive fluctuations. During the past four seasons the area under oats has increased rapidly to a maximum of 698,000 acres in 1909-10.

(iv.) *Maize.* The graph relating to maize indicates that the area devoted thereto in Australia, although somewhat fluctuating, increased with fair rapidity until the season



GRAPHS SHEWING THE AREA UNDER THE PRINCIPAL CROPS IN THE COMMONWEALTH FROM 1860-1 TO 1908-9.

(See pages—for wheat, 366; oats, 375; maize, 379; barley, 382; hay, 391; sugar-cane, 396; and vineyards, 401.)

EXPLANATION OF GRAPHS.—The base of each small square represents an interval of one year, while the vertical height represents a number of acres, varying with the nature of the crop in accordance with the scale given on the left-hand of the diagram. The height of each graph above the base line denotes, for the crop to which it relates, the total area under cultivation in the Commonwealth during the successive seasons.

GRAPHS SHEWING THE PRODUCTION OF THE PRINCIPAL CROPS IN THE COMMONWEALTH FROM 1860-1 TO 1908-9.

(See pages—for wheat, 367; oats, 375; barley, 383; maize, 379; and hay, 393.)

EXPLANATION OF GRAPHS.—In this diagram a separate base line is provided for each of the crops dealt with. In each instance the base of a small square represents an interval of one year, the vertical height of such square representing in the case of the wheat graph, 10,000,000 bushels oats, 2,000,000 bushels; barley, 500,000 bushels; maize, 2,000,000 bushels; and hay, 500,000 tons. The height of each graph above its base line denotes the aggregate yield in the Commonwealth of that particular crop during the successive seasons.

1896-7, since when it has varied above and below the point then reached, on the whole remaining practically stationary. The maximum area under maize, viz., 372,000 acres, was attained in the season 1903-4.

(v.) *Sugar-Cane.* In the case of sugar-cane the graph shews a fairly rapid rate of increase to 1874-5, followed by a period of five years during which the area increased but slowly. From 1879-80, however, the sugar-cane area rose rapidly until in 1884-5 a total of more than 75,000 acres was reached. Then followed a period of diminished cultivation, and it was not until 1892-3 that so high a total was again attained. After this the area rose rapidly to 136,000 acres in 1898-9, but during the next five years a decline took place, the area for 1903-4 being 132,000 acres. A marked decline was in evidence in 1902-3, and a corresponding recovery in 1903-4. The season of maximum area, viz., 156,000 acres, was 1905-6, since when a marked decline in area has been in evidence.

(vi.) *Barley.* The Commonwealth barley crop, although not an extensive one, is yet one which has exhibited from time to time very marked fluctuations in area. The graph representing this crop is consequently a very irregular line. The total has, on the whole, increased but slightly since 1880, rapid increases in certain years being succeeded by equally rapid decreases in subsequent years. The maximum area under barley, viz., 143,000 acres, was attained in the season 1909-10.

(vii.) *Vines.* The graph relating to area under vines, from 1872-3 onwards, indicates that there were two periods of very slow increase, one from 1872-3 to 1881-2, the other from 1893-4 to 1904-5. Between these, viz., from 1881-2 to 1893-4, a moderate rate of increase of area was experienced, the total for the Commonwealth advancing during that time from 14,600 acres to 57,400 acres, while since 1904-5 the area has fallen consistently. The season of maximum area under vineyards was 1904-5, with a total of about 65,700 acres.

2. **Production.**—The diagram on page 440 furnishes a graphical representation of the aggregate yields from 1860-1 to 1909-10 of five of the principal crops of the Commonwealth.

(i.) *Wheat.* This graph brings out clearly the fact that while on the whole the production of wheat in the Commonwealth is increasing with fair rapidity, the fluctuations in the total quantity produced have been more marked in recent than in earlier years. Thus since the year 1890 there have been three seasons of extremely low output, viz., in 1891-2, 1895-6, and 1902-3, with aggregate yields respectively of 25,700,000 bushels, 18,300,000 bushels, and 12,400,000 bushels. On the other hand there have been four seasons in which the total production was exceptionally high. These will be seen from the graph to have been the seasons 1893-4, 1900-1, 1903-4, and 1909-10, the total yields for which were 37,100,000 bushels, 48,400,000 bushels, 74,100,000 bushels, and 90,400,000 bushels respectively. Each of these yields represented at the date of its attainment the maximum Australian wheat crop, the last-mentioned being the highest yet reached.

(ii.) *Oats.* From 1860-1 to 1880-1 the oat crop of the Commonwealth, although exhibiting from year to year fluctuations more or less marked, gave no indications of a tendency to increase with the advance in population. This is well shewn in the diagram, by the persistence with which the graph for this period adheres to the line denoting 4,000,000 bushels, the yield for 1880-1 being actually lower than that for 1860-1. From this latter season to 1894-5 the variation was on a somewhat higher level, and is shewn in the diagram to have been in the vicinity of the line representing 6,000,000 bushels. From this point onwards a tendency to more rapid increase in production is in evidence, obscured somewhat by extensive fluctuations corresponding to those referred to above in the case of wheat. Thus in 1895-6 and 1902-3 the total yields were only 4,400,000 and 7,300,000 bushels respectively, while in 1900-1 and 1903-4 aggregates respectively of

12,000,000 and 17,500,000 bushels were reached, this latter being the maximum oat crop of the Commonwealth.

(iii.) *Barley.* The Australian barley crop will from the graph be seen to have fluctuated very considerably throughout, these variations being due rather to fluctuations in the area sown than to adverse seasons. From 1879-80 to 1902-3 the curve rises above and falls below the line representing 1,500,000 bushels. For more recent years the graph bears evidence of an increasing, though still fluctuating, output. The maximum barley crop of the Commonwealth was that of 2,870,000 bushels in 1908-9.

(iv.) *Maize.* The maize graph indicates a rapid increase in output from 1860-1 to 1869-70, followed by a moderate increase from the latter season to 1886-7, and a further rapid increase to 1891-2. From the last-mentioned season onwards the production has fluctuated considerably, but little increase has, on the whole, been experienced, the total for 1891-2 being 9,300,000 bushels, as compared with 10,770,000 bushels for 1909-10, the maximum Australian maize crop. As in the case of all other crops, the maize yield for 1903-4 was much higher than those for the years immediately preceding and succeeding.

(v.) *Hay.* The graph relating to the Commonwealth output of hay indicates a fairly continuous increase in production from the season 1860-1, when the total stood at 340,000 tons, to that of 1887-8, when it reached 1,330,000 tons. In subsequent years marked fluctuations have been in evidence, but the tendency has, on the whole, been one of increase. The maximum hay crop of the Commonwealth was that of the season 1909-10, when the total production reached 3,153,000 tons.

SECTION IX.

FARMYARD AND DAIRY PRODUCTION.

§ 1. Introductory.

1. **General.**—Amongst the live stock brought out by Captain Phillip in 1788 were included one bull, four cows, one calf, and twelve pigs, these being established at Farm Cove when Port Jackson was settled. Of the early importations of cattle the greater part was slaughtered to relieve the necessity of the colonists in the famines which several times threatened the existence of the young community. With regard to the existing herds it may be noted that they have sprung not only from the original stock, but have been improved by the introduction of stud cattle and pigs, especially during late years. Stock-raising, with regard to the special requirements of dairying, etc., has in fact been scientifically considered only in comparatively recent times. The technical advances made in the manufacture of butter and cheese in Europe and elsewhere, and the necessity for keeping pace with them in connection with the export trade of Australia, demanded in Australian stock-raising a judicious crossing of strains with a view to improving the quantity and quality of the milk supply. Further, the pasturage was improved by the eradication of grasses and herbage of little or no use, and the planting of suitable grasses and other fodder plants. Much of the indigenous herbage forms, however, excellent food for stock. Although some of the State Governments have made considerable importations for stud purposes, the importation of British and other cattle for breeding purposes is ordinarily under private enterprise, but is safeguarded by Government supervision in order to prevent the introduction of diseases and pests, with the result that Australia is comparatively free from stock diseases. Permanent structures for the shelter of dairy herds are required only to a very small extent in the Commonwealth, the mildness of the climate rendering it possible for stock to thrive in the open throughout the year. Practical experience has, however, demonstrated the wisdom of rugging or otherwise protecting dairy cattle during the colder months, while the provision of shelters in the form of plantations of trees is attended by beneficial results. Where winter fodder must be grown it is given to the cattle in the fields, and consists of lucerne, oats, maize, barley, rye, and mangolds. Ensilage is highly recommended by dairy experts, and increasing use is being made thereof. Continued expansion of the dairying industry, and particularly its extension into non-coastal districts, will involve a more general use of the silo.

Some of the indigenous Australian grasses are particularly suitable for dairy cattle, since they possess milk-producing as well as fattening properties, but many of the holdings are sown with English and other imported grasses, varieties being chosen to suit particular localities. The area of land devoted to green food and permanent artificially-sown grasses is constantly increasing, its produce being, for the most part, devoted to the depasturing of dairy herds. The opinion, long held, that only heavily-grassed country with good rainfall was profitable for dairying has been controverted by experience, it being shown that with proper care more lightly clad regions can be made to yield good milk results.

2. **State Supervision of Industry.**—Each of the State Agricultural Departments exercises considerable supervision in regard to the industry. Dairy experts are employed to give instruction in approved methods of production, to examine animals, to inspect

the buildings used for milking and separating, and to examine the marketable produce. A high standard of dairy hygiene, cleanliness of *personnel* and *materiel*, and purity of produce have also been insisted upon under State laws. Financial assistance has been given to facilitate the economic handling of dairy products, and much benefit has resulted, the advances having generally been promptly repaid.

For the maintenance of the purity and quality of Australian butter, the Commonwealth regulations under the Commerce Act 1905 enact that butter intended for shipment oversea has to be covered with a true trade description, and that at least the following matter should appear in the brand :—The word "Australia," the name of the State in which it was produced, net weight, manufacturer's or exporter's name or registered brand, and the words, "pure creamery butter," "pastry butter," "milled butter," or "re-packed butter," as the case may require. Other matter may be added, but it must be true, and not liable to mislead.

Butter may be shipped at the exporter's discretion in one of three different ways :—

(i.) On his certifying that the butter contains no fat other than butter fat, not more than 16 per cent. of water, 3 per cent. of casein, 0.5 per cent. of boric acid, 4 per cent. of salt, not less than 82 per cent. of butter fat, any colouring matter deemed harmless by the Minister. The inspector checks the contents to see that they are in conformity with the brands on package and the exporter's declaration, and an export permit is then issued.

(ii.) The exporter may apply in writing to have his butter classified prior to export, and thus dispense with the written statement regarding its composition. The inspector then examines for quality in addition to checking the trade description, and grades as follows:—95 to 100 points, "superfine"; 90 to 94 points, "first grade"; 83 to 89, "second grade"; 75 to 82, "third grade"; under 75, "pastry" (branded as such). Certificates are issued according to the grade awarded, and the issue necessitates the branding of each box in the consignment with the Commonwealth stamp "approved for export" and the certificate number. In order to facilitate branding, all certificates for a specific grade issued on one day bear the same number, the registered brand on the packages forming the leading feature of each certificate.

(iii.) A separate written application from the exporter is necessary before a grade stamp is placed on the boxes by the examining officer prior to shipment. This grade stamping, as well as the classification itself, is purely optional with the exporter. Where such an application is received, the grade is stamped on the packages in addition to the Commonwealth stamp and certificate number.

By these means, purity and quality are guaranteed, and trade is also facilitated, since quantities of butter are purchased solely on the certificate issued, without ever being seen.

Regulations fixing standards for other dairy products were also enacted.

New regulations, to come into force on 1st July, 1911, have been approved. They contain important changes in regard to the standard for export dairy products. The new standards will be as follow :—

Butter.—Butter which contains only—No fat other than butter fat; not more than 15 per cent. of water, 3 per cent. of casein, 0.5 per cent. of boric acid, 4 per cent. of salt; not less than 82 per cent. of butter fat; any colouring matter deemed by the Minister to be harmless.

Cheese.—Cheese which does not contain any foreign matter other than rennet, salt, or colouring matter deemed by the Minister to be harmless.

Concentrated Milk.—Pasteurised milk which is concentrated by any process whatever, and not subsequently sterilised, and which contains not less than 9 per cent. of

butter fat and 24 per cent. of milk solids not fat, and no foreign substance other than 0.5 per cent. of boric acid.

Condensed Milk.—Milk which is condensed or concentrated by any process whatever, with or without the addition of cane sugar, and which, when containing such sugar, also contains not less than 9 per cent. of butter fat, and 22 per cent. of milk solids not fat, or which, when not containing such sugar, contains not less than 8 per cent. of butter fat and 20 per cent. of milk solids not fat.

Dried Milk.—Milk from which the water has been removed by a process of heating, without the addition of any extraneous matter, and which, when dissolved in or treated with water, according to any directions supplied by the maker or vendor thereof, produces milk as defined in this Schedule.

Honey.—The ripened, unfermented honey of bees, which does not contain any foreign matter.

Milk.—The milk of cows, whether mixed or not, and containing not less than 3 per cent. of butter fat, nor less than 8.5 per cent. solids not butter fat.

The trade description prescribed must be permanently affixed on the goods or on the containing packages. In the case of butter the trade description must, with additional particulars, be indelibly impressed on the outer covering.

Butter and cheese are to be graded by the examining officer as follows :—

BUTTER.—

Superfine—Pure creamery butter, graded at 95 to 100 points.
First grade—Pure creamery butter, graded at 90 to 94 points.
Second grade—Pure butter, graded at 83 to 89 points.
Third grade—Pure butter, graded at 75 to 82 points.
Pastry butter—Pure butter, graded at less than 75 points.

CHEESE.—

Superfine—Pure cheese, graded at 95 to 100 points.
First grade—Pure cheese, graded at 90 to 94 points.
Second grade—Pure cheese, graded at 83 to 89 points.
Third grade—Pure cheese, graded at 75 to 82 points.

In grading butter and cheese, the maximum points to be awarded are : Flavour and aroma, 50 points ; texture, including body, grain, and moisture, 30 points ; condition, including colour, salting, packing, and covering, 20 points. An official grade mark is to applied to all export butter and cheese graded at over 89 or under 75 points, as follows :—

Butter and cheese graded at 95 to 100 points—Superfine.
Butter and cheese graded at 90 to 94 points—First grade.
Butter graded at under 75 points—Pastry.
Cheese graded at under 75 points—Below standard.

Impure butter and cheese are not to be graded at all. The exportation of unsound, inferior, or abnormal dairy products, is prohibited, unless the trade description applied to the goods includes the words, "Below Standard."

3. **Mixed Farming.**—Dairying is not now, as formerly, wholly confined to farmers, since many graziers in a large way of business have lately given it their attention. In non-coastal regions it is generally carried on in conjunction with agriculture and sheep-raising, sufficient fodder being grown to carry the cattle through the winter months. Local wants are thus met, and in many places remote from the metropolis well-equipped factories have been established.

4. **Factory System.**—Cream separation and butter-making are often carried on together under the co-operative system. The creation of large central butter factories, supplied by numerous separating establishments or "creameries," has resulted in a considerable reduction in cost of manufacture, since improved appliances, such as refrigerators, may be profitably worked at the larger establishments. The product is also

of a more uniform quality. The number of farmers who adhere to hand processes is steadily diminishing. Formerly the average quantity of milk used per pound of hand-made butter was about 3 gallons, but separator butter requires only about 2.6 gallons.

5. **Butter and Cheese Factories.**—The establishments in the Commonwealth where the manufacture of butter, cheese, and condensed milk was carried on, numbered 550 in 1909. These were distributed as regards the various States as follows:—New South Wales, 181; Victoria, 211; Queensland, 80; South Australia, 53; Western Australia, 3; Tasmania, 22.

§ 2. Milk, Butter, and Cheese.

1. **Dairy Herds.**—Since the drought year 1902, there has been in each State, a general yearly increase in the number of dairy cows. In New South Wales, Victoria, South Australia proper, and Tasmania—as will be seen from the table of cattle and dairy cattle given below—the proportion of dairy cattle to all cattle is high. In Queensland, the Northern Territory of South Australia, and Western Australia, there is a greatly preponderating number of other cattle, dairying not having been established in the tropical regions of the Continent:—

CATTLE AND DAIRY CATTLE, COMMONWEALTH, 1905 to 1909.

State.		1905.	1906.	1907.	1908.	1909.

† Statistics not collected: figures estimated.

2. **Milk.**—The annual quantity of milk produced per dairy cow varies greatly with locality and season, probably reaching as high as 500 gallons, but averaging for the whole of Australia, for all dairy cows and for all seasons, something under 250 gallons per annum. The best yields over a series of years appear to be in South Australia, New South Wales, Victoria, and Tasmania, while Western Australia is below Queensland. In the following table the average yields per cow for 1908 and 1909 are taken from the number of dairy cows who were, during any part of the year, milking. The average given is considerably below that for cows which were yielding during the greater part of the year.

PRODUCTION OF MILK, COMMONWEALTH, 1908 and 1909.

3. **Butter and Cheese.**—The butter output shews, in general, a tolerably steady increase since the drought year 1902, the most marked development being in Queensland. The production of butter reached its highest figures in 1906. In both butter and cheese a falling-off is shewn in some of the States in 1907 and 1908, due to the dryness of the season. There was a recovery in 1909, the cheese production reaching its highest figure. For the five years from 1905 to 1909 the figures are:—

PRODUCTION OF BUTTER AND CHEESE, COMMONWEALTH,

1905 TO 1909.

* Prior to 1908 Tasmanian statistics relate only to the quantities made in factories. † The totals for the Commonwealth here given prior to 1908 are exclusive of Tasmanian butter and cheese made elsewhere than in factories.

4. **Concentrated Milk.**—"Condensed" or "concentrated" milk denotes milk the bulk of which is reduced by evaporation, no sweetening agent being added. When a sweetening agent is added it is called "preserved" milk. Small quantities of such milk have been made, but the industry is at present by no means a large one. No condensed or concentrated milk is made in South Australia, Western Australia, or Tasmania. In New South Wales, Victoria, and Queensland the following quantities are returned for 1908 and 1909:—

CONDENSED AND CONCENTRATED MILK MADE, 1908 and 1909.

Year.	N.S.W.	Victoria.	Queensland.	Commonwealth.
	lbs.	lbs.	lbs.	lbs.
1908	2,399,673	3,308,854	3,935,024	9,643,551
1909	2,400,687	3,487,312	7,038,202	12,926.201

5. **Oversea Trade in Milk, Butter, and Cheese.**—The tables following give the imports, exports, and net exports or imports of butter, cheese, and milk. In each of the five years exports of butter exceeded imports; in four the cheese import was heavier than the export, and this was the case each year with milk.

IMPORTS, EXPORTS, AND NET IMPORTS OF BUTTER, CHEESE AND MILK, COMMONWEALTH, 1905 TO 1909.

1. See definition on page 447. 2. — signifies net imports.

The large quantities of concentrated and preserved milk imported for local use indicate room for development in this industry.

6. **Interstate Trade in Milk, Butter, and Cheese.**—The extent of interstate trade in dairy products, naturally of considerable magnitude, is worthy of statistical presentation. That for butter, cheese, and milk is as follows:—

INTERSTATE TRADE IN BUTTER AND CHEESE, 1909.

State.	Imports from other States of the C'wealth.		Exports to other States of the Commonwealth.		Net Interstate Exports.[1]	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
BUTTER.

MILK AND CREAM—PRESERVED.[2]						
	lbs.	£	lbs.	£	lbs.	£
New South Wales ...	2,583,040	51,522	349,120	7,158	— 2,233,920	— 44,364
Victoria	616,051	12,504	1,796,630	36,457	1,180,579	23,953
Queensland	94,571	1,856	3,883,696	75,188	3,789,125	73,332
South Australia ...	600,292	11,638	437,899	9,356	— 162,393	— 2,282
Western Australia ...	2,203,607	42,865	34,679	721	— 2,168,928	— 42,144
Tasmania	420,862	8,831	16,399	336	— 404,463	— 8,495

1. — signifies net imports. 2. See definition on page 447.

New South Wales and Western Australia are large importers of preserved milk from other States of the Commonwealth, Queensland and Victoria being the chief suppliers. There was practically no interstate trade in fresh milk and cream in 1909.

7. **Local Consumption of Butter and Cheese.**—The total production of butter and cheese, with the net export or import subtracted or added, gives approximately the consumption in the Commonwealth. In the period considered hereunder, 1907 was the only year in which the local supply of cheese was adequate:—

BUTTER AND CHEESE LOCALLY CONSUMED, 1905 to 1909.

Product.	1905	1906.	1907.	1908.	1909.
	lbs.	lbs.	lbs.	lbs	lbs.
Butter ... Total	85,013,391	84,201,904	90,324,640	94,151,872	93,652,376
,, ... Per head of mean population ...	21.2	20.6	21.7	22.2	22.8
Cheese ... Total	13,346,140	14,900,794	13,579,382	15,173,007	15,938,864
,, ... Per head of mean population ...	3.3	3.6	3.3	3.6	3.7

The consumption in 1909 was, therefore, equal to 22.8 lbs. of butter and 3.7 lbs. of cheese per head of mean population, an amount probably unsurpassed anywhere. The consumption of butter and cheese in the United Kingdom is given as 19 lbs. per head, and is therefore only equal to about three-fourths of that of the Commonwealth.

O

§ 3. Pigs, Bacon, etc.

1. **Pigs.**—The pigs in Australasia numbered 43 in 1792; 4017 in 1800; 8992 in 1810; 33,906 in 1821; 66,086 in 1842; and 121,035 in 1851. The figures for each State in subsequent census years, and in the last five years, were as follows:—

NUMBER OF PIGS, COMMONWEALTH, 1861 to 1909.

State.	1861.	1871.	1881.	1891.	1905.	1906.	1907.	1908.	1909.
New South Wales ...	146,091	213,193	213,916	253,189	310,702	243,370	216,145	215,822	237,849
Victoria	43,480	177,447	239,926	286,780	273,682	220,452	211,002	179,358	217,921
Queensland	7,465	32,707	56,438	122,672	164,087	138,282	133,246	124,749	124,803
South Australia	69,286	95,542	120,718	83,797	119,005	112,277	93,605	81,165	81,797
Western Australia	11,984	14,265	22,530	25,930	74,567	56,203	53,399	46,652	47,062
Tasmania	40,841	52,863	49,660	73,520	72,810	42,985	46,704	47,943	55,705
Commonwealth ...	319,147	586,017	703,188	845,888	1,014,853	813,569	754,101	695,689	765,137

The number of pigs was highest in 1904, when for the first time it was over a million; prior to 1899 it had never reached 900,000. That year, the two immediately following, and 1904 and 1905 mark the highest totals. An examination of the States' returns shews remarkable fluctuations. It will be noticed that in no State was the number as high in 1906 as in the preceding year, and in Tasmania alone was the figure for 1907 higher than that for 1906. A similar experience was met in 1908. In several States the falling-off over the three years is very marked. In 1909 a remarkable recovery in the figures is shewn, increases over 1908 being large in New South Wales, Victoria, and Tasmania. The number of pigs per head of population, and the number per square mile, will be found in the tables of live stock, pages 335 and 336.

2. **Bacon and Ham.**—From 1905 to 1908, the production of bacon and ham in the Commonwealth shewed little annual variation. In 1909, however, there was a considerable falling-off. It will be noticed from the table above that the number of pigs in Australia in 1908 was much below the average.

PRODUCTION OF BACON AND HAM, COMMONWEALTH, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
	lbs.	lbs.	lbs.	lbs.	lbs.

1. — signifies net imports.

From 1901 to 1903 there was a considerable net import of bacon and ham, but for the following years there was a large net export. The local production of frozen pork and lard was for each of the years shewn more than sufficient for the local demand.

4. **Interstate Trade in Pig Products.**—The interstate trade in pigs, bacon and ham, frozen pork, lard, etc., in 1909 was as follows:—

INTERSTATE TRADE IN PIG PRODUCTS, 1909.

1. — signifies net imports.

5. **Local Consumption of Bacon and Ham.**—From 1904 to 1909 the production of bacon and ham was sufficient to meet the local demand, and there was a surplus for export, but in 1901, 1902, and 1903 this was otherwise, and considerable quantities were imported.

§ 4. Poultry Farming.

1. **Development of the Industry.**—Until recently, poultry farming as a well organised industry could scarcely be said to exist, although in metropolitan and suburban districts poultry has of course long been kept for the table and egg supplies. The aggregate output, though considerable, represented relatively little value beyond the cost of production, owing to imperfect management. Many farmers also, both wheat-growers and dairymen, have maintained a large poultry stock, erecting poultry yards constructed on modern principles, and feeding from the stubble fields and waste grain with a minimum expenditure in tending. This brought about a considerable addition to the net agricultural or dairying return. The poultry industry during recent years has assumed an independent position among rural industries, notwithstanding that large numbers of poultry runs on wheat and dairy farms are still maintained; poultry farming is also carried on in conjunction with pig farming. In special poultry farms, breeding on scientific principles and a proper arrangement of the runs is secured, feeding and reproduction are technically attended to, and proper shelter is provided either by means of trees or sheds. Poultry experts are engaged by the State Governments to instruct in matters that will amplify the returns. Poultry for consumption is extensively reared, and the egg-producing qualities of the birds have also been greatly improved by careful breeding. Egg collecting circles have been formed in some country districts, to develop, under Government supervision and with Government aid until the organisation is self-supporting, the industry on co-operative lines. A member of the circle is elected to act as

secretary, and he receives all the eggs from the members, tests, packs, and forwards them to the metropolitan depôt for shipment. Only clean and fresh eggs are to be delivered to the secretary under penalty of fine and expulsion from the circle. Another method of collecting and marketing the eggs is through the local butter factories, where eggs are delivered by the suppliers of milk and cream a number of times each week.

2. **Production of Poultry.**—Figures for the yield of poultry products are difficult to obtain. The following values are returned :—

ESTIMATED VALUE OF POULTRY AND EGGS. COMMONWEALTH, 1908-9 and 1909-10.

* Not available. † Excluding Queensland and Tasmania. ‡ Excluding Tasmania.

3. **Oversea Trade in Poultry Products.**—The imports and exports of eggs shew a considerable balance on the side of imports in each of the years 1901 to 1906 and in 1909. In 1907 the export considerably exceeded the import, and in 1908 the imports were greater in quantity, but less in value, than the exports. In 1909, the balance, both in number and value, was on the side of exports. The figures for frozen poultry shew that a considerable oversea trade is carried on.

§ 5. Bee Farming.

1. **The Bee-farming Industry.**—Bee farming, like poultry farming, has ordinarily been an adjunct to agricultural or dairying industries, and can hardly yet be said to have been organised as a distinct industry. The returns collected shew that, while production varies greatly, there is on the whole a fair improvement, to which the large increase in the Western Australian product since 1902 has considerably contributed. The annual average returns of honey from the hives range between 20 lbs. and 600 lbs. per hive.

The value of the export of honey from Australia was only £1541 in 1907, £3361 in 1908, and £2675 in 1909. It is believed that this export could be considerably increased. Australian honey exhibited in the Franco-British Exhibition in London in 1908, obtained

the highest award. It has been proved that there is no eucalyptus flavour in Australian honey, and the prejudice against it on that account is ill-founded.

2. **Production of Honey and Beeswax.**—The particulars of honey production, available up to 1907 for only three States, are as given below :—

NUMBER OF HIVES AND PRODUCTION OF HONEY AND BEESWAX, 1905 to 1907.

Particulars.		1905.	1906.	1907.

§ 7. British Imports of Dairy Products.

1. **Value of Britain's Imports of Dairy Products.**—Great Britain pays annually considerably more than £22,000,000 for imported butter; £7,000,000 for imported cheese; £17,000,000 for bacon and ham; and £1,000,000 for pork.

2. **Butter.**—Australia in 1909 stood fourth in the value of butter imported into the United Kingdom, but the import of other Australian dairy products was inconsiderable.

IMPORTS OF BUTTER INTO THE UNITED KINGDOM, 1909.

Country from which Imported.	Quantity.	Value.	Country from which Imported.	Quantity.	Value.
	Cwt.	£		Cwt.	£
Denmark	1,764,027	10,233,370	Argentine Republic	73,553	392,014

New Zealand ...	278,581	1,472,219			
Netherlands ...	148,567	797,162	Total ...	4,062,812	22,424,962

In October, 1907, a falling-off of imports of Australian butter into Great Britain was noticed, with the result that, three months later, there was a heavy shortage, and a "butter boom" ensued in London, prices rising rapidly, until a limit was reached with 156s. per cwt., the highest recorded for Australasian butter. After a short period of high values in February, 1908, prices steadied at 116s., and then gradually fell to 104s. in the middle of May, when European grass-fed butter was ready for the British market. Prices in London in 1909 were of higher average than in any previous year since the Australian export trade was instituted twenty years ago.

3. **Cheese.**—The value of the British cheese import in 1909 was £6,800,000, of which four and a-half million pounds worth was received from Canada. The import from Australia was practically *nil*. Small experimental shipments were, however, made in 1908 and 1909, and a fair price was realised.

4. **Bacon and Ham.**—Of a total import of bacon and ham valued in 1909 at £16,914,600, Great Britain received goods to the value of £9,010,000 from the United States; £5,802,000 from Denmark; and £1,518,000 from Canada. The British import from Australia was *nil*.

5. **Pork.**—The total value of British imports of fresh pork (including refrigerated and frozen) was £1,023,000 in 1909. Of this the value of Australian products was *nil*, whilst from the Netherlands pork valued at nearly £1,000,000 was imported.

6. **Other Products.**—There is practically no British import from Australia of honey, beeswax, poultry, game, lard, or eggs, but rabbits to the value of £506,000 were received from the Commonwealth in 1909.

§ 8. Graphical Representation of Dairy Production.

Two graphs shewing respectively the increase in dairy production and in the exports of butter will be found on page 360.

SECTION X.

FORESTS, FORESTRY, AND FORESTAL PRODUCTS.

§ 1. The Forests of Australia.

1. **Extent of Forests.**—Although no definite survey of forest lands has been made on a uniform basis for the different States of Australia, the following table gives the results of careful estimates made for each State :—

FOREST RESERVES AND FOREST AREAS, STATES AND COMMONWEALTH, 1909.

State.	Specially Reserved for Timber.	Total Forest Area.	Percentage of State Area.		Percentage of Commonwealth Area.	
			Specially Reserved	Total Forest.	Specially Reserved	Total Forest.
	Acres.	Acres.	%	%	%	%
New South Wales	7,690,771	15,000,000	3.88	7.55	0.40	0.78
Victoria ...	3,989,790	11,800,000	7.10	20.98	0.21	0.62
Queensland ...	3,817,353	40,000,000	0.89	9.32	0.20	2.10
South Australia ...	155,232	3,800,000	0.03	0.66	0.01	0.20
Western Australia	52,900	20,400,000	0.01	3.27	0.003	1.07
Tasmania ...	997,454	11,000,000	5.95	65.56	0.05	0.58
Commonwealth	16,703,500	102,000,000	—	—	0.88	5.35

The actual area of wooded land is probably in all cases much greater than shewn above. For example, that of Western Australia is estimated at 97,900,000 acres; Queensland has probably 143,000,000 acres; and Victoria has a considerable extent of "Mallee" country not included in the above estimate. The basis of estimation for each State in any case cannot be regarded as quite identical. Considerable areas not included as forest lands possess timber of local value.

The absolute and relative forest areas of Australia and other countries are shewn in the table on the next page.

In each of the States areas have been set apart as State forests and "timber reserves," in some cases the reservation being made in perpetuity, in others for a definite period, in others again the reservation may be cancelled at any time. The characteristics of the forest areas of the different States are referred to seriatim.

RELATIVE AREAS OF FOREST LANDS, AUSTRALIA AND OTHER COUNTRIES, 1909.

Hungary	34,775	27.72			

2. **Characteristics of State Forest Areas.**—(i.) *New South Wales.* Great diversity exists in the more dense distribution of timber trees in the coastal region, between the range and the Pacific Ocean. The areas of natural forest, however, are found in nearly every part of the State except the wide plains of the Murrumbidgee, Lachlan, and Darling districts, the level surface of which is chiefly covered with salt bush, scrub, and indigenous grasses, while the tree-growth is, as a rule, confined to belts of red gum, box, sheoak, and myall along the courses of the rivers and their tributaries, and to groves of cypress pine at intervals. The tree-clad regions of the State may be divided into open, brush, and scrub forests. The first class has the widest distribution, being found in every geological formation, and including some of the finest timbers, such as many species of eucalyptus, angophora, and other genera of the natural order of myrtles. Among the hardwoods, red gum usually marks the courses of streams, while on the rough and stony mountain and hill ridges, with their sheltered gorges, are found several varieties of ironbark, blackbutt, tallowwood, spotted gum, grey box, red mahogany, forest red gum, Sydney blue gum, and turpentine. The brush or jungle forests occupy a considerable tract of country between the Dividing Range and the coast. In this region, interspersed occasionally with large Moreton Bay and other figs, fern trees, cabbage trees, and palms, grow some of the most beautiful timbers known for cabinet work and veneers, such as the red cedar, rosewood, silky oak, beech, red bean, beefwood, tulipwood, and coachwood. In addition to these, there are considerable supplies of the colonial or hoop pine, and the brown or berry pine. The scrub forests are represented by the red or black and white varieties of the cypress pine, and many species of acacia and eucalyptus. These are chiefly situated in the western portion of the State, and although the pines and some of the eucalypts are useful for local building and fencing, the bulk of the timber is of little commercial value.

(ii.) *Victoria.* The mountain ranges, principal of which are the Dividing Range and the Australian Alps, constitute the true forest regions of the country, the trees attaining considerable height and girth, and the brush or scrub growth great luxuriance. The lower elevations of the ranges, remote from settlement, are densely wooded to their summits, but the peaks above the winter snow-line are either bare or covered only with dwarfed vegetation. Dense and luxuriant forests characterise the Otway Ranges and Gippsland, south of the Main Divide. The tree-growth in the Grampians consists chiefly of stringy-bark, white gum, grey and yellow box, and white ironbark, with some red gum and wattle. In the Pyrenees there are more valuable hardwoods, chiefly blue gum and messmate, with stringy-bark, grey and yellow box, red and white ironbark on the lower levels. In Wombat Forest, extending along both sides of the Dividing Range from Creswick to Mount Macedon, the timber is almost wholly young messmate of good quality, with peppermint and swamp gum. Further eastward along the range messmate

and stringy-bark prevail, with grey and yellow box and ironbark on the low country. In Delatite, and in the lower ranges of the Australian Alps generally, the timber increases in height and girth, and includes blue gum, messmate, and peppermint of fine quality, with ribbon gum, woollybutt, and silvertop on the higher levels, and grey and yellow box with stringy-bark along the lower slopes and valleys. The northern plains, extending westward from Wodonga to the Grampians, are thinly covered with open forests, the limits of the prevailing trees being defined in clearly-marked belts. Thus the main belt of red gum follows the course of the Murray and extends along the valleys of its tributaries, but is interspersed at intervals near the river with sand ridges bearing grey box and cypress pine. Southward of this belt, and between the streams, the prevailing trees are grey or yellow box, with red and white gum and stringy-bark on the low ridges. From Chiltern a line drawn westward through Rushworth, Heathcote, Bendigo, Dunolly, and St. Arnaud marks a long belt of ironbark, of both red and white varieties, interspersed with stringy-bark and grey or yellow box. In the north-west, between the Wimmera Plains and the Murray, the dwarf eucalypt known as the mallee scrub covers the plains, with belts of cypress pine at intervals, and red gum and box along the courses of streams and lakes. The south-west is poorly timbered, the prevailing tree being stringy-bark, with red gum along the streams, and white gum, box, lightwood, and honeysuckle on the plains and undulating country. In the Otway district are valuable timber forests; over 280 square miles are covered with blue gum, spotted gum, messmate, and mountain ash or blackbutt of fine quality, with some stringy-bark and white gum, while the valleys between the ridges bear valuable timber of fine grain such as blackwood, beech, satin box, olive, sycamore, and pencil cedar. Eastward of Melbourne, on the watershed of the Yarra, there is another fine forest region, the trees consisting of spotted gum, mountain ash, messmate, and white gum, with blackwood, beech, sassafras, and silver wattle in the valleys. The ranges of Southern Gippsland bear blue gum, spotted gum, mountain ash, and yellow stringy-bark, while in the western and northern portions of the same district grow the mountain stringy-bark, spotted gum, blackbutt, and the Gippsland mountain ash or silvertop, with woollybutt and ribbon gum on the higher elevations of the Main Divide. In the eastern part of the district, stretching from the Lakes towards the Genoa River, are found the Bairnsdale grey box, the Gippsland mountain ash or silvertop, white and yellow stringy-bark, red ironbark and bloodwood. The prevailing timber in this part of Gippsland is the white stringy-bark, which forms large forests from the foothills of the Divide to the sea-coast.

(iii.) *Queensland.* The extensive forests of Queensland yield a great variety of woods, esteemed for their strength, durability, or beauty. The principal merchantable timbers lie between the eastern seaboard and the Great Dividing Range, which runs roughly parallel to, and about 200 miles from the coast. At about the 21st parallel of south latitude, a spur runs westward nearly to the South Australian border, and bears on its crests and slopes much valuable timber. Forests are also found on the Denham, Johnstone, and Gilbert Ranges. The principal eucalypts are ironbark, grey, spotted, and red gum, blackbutt, and turpentine; Moreton Bay, brown, and Bunya Bunya pines represent the conifers; and red cedar, beech, tulipwood, rosewood, red bean, and black bean are among the brush timbers of fine grain. On the extensive plateaux west of the Divide there is but little timber; and towards the vast basin of the interior, the low ridges and banks of the short water-courses bear a growth of stunted eucalypts such as the gimlet gum, the desert sheoak, acacias, and mallee.

The chief supply of mill timber (eucalypts, Moreton Bay pine, etc.) is in the southern coastal region, from the New South Wales border as far north as Gladstone. In the regions between Rockhamption and Ingham the supply is not so plentiful; but northward of the latter town, the red cedar, kauri pine, and black bean are luxuriant. Large supplies of these valuable trees are found on the Barron Valley reserves, and in other localities between Ingham and Port Douglas. Inland from this zone of heavy forest is another, less densely timbered, bearing cypress and other pines, ironbarks and acacias. In the south-western regions of the State the cypress pine flourishes.

(iv.) *South Australia and Northern Territory.* The principal forest districts of South Australia proper are restricted largely to the hill ranges in the neighbourhood of Adelaide and Spencer Gulf, and the trees have not the fulness and lofty growth of those of the eastern and south-western borders of Australia. Red gum is widely distributed, though never far from water; and there are belts of timber where, from the general appearance of the surrounding country, they would hardly be expected. The stringy bark has its habitat principally in the hills, and is but rarely seen on the plains; other useful hardwoods are the white and blue gum and peppermint. Blackwood (in demand for cabinet work) is common in the south-east and along the eastern border, but is rare near Adelaide. Wattle also is cultivated for its gum and bark. Sheoak appears in districts less thickly forest-clad, and ti-trees inhabit low, damp situations. The sandalwood tree grows luxuriantly in Yorke Peninsula. On the great plains of the interior there is little vegetation, patches of forest country being occasionally found, while here and there fertile spots of grass land, but generally not of large extent, are met with. Groups of stunted shrubs, and small scattered trees—sheoak, eucalyptus, and wattle—mostly of limited extent, rise from the plains like islands.

In Central and Northern Australia there is little forest, until the hills where the waters of the northern river system take their rise are encountered. On the plains to the north of the McDonnell Ranges there is a thin clothing of mulga scrub, with gum trees marking the water-courses. Occasionally patches of heavier gum forests are met with. Stirling Creek is lined with the bean tree. The mulga scrub thickens, and with stunted and mallee gums furnishes a uniform vegetation as far north as Powell's Creek. Here, with red gums still lining the water-courses and flooded gums on the flats, the vegetation becomes more varied. On the ranges pines, fig trees, and orange trees (*capparis*) occur. Heavy timber clothes the uplands about the Roper River, and the tableland which stretches across the territory at a distance from the coast of from 30 to 100 miles bears large paperbark trees, Leichhardt pines, and palms. On the higher steppes there is also abundance of bloodwood and other varieties of eucalyptus, besides other kinds of trees. Many prominent fibre plants are native to the territory.

(v.) *Western Australia.* The coastal timber belt runs along the western shore from the Murchison River to the Leeuwin, and along the southern shore from that point to beyond Albany, clothing with trees the Victoria, Herschel, Darling, and Stirling Ranges. Pre-eminent among the trees of this State for strength and durability are the jarrah and karri. A great belt of the former stretches eastward of the Darling Range to upwards of 100 miles in breadth, with a length of 350 miles. Between this region and the coast are two well-marked belts of tuart and red gum. In the extreme south-west of the State the main karri belt stretches from Augusta to Albany. Eastward of the jarrah belt a strip of white gum encloses a narrow belt of York gum, its southern extremity almost reaching the coast, while its northern limit extends even beyond that of the jarrah tract. Still further east the forest thins, a poorer growth of white gum giving place to brushes, scrub, and dwarf trees. Along the shores of the Great Australian Bight there are stunted eucalypts, with casuarinas and wattle. In the north-west, on the King Leopold and St. George's Ranges, there are forest areas, but from Dampier Land to below Shark Bay there is no coastal forest, and in many cases the stunted bush and scrub lands infringe on the sea-coast.

(vi.) *Tasmania.* The Tasmanian forest consists chiefly of eucalypts, widely distributed over the island; and of conifers, such as the Huon, the King William, and the celery-top pines, flourishing in the western and southern parts. The principal hardwoods of the eucalypt family are the blue gum, stringy bark, peppermint, and silvertop ironbark, while among woods of fine grain are the blackwood, beech or myrtle, sassafras, native cherry, and sheoak. Black and silver wattles also inhabit various parts of Tasmania.

3. **Distribution of Timber in the Commonwealth Generally.**—The more conspicuous timber regions of Australia as a whole are the eastern and southern portions, including Tasmania, and, again, the south-western portion northwards and eastwards from Cape

Leeuwin. In regard to distribution, on the eastern side of the continent the largest timber is found on the crests and coastal slopes of the mountain ranges, but in the south-west, in addition to the vegetation between mountains and sea, a large area of forest stretches inland from the coastal ranges. The hills encircling Adelaide and Yorke and Eyre Peninsulas also bear good forest. The Kimberley district is timbered, and in the Northern Territory and round the shores of the Gulf of Carpentaria there are considerable forest areas. But the coastal regions of West and North-west Australia, except in the case of the districts named and the shores of the Great Australian Bight and Encounter Bay, are devoid alike of mountains and forests. The interior of the continent is thinly timbered, or almost destitute of vegetation, an occasional limited area of forest, generally in connection with mountain systems (though these themselves are scarce), acting as a relief in the landscape, which but for these presents to the eye all the features of a dreary and arid waste.

4. **The Timber Districts in New Zealand.**—Milling timbers occur chiefly in the Auckland district. Kauri, the finest New Zealand timber, is only found here; its gum is of considerable commercial value, and gives employment to large numbers of men. Totara, kahikatea, and rimu growths are also extensive. Other trees in less demand are tawa, beech, and puriri. The bulk of the timber in the Hawke's Bay district is rimu, with totara in lesser quantities. In Taranaki, rimu chiefly, kahikatea and totara are available for use. In Wellington, one-third of the available timber is rimu, the rest consisting of matai and tawa, with a little kahikatea and totara. Two-thirds of the timber in Marlborough is rimu, the remainder is composed of kahikatea, matai, and beech. In the Nelson district, four-fifths of the available milling timber is brown beech; there are also quantities of rimu, mostly in inaccessible country. Westland is the mainstay of the South Island; four-fifths of its milling timber is rimu, with kahikatea and totara making up the remainder. In Canterbury the chief timber is beech. The forest area of Otago is very small; rimu is the chief timber found, the others being matai and beech. In Southland there is a large quantity of milling timber, one-third of which is rimu, one-third beech, the remainder comprising kahikatea, matai, and totara.

§ 2. Forestry.

1. **Objects.**—Economic forestry, aiming at the conservation of forestal wealth by safeguarding forests against inconsiderate destruction, and by the suitable re-afforestation of denuded areas, is essential to the preservation of industries dependent upon an adequate supply of timber, and to the perpetuation of a necessary form of national wealth. Though in Australia large areas of virgin forests still remain, the inroads made by timber-getters, by agriculturists, and by pastoralists—who have destroyed large areas by "ringbarking"—are considerable; and it is not unlikely that climatological changes are caused thereby. For it would appear that variations in climate, and alternating periods of drought and flood, desiccation and erosion of soil, with loss or diminution of fertility, have resulted from forest denudation in countries bordering the Mediterranean. In many of the States of America diminished rainfall is said to have followed the destruction of large forest areas, and in Mauritius, clearing the hills of timber destroyed the even distribution of rainfall, causing floods and soil denudation. On the other hand beneficial consequences appear also to have followed on the planting of trees on denuded lands, or along encroaching coasts, and it is obvious that a forest covering tends to beneficially regulate the effects of rainfall.

Successful planting of exotics in various parts of the Commonwealth has demonstrated that the Australian climate is suitable for the cultivation of a large number of the most valuable and beautiful of the world's timber trees.

2. **Forestry Departments.**—Each State of the Commonwealth, excepting Tasmania, has organised a separate forestry department or branch of service specially charged with

forestal matters. Forest improvement work is carried on, areas of young forest being cleaned up by the felling and removal of stunted, diseased and suppressed growth, the burning of debris and the making of fire breaks. Provision is made for effective patrols in forest districts, to check the ravages caused by fires, often, it is believed, caused through carelessness. The following table gives a comparative indication of the attention paid to the subject, the particulars being those for 1909:—

STATE FORESTRY DEPARTMENTS, 1909.

Particulars.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	West. Aus.	Tas.
Designation of officer in charge	Director of Forests	Conservator of Forests	Director of Forests	Conservator of Forests	Insp.-Gen. of Forests.	*

3. **Sylvicultural Nurseries and Plantations.**—The growing recognition of the necessity for systematic sylviculture has led to the creation in most of the States of a number of sylvicultural nurseries and plantations.

(i.) *New South Wales.* In this State a small forest nursery is maintained at Gosford, between Sydney and Newcastle, from which young trees are widely distributed throughout the State, the bulk being issued to municipal councils and farmers, and for planting in parks, town reserves, hospital grounds, and cemeteries. Large sums have been distributed by the State in improvement fellings and the thinning out of young timber, principally in the Bogan, Narrandera, and Murray River districts. Over a quarter of a million acres of pine forest and red gum have been so treated.

(ii.) *Victoria.* In Victoria there are four forest nurseries, the largest being situated at Macedon, the smaller at Creswick, Havelock, and Tintarra. At Macedon the arboretum contains many fine specimens of the conifers and deciduous trees of Europe, America, and Asia. While the bulk of the yields are retained for the State plantations, there are considerable distributions for public parks and recreation reserves, "Arbor-day" planting of streets and roads, municipal councils and water trusts, mechanics' institutes and libraries, cemeteries, State schools, and other institutions, and farmers and private persons, the applications of those in dry districts receiving first consideration.

Among the principal native hardwoods raised and distributed are blue gum, sugar gum, and tallowwood, with some jarrah for the plantations; among conifers, the Monterey, Corsican, Black Austrian, Canary Island, Maritime, and Aleppo pines, the blue pine of India, the American white and yellow pines, with several spruces; and among other exotics, peppers, Indian cedars, oaks, elms, planes, silver poplars, sycamores, and chestnuts. Great success has attended the establishment of a new nursery for conifers at Creswick.

The principal forest plantation is along the lower slopes of the You Yangs, near Geelong, where about 1000 acres have been enclosed and planted with eucalypts and conifers. Good results have attended the cultivation of the broad leaf and feather leaf wattles.

At another plantation, viz., at Sawpit Gully, among the foothills of the Dividing Range, near Creswick, conifers are chiefly grown. Minor plantations of blue gum and sugar gum are established at Havelock and Majorca, near Maryborough; and at Mount Macedon, the principal species of oak, elm, ash, plane, sycamore, pine, spruce, eucalypts, and willows are planted. During 1909 additional planting of conifers was carried out at Creswick, Frankston, and Warrnambool, and a large area was sown with tan-yielding wattles at You Yangs.

The principal work of the year in forest reserves and plantations has been improvement thinning and felling, planting, fencing, and construction of dams. The planted area of some of the older plantations has been enlarged.

Officers of the Lands and Forests Departments have made joint inspections of portions of reserved forests, to discover what areas, suitable for settlement, can be excised from the forest and made available. As a result, the forests will suffer a further loss of 20,000 acres. The officers have also recommended the addition of large areas to the State reserves.

Recent legislation makes provision for the stricter control of grazing in forests, and for more efficient protection from fire.

(iii.) *Queensland.* In Queensland there is a forest plantation of 310 acres. The questions of replanting and further reservation have lately been attracting attention, and the prominence given to them will probably greatly influence forest policy.

(iv.) *South Australia.* In this State there are several plantations, the most important being at Bundaleer (7377 acres) and Wirrabarra (3633 acres), situated some 150 and 190 miles respectively to the north of Adelaide in the direction of Spencer Gulf. The total area of the enclosures for planting and natural regeneration of the indigenous

timber was on 30th June, 1910, 14,898 acres. Of the reserved area, about one-fifth only, it is said, ever bore timber of commercial value, the remainder having been covered for the most part with stunted vegetation. Owing to the absence of high mountain ranges and the dryness of the climate, the forests are not dense. Special attention has been given in South Australia to sylviculture, and great success has been achieved in clothing areas of treeless plain and hillslope with belts of young trees, such as blue, sugar and red gum, and white ironbark. In some parts the Tasmanian blue gum (*E. globulus*) flourishes, but great success has also been attained with the sugar gum (*E. corynocalyx*), a tree indigenous to the State itself. It is found chiefly in the Flinders Range, and used for railway sleepers, telegraph poles, coachbuilding, and in wharf and jetty construction. Two other eucalypts found in South Australia, the white ironbark (*E. leucoxylon*), known locally as "blue gum," and the grey box (*E. hemiphloia*) furnish strong, tough, and durable timber, inlocked in grain and suitable for the same purposes as sugar gum. The common flooded variety of red gum, which has a fairly wide distribution, being found on clay flats and along streams and water-courses, has also been grown in the plantations, but not with the same success as sugar gum. Among conifers which have been grown with fair success are the Monterey, the Maritime, Aleppo, and Stone pines. The Monterey pine (*P. insignis*) outstrips all other trees in growth, and its timber, though softer than other first-class pines, has been utilised for deal tables, packing cases, picket fencing, shelving, and generally for purposes where common deal is useful. The Maritime, Aleppo, and Stone pines are naturally of slower growth. In Europe they furnish useful timber, but in these plantations have not yet reached an age suitable for utilisation. The upright poplar (*P. fastigiata*) growing well over a large area, serves for packing cases, flooring boards, etc. The locally-grown American ash (*Fraxinus americana*) has been used in coachbuilding work, and compares well in quality with the imported American ash. The area suitable for its cultivation in South Australia is, however, very limited, as it requires favourable conditions of soil and climate.

During the last twenty-seven years the Forest Department has issued very large numbers of young plants to the public free of charge, for wind breaks, avenues, and for the shelter of homesteads and buildings generally, over seven million trees having been so distributed. Formerly, bounties were paid under the Forest Act for the encouragement of private persons in planting timber trees.

A substantial increase in the amount voted for 1909-10 has enabled great progress to be made in planting in forest reserves, and a much larger area is now planted than has been the case for many years past. It is anticipated that on completion of the planting season nearly a thousand acres will have been planted. Plans have been prepared for re-afforestation by natural regeneration of a large area in the Penola State forest, under a thorough system of fire protection.

(v.) *Western Australia.* A State sylvicultural nursery is established at Drake's Brook, on the south-western railway, the site chosen being a ti-tree swamp, exotic trees of temperate climates being raised. The planting of the Monterey, Maritime, Aleppo, and Canary Island pines, the blue pine of the Himalayas (*P. excelsa*), the Indian cedar, Lawson's cypress, several kinds of poplar, the Virginian catalpa, white cedar, and American ash has been successful. A large number of pepper trees and sugar gums were raised, chiefly for shade purposes. The trees are sold or given away to settlers, being distributed chiefly in the goldfields region and other districts with little natural forest.

There are also forest plantations—for conifers at Bunbury, for Australian wattles at Spencer's Brook, and for the indigenous sandalwood at Meckering. The planted areas are flourishing, the trees making very healthy growth.

(vi.) *Tasmania.* There are at present only two small experimental plantations. In the State nursery a considerable area is being planted with softwoods.

Particulars regarding nurseries and plantations in 1909 are given hereunder:—

SYLVICULTURAL NURSERIES AND PLANTATIONS, 1909.

Particulars.	New South Wales.	Victoria.	Q'land.	South Australia.	Western Australia.	Tasmania.
Expenditure on plantations and upkeep of sylvicultural nurseries	£808	£4279*	nil	£14,748	£1039	nil
No. of persons engaged in nurseries	8	22	nil	16	5	nil
No. of sylvicultural nurseries ...	1	3	nil	7	1	1
Area of sylvicultural nurseries ...	85 ac.	54 ac.	nil	7 ac.	17 ac.	3 ac.
No. of forest plantations ...	2	10	1	107	3	2
Area of forest plantations ...	100 ac.	10620 ac.	310 ac.	9684 ac.	300 ac.	2 ac.

* Including improvement work in State forest. † There are no forest nurseries issuing trees in Queensland, but a small number of economic and ornamental trees are issued by the Department of Agriculture.

4. **A Forestry School.**—A suitable building, with adequate grounds, has been purchased at Creswick for the establishment of a School of Forestry. The site is near the State plantation and nursery. It is intended to give class-teaching at the school, but the principal aim of the Forest Department will be to keep practical work in the foreground. The principal class subjects, in addition to theoretical forestry, are botany, geology, physics, and land surveying, while in outside work trainees will have regular teaching and experience in the preparation of seed-beds, seed-sowing, propagation, planting out, pruning, the general care and improvement of plantations and natural forests, and the conversion of timber to the best advantage. The desire is to catch the prospective forester young and give him a thorough training in all branches of the work. Facilities will also be afforded to members of the present forests staff to qualify in special subjects by attending winter classes. The school will probably be opened early in 1911.

In September, 1910, an Instructor of Forestry was appointed by the South Australian Government, to assist the Conservator in forest inspection, and particularly to conduct a course in forestry at the Adelaide School of Mines.

§ 3. Commercial Uses of Principal Australian Timbers.

The uses of the more important of Australian timbers are many and various. Four varieties of ironbark, viz., white or grey (*E. paniculata*), narrow-leaved (*E. crebra*), broad-leaved (*E. siderophloia*), and red (*E. sideroxylon*) are largely used for public works, preference being given to the white and narrow-leaved varieties. These timbers are used extensively in the building of bridges and culverts, for railway sleepers and fencing posts, and for framing, naves, spokes, poles and shafts in carriage and waggon building. Ironbark beams are of great strength, hence it is largely employed for girders and joists of upper floors, especially in stores for heavy goods.[1] Another red ironbark (*E. leucoxylon*), heavy, dense, and strong, is greatly valued for bridge beams and piles. Tallowwood (*E. microcorys*) is strong, heavy, very durable, not easily split, and turns and planes well. It is used for bridge-decking, house-flooring (being peculiarly suitable for ballrooms), girders, piles, and fencing posts, and especially for paving blocks, giving even and regular wear under heavy traffic. Even better in this latter regard is blackbutt (*E. pilularis*), a fine hardwood for house and ship building, as well as street paving. Grey gum (*E.*

1. Ironbark girders do not burn rapidly and often stand a fire when iron girders yield through the effect of the heat.

propinqua), makes excellent railway sleepers, and is used for felloes and spokes in coach building. It makes very durable fencing posts, and is also sometimes split for shingles. Murray red gum (*E. rostrata*), the common river gum of all the eastern States, is one of the best hardwoods in contact with the ground, being largely used for poles, house foundations, wood paving, and railway sleepers. It is also extensively cut for mining shafts and public and municipal works. The forest variety of red gum (*E. tereticornis*) serves the same purposes as the river red gum. White mahogany (*E. acmenoides*) is used for posts, poles, girders, and similar classes of work, being an exceedingly durable timber. Red mahogany (*E. resinifera*) is largely employed for general building work, street paving, fencing, and weatherboards. It is very durable and hardens greatly with age. Grey box (*E. hemiphloia*) is very durable in contact with the ground, and is hence used for railway sleepers (lasting from thirty to thirty-five years in the track), telegraph poles, mine props, fence posts, piles, girders, and for heavy framing and naves, wheel cogs, shafts, dray poles, spokes, etc. Bairnsdale grey box (*E. bosistoana*) serves similar purposes. Brush box (*Tristania conferta*), another hard and durable wood, is used for tram-rails, bullock yokes, tool handles, planes, etc. Sydney blue gum (*E. saligna*) is greatly valued by shipwrights and wheelwrights, and furnishes ships' planks, felloes of wheels, etc. It is also used for buildings, and makes very durable paving blocks. Woollybutt (*E. longifolia*) is used for house building, fencing, felloes, spokes, and wheelwrights' work generally. Being durable in contact with the ground, and resistant to heavy traffic, it is also used for street paving. Spotted gum (*E. maculata*) is one of the best hardwoods for bending, even when cold, and is therefore specially valuable in wheelwrights' and coachbuilders' work for poles, shafts, crosspieces, naves, and spokes; also for framing and house building, tram rails, ship planking, decking of bridges, and wood paving. Turpentine (*Syncarpia laurifolia*) is of great durability in the ground or under water, being used for piles or jetties, wharves, bridges, pillars and girders of buildings, wood paving, and hewn posts and rails. Yellow stringy-bark (*E. muelleriana*) is chiefly used for jetty and pier work, and for fencing posts. Blue gum (*E. globulus*) is a valuable timber with straight, symmetrical bole, used for upper timbers and decking in jetty and bridge work, bridge piles, shafts, felloes, spokes and frame work of vehicles, and in general building and construction. Spotted gum (*E. goniocalyx*) furnishes a hard, heavy, and durable timber, similar in appearance to blue gum, and serving the same purposes. Yellow box (*E. melliodora*) bears a large quantity of blossom, and hence is a favourite tree with beekeepers. Its timber is used for piles and posts, squared beams, and stringers for bridges. Messmate (*E. obliqua*) is largely sawn by mills for weatherboards, studs, rafters, joists, etc., and is also used for railway sleepers and fencing posts. Stringy-barks (*E. macrorrhyncha*, *E. capitellata*, *E. piperita*) are sawn by mills into ordinary building timber, and split by settlers into posts and rails and rough building material. Mountain ash (*E. amygdalina regnans*) is sawn into building material, and is also split into palings, shingles, rails, and mining laths. Silvertop (*E. sieberiana seu virgata*) called also Gippsland mountain ash, green top, and white ironbark—is used for ordinary building purposes, and for fencing rails and rough construction. Sugar gum (*E. corynocalyx*) is held in high repute on account of its toughness and durability, and is chiefly used for railway sleepers, telegraph poles, coach building, and in wharf and jetty construction. White or manna gum (*E. viminalis*) is not a good weather timber, but is suitable for interior construction, such as house frames and floors.

The pre-eminent timber trees of the West are jarrah (*E. marginata*) and karri (*E. diversicolor*). Jarrah is in great request for piles in jetty and bridge construction, and for railway sleepers and street paving. It also furnishes a favourite material for boat-building, fencing, and rough furniture, and makes excellent charcoal. Karri is heavy, dense, elastic, and tough, not so easily wrought as jarrah, and used for bridge-decking, flooring, planking, spokes, felloes, shafts, and street-paving. Tuart (*E. gomphocephala*) is exceedingly strong and tough, suitable for the framework of railway waggons, bridge supports, buffers, keelsons, shafts, wheelwrights' work, and generally for all purposes where great strength and hardness are necessary. The red gum (*E. calophylla*) is a fine shade tree, and is valued for the shelter it affords to cattle and sheep.

Its timber, however, is not held in much esteem; but in short lengths it is employed for wheelwrights' work and agricultural implements. Its gum or kino has medicinal properties, and is used locally for tanning hides. Wandoo (*E. redunca*) is used for fencing, wheelwrights' work, and railway buffers and sleepers. The blackbutt (*E. patens*) York gum (*E. loxophleba*), and yate (*E. cornuta*) of the West are largely used for fencing, building, and rough construction.

The Moreton Bay or hoop pine (*Araucaria cunninghami*) is used for interior work (flooring, ceiling, and lining boards) and for packing cases and butter boxes. Brown pine (*Podocarpus elata*) is also used for interior work, and for bridge, jetty, and pier piles. Cypress pine (*Callitris*), including red or black pine (*C. calcarata*); Murray pine (*C. verrucosa*), Port Macquarie pine (*C. macleayana*), and the Richmond River cypress pine (*C. columellaris*) are used for buildings liable to attacks of white ants, being strongly resistant to these pests. Cypress pine is also suitable for bridge decking and makes fine fuel. Red cedar (*Cedrela australis*) furnishes timber of great beauty; it is easily worked and very durable, and is used for furniture and cabinet-making, doors, panelling, and interior fittings generally. Rosewood (*Dysoxylon fraserianum*) is easily wrought, and is used for furniture, turnery, carving, cabinet work, mouldings, planes, window joints, house fittings, and wine casks. Red bean (*Dysoxylon muelleri*) has a finely-figured grain and is an excellent furniture wood. White beech (*Glemina leichhardtii*) is durable and easily worked, and is in great request for decks of vessels, furniture, picture frames, carving, flooring, house-fittings, vats, casks, and general coopers' work. Silky oak (*Grevillea robusta* and *Orites excelsa*) is also in request for coopers' work, and makes handsome furniture and wainscoting. The silky oak has also been used for butter kegs, buckets, churns, etc., and makes good butter boxes for the local markets. Black bean (*Castanospermum australe*), or Moreton Bay chestnut, is used for furniture, cabinet-making, and gun stocks. Tulip-wood (*Harpullia pendula*) is highly esteemed for cabinet-work, being used for door panels, dadoes, and billiard tables. Coachwood (*Ceratopetalum apetalum*) is suitable for boat-building, cabinet work, and coach-building. Kauri pine (*Agathis palmerstoni*) gives a light, strong, and durable timber, and is used for general building and construction, wainscoting, furniture and joinery, railway carriages, and ship-decking. Blackwood (*Acacia melanoxylon*) is very strong and durable, diminishing, however, greatly in weight in seasoning, though shrinking very little in volume. Figured blackwood is a beautiful timber: it is used for furniture, such as billiard tables, chairs, secretaires, casings of pianofortes and organs, and general cabinet work; dadoes, panelling of railway carriages, boat-building, picture frames, wheel naves, gun stocks, walking sticks, and a great variety of useful and ornamental purposes; it is also split into staves for wine and tallow casks. Evergreen beech (*Fagus cunninghami*) yields also a handsome timber, used for furniture, sashes and doors, light joinery, wood-carving, picture frames, and cog-wheels. Huon pine furnishes a fine, strong, and light timber; it is almost indestructible in water, and hence is largely used for boat planking; its beautiful grain brings it into request for furniture, panelling, and wainscoting. The King William variety is very tough, being used for racing sculls; it is also a favourite timber in joiners' work. Celery-top pine is strong and heavy, suitable for furniture, flooring, house frames, coopers' work, and masts. Other Australian brush timbers of minor importance are sassafras (*Atherosperma moschata*), used for saddle-trees and boot lasts; and satin box, sycamore, olive, and pencil-wood, giving woods of beautiful grain for parquetry, veneers, carving, and picture frames. The sandalwood of Western Australia (*Santalum cygnorum*) is a very valuable forest product, and has been exported in varying amounts during the last fifty years.

As aids in the development of Commonwealth industries, the Government is experimenting with Australian woods for rifle stocks, telephone switch boards, etc. It has also made available a sum of money for the seasoning and storing of Australian timber. It is intended to establish seasoning depôts at the Federal Capital, and also at the principal centres in the various States, whence contractors will be able to obtain timber at scheduled rates. Other timber seasoning works have been established by private enterprise.

§ 4. Forestal Industries and Production.

1. **Timber.**—The returns for quantity and value of timber cut and sawn, as given by the States Forestry Departments, are at present very incomplete. Owing to this fact the figures given hereunder are, in some cases, necessarily merely estimates.

QUANTITY OF LOCAL TIMBER SAWN OR HEWN IN EACH STATE OF THE COMMONWEALTH DURING THE YEARS 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
	Sup. feet.	Sup. feet.	Sup. feet.	Sup. feet.	Sup. feet.
New South Wales	112,580,000	119,337,000	122,998,000	123,152,000	134,070,000
Victoria	47,635,358	51,103,000	55,873,000	54,602,000	50,000,000
Queensland	73,930,279	82,901,846	91,752,000	100,760,000	108,391,000
South Australia	155,662	130,763	143,000	436,000	240,500
Western Australia	137,250,340	136,294,697	110,395,000	165,766,000	171,825,000
Tasmania...	40,273,429	39,498,697	35,228,000	44,335,000	45,035,000
Commonwealth	411,825,068	429,166,003	416,389,000	489,051,000	509,561,500

The only States for which an annual return is furnished for the value of locally sawn or hewn timber are South Australia and Tasmania. The values for South Australia for the years 1901 to 1909 are respectively, £23; £154; £413; £400; £340; £230; £815; £1084; and £411. For Tasmania the values for the years 1901 to 1908 are respectively, £117,734; £62,573; £89,227; £92,102; £75,817; £110,689; £93,762; £138,492. The estimate for New South Wales, 1901 to 1906, is £4,050,000; for 1907, £1,440,000, for 1908, £763,241; and for 1909, £801,456. For Victoria, the output of timber, from forest sawmills only, was £153,309 in 1906; £181,590 in 1907; £177,460 in 1908; £189,130 in 1909. The output of Western Australian sawmills was valued at £5,268,235 for the years 1901 to 1907; £763,241 in 1908; £1,105,108 in 1909. For Queensland, for 1908, £665,350; for 1909, £736,578.

2. **Forest Produce.**—Estimates have been made of the total value of forest production, but these must be regarded as mere approximations. Many of the items are very difficult, and some impossible, to obtain. Large returns are credited to firewood, but these have been omitted altogether, since estimates are subject to a wide range of uncertainty.

The Forestry Department of New South Wales estimates that the production in the seven years 1901-7 averaged at least £685,000 per annum. For Victoria the Government Statist gives the following figures:—1904, £230,567; 1905, £206,725; 1906, £217,569; 1907, £244,170; 1908, £234,154; 1909, £255,650. This is exclusive of hewn timber. No figures on a similar basis are available for Queensland. The estimates for South Australia for 1901 to 1908 are £187; £354; £590; £665; £610; £440; £1086 and £1628. Western Australia averages for the seven years 1901-7, £984,264. Tasmania supplies the following estimates for the years 1901 to 1906, viz., £152,102, £83,943, £114,227, £119,477, £94,987, £126,514.

§ 5. Oversea Trade.

1. **Imports.**—The timber imports are shewn according to countries of origin in the table below. Prior to 1908 these figures had been tabulated according to countries whence imported, and were so published in the previous issues of the Year Book. They are now presented in the improved form.

IMPORTS OF DRESSED TIMBER, COMMONWEALTH, 1906 to 1909.

* Quantities are not included in classes not measured in super. feet.

2. **Exports.**—The quantity and value of undressed (sawn) timber exported from 1905 to 1909 is given below, the countries of destination being also shewn.

In the year 1905 the largest quantity of undressed timber was exported. The year 1907 shewed considerable decrease from previous years, both in quantity and value, but the export was again heavy in 1908 and 1909.

SECTION XI.

FISHERIES AND PISCICULTURE.

§ 1. Commercial Fisheries.

1. **Early Fishing Excursions of Malays.**—Economic fisheries in Australia date back to a period long before the exploration of the northern and north-western shores of the continent by Tasman and Dampier. The Malays of Macassar, in their proas, made fishing excursions amongst the reefs and shoals skirting the coast, collecting and curing trepang and bêche-de-mer, a practice continued up to the present time. They arrive ordinarily at the beginning of the north-west monsoon, and return to Macassar after a few weeks, as the south-east monsoon sets in. In addition to collecting trepang and bêche-de-mer, the Malays barter rice, tobacco, bright coloured handkerchiefs, etc., for tortoise-shell, pearlshell, and seed pearls collected by the aborigines.

2. **Fish Stocks.**—Australasia, extending from 10° to 45° south latitude, possesses an abundant and varied fish fauna, which embraces both tropical and temperate varieties and includes destructive, as well as edible species. In rivers and lakes both indigenous and imported varieties thrive. The latter have been introduced and acclimatised for industrial and sporting purposes by Governments and angling societies. Exploitation of the fishing areas—for some classes of fish for the whole year, for others during the breeding season only, or until a certain size is attained—is, where necessary, expressly forbidden; proclaimed localities are closed against net-fishing, and a minimum size of mesh for nets is sometimes fixed. The sea-fishermen in some districts have made regulations in their own interests for the purpose of controlling the market supply, and these they rigorously observe.

3. **Economic Fisheries.**—Australia's food fishes, though abundant, have not led to the development of an industry of national importance, though fresh and salt water fisheries pay handsomely in other countries, and could no doubt do so in Australia. It has been authoritatively asserted that "The collection and distribution of the knowledge of the world's work in fish-culture would make an acre of water more valuable than an acre of land, and the toilers of the sea could reap manifold their present harvest." This would involve also better arrangements for the distribution of fish than exist at present. Official reports state that the possession of scientific knowledge by the fishermen would greatly benefit the industry.

4. **Lake and River Fishing.**—Lake and river fishing take even lower industrial rank than marine fishing, though local catches furnish on the aggregate a not inconsiderable amount of food supply.

5. **Distribution of Supplies.**—The economic arrangements as to distribution impose at present serious difficulties on the development of fishing generally, since there is a wide divergence between the price paid by the consumer and the return received by the

producer. Municipal oversight has been undertaken in Sydney and is proposed in other capitals. It is anticipated that an efficient system of fish supply to private customers will soon be established in the chief centres of population, where good markets are assured for regular deliveries.

6. **Oyster Fisheries.**—Natural oyster beds, whose ample product is of excellent quality, exist in the shallow waters of inlets and estuaries of several parts of the Australian foreshore. By husbanding the natural crop, and by judicious transplanting, the oyster output has been very materially augmented, and it is believed that there is a great future for the industry. The areas are leased by the Government to private persons, lengths of foreshore being taken up and profitably exploited.

7. **Pearl-shelling.**—Pearl-shelling is carried on in the tropical districts of Queensland, South Australia (Northern Territory), and Western Australia. The pearl oyster inhabits the northern and western coasts from Cape York to Shark Bay, a length of shore of over 2000 miles. Along the north coast the pearls taken are small, and their aggregate value inconsiderable; but the shells are marketed in considerable quantities, the industry giving directly and indirectly employment to a large number of people, mostly Japanese, Chinese, and Malays. The Shark Bay pearling industry, however, is carried on for both gems and shells. The fishing is generally conducted with the aid of diving apparatus, in water varying from four to twenty fathoms in depth. The inshore banks and shallower waters have been almost entirely worked out, and the deeper waters, from three to twenty miles off shore, are now being worked.

In tropical Queensland pearlshell diving is actively pursued, and is by far the most important of the fishing industries, Torres Straits being the centre of production. With it the pursuit of bêche-de-mer is carried on, and tortoiseshell is obtained on the coasts. The industry is supervised by the Marine Department, which administers the Fisheries Acts. A statutory limit is fixed for the minimum size of shell that may be gathered. Experiments have been made in cultivating the pearl oyster on suitable banks. A small variety has been discovered at Stradbroke Island, in Moreton Bay, but the commercial value of the produce is small. In October, 1909, a pearl of great beauty and fine quality from the Thursday Island fisheries, was exhibited in Melbourne. Its weight was 32½ grains, and its value was stated at £1000.

The discovery of mother-of-pearl shell in Port Darwin Harbour in 1884 caused a rush of pearling boats from Torres Straits. But the muddiness of the water, rendered almost opaque by the heavy tides, prevented the divers from satisfactorily working the area and led to an abandonment of the industry within three years from its birth. Prospecting in new patches has since been carried out and the industry has been revived. In addition to pearl and trepang fishing, dry-salted fish is also exported from the Territory.

In Western Australia the centres of the industry are Broome, Cossack, Onslow, and Shark Bay. There are two distinct species of mother-of-pearl shell exported. The principal trade is done in the large shells (*Meleagrina margaritifera*), limited in distribution to tropical waters and extending in habitat from Exmouth Gulf northwards. It is used for the larger manufactured articles, such as dessert and fish knife and fork handles, large buttons, and inlaid work. The largest and finest pearls are obtained from it. The second species is that known commercially as the Shark Bay variety (*Meleagrina imbricata*). It is of smaller size and used chiefly for the manufacture of small buttons. The pearls found are of varying value. The Shark Bay pearlshell is collected by dredging in the deeper waters and gathering by hand from the shallow banks at low tide.

The system of licensing boats and men engaged in the pearling industry restricts, in the States where it is in force, indiscriminate exploiting of the areas, and returns a small revenue.

In accordance with the "White Australia" policy, it has lately been urged that the employment of coloured labour in the pearl-shelling industry should be restricted, and white labour encouraged.

The heavy mortality amongst divers has led to suggestions for their medical inspection, and for the establishment of a school for training divers.

§ 2. Fisheries Statistics.

1. **Estimates for the Commonwealth.**—The returns given below have been furnished by the States departments, and estimates, where they have been made, are official. The data do not generally lend themselves to presentation on a uniform scheme, but the principal facts have been compiled as far as possible for the Commonwealth.

2. **States Fisheries Statistics.**—(i.) *New South Wales.* Much of the information is approximate. From 1904 to 1906 the average numbers of men and boats employed in general fisheries were respectively 1730 and 849; the average annual quantity of fish marketed was nearly six million pounds. In 1907 the estimated number of men employed was 1935, and of boats, 1025; the take of fish was 124,078 baskets, averaging 75 lbs. each. In 1908 there were 1163 boats, worked by 2093 men, the take being 134,437 baskets of fish, 11,031 dozen lobsters, and 3478 baskets (80 lbs. each) of prawns. In 1909, 1155 boats and 2381 men were licensed; the take was 142,573 baskets of fish, 8497 dozen lobsters, and 6762 baskets of prawns. The approximate value in 1907 was £64,000, in 1908 £72,760, and in 1909 £74,000. The fisheries revenue over a series of years averaged £6000 annually. It was £6626 in 1908, and £6782 in 1909.

Considerable portions of the foreshores and shallow areas of the river estuaries are excellent natural oyster-beds, and with constant attention the annual yield of oysters could no doubt be materially increased. In 1907 the oyster leases covered 65 acres of deep water, and 553,975 yards of foreshore, and the yield was 14,406 bags, valued at £25,210. In 1908 there were leased 72 acres of deep water, and 597,495 yards of foreshore, from which 20,590 bags, value £26,900, were taken. The foreshore leased in 1909 was 662,135 yards, the take being 15,538 bags, valued at £27,192.

(ii.) *Victoria.* In 1908 a Fisheries Inquiries Board investigated the conditions of the fishing industry in Victoria. The scope of the inquiry covered questions as to the permanent and temporary closing of areas against fishing; the length and number of nets to be used by any one party; poaching; the destruction of cormorants; the appointment of local inspectors; adequate punishment for offences against the Fisheries Act; trawling and long line fishing experiments; and the handling, freight, and marketing of fish. Some of the recommendations of the Board were given effect to, others are still under the consideration of the Government. The Fisheries Branch was, in 1909, transferred from the Public Works to the Agricultural Department, with a view to its reorganisation on the lines suggested in the Board's report. Legislation is proposed that is expected to result in the industry being considerably advanced in the near future. The number of boats engaged in the industry averages 700 over a series of years, and of men 1100. In 1907 there were 726 boats engaged, valued, with their equipment, at £38,666, and carrying 1153 men; in 1908, 755 boats, carrying 1158 men, and valued at £38,321. The take in 1907 was 99,707 cwt. of fish, valued at £60,442; and 24,889 dozen lobsters, valued at £6179. In 1908 it was 93,899 cwt. of fish, valued at £65,184; and 27,127 dozen lobsters, valued at £6726. In 1909, 780 boats and 1125 men were

engaged, the value of the former being £38,187. The take was 97,933 cwt. of fish, valued at £67,698; and 29,962 dozen lobsters, valued at £7403. Licenses to net in certain waters are issued without fee. These are not annual, but are supplemented every year by new issues. It is proposed to make the registration annual, and impose a fee. In 1907 legal proceedings, which called attention to the fact that the necessary licenses had not been taken out in many cases, resulted in a large increase in the issue of licenses. In 1906, 39 were issued to men and 38 to boats. In 1907 the numbers were 176 and 80; in 1908, 83 and 45; and in 1909, 85 and 45 respectively. There is no separate revenue credited to fisheries, the small amount derived by way of fines being credited to general revenue.

Annual leases have been granted to oyster fisheries, but the return has been insignificant. In 1909 only three leases were granted (to take effect from 1st January, 1910); none were granted during the preceding three years.

(iii.) *Queensland.* Prior to 1907 no account was kept of the value of boats and equipment, but an approximation believed to be very close was furnished. Over a series of years the number of boats and men engaged in general fisheries averaged 250 and 500. In 1907, 242 boats, valued, with equipment, at £6596, and carrying 497 men, were worked; in 1908, 266 boats, valued at £8924, carrying 497 men; and in 1909, 300 boats, valued at £11,233, and carrying 567 men. The take in 1907 was 32,500 cwt., valued at £24,437; in 1908, 31,000 cwt., valued at £28,519; and in 1909, 34,050 cwt., valued at £32,987. There are no lobster fisheries. The amount put up in the fish-preserving establishments is not great, but the demand for fish locally tinned is growing. The revenue from fisheries in Queensland is considerable, and is chiefly derived from licenses. Since 1904 it has annually exceeded £7000, being in 1907, £7921; in 1908, £8176; and in 1909, £8108.

For oyster fisheries, the deep waters in Moreton Bay and Sandy Strait are leased as dredge sections, which extend across the channels to the islands, and contain from 100 to 1000 acres each. Within these sections the majority of the oyster banks (ground containing up to 30 acres lying within two feet of low-water mark) are situated on the foreshores of the islands, and on the mud and sand flats. In 1907, 149 boats, valued at about £8000, and carrying 212 men; in 1908, 135 boats, valued at £7800, and carrying 190 men; and in 1909, 133 boats, valued at £7850, and carrying 167 men, were engaged. In 1907, 60,000 cwt. of oysters were taken, valued at £37,500; in 1908, 37,000 cwt., valued at £35,000; and in 1909, 38,300 cwt., valued at £36,000. Leases granted numbered 924 in 1907, 885 in 1908, and 807 in 1909.

In the pearlshell industry, the last two years have been satisfactory, notwithstanding the industrial trouble early in 1908. Prices improved considerably, as much as £150 per ton being realised for pearlshell. During the last four years, however, there has been a considerable diminution in production, the number of boats and men engaged having been much fewer than in preceding years. In 1907, 211 boats, valued at £63,300, and carrying 1420 men, were employed. The take was 577 tons of pearlshell, valued at £70,495; 338 tons of bêche-de-mer, valued at £30,033; and 3095 lbs. of tortoiseshell, valued at £1927. In 1908, 204 boats, valued at £61,200, and carrying 1300 men, were engaged. The take was 424 tons of pearlshell, valued at £50,514; 322 tons of bêche-de-mer, valued at £21,631; and 4805 lbs. of tortoiseshell, valued at £2617. In 1909, there were 190 boats, valued at £57,000, and carrying 1362 men. The take was 516½ tons of pearlshell, valued at £70,505; 14 tons of bêche-de-mer, valued at £14,504; and 3156 lbs. of tortoiseshell, valued at £1389. Prior to 1907, no record of the value of pearls obtained was kept, and it is impossible to estimate it. In the year named the value was approximately £30,000; in 1908, £20,000; and in 1909, £25,000.

(iv.) *South Australia and Northern Territory.* In 1907, 633 persons and 512 boats were engaged in general fisheries, the value of boats, equipment, etc., being £21,570. In 1908 the figures were 538 persons, and 487 boats, valued at £19,834; and in 1909, 550 boats, valued at £25,000, carrying 700 men. In 1907 the take was 20,734 cwt. of fish, valued at £25,121, and 1380 dozen lobsters, valued at £369; in 1908, 25,796 cwt. of

fish, valued at £34,756, and 14,000 dozen lobsters, valued at £3677; and in 1909, 23,095 cwt. of fish, valued at £40,087, and 3522 dozen lobsters, valued at £3299. The revenue from general fisheries was £286 in 1907, £368 in 1908, and £356 in 1909, all from licenses. There are two fish-preserving establishments in the Northern Territory. Legislation to increase the powers of inspectors and to enforce compulsory licensing of fishermen and boats in all cases is proposed, the necessary Bill having been introduced into Parliament in August, 1909. Oyster fishing has been introduced, but has not, up to the present, attained any great dimensions. In 1907, 4 boats and 6 men were engaged, and 416 bags were taken, valued at £728. For 1908 no figures are available. In 1909, 6 boats were engaged, employing 8 men.

In pearl-shelling, the limitation of shelling grounds and the scarcity of suitable labour has considerably hampered the industry, not more than half the fleet of boats having been engaged in late years. No pearls have been declared, but it is hardly possible that none were procured. It is believed that a quantity of pearls pass through the post office without the knowledge of the Customs, and that dishonest divers send some away unknown to the boat-owners—in some instances by special messengers. There are indications that trepang fishing will receive more attention than hitherto from Europeans, in whose hands the whole of the industry is now held. The closing of the coast against the Macassar proas must necessarily cause a shrinkage, but it is expected that in the course of a year or two this will prove a great boon to local boats, inasmuch as it will give the fishing grounds time to recoup. Both the pearlshell and the trepang fisheries are capable of expansion. In 1907, 31 boats were engaged; pearlshell taken amounted to 64 tons, valued at £8805. Other products were:—342 lbs. of tortoiseshell, valued at £115; 38,976 lbs. of dried fish, valued at £822; and 20 tons of bêche-de-mer, valued at £898. In 1908, 52 boats were licensed, valued at £16,500, crews numbering 248. During the year, however, many of the boats were taken off for want of men, others to carry on different work. The take was 58 tons of pearlshell, valued at £7578; 24 tons of bêche-de-mer, valued at £1272; 83,900 lbs. of dried fish, valued at £1697; and 251 lbs. of tortoiseshell, valued at £159. Revenue from licenses amounted in 1908 to £59. In 1909, the licensed pearling fleet consisted of 39 luggers, one steamer, and six canoes. Of these boats only 26 were actually engaged. The area worked over was old ground. The pearlshell taken was 58½ tons, valued at £10,085. With a take equal to that of the previous year, the price realised was about 25 per cent. better. No pearls were reported. The export of trepang was 38 tons, valued at £1906. This industry has been steadily increasing since 1905, when the coast was closed to the Macassar fishermen. The production of dried fish in 1909 was 63,504 lbs. valued at £1091; and of tortoiseshell, 376 lbs. valued at £350.

(v.) *Western Australia.* In 1907 there were engaged in general fisheries in Western Australia 235 boats, valued, with their equipment, at £16,500, and carrying 504 men; in 1908, 298 boats, valued at £21,328, and carrying 539 men; in 1909, 222 boats, valued at £17,463, and carrying 437 men. The take in 1908 was 1500 tons of fish, valued at £50,000, and 10,000 doz. lobsters, valued at £3000. In 1909 it was 1500 tons of fish, valued at £52,500, and 10,920 dozen lobsters, valued at £3276. Revenue from fisheries amounted in 1907 to £787, in 1908 to £1174, and in 1909 to £1234.

In the pearl and pearlshell fisheries in 1907, 383 vessels carried crews aggregating 2500, a great number of whom were Asiatics; in 1908, 348 vessels carried 2304 labourers; in 1909, 331 boats carried 2267 men. The value of boats and equipment in 1909 was £151,705. The quantity of pearlshell obtained in 1907 was 1393 tons, and the value £169,815; in 1908 the quantity was 1286 tons, valued at £161,006; and in 1909, 1196 tons, valued at £189,666. Pearls to the value of £64,690, £29,225, and £52,788 were taken in 1907, 1908, and 1909 respectively. The bêche-de-mer fisheries are little developed, and no produce of commercial value was obtained during the last three years, although in previous years small quantities have been marketed.

(vi.) *Tasmania.* The fishing boats and fishermen in Tasmania are not licensed, and no record is kept of them. The fish markets are under the control of the municipalities,

and these do not keep complete records of quantities sold. The number of boats engaged in 1908 was 94, with crews aggregating 282. The estimated total value of boats and equipment was £7500. The estimated take of fish was 17,800 cwt., estimated value £11,400. There are no lobster fisheries. The revenue over a series of years averages about £600, mostly derived from licenses to angle for salmon and trout with rod and line. In 1907 the total receipts were £596; in 1908 £569.

Oyster fisheries are not worked except in a most primitive way.

The work of the Commissioner trends mostly in the way of breeding and distributing young fresh-water fish, especially acclimatised trout.

§ 3. Oversea Trade in Fish.

That the development of the fishing industry in Australia leaves much to be desired is evident from the fact that the import of preserved fish into the Commonwealth is large, the export inconsiderable. The figures for the trade are as follows:—

IMPORTS OF FISH, COMMONWEALTH, 1905 to 1909.

Classification.		1905.	1906.	1907.	1908.	1909.

A considerable development has taken place lately in the fish preserving industry. Two factories were opened in the Northern Territory of South Australia in 1907, and a

large output resulted from the operations of those previously established. There was, however, for the Commonwealth an excess of imports over exports amounting to £350,000 in 1907, £475,000 in 1908, and £450,000 in 1909.

The exports of pearlshell and tortoiseshell are given hereunder for the five years 1905-9 :—

§ 4. Development of the Fishing Industry.

1. **Transport and Marketing.**—The large importations of fish into the Commonwealth indicate the scope for the development of the local fishing industry. For many years the question of securing to the consumer a regular supply of a wholesome article at a moderate price has been under consideration. In Sydney, the City Council has undertaken the handling and marketing of the product, but the result of the experiment is as yet indecisive. Where quick transport by rail or steamer is not provided, the catch of fish in tropical or sub-tropical waters can only be locally consumed, since speedy marketing is essential. Adequate refrigerating apparatus on railway waggons and coasting steamers, and quick transport to centres of population might, however, alter the economic condition in a satisfactory direction. At the present time the natural wealth of Australia in fish is exploited only to a very slight extent. The daily supply of fish in Great Britain is 300,000 tons, and the deep sea fisheries cover an enormous area.

2. **Experiment and Culture.**—(i.) *The Existing Fisheries.* In many respects the fishing industry is capable of modification and development. A good deal has been effected by the State Governments in the way of experiment and culture, but much yet remains to be done before the industry is at all commensurate with the industrial progress and consuming capacities of the Commonwealth. A uniform policy of development for Australia is desirable, and recommendations have been made that the Fisheries Departments of the various States should co-operate with the Federal Government in its efforts to increase the productiveness of the Commonwealth waters, and the research work generally undertaken by it; and that uniform fisheries laws should be adopted by adjacent States. The existing fishing is inshore, the supplies being obtained from the vicinity of river estuaries and lakes. Deep-sea fishing, as established and carried on in older countries, is, so far, practically non-existent in Australia. It has been established that the deposits of fish eggs generally float upon the water. The drift of currents or the influence of winds often carry them a considerable distance from the shore, thus affording very little chance of development. The problem that is now engaging experts all over the world is how to artificially control the drift of eggs, so that the fish may be hatched near shore under the most favourable conditions.

To prevent the importation of fish of predaceous habits, or otherwise undesirable, all live fish arriving in Australia are examined on shipboard.

(ii.) *New South Wales.* In New South Wales, trawling experiments have shewn that considerable areas along the coast are suitable fishing grounds, but practical work on commercial lines is yet undeveloped. The stocking of rivers and lakes was begun by private enterprise, but Government aid was granted later, and eminent success has been

attained, among other fish, with the Californian rainbow trout. Young fry are distributed annually from the trout hatchery at Prospect, and the natural reproduction of the fish in the streams that issue from the mountain ranges is regarded as a valuable asset. In 1902 attempts were successfully made to transport European fishes alive to Australia. A marine hatchery and biological station has been completed at Gunnamatta Bay, Port Hacking, by means of which it is proposed to gradually acclimatise suitable fishes. The output of ova and fry last season was in excess of that of previous years. The natural oyster beds are also being extended. In September, 1909, a Fisheries Exhibition was held at Sydney, to shew the resources of the State.

With the object of ascertaining something of the movements of oceanic fishes, as well as of those estuarine fishes which make periodical oceanic migrations, lighthouse-keepers on the coast were requested to report weekly the various kinds of fishes, etc., observed travelling along the coast, as well as the quantity and size of the fish seen. Some very useful information has in this way been obtained.

By arrangement with the Commonwealth Fisheries' Department, members of the staff of the Australian Museum, Sydney, accompany the F.I.S. "Endeavour" on various cruises. Specimens are collected, mounted for scientific purposes, and distributed to other Australian museums, a considerable number being put aside for the Fishery Museum to be established by the Commonwealth Government in connection with the department.

(iii.) *Victoria.* In Victoria, besides the culture that has been mainly the work of private individuals and angling clubs, the Government has incurred the expenditure of a sum of money on hatcheries with good results. Fry and yearlings are distributed, and one consignment of the latter was despatched from the Geelong hatchery and liberated without loss at Mundaring, Western Australia. Young rainbow and Loch Leven trout are also released into the rivers of the State from the hatcheries lately established at the Zoological Gardens. At Studley Park, Melbourne, and at Ballarat, there are also ponds for experimental culture. Trawling experiments were conducted some years ago, but the results were inconclusive.

(iv.) *Queensland.* In Queensland artificial hatching was undertaken by the Acclimatisation Society of Southern Queensland. Here, also, the American rainbow trout has succeeded, fry being distributed from the hatchery at Spring Creek, Killarney. The lung-fish, formerly known only in two streams, has been successfully transplanted to several other streams. Oyster beds are also being developed in several parts, and improved methods of culture have largely increased the output. The trawling experiments of 1901 and 1902 point to the improbability of a great trawling industry being established. The trawling area off Queensland would be a mere strip, because of the presence of the coral region immediately to the north and the fact that the sea deepens very rapidly to the east.

(v.) *South Australia.* In South Australia the indiscriminate exploitation of the Port Lincoln and adjacent oyster beds led to the necessity for their being closed from time to time to prevent the district from being altogether worked out. The future outlook has in this way been improved as regards oyster culture. The South Australian general fishing grounds have been stated to be most desirable areas, only wanting men and boats to ensure a large take. Many new grounds have been opened up on the West Coast. Trawling by private individuals has been undertaken. The question of establishing a floating hatchery is under consideration.

On the 1st April, 1910, the Fisheries Act Amendment Act of 1909 became law. It provides that a fisherman must be a natural born or naturalised British subject, and must be licensed, and have his boat registered and marked. Inspectors are given considerable power to protect the industry and those engaged in it.

The Fisheries Department is taking active steps to increase supplies, and is gathering information respecting natural breeding grounds, with a view to making them sanctuaries for the breeding of young fish.

(vi.) *Western Australia.* In Western Australia the coastal waters have been examined to ascertain whether suitable trawling grounds exist. The Acclimatisation Committee has successfully hatched and liberated trout, the Mundaring Weir being stocked with the Loch Leven variety. Perch were stocked in the lakes near Wanneroo Caves.

(vii.) *Tasmania.* Considerable distributions of ova and fry are annually made from the River Plenty in Tasmania. Besides the supplies to Tasmanian waters, the northern States are also recipients of ova.

§ . The Commonwealth Department of Fisheries.

1. **The Federal Council of Australasia.**—The Federal Council had power to legislate with regard to fisheries in Australasian waters beyond territorial limits. In its second session (opened 16th January, 1888), an Act was passed to regulate pearlshell and bêche-de-mer fisheries in Australasian waters adjacent to Queensland ; and in the third session, opened shortly afterwards, the Act was made applicable to Western Australia. By the passing of the Commonwealth Constitution Act of 1900, however, the Federal Council was abolished.

2. **Commonwealth Investigations.**—In 1907, the Commonwealth Government decided to demonstrate what might be attained commercially by the application of modern methods and experience. A Federal Investigation Ship, the *Endeavour*, was constructed specially for the work, and a Director of Fisheries was appointed. Cruises and experiments were immediately instituted. These shew that the Commonwealth possesses an asset of considerable value in her sea fisheries. The scope and results of the inquiries are set out in the Director's reports, and are summarised below.

3. **Scope of the Inquiry.**—The immediate scope laid down for the investigations was, shortly, as follows :—

(i.) By various means of capture to ascertain what marketable food-fishes may be found in ocean waters adjacent to Australia.
(ii.) In what quantity they may be taken.
(iii.) To what extent they migrate, and where.
(iv.) How they may be conveniently and economically captured.
(v.) By systematic survey to find out and chart suitable fishing grounds.

In addition to the work which is being thus carried on in the various recognised methods of capture (including long-line and drift-net fishing, etc.), survey, hydrographic work, etc., is conducted, for the purpose of ascertaining the nature of the bottom, depth of water, currents, and sea temperature.

4. **The F.I.S. "Endeavour."**—The construction of the investigation vessel was undertaken in the Commonwealth, and was upon the lines shewn by the most recent European experience to be of greatest advantage, with necessary modifications to suit the Australian climate. Australian materials were used. On 1st June, 1908, the keel was laid, and on 27th August, the steel hull was ready for launching. The official trial took place in January, 1909, and on 9th March, the equipment being complete, there was put in commission the first Commonwealth-owned seagoing ship, named *Endeavour*, after Captain Cook's historic vessel. The measurements of the vessel are :—134 ft. 9 in. over all ; beam 23 ft.; moulded depth, 11 ft. 9 in.; greatest draft, 11 ft. 9 in. The engines are of triple expansion type, and develop 440 i.h.p. The speed is nearly 11 knots. The vessel is suitably equipped for her work, all available space being put to use; and has proved to be an excellent and reliable seaboat. She closely resembles a modern trawler, fittings for her special service having been added. The main winch is especially powerful, and carries 2000 fathoms of $2\frac{1}{2}$ in. and $1\frac{1}{2}$ in. wire rope for trawling purposes. An additional reel attached to the fast running axle on the winch carries 1500 fathoms

of ½-in. wire rope for hydrographic observations. The starboard side is generally fitted and equipped for operating the large otter trawl (95 feet head line), while on the port rail a Lucas Sounding Machine (5000 fathoms of piano wire) and davits for various purposes have been fixed. The hold is given up to net stores, and a cool chamber for the keeping of fish, etc. On the deck aft is provided a laboratory, where preliminary investigations are carried out. Here also is stored all the special apparatus, including deep-sea water bottles, thermometers, etc.

5. **The Endeavour's Cruises.**—The first cruise began on 12th March, 1909, and ended six days later. Up to 19th October, 1910, twenty-nine cruises had been undertaken in the waters off the coasts of Queensland (as far north as Bowen, latitude 20° S.), New South Wales, Victoria, South Australia (preliminary surveys), and Tasmania. In many cases, areas have been revisited and tested at different seasons of the year, thus affording a fair indication of their true fisheries value.

6. **Results.**—The object of the investigations is to shew how and where food-fish may be obtained in quantity, rather than to bring large catches into port. Moreover, in untested areas, sounding and survey work generally becomes a main feature. The surveys were extended to cover fields as large as possible, the duration of each haul with the trawl being limited to average about two hours. A commercial vessel, working on well-known grounds, would remain continuously on the richest fields until a freight was secured, and would work longer drags. The "take" of the *Endeavour*, therefore, is considerably below what is to be expected from a vessel working the fields for profit.

Experiments with drift nets and long lines, although up to the present not largely carried out, have given promising results. Trawling has been the principal method tried. By it, the fish are disturbed by a large bag-shaped net drawn along the sea bottom, and they are caught and retained in a trap arrangement at the tail-end of the net. Generally, the inquiries have been limited to waters of not more than 100 fathoms in depth.

The cruises have shewn that both suitable and unsuitable trawling grounds were met with in all parts; and that not all suitable grounds are rich in fish life. Over vast areas the bottom consists of coarse ("hungry") sand, which is almost barren and desert like, while in other instances the sand is covered with quantities of sponges and other growth. In South Australia, in particular, large sections are covered with a fine white sand, and in all these cases fish life is scarce. The richest grounds were found in localities where a reversal of currents or eddies facilitates the accumulation of fish food.

In conjunction with the survey work, investigations were undertaken regarding the deep water currents and their relation to the abundance of fish food and migrations. Bottom samples have been obtained from various depths down to 1200 fathoms, and water samples and temperatures from intermediate depths. Plankton collections from the surface have also been obtained, particularly to ascertain the distribution of pelagic fish eggs.

A varied and scientifically interesting collection of rare fishes, invertebrates, etc., has also been obtained, and arrangements made with naturalists in various parts of the Commonwealth to classify and mount the specimens.

Reports on the hydrographic, survey, and scientific departments of the vessel's activity are being prepared.

7. **Treatment and Disposal of the Catch.**—It was decided that the wisest method of disposing of the fish was to distribute them to recognised charitable institutions. Clashing with the established industry was thus avoided. Upwards of one hundred charities have benefited.

Upon capture, the prompt gutting and washing of the fish is performed. The necessary records are taken regarding their number, size, food, etc. They are then dried, and stowed in the cool chamber.

Unmarketable fish constitute a considerable proportion of the catch. Experience elsewhere has shewn that fish for which there is no sale for consumption, have a considerable value as material for rich fertilisers, and the extraction of oil.

8. **Possibility and Scope for Future Development.**—The records of the *Endeavour's* cruises are preserved in the departmental office, and there all particulars of the progress of the work are available. The Director's report gives two instances of the remarkable return that experience shews is to be expected to accrue from working the areas examined. A vessel working at Flinders Island with Melbourne as a base would yield profits averaging 40 to 45 per cent., while part of the East coast of New South Wales worked with Eden as a base, would in one year earn the cost of the trawl and working expenses.

The inadequacy of the present supply of fish is universally admitted. It is not, as in Great Britain and the northern countries of Europe, a popular article of diet. While the value of consumption of fish was in Norway 12s., and in Holland, Denmark, and the United Kingdom 5s. per head of population, in Australia it was little over 1s. Moreover, in the countries named, a shilling's worth of fish represents a much larger quantity than could be obtained in the Commonwealth, where the wealth of the coastal waters indicates that, with satisfactory handling, the product of the sea would become an article of food for the poorest classes, and a valuable industry would be developed. The uncertainties and limitations of the market, caused by the irregularity of the supply, will be overcome when the fact is recognised that the ocean product, properly exploited, is adequate to supply the demand, however strong. As a result of the *Endeavour's* experiments, definite steps are being taken to carry out well-considered schemes, which it is hoped will revolutionise the now obsolete and cramped condition of the Australian fish trade.

§ 6. Fish Preserving.

Bounties have been provided by the Federal Government for fish preserving. The amounts paid were £27 in 1907-8; £1727 in 1908-9; and £311 in 1909-10. The amount available for 1910-11 is £10,000. It is anticipated that the bounties, together with the increased yield that may be expected as a result from the fisheries investigations now being conducted, will lead to a considerable output and consumption of locally preserved fish. The abundance of fish in Australian waters offers excellent opportunities for the institution of preserving establishments, particularly in those coastal districts which enjoy a temperate climate. Up to the present but little development has taken place. The establishments for fish preserving at the present time are very few.

SECTION XII.

MINES AND MINING.

§ 1. The Mineral Wealth of Australia.

1. **Place of Mining in Australian Development.**—Although Australia is pre-eminently a pastoral and agricultural country, the value of the production from its flocks and herds and from its farming industry far exceeding the return from mining, yet its mines and its mining developments are of great and increasing importance. It may also be said that it was the discovery of its immense stores of mineral wealth that first attracted population to Australia, and thus laid the foundation of its nationhood. Though coal was the first discovered mineral of recent times, it was the discovery of gold, overshadowing in popular estimation the former, which brought about a large influx of population and the formation of various settlements.

2. **Extent of Mineral Wealth.**—The large production of gold, silver, copper, and tin, the extent of the coal deposits, the presence of large quantities of iron ore, and the great variety of minerals found in appreciable quantities, suggest that the future history of mining will, in all probability, be more remarkable even than that of the past. For the extent of the total mineral wealth of Australia cannot yet be regarded as well-ascertained since the mineral exploration of the country is, after all, still in its infancy. The presence of considerable deposits of valuable metals has long been known. Thus, silver was discovered by Count Strzelecki as early as 1839, and was worked as early as 1864; copper mining dates back to 1844; lead to about 1848; iron to about 1850; while the discovery of gold in payable quantities dates back to 1851. Cobalt, nickel, manganese, chromium, tungsten, molybdenum, mercury, antimony, bismuth, zinc, etc., have all been found, some in fairly large quantities.

Among the more valuable non-metalliferous substances may be mentioned coke, kerosene shale, graphite, alunite, asbestos, diatomaceous earth, clays, ochres, etc.; in building stones, sandstones, syenites, granites, basalts, augite-andesite, porphyries, serpentines, slates, limestones, and marbles; in precious stones, diamonds, emeralds, rubies, sapphires, amethysts, precious opal, turquoise, topazes, garnets, chrysolites, cairngorm, agates, etc. In general it may be said that the variety of Australian mineral wealth is very great.

3. **Value of Production during 1909.**—The progress of the mineral industry during the year 1909 was seriously interfered with in certain parts of the Commonwealth by labour disputes, which more particularly affected the output of coal and coke, silver-lead, and copper. In coal the decrease in output, as compared with 1908, amounted to £649,445 and was chiefly due to the strike of the New South Wales coal-miners, which commenced on the 8th November, and which practically stopped production for the remainder of the year. The decrease in silver-lead products for 1909, as compared with the preceding

year, amounted to £582,248, and this again is attributable to labour troubles. The Broken Hill strike extended over the first five months of the year, and involved principally two large mines, viz., the Proprietary and Block 10. Nevertheless, the value of the mineral production of the Commonwealth during 1909 exceeded that of previous years with the exception of the years 1903 to 1908, and must therefore be taken as satisfactory when the disabilities under which the industry laboured are taken into consideration. The value of the production in 1909 was £23,074,935, as against £24,580,303 in 1908, and £28,301,346 in 1907, when the value of the mineral production in the Commonwealth reached a maximum. The value of the production from all minerals raised in each State during 1909 is given in the following table :—

COMMONWEALTH MINERAL PRODUCTION IN 1909.

* Not available for publication. † Included in Wolfram. ‡ Including Bismuth. § Exclusive of Victoria.

The figures in the above table do not in all cases coincide with those published by the Mines Departments, as they are exclusive of certain items such as building stones, slates, cement, and lime, which appear in some of the mining returns. The New South Wales Mining Report gives the production of building stone up to the end of 1909 as £18,408 (this figure, however, representing exports alone), while the production in Victoria during the period 1866-1908 is given in the Victorian Mines Report as £3,628,259. For comparative purposes the figures are therefore valueless, the utility of export figures for such a commodity as building stone being more or less dubious.

4. **Total Production to end of 1909.** In the next table will be found the estimated value of the total mineral production in each State up to the end of 1909.

The figures given in this table are also exclusive of the same items referred to in connection with the preceding table.

COMMONWEALTH MINERAL PRODUCTION TO END OF 1909.

Minerals.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.

Coal	59,250,851	1,712,673	4,392,151	....	708,725	473,572	66,537,972
Other	11,554,914	358,887	1,459,797	1,188,855	73,673	470,261	15,106,387
Total ...	198,290,805	288,368,506	92,358,833	31,657,599	94,941,159	32,368,587	737,985,489

The "other" minerals in New South Wales include antimony, £301,409; bismuth, £123,523; chrome, £101,108; diamonds, £111,462; opal, £1,171,699; oil shale, £2,217,185; and zinc, £3,069,057. In the Victorian returns antimony ore was responsible for £209,529. Included in "other" in the Queensland production were opal, £163,195; gems, other, £140,593; bismuth and wolfram, £633,054; antimony ore, £50,881; manganese, £56,280; limestone, £193,191; and ironstone, £147,155. The chief item in South Australian "other" minerals was salt, £707,594. In the Tasmanian returns limestone flux was responsible for nearly £100,000.

It will be convenient in the succeeding pages to deal first with gold and the various metals, then with non-metallic minerals and precious stones, and finally to furnish some account of the extent of employment in mining generally. With regard to the discovery of the various minerals and to the historical development of their production, it is only proposed to give in this section a brief summary of the more important facts. A more extended account of these matters was given in the Year Books Nos. 1 and 2, to which reference may be made.

(A) METALS.

§ 2. Gold.

1. **Discovery of Gold in Various States.**—The discovery of gold in payable quantities was an epoch-making event in Australian history, for as one writer aptly phrases it, this event "precipitated Australia into nationhood." A reference to the population figures prior and subsequent to the year 1851 amply demonstrates this fact. Thus on 31st December, 1841, the population of the Commonwealth was only 220,968[1]; at the end of 1851 it was still under half a million, viz., 437,665[1], while by the end of 1861 the total had reached 1,168,149[1] persons, that is, the population had quintupled itself in twenty years. A short account of the chief discoveries in each State is appended:—

(i.) *New South Wales.* The first authentic discovery of the precious metal in this State was made by "Assistant-Surveyor" James McBrien, on the 16th February, 1823, in the neighbourhood of the Fish River, and not far from the scene of Hargraves'

1. Figures for these years were given in "A Statistical Account of Australia and New Zealand for 1903-4" as 206,095; 404,889; 1,153,973 respectively, but those refer presumably to the enumerations in the earlier part of the years mentioned.

memorable discovery twenty-eight years later. In 1839 Count Strzelecki reported the existence of gold in the Vale of Clwydd, near Lithgow, while the Rev. W. B. Clarke discovered the precious metal on the Cox River in 1841, and on the Wollondilly in 1842. In 1851, Hargraves found payable deposits of alluvial gold at Lewis Ponds and Summer Hill Creek, and on the Macquarie River. The news of these discoveries, amplified and distorted by all sorts of rumours, soon caused an enormous influx of people into Australia. The dates of other important finds were as follow:—Rich alluvial leads at Forbes, in 1862; Rocky River near Uralla, 1856; in beach sands at northern rivers, 1870; Gulgong, 1871; Mount Drysdale, 1892; Wyalong, 1893.

(ii.) *Victoria.* The first discovery of gold in Victoria was probably that made by the Hon. W. Campbell, at Clunes, in March, 1850. On the 5th July, 1851, notification was made of the discovery of gold in the Yarra Ranges by Mr. L. J. Nichel, and at the Pyrenees Mountains by Mr. James Esmond. Soon after the numerous fields near Mount Alexander were opened up. The chief centres of the gold-mining industry at the present time are in the Bendigo, Ballarat, Beechworth, Castlemaine, Maryborough, Gippsland, Ararat, and Stawell districts. In November, 1906, a remarkable discovery of gold was made near Tarnagulla, where a miner who had prospected the district for years obtained seven ounces of gold from a shaft nineteen feet deep, and some fairly large nuggets being found soon after, the so-called Poseidon rush set in. Several of the nuggets were unearthed within a few inches of the surface. The largest weighed 953 ounces and two others weighed 703 and 675 ounces respectively. The shallow ground was soon worked out, but operations have given satisfactory results in the deeper alluvial.

(iii.) *Queensland.* The first discovery of payable gold in Queensland was that made at Canoona by a party under the leadership of Mr. W. C. Capel. In 1863 gold was found at Canal Creek and Gladstone; Crocodile Creek field was discovered in 1865, Ridgelands in 1867, followed shortly afterwards by Rosewood and Gympie; Townsville was opened up in the following year, and the Gilbert River fields in 1869. Charters Towers dates from 1872; the Palmer goldfield from 1873; the Hodgkinson from 1875; while the celebrated Mount Morgan was first worked in 1882, Croydon in 1886, the Starcke field in 1890, Coen in 1900, and Alice River in 1904.

(iv.) *South Australia.* In South Australia, what is believed to have been the first authentic discovery of gold in the Commonwealth from which actual mining operations resulted was made in January, 1846, at a spot about ten miles east from the City of Adelaide. Although finds were subsequently made in many districts and over large areas, the gold-mining industry has never made very great progress in the State, and South Australia contributes the smallest share of the total gold production of the Commonwealth. There is, however, an immense area of country which has not been systematically prospected. There are numerous deposits of the precious metal at various localities in the Northern Territory, the total yield in 1908 being 8575 ounces, valued at £27,512, of which 1021 ounces were obtained at the Driffield. In June, 1909, a rich find of gold was reported from Tanami, about 200 miles from Hall's Creek and 450 miles to the south-east of Wyndham. Steps are being taken to open up this field by sinking wells to provide permanent water, of which there is a great scarcity in the district. A large number of Chinese are engaged in mining in the Territory. In 1908, out of a total of 824 miners employed, the Chinese numbered 674.

(v.) *Western Australia.* The discovery of gold in Western Australia took place at a much later date than in the eastern States; nevertheless the present production far exceeds in value that of any other portion of the continent. It appears that the precious metal was first detected in 1848, in specimens sent for assay to Adelaide from the Murchison copper and lead deposits. In 1852-53 rich specimens of gold-bearing stone were found by shepherds and others in the eastern districts, but they were unable afterwards to locate the places where the stone was discovered. The late Hon. A. C. Gregory found

traces of gold in quartz in the Bowes River in 1854. In 1861 Mr. Panton found gold near Northam, while shortly afterwards a shepherd brought in rich specimens of auriferous quartz which he had found to the eastward of Northam, but he failed to locate the spot again. Various small finds were made up to 1882, when Mr. A. McRae, riding from Cossack to Roeburne, picked up a nugget weighing fourteen ounces. In 1885 Messrs. Hall, Slattery, and others found gold on the Elvire, Margaret, and Ord Rivers. The Kimberley goldfield was opened in May, 1886. Next year the precious metal was discovered at Yilgarn, and the field was proclaimed in 1888, in which year rich finds were also made at Mallina and Pilbara Creek, the Pilbara field being proclaimed in October. The Ashburton and Yalgoo fields were proclaimed in 1890, and the Murchison in 1891. In 1892 Bayley and Ford discovered the Coolgardie field, obtaining over 500 ozs. of gold in one afternoon by the aid of a tomahawk. Alluvial was discovered by Frost and party at Goongarrie (the Ninety-mile) in May, 1893. Kalgoorlie (Hannan's) was discovered in June of the same year by Messrs. Flannigan and Hannan, Bardoc in August by Messrs. Cashman and Lee, Siberia by Frost and Bonner in October. There were numerous rich discoveries in 1894, such as at "Mount Jackson," "the Pinnacles," "Billy Billy," and at the celebrated Kanowna diggings. Rich finds were also made at Bulong, Londonderry, and the Wealth of Nations, Mr. J. D. Dunn, the discoverer of the latter, obtaining £20,000 of gold in a few days. The "Norseman" was discovered in July by Mr. L. Sinclair, as also the "Lady Shenton" at Menzies. The "Niagara" was discovered in January, 1895, also the rich field known as the "Hands Across the Sea," at Kunanalling. "Blackboy Hill" field was proclaimed in 1897, "Donnybrook" in 1898, while there were further rich finds in 1899.

(vi.) *Tasmania.* The first discovery of the precious metal in the island State is reported to have been made by a Mr. Riva, of Launceston, who is stated to have traced gold in slate rocks in the vicinity of Nine Mile Springs in 1849. A valuable discovery was made in 1852 at the Nook, near Fingal, and further small finds were reported during the same year from Tower Hill Creek and the vicinity of Nine Mile Springs (Lefroy). During 1859 the first quartz mine started operations at Fingal. In the same year James Smith found gold at the River Forth, and Mr. Peter Leete at the Calder, a tributary of the Inglis. Reef gold was discovered in 1869 at Nine Mile Springs (Lefroy) by Mr. S. Richards. The first recorded returns from the Mangana goldfields date from 1870; Waterhouse, 1871; Hellyer, Denison, and Brandy Creek, 1872; Lisle, 1878; Gladstone and Cam, 1881; Minnow and River Forth, 1882; Branxholme and Mount Victoria, 1883; and Mount Lyell, 1886.

2. **Production of Gold at Various Periods.**—In the table hereunder will be found the value of the gold raised each year in the several States and in the Commonwealth from the dates when payable discoveries were first reported. Owing to defective information in the earlier years the figures fall considerably short of the actual totals, for during the first stages of mining development large quantities of gold were taken out of Australia by successful diggers, who preferred to keep the amount of their wealth secret. For South Australia the records in the earlier years are somewhat irregular, and the remark applies to some extent also to the returns for Western Australia and Tasmania.

In New South Wales the production of several important centres, such as Hillgrove and Wyalong, shewed a marked falling-off in 1909. In Victoria the decrease in that year was mainly owing to the closing down of some deep alluvial mines and to the lessened yield from the lode mines at Walhalla, and also from dredging and sluicing. The fall in the gold production in Western Australia is attributable to a decline in one or two mines, the most marked decreases being in the Murchison, North Coolgardie, and Coolgardie Fields. It is stated that generally but little attention was given to prospecting during the year 1909, and that consequently little fresh capital was invested. It is believed, however, that the decline in gold production is only temporary, as past experience has shewn that prosperity in the industry occurs in cycles.

VALUE OF GOLD RAISED IN AUSTRALIA, 1851 to 1909.

The amount of gold raised in the Commonwealth in any one year attained its maximum in 1903, in which year Western Australia also reached its highest point. For the other States of the Commonwealth the years in which the greatest yields were obtained, were as follows:—New South Wales, 1852, Victoria, 1856, Queensland, 1900, South Australia, 1894, and Tasmania, 1899.

The following table shews the quantity in fine ounces of gold raised in each State and in the Commonwealth during each of the last nine years, the value of one ounce fine being £4 4s. $11\frac{5}{11}$d.

QUANTITY OF GOLD PRODUCED IN THE COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	Fine ozs.	Fine ozs.	Fine ozs.	Fine ozs.	Fine ozs.	Fine ozs.	Fine ozs.
1901	173,543	730,450	598,382	21,946	1,703,417	69,490	3,297,228

3. **Changes in Relative Positions of States as Gold Producers.**—A glance at the figures in the table shewing the value of gold raised will sufficiently explain the enormous increase in the population of Victoria during the period 1851 to 1861, when an average of over 40,000 persons reached the State each year. Victoria maintained its position as the chief gold-producer for a period of forty-seven years, or up to 1898, when its production was first outstripped by that of Western Australia, the latter State from this year onward contributing practically half the entire yield of the Commonwealth. New South Wales occupied the second place on the list until 1876, when Queensland returns exceeded those of the parent State, a condition of things that has been maintained ever since. Up to the year 1884 Tasmania and South Australia in turn occupied the position of lowest contributor to the total gold yield of the Commonwealth, but from 1894 onwards the returns from the former State have been in excess of those of the latter. Taking the average of the last nine years the relative positions of each State in regard to the gold production of the Commonwealth were as follows :—

RELATIVE POSITION OF STATES AS GOLD PRODUCERS, 1901 to 1909.

State.	Annual Average of Gold Production, 1901 to 1909.	Percentage on Common-wealth.	State.	Annual Average of Gold Production, 1901 to 1909.	Percentage on Common-wealth.
	£			£	
Commonwealth ...	**14,485,648**	**100.00**	New South Wales	974,142	6.72
Western Australia	7,699,285	53.15	Tasmania ...	267,645	1.85
Victoria ...	3,079,327	21.26	South Australia	72,200	0.50
Queensland ...	2,393,049	16.52			

4. **Methods of Gold Mining adopted in Each State.**—The circumstances of gold mining in the various States are not quite identical, for which reason reference is made to that of each State.

(i.) *New South Wales.* In New South Wales the earlier "rushes" were to surface alluvial or shallow-sinking grounds. Many of these were apparently soon worked out, but there is reason to believe that in some instances payable results would be obtained by treating the rejected wash-dirt on more scientific principles. With the exhaustion of the surface deposits discoveries were made by sinking to what are called deep alluvial leads, representing the beds of old drainage channels in Pliocene times. The first of these deep alluvial leads was discovered at Forbes, in New South Wales, in 1862. The Tertiary deep leads at Gulgong were discovered in 1871. Cretaceous leads occur at Tibooburra, and detrital gold has been found in Permo-carboniferous conglomerates at Tallawang. The method of dredging is at present being extensively used for winning gold from the beds

of running streams, and also in loose river flats and other wet ground where sinking would be impracticable. The system was introduced from New Zealand, where it was originally applied with great success on the Clutha River, and there are now dredges working on practically all the auriferous rivers of New South Wales. Hydraulic sluicing is also employed in several places, the necessary machinery being fitted to a pontoon for convenience in moving from place to place. The quantity of alluvial gold obtained, other than by dredging, amounted to 11,514 ozs. in 1909, the chief yields being—Tumbarumba, 1379 ozs.; Stuart Town, 1300 ozs.; Gulgong, 563 ozs:, and Major's Creek, 510 ozs. The quantity obtained by dredging was 36,168 ozs.; the largest returns being obtained at Araluen, 10,735 ozs.; Adelong, with 10,321 ozs.; Stuart Town, 4113 ozs.; Wellington, 6346 ozs.; Nundle, 1378 ozs.; and Sofala, 1788 ozs. The dredges at work at the end of 1909 totalled 66, of which 20 were of the bucket type and 46 were pumping plants. The value of the plants in operation (including recovery plants) was estimated at £309,833. The quantity of gold won from quartz amounted to 157,073 ozs. At the present time the Cobar district is the chief centre of the production from quartz, the yields from the Canbelego and Cobar fields included therein being respectively 43,197 ozs. and 35,009 ozs. Next comes the Murrumburrah field, with 11,390 ozs.; Araluen, 10,735 ozs.; Adelong, 10,321 ozs.; Wyalong, 9981 ozs.; Wellington, 7921 ozs.; and Peak Hill, 6984 ozs.

The table below shews the yield from alluvial and quartz working in each of the principal districts during 1909:—

***GOLD WON IN NEW SOUTH WALES, ALLUVIAL AND QUARTZ, 1909.**

District.	Alluvial.		Quartz.	Total.
	Other than by Dredging.	By Dredging.		
	ozs.	ozs.	ozs.	ozs.
Albert	353	...	1,517	1,870
Bathurst	1,686	76	10,166	11,928
Clarence and Richmond	165	...	696	861
Cobar	...	...	78,402	78,402
Hunter and Macleay	77	...	350	427
Lachlan	386	...	26,450	26,836
Mudgee	1,735	6,346	15,780	23,861
New England	221	...	464	685
Peel and Uralla	1,150	1,378	5,083	7,611
Southern	1,206	11,322	7,284	19,812
Tambaroora and Turon	2,084	6,176	545	8,805
Tumut and Adelong	2,451	10,870	10,336	23,657
Total	11,514	36,168	157,073	204,755

* These particulars are based on information obtained locally from mine and battery owners, and the total of the quantities specified in this table does not agree with the total production as obtained from the Mint and from export and import returns as shewn on page 496.

(ii.) *Victoria.* Quartz-reefing predominates in Victoria, although a considerable amount of gold is obtained from alluvial workings, both surface and deep leads. The deepest mines in Australia are found in the Bendigo district, where the two deepest shafts were at the 31st December, 1909, 4355 and 4318 feet deep respectively, while the bottom of the winze at the Victoria Reef Quartz was 4558 feet from the surface. Altogether there were at the close of 1909 no less than fifty-two shafts in this district which had reached a depth of over 2000 feet. A considerable amount of attention is given to dredging and hydraulic sluicing, particularly in the Beechworth, Gippsland, Castlemaine, and Ballarat districts, the number of plants in operation at the end of 1909 being 111, while 9 plants were in course of reconstruction or building. The total quantity of gold won

from dredge mining in 1909 was 88,339 ounces, and from sluicing 630 ounces, while the number of gold dredging and hydraulic sluicing leases in force at the end of the year was 234, extending over an area of 21,493 acres. The yields from alluvial workings and quartz reefs as returned (in crude ounces) from the chief mining districts of the State during last year were as follow:—

GOLD WON IN VICTORIA, ALLUVIAL AND QUARTZ, 1909.*

District.	Alluvial.	Quartz.	Total.
	ozs.	ozs.	ozs.
Ararat and Stawell	11,186	7,458	18,644
Ballarat	40,054	95,270	135,324
Beechworth	98,783	22,092	120,875
Bendigo	2,926	216,716	219,642
Castlemaine	22,539	53,651	76,190
Gippsland	6,985	42,872	49,857
Maryborough	50,136	30,747	80,883
Total	232,609	468,806	701,415

* As returned in crude ounces from chief mining districts.

The Virginia, Bendigo, was the largest yielding lode mine, with an output of 36,567 tons for 17,277 ozs., or an average or 9½ dwts. per ton; the greatest yielding deep alluvial mine was the Duke and Main Leads Consols, at Maryborough, with an output of 15,621 ozs.; the Tewksbury Amalgamated, working five dredges, heads the list of dredging and sluicing companies with a yield of 6356 ozs.

(iii.) *Queensland.* Operations in Queensland are at present chiefly confined to quartz reefing, the yield from alluvial in 1909 being only 10,288 ounces, while the quantity produced from quartz was 343,650 ounces; from copper and other ores 95,579 ounces; and from old tailings 6062 ounces; making a total production of 455,579 ounces, valued at £1,935,178. The yields from the principal fields are given below:—

GOLD WON IN QUEENSLAND, ALLUVIAL AND QUARTZ, 1909.

District.	Alluvial.	Quartz.	From Copper and other Ores and old Tailings.	Total.
	fine ozs.	fine ozs.	fine ozs.	fine ozs.
Charters Towers	720	164,282	6,652	171,654

Other districts	1,189	8,891	12,564	22,644
Total	10,288	343,650	101,641	455,579

(iv.) *South Australia.* In South Australia alluvial gold has been worked for many years in the gullies round Adelaide, while a fair amount of gold has been obtained by this method at Teetulpa, in the northern areas. There are some valuable reefing fields

in the Echunga district, at Mt. Grainger, Barossa, Wadnaminga, Mannahill, etc., but they have not been developed to the extent they deserve. Good stone was discovered a few years ago at Tarcoola, but the present returns are comparatively small. The rich finds at Arltunga in the centre of the continent, within the boundaries of the Northern Territory, have not yielded up to expectations, but the field has not been systematically prospected. It is stated that the gold occurs chiefly in vughs, crevices, and cellular quartz, the latter being at times exceedingly rich. The solid stone is low grade and is not worked. Operations are confined to the vein matter, which is passed through screens, and the larger lumps hand picked, the fines and all that contains vughs or cellular quartz being saved for treatment and the balance discarded. South Australia is not divided into mining districts as is the case in the other States. The Macdonnell Ranges, although within the boundaries of the Northern Territory and coming under the operation of the Northern Territory Mining Act, yet geographically belong to South Australia proper. All business is done from Adelaide and the administration of the Mining Act south of the 19th parallel of latitude is conducted by the Hon. Minister controlling the Northern Territory, with the help of a resident warden at Arltunga. The total output of gold for 1909 from the Northern Territory amounted to 7953 ounces, valued at £24,148.

(v.) *Western Australia.* In Western Australia the operations are confined principally to quartz reefing, the returns from ordinary alluvial and hydraulic sluicing being comparatively small. The total production of gold from all sources during last year was 1,595,270 ounces, of which only 0.5 per cent. was alluvial. The production of gold on the various goldfields during the year 1909 was as follows :—

GOLD WON IN WESTERN AUSTRALIA, ALLUVIAL AND QUARTZ, 1909.

Goldfields.	Alluvial.	Dollied and Specimens.	Crushed.	Total.
	Fine ozs.	Fine ozs.	Fine ozs.	Fine ozs.
East Coolgardie	1,391	1,203	896,695	899,289
East Murchison	389	1,644	153,876	155,909
Mount Margaret	954	1,281	153,630	155,865
Murchison	894	2,301	129,911	133,106

Other goldfields	...	...	348	348
Total	8,121	11,211	1,557,074	1,576,406

The figures in the above table are compiled from returns from the individual mines and are somewhat incomplete ; the total is therefore less than the total shewn on page 496 from mint and export returns.

(vi.) *Tasmania.* The yield from Tasmania is also chiefly obtained from quartz reefing, although there is a little alluvial mining carried on in the Lisle district. The yields as returned from the chief centres in 1909 are shewn hereunder :—

GOLD WON IN TASMANIA, ALLUVIAL AND QUARTZ, 1909.

Description.	Northern & Southern.	North-eastern.	Eastern.	Western.	Total.
	ozs.	ozs.	ozs	ozs.	ozs.
Quartz	22,938	219	2,450	18,811*	44,418
Alluvial	240	329		65	634

* Gold contained in blister copper and silver-lead bullion.

The total production equalled 44,777 fine ounces, valued at £190,201.

5. **Remarkable Masses of Gold.**—The first "nugget" found in Australia was obtained at Hargraves, in New South Wales, on the 13th May, 1851, and weighed a little over 1 lb. In the same year the Burrandong nugget was found near Orange, weighing 2217 ozs. 16 dwts., and the "Brennan" was sold in Sydney for £1156. During the period 1880-82 nuggets weighing from 59 ozs. to 1393 ozs. were found at Temora. The "Jubilee," which weighed 347 ozs., was found in 1887.

In Victoria a nugget found at Canadian Gully in 1853 weighed 1620 ozs.; the "Welcome," found at Ballarat in 1858, weighed 2217 ozs.; and the "Welcome Stranger," unearthed in 1869 at Mount Moliagul, near Dunolly, weighed 2315 ozs., of which 2284 ozs. were fine gold and 31 ozs. silver, and was valued at £9534.

In addition to these alluvial nuggets large masses of gold have been found *in situ* in reefs. A mass known as "Kerr's Hundredweight," discovered in 1851 at Hargraves, in New South Wales, yielded 106 lbs. of gold. Probably the largest mass of gold ever found was obtained in Beyers and Holtermann's claim at Hill End in 1872. The total weight of the specimen, including the small amount of quartz in which it was encased, was 630 lbs. Its dimensions were 4 ft. 9 in. high, 2 ft. 2 in. wide, and about four inches thick. The value was not definitely known, but an offer of £13,000 was refused.

6. **Modes of Occurrence of Gold in Australia.**—(i.) *New South Wales.* The principal gold deposits worked with profit in New South Wales are classified by the Government Geologist of that State as follows:—(*a*) Alluvial or detrital gold. (*b*) Auriferous reefs or lodes. (*c*) Impregnations in stratified deposits, such as slate, quartzite, and volcanic tuff. (*d*) Impregnations in igneous rocks, such as granite, serpentine, felsite, etc. (*e*) Irregular deposits, such as bunches of auriferous ironstone. The detrital gold is found chiefly in Recent and Pleistocene alluvials, in beach sands along the coast, in Tertiary alluvial leads, in Cretaceous alluvial leads, and in Permo-carboniferous conglomerates. In the beach sands the gold is found in association with platinum and tin. In reefs the gangue is principally composed of quartz; calcide is often present, and barytes and fluor-spar are also met with. At Hill End gold was found associated with muscovite. In the oxidised portions of auriferous reefs, limonite, malachite, azurite, and cuprite are found, while below the water-line the veins are impregnated with iron pyrites, galena, copper pyrites, zinc blende, pyrrhotine, and stibnite. The auriferous quartz veins fall into three categories—fissure veins, bedded veins, and contact veins. Large masses of gold have occasionally been found in lodes, such as "Kerr's Hundredweight," alluded to in a preceding paragraph. The so-called saddle reefs in the Hargraves district are identical with those worked so profitably and at such great depths round Bendigo, in Victoria. Altogether gold has been found in association with over forty minerals in New South Wales, one of the most peculiar products being known as "mustard" gold, resultant on the decomposition of tellurides. The substance has the appearance of dull yellow clay, but it readily burnishes when pressed with a knife blade. Native gold has never been found in an absolutely pure state in New South Wales, being always alloyed with silver and also traces of other metals.

(ii.) *Victoria.* In Victoria the occurrence of gold is noted under two main headings —1. Matrix gold. 2. Redistributed gold. The so-called matrix gold occurs in quartz reefs of various kinds, in Ordovician, Silurian, and Lower Devonian sedimentary, metamorphic, and granitoid and porphyritic rocks; in reefs, veins, and lenticular deposits in dykes of granitoid, porphyritic, dioritic, and felspathic rocks, or between dykes and walls of intruded rocks; or in fracture planes or joints in granitoid rocks. Under the above conditions the gold is either free or in combination with iron, arsenic and iron, copper and iron, zinc, lead, antimony, silver, etc.

The redistributed gold is found in sands and gravels of existing streams, in deep leads, in littoral gravels and sands, and in cleavage and joint planes of rocks underlying the deep leads.

(iii.) *Queensland.* The most remarkable mode of occurrence in Queensland is that at the Mount Morgan mine, which presents so many novel features as to demand special reference. At this mine the siliceous material forming the ore body was found enclosed in igneous rock, which continued to the surface, except for a funnel-shaped mass of sandy beds and secondary ore outcropping near the summit of the mount. In a crevice of these sandy beds was deposited a plug of desert sandstone nearly 100 feet deep at its thickest part, with a surface area of three-fifths of an acre, quite distinct from and unconformable to, the beds of loose sand which underlay and surrounded it, and more ferruginous towards the outside than in the centre of its area. A ferruginous belt extended outside the plug, attaining a depth of 150 feet from the surface. It was hard and extremely rich in gold, which was disseminated through the stone in microscopic particles. Beneath the ironstone there was a band of loose sand or soft bed, in some places many feet in thickness, also extremely rich in gold. Underlying and almost surrounding the secondary ores, a great mass of siliceous and kaolin ore was found, denuded of its gold, which is supposed to have been leached out and conveyed in solution and again deposited in the enriched zone. The impoverishment prevails between the depths of 180 and 300 feet, the friable silicia being cellular from the removal of the pyrites. The evidences of the oxidisation and leaching action are greater towards the centre than along the walls of the mass. Below the skeleton ore an unaltered zone of copper sulphide ore was found, in which gold was irregularly distributed, the copper increasing with the depth. Outside both sulphide and skeleton ore are walls of crystalline igneous rocks. Dykes, later than the massive igneous rocks but older than the enriched zone, traverse the siliceous sulphides in various directions. The theory advanced by Dr. Jack that the formations at Mount Morgan were due to geyser action at one time found wide acceptance, but later investigations tend to discredit it. So far, however, no completely satisfactory explanation has been put forward.

(iv.) *Western Australia.* The Government Geologist of Western Australia classifies the conditions under which gold is found in that State as follows:—(*a*) Native metal. (*b*) Compounds with tellurium and other elements. (*c*) Associated with other minerals.

Native gold occurs in several different forms, to which popular names descriptive of their appearance have been given, such as crystalline, dendritic, rough, flake, mustard, and sponge gold. Tellurides of gold abound at Kalgoorlie and Mulgabbie. Calverite is the most frequently occurring mineral, but petzite, goldschmidtite, and the minerals termed kalgoorite and coolgardite are also found. Of the metallic minerals, iron in the form of iron pyrites and oxides is widely distributed. Galena comes next, whilst amongst other minerals found in association with the precious metal may be mentioned zinc blende, arsenopyrite, vanadinite, bismuth pyrrhotite, chalcopyrite, bourononite, copper, scheelite. Quartz is of course the commonest of the earthy secondary minerals, but calcite, chalcedony, gypsum, actinolite, chlorite, and others are also found in association with gold. Some of the native gold is found to be remarkably pure, specimens of sponge gold from lodes at Boulder, Kalgoorlie, and East Coolgardie being found to contain 99.91 per cent. of the precious metal with but 0.09 per cent. of silver.

7. **Place of Commonwealth in the World's Gold Production.**—In the table given below will be found the estimated value of the world's gold production, and the share of the Commonwealth therein during the thirteen years 1897 to 1909. The figures given in the table have been compiled chiefly from returns obtained direct by the Commonwealth Bureau of Census and Statistics from the gold-producing countries of the world.

WORLD'S GOLD PRODUCTION, 1897 to 1909.

Year.	World's Production of Gold.	Gold produced in Commonwealth.	Percentage of C'wealth on Total.
	£	£	%
1897	48,196,000	9,890,000	20.52
1898	58,136,000	11,679,000	20.09
1899	63,015,000	14,533,000	23.06
1900	52,086,000	13,578,000	26.07
1901	53,339,000	14,006,000	26.26
1902	60,619,000	14,812,000	24.43
1903	66,761,000	16,295,000	24.41
1904	70,554,000	15,897,000	22.53
1905	76,839,000	15,551,000	20.24
1906	83,180,000	14,632,000	17.59
1907	84,770,000	13,515,000	15.94
1908	90,370,000	13,059,000	14.45
1909	91,910,000	12,605,000	13.71

The latest published estimates place the world's gold yield at about 92 millions sterling in 1909, towards which the Commonwealth contributed 12½ millions, or about 13¾ per cent. While the production of gold in the Commonwealth rose by about 27½ per cent. in the thirteen years from 1897 to 1909, the world's total increased by about 90 per cent. in the same period. The following table will be found interesting, as shewing the various foreign countries where the chief increases have taken place during the interval in question:—

INCREASE IN GOLD YIELD, VARIOUS COUNTRIES, 1897 to 1909.

Country.	1897.	1900.	1907.	1908.	1909
	£	£	£	£	£
United States ...	11,787,000	16,269,000	18,583,000	19,566,000	20,418,000
Canada ...	1,240,000	5,742,000	1,725,000	2,025,000	1,930,000
Mexico ...	2,045,000	1,884,000	3,733,000	4,137,000	4,582,000
Transvaal ...	11,654,000	1,481,000	27,401,000	29,973,000	30,988,000
Rhodesia ...	800	308,000	2,179,000	2,526,000	2,624,000
Gold Coast ...	85,000	38,000	1,164,000	1,195,000	979,000
Madagascar ...	8,500	142,000	267,000	345,000	434,000
India	1,571,000	1,893,000	2,134,000	2,178,000	2,070,000
Korea ...	208,000	371,000	471,000	480,000	480,000*
Japan ...	142,000	290,000	396,000	457,000	520,000
Java	24,000	112,000	479,000	610,000	630,000
Costa Rica ...	2,000	31,000	70,000	122,000	122,000*

* Not available; previous year's figures taken.

The largest increase was recorded in the Transvaal, where the production nearly trebled itself in the thirteen years 1897 to 1909.

The number of persons engaged in gold mining in each State during the last nine years is shewn in the following table:—

PERSONS EMPLOYED IN GOLD MINING, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
	No.	No.	No.	No.	No.	No.	No.
1901	12,064	27,387	9,438	1,000	19,771	1,112	70,772
1902	10,610	26,151	9,045	1,000	20.476	1,038	68,320
1903	11,247	25,208	9,229	1,000	20,716	973	68,373
1904	10,648	24,331	9,620	1,000	18,804	1,076	65,479
1905	10,309	25,369	10,641	900	18,382	1,207	66,808
1906	8,816	25,304	9,842	900	17,926	988	63,776
1907	7,468	23,291	8,883	914	17,237	953	58,746
1908	6,363	20,853	7,736	1,213	16,075	843	53,083
1909	5,585	18.671	7,150	1,177	17,027	713	50,323

§ 3. Platinum and the Platinoid Metals.

1. **Platinum.**—The existence of platinum was first noted in New South Wales in 1851 by Mr. S. Stutchbury, who found a small quantity near Orange. Since the year 1878 small quantities of the metal have been obtained from beach sands in the northern coastal district. Platiniferous ore was noted in 1889 at Broken Hill. The chief deposits at present worked in the State are situated at Fifield, near Parkes, but the entire production in 1909 was small, amounting to only 440 ozs., valued at £1720, while the total production recorded to the end of 1909 amounted to 11,578 ozs., valued at £20,713. The matter of treating the extensive surface deposits received further attention during the year, but the difficulty of securing the necessary supply of water has not been surmounted. In September, 1909, the price paid locally for the platinum was increased from £2 17s. 6d. to £3 15s. per ounce. Attempts were made by a French company to treat the sands in the vicinity of Jerusalem Creek in the Woodburn division, but it is represented that it was found that a larger plant is necessary to enable operations to be conducted at a profit; work was therefore suspended for the purpose of raising additional capital.

In Victoria the metal has been found in association with copper at the Walhalla Copper Mine in Gippsland, but the mine is not at present being worked. The metal has also been found in small quantities in black sand beaches in the Otago district of New Zealand, and is present in the alluvial wash at Takaka, Nelson. Up to the present, however, the production has been trifling.

2. **Osmium, Iridium, etc.**—Small quantities of osmium, iridium, and rhodium are also found in various localities. As far back as 1860, the Rev. W. B. Clarke states that he found native iridium. Platinum, associated with iridium and osmium, has been found in the washings from the Aberfoil River, about 15 miles from Oban, on the beach sands of the northern coast; in the gem sand at Bingara, Mudgee, Bathurst, and other places. In some cases, as for example in the beach sands of Ballina, the osmiridium and other platinoid metals amount to as much as 40 per cent. of the platinum, or about 28 per cent. of the whole metallic content.

In Victoria, iridosmine has been found near Foster, and at Waratah Range, South Gippsland.

§ 4. Silver.

1. **Discovery in Each State.**—(*a*) *New South Wales.* The occurrence of silver in New South Wales was first mentioned by Count Strzelecki in a letter addressed to Captain King, R.N., dated the 26th October, 1839. In his work, "The Southern Goldfields," published in 1860, the Rev. W. B. Clarke also mentions a discovery of the metal. Since that date silver has been found in a large number of localities throughout

the State. The Broken Hill field, the chief lode on which was discovered in 1882 by Mr. Charles Rasp, constitutes one of the richest and most productive mining centres in the world. Further reference to the production from the Broken Hill district will be made on a subsequent page. Amongst other important finds in New South Wales may be mentioned Boorook, near Tenterfield, discovered in 1878; Sunny Corner, originally worked for gold in 1875; Emmaville, 1884; Rivertree, on the Clarence River, 1887; Borah Creek, near Inverell, 1870; Rockvale, 1895.

(*b*) *Victoria.* Mining for silver is not carried on to any extent in Victoria, the production recorded in the mining returns being chiefly obtained in the process of refining gold, and the same applies in the case of the production from Western Australia.

(*c*) *Queensland.* In Queensland most of the important gold mines yield also supplies of silver, but the credit of establishing the silver mining industry *per se* belongs to the Ravenswood field, where in 1879 the recovery of a parcel of 40 tons of galena assaying 130 ozs. of silver to the ton, marked the opening of the industry. At Chillagoe in 1884 there were thirty-two silver lead shows being worked, while during the decade 1885-1895 over 1½ million ozs. were raised at the Mount Albion mine. The Girofla mine in the Mungana group is at present producing large supplies of silver lead ore of high grade. The output of ore from the Silver Spur mine at Texas to the end of 1909 was 66,000 tons, the ore treated averaging from 26 to 35 ozs. of silver per ton; the ore deposits in this vicinity are reckoned to be the richest in Southern Queensland. In 1909 the total quantity of silver produced in Queensland was 1,001,383 ozs., valued at £99,093.

(*d*) *South Australia.* In South Australia, silver lead is found in the main range, south of Adelaide. The Wheal Gawler mine, near Glen Osmond, opened in 1841, was probably the first mine worked in the Commonwealth. Silver lead deposits have also been noted north-east from Farina and west from Beltana. A small amount of silver lead is also obtained in the Northern Territory.

(*e*) *Tasmania.* Tasmania is the only State in the Commonwealth besides New South Wales which produces any considerable quantity of silver. The famous Zeehan mine, on the west coast, was discovered in 1885, and the deposits at Heazlewood River in 1887. Both districts are still opening up rich deposits of ore.

2. **Development of Silver Mining.**—In illustration of the development of silver mining in Australia the following table has been compiled, shewing the production of silver, silver lead and ore, and lead from each State during the years 1881, 1891, and 1901 to 1909:—

PRODUCTION OF SILVER AND LEAD, AUSTRALIA, 1881 to 1909.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1881 ...	...	5,239	13,494	1,182	11,224	...	31,139
1891 ...	3,621,614	6,017	21,879	5,927	250	62,138	3,717,825
1901 ...	1,954,964	6,550	69,234	3,886	7,718	325,335	2,367,687
1902 ...	1,487,837	4,900	72,851	42,063	9,467	387,024	2,004,142
1903 ...	1,539,989	4,898	109,177	10,870	19,153	428,125	2,112,212
1904 ...	2,131,504	4,990	96,418	1,387	45,912	318,971	2,599,182
1905 ...	2,496,709	4,100	102,388	3,244	44,278	415,248	3,065,967
1906 ...	2,864,057	4,980	151,577	12,982	37,612	552,704	3,623,912
1907 ...	4,290,128	4,355	187,870	13,873	26,674	572,560	5,095,460
1908 ...	2,346,941	2,835	206,716	9,030	23,883	322,007	2,911,412
1909 ...	1,839,688	2,310	167,636	673	19,977	298,880	2,329,164

The figures quoted for New South Wales in the above table represent the *net* value of the product (excluding zinc) of the silver-lead mines of the State. In explanation of the values thus given, it must be noted that the metallic contents of the larger portion of the output from the silver-lead mines in the State are extracted outside New South Wales, and it is considered, therefore, that the State should not take full credit for the finished product. Hence the *net* value referred to above relates to that of the ore, concentrates, and bullion, as declared by the several companies to the Customs Department at date of export. The real importance of the State as a producer of silver, lead, and zinc is thus to some extent lost sight of. The next table, however, which indicates the quantity and value of these metals locally produced, and the quantity and value of concentrates exported during the last six years, will shew the estimated total value of the yield:—

VALUE OF PRODUCTION FROM SILVER-LEAD MINES OF NEW SOUTH WALES, 1904 TO 1909.

Year.	Value of Silver, Lead, and Spelter produced within the C'wealth.	Value of Concentrates Exported.	Total.
	£	£	£
1904	2,088,784	642,125	2,730,909
1905	2,131,317	1,181,720	3,313,037
1906	2,112,977	1,876,834	3,989,811
1907	2,228,420	3,574,775	5,803,195
1908	2,008,410	2,400,997	4,409,407
1909	1,176,394	2,707,680	3,884,074

As regards silver alone, the following table, which has been prepared on a basis similar to that on which the preceding table was compiled, shews the estimated total quantity and value of that metal yielded by the mines of New South Wales up to the end of 1903 and during the last six years:—

ESTIMATED QUANTITY AND VALUE OF SILVER YIELDED BY MINES OF NEW SOUTH WALES, TO END OF 1909.

Period.	Produced in Australia.		Contained in Concentrates, etc., Exported.		Total Production.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Fine ozs.	£	Fine ozs.	£	Fine ozs.	£
To the end of 1903 ...	82,947,404	13,807,421	104,659,834	18,330,147	187,607,238	32,137,568
1904	7,751,667	920,947	2,945,058	349,891	10,696,725	1,270,838
1905	6,804,934	852,533	3,480,561	436,050	10,285,495	1,288,583
1906	5,575,410	775,409	3,111,013	432,669	8,686,423	1,208,078
1907	5,921,457	795,982	6,228,225	845,845	12,149,682	1,641,827
1908	6,484,288	693,034	5,499,381	587,768	11,983,669	1,280,802
1909	3,717,016	382,605	6,867,775	732,563	10,584,791	1,115,168
Total	119,202,176	18,227,931	132,791,847	21,714,933	251,994,023	39,942,864

The decrease in the value of the production for 1908 was chiefly due to the fact that operations in the Broken Hill field were conducted on a considerably restricted scale. The fall in the price of metals resulted in several of the mines in this field being closed down in 1908, while other mines curtailed development and productive work. The further decrease in 1909 is attributable to labour troubles. The Broken Hill strike extended over the first five months of the year, and involved principally two large producing mines, viz., the Proprietary and Block 10. In the case of the former mine, underground work was not resumed during the whole year, as it was considered that the current prices of metals did not permit of the profitable extraction of the ore, in view of the rates of wages

fixed by the Commonwealth Arbitration Court. The ore mined at the Broken Hill field was consequently 417,217 tons less than in the previous year, while the gross value of the output dropped from £3,215,325 to £2,611,189. In Tasmania the decrease was principally owing to the temporary stoppage of the Tasmanian Smelting Company's works, followed by the closing down of the Magnet and Hercules mines. The output of the Yerranderie field in New South Wales was not so large as in the previous year, operations being restricted owing to transport difficulties.

3. **Chief Centres of Silver Production.**—Broken Hill, in New South Wales, and Zeehan, in Tasmania, are the great centres of silver production in Australasia. The production in Queensland has, however, considerably expanded during the last few years.

(i.) *New South Wales.* (*a*) *Broken Hill.* The bulk of the production is, of course, from New South Wales, being contributed mainly by the mines in the celebrated Broken Hill district.

At Broken Hill a considerable quantity of high-grade ore has been found at or near the surface, while shafts and drives have been put in along the lode to intersect ore bodies at greater depths. The deepest shaft on the field is on Block 10, where a depth of 1490 ft. has been reached, while shafts at the Proprietary and Junction North have been put down to a depth of 1300 and 1200 ft. respectively. Broken Hill itself consists of a low range about two miles in length, composed of crystalline gneisses passing into banded quartzites, micaceous and hornblendic schists, and garnetiferous sandstones. The rocks are bent into an anticlinal fold, the axis being coincident with the crown of the range, and the strata dipping away on each side almost parallel to the surface of the slope. The lode occupies the saddle-shaped cavity formed by the contortion of the strata, and its outcrop is coincident with the highest part of the range for about a mile and a half in length. Practically the whole of this outcrop has been removed in an open cut varying in width from 20 to 100 ft. The outcrop was composed of massive manganiferous limonite associated with siliceous and aluminous material, and containing numerous vughs bearing cerussite, chloride, iodide, and bromide of silver and stalactites of psilomelane. The iron ore contained from 2 to 30 ozs. of silver to the ton and from 10 to 25 per cent. of lead, and was extremely useful in fluxing the siliceous ores beneath it. Underneath the ironstone were found (1) deposits of carbonate of lead and a gangue composed of siliceous and aluminous material containing manganiferous iron oxide; (2) other high-grade ores containing kaolin, garnets, quartz with native silver, and also chlorides, chloro-bromides, and iodides, and yielding 4 to 300 ozs. of silver to the ton and a small quantity of lead; (3) a dry low-grade ore yielding from 5 to 40 ozs. to the ton. Below these so-called oxidised ores the lode consisted of rich sulphides containing galena, zinc blende, quartz, garnet, rhodonite, felspar, iron and copper pyrites, and small quantities of mispickel, wulfenite, and fluorspar. The sulphide ore contains from 6 to 36 ozs. of silver and 2 to 3 dwts. of gold to the ton, from 5 to 50 per cent. of lead, and 14 to 30 per cent. of zinc.

In addition to the cessation of operations at the Proprietary and Block 10 mines owing to labour troubles, to which reference has already been made, the British mine was closed down during the whole year, owing, it is stated, to the price of metals being too low to permit of the company conducting operations under existing conditions at a profit. At the Junction mine also no productive work was carried on during the year. In these circumstances the aggregate output of ore—1,030,287 tons in 1909, as against 1,447,504 tons in the preceding year—must be regarded as satisfactory and as furnishing evidence of the potentialities of the mines. Recoveries of metals have been higher than in previous years, much better results being secured by the new and improved milling plants in operation. Towards the end of the year, when the industry was rapidly recovering from the set-back which it had received, the strike of the coal-miners in New South Wales, and the consequent shortage of fuel, were the means of putting a large

number of miners on the Broken Hill field out of employment. Although the returns are not complete in all cases, the following table relating to the mines at Broken Hill will give some idea of the richness of the field :—

RETURNS OF BROKEN HILL SILVER MINES, 1909.

Mine.	Authorised Capital.	Value of Output to end of 1909.	Dividends and Bonuses Paid to end of 1909.
	£	£	£
Broken Hill Proprietary Co. Ltd.	384,000	32,374,233*	9,752,000†
Broken Hill Proprietary Block 14 Co. ...	155,000	3,228,101	446,827
British Broken Hill Proprietary Co. ...	264,000	1,993,616	337,500
Broken Hill Proprietary Block 10 Co. ...	1,000,000	3,574,220	1,205,000
Sulphide Corporation Ltd. (Central Mine) ...	1,100,000	10,043,351	653,125
Broken Hill South Silver Mining Co. ...	200,000	3,307,000	675,000
North Broken Hill Mining Co.	140,000	1,180,169	228,440
Broken Hill Junction Mining Co.	100,000	797,673	85,000
Broken Hill Junction North Silver Mining Co.	180,000	685,767	25,793
Broken Hill South Blocks Ltd.	200,000	405,867	...
Broken Hill South Extended Ltd.	337,500	150,344	50,000
Totals	4,060,500	57,740,341‡	13,458,685

* The value of the ores purchased during 1908 and 1909 is not included. † Excluding nominal value of shares in Block 14, British, and Block 10 Companies, allotted to shareholders of the Proprietary Company and amounting to £1,744,000. ‡ Owing to incompleteness of the returns, these figures understate the total value of output.

(*b*) *Yerranderie and Conrad Stannite.* The mines on the Yerranderie field in the Southern Mining District produced 719,264 ozs. of silver in 1909, besides small quantities of gold and lead. This yield, although falling short of that of the previous year (828,129 ozs.), is such as to emphasise the importance and possibitities of the field. It is stated that mining operations are carried on under considerable difficulties owing to the heavy cost of transport, and that the advent of a railway (the construction of which is proposed) would completely change the outlook. Increased activities were evinced during the year in the operations at the silver mines in the Burrowa, Yass, and Cootamundra divisions. The total production in 1909 was valued at £99,374, as compared with £114,029 in 1908.

(ii.) *Tasmania, West Coast.* The silver-lead mines on the west coast are now well established. Amongst the most important are the Mt. Zeehan, Zeehan-Montana, Zeehan-Western, Oonah, Comet, Hercules, Adelaide, North Mt. Farrell, and Tasmanian Copper. The total production of silver-lead ore in 1909 was 80,378 tons, valued at £298,880, as against 63,167 tons, valued at £322,007, in 1908. The production for these two years was considerably lower than for 1907, viz., £572,650, owing to the temporary stoppage of the Tasmanian Smelting Company's works, followed by the temporary closing down of the Magnet and Hercules mines.

(iii.) *Queensland.* Notwithstanding that ore shipments from the Lady Jane mine ceased shortly after the fall of ground in that mine in February, 1909, the Mungana (Chillagoe) Company's copper shipments to the Chillagoe smelter totalled 6386 tons, the gross contents being—silver, 73,165 ozs., and copper, 304 tons. The lead shipments amounted to 28,973 tons, the gross contents being 389,386 ozs. of silver and 1425 tons of copper, of a total value of £153,381. It is believed that silver lead will also prove an important factor in the development of the Etheridge goldfield.

4. **World's Production of Silver.**—The world's production of silver during the last nine years is estimated to have been as follows :—

WORLD'S PRODUCTION OF SILVER, 1901 to 1909.

Year	1901.	1902.	1903	1904	1905.	1906	1907.	1908.	1909.
World's production* in 1000 fine ozs.	174,851	163,937	173,222	176,840	181,338	184,552	183,386	212,570	217,615

* Add 000 to figures for fine ounces.

The Commonwealth's share in the world's silver production in 1909 was estimated at 15,923,320 ounces, or about 7¼ per cent. on the total production.

5. **Prices of Silver.**—As the production of silver is dependent to a very large extent on the price realised, a statement of the average price per standard ounce paid by the London Mint at various periods and during the last six years is given below.

PRICES OF SILVER, 1871 to 1909.

Year	1871.	1881	1891.	1901.	1904.	1905.	1906.	1907.	1908.	1909.
Pence per standard oz....	60½	51 11/16	45 1/16	27 3/16	26⅜	27 5/16	30⅞	28 5/16	24½	23 15/16

During the month of November, 1906, owing to the small sales in New York, and also to the fact that the Indian, American, and Mexican Governments were all buying silver, the price rose to 33⅛d., the highest realised since 1893, when the average stood at 36 5/16d.

6. **Employment in Silver Mining.**—The number of persons employed in silver mining during each year of the period 1901 to 1909 is given below :—

NUMBER OF PERSONS EMPLOYED IN SILVER MINING, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania	C'wealth.
	No.	No.	No.	No.	No.	No.	No.
1901	6,298	...	40	150	...	2,414‡	8,902§
1902	5,382	...	100	150	...	2,893‡	8,525§
1903	6,035	...	458	150	...	1,681‡	8,324§
1904	7,071	...	45	50	...	1,101	8,267
1905	7,887	...	293	50	...	1,512	9,742
1906	9,414	13	282	50	...	1,745	11,504
1907	10,021	10	785	86	8	1,908	12,818
1908	7,560	3	496	51	5	1,740	9,855
1909	6,207	...	354	40	5	1,516	8,122

‡ Including copper miners. § Including copper miners in Tasmania.

As the table shews, the bulk of the employment was in New South Wales and Tasmania, the quantity of silver raised in the other States, excepting Queensland, being unimportant.

§ 5. Copper.

1. **Production of Copper.**—The production of copper in the various States of the Commonwealth has been influenced considerably by the ruling prices, which have fluctuated in an extraordinary way. In 1908 the ruling price of the metal remained so consistently low that the progress of operations was seriously affected, and companies, which in previous years were important producers, found that they were unable to adjust their economies to suit the conditions, and were compelled to suspend work. The quantity and value of the production in earlier years and for 1905 to 1909 is shewn in the following tables :—

PRODUCTION OF COPPER, AUSTRALIA, 1881 to 1909.

* Not available.

2. **History.**—(i.) *New South Wales.* It is believed that copper was the first metal mined for in New South Wales, the earliest attempts at working taking place about the year 1844. The deposits at Copper Hill, near Molong, were worked in 1845, as well as those in the neighbourhood of Canowindra. In 1847 mining for copper was commenced at the Summerhill Estate, near Rockley. The Rev. W. B. Clarke reported the discovery of copper ores near Marulan in 1851, and at Quidong, in the Snowy River district, in 1852. The Mount Hope field was opened in 1878, Nymagee in 1880, and Lake George in 1882. The principal seat of the copper-mining industry at the present date is in the Cobar district, the value of the deposits there being first recognised in 1869. The value of the output of the Cobar district in 1909 was £253,378, out of a total for the State of £424,737, which is £78,075 less than the total for the previous year. Operations at the Great Cobar mine were, however, interrupted by a strike of tappers, and this, in conjunction with a shortage of fuel, was responsible for the suspension of smelting operations from the 17th November. The Nymagee, Mount Hope, and Girilambone mines in the Cobar division did not resume work during the year.

From the Grafton Company's mine at Cangai a considerably augmented output was supplied, and this mine secured the position for the year as second largest producer of

copper in the State. The Kyloe mine in the Cooma division also furnished a very satisfactory output. The Electrolytic Refining and Smelting Company of Australia Limited commenced active operations at Port Kembla, and during the year produced 5851 tons of electrolytic copper. This was, however, mostly obtained by the treatment of mattes and ores imported from other States, the quantity of copper won from the products of the mines of the State being only 697 tons.

(ii.) *Victoria.* In Victoria copper has been found at Bethanga, Sandy Creek, near Bogong, Walhalla on the Thomson River, and on the Snowy River and at Mount Tara near Buchan, but there are no mines at present being worked for their copper contents.

(iii.) *Queensland.* The first important discovery of copper in Queensland was made in the year 1862, when a rich lode was found near Clermont, on the Peak Downs. A further discovery was made during the same year at Mount Perry. Copper, tin, silver, and gold were found on the Herberton, Walsh, and Tinaroo mineral fields in 1879. The famous Mount Morgan gold mine, discovered in 1882, also produces a considerable amount of copper, the production therefrom in 1909 exceeding that from any other district. The production in 1909 from the more important districts was as follows:—Mount Morgan, £369,081; Herberton, £12,832; Mount Perry, £39,439; Cloncurry, £90,342; Rockhampton, £74,993; the total quantity of copper produced in Queensland in that year being 14,494 tons, valued at £853,196.

(iv.) *South Australia.* Taking the entire period over which production extended, the yield of copper in South Australia easily outstrips that of any other State in the Commonwealth. In recent years, however, Tasmania, Queensland, and New South Wales have come to the front as copper producers, as the table on the preceding page will shew. Deposits of copper ore are found over a large portion of South Australia. The Kapunda mine, discovered in 1842 by Messrs. Dutton and Bagot, is situated fifty miles north of Adelaide, and is the oldest copper mine in the State. Up to the end of 1879 the production amounted to 70,000 tons, the metal possessing such a high standard of purity that it always obtained the highest prices in the world's markets. During the nine years 1870 to 1878 the production was valued at £157,000. The Burra Burra mine, located in 1845 by a shepherd named Pickett, is situated about 100 miles north of Adelaide. The original capital invested in this mine was £12,320 in £5 shares, on which no call was ever made, while dividends to the amount of £800,000 were paid. For many years this mine produced from 10,000 to 13,000 tons of ore, averaging 22 to 23 per cent. of copper. During the 29½ years in which the mine was worked the production was valued at £4,749,000. In 1859 as many as 1170 persons were employed on it. The mine has lain practically idle for many years, but recently there have been attempts at re-working.

Yorke's Peninsula, between Spencer's Gulf and St. Vincent's Gulf, contains a large area of copper-bearing country. The principal mines at Wallaroo and Moonta are situated a few miles from Port Wallaroo, and date back to 1860. For about thirty years the Moonta mines were worked independently, selling their ores to the Wallaroo company. During its separate existence the Wallaroo field produced about £2,600,000 worth of copper, while Moonta yielded £5,396,000, and was the first Australian mining field to produce £1,000,000 in dividends. The amalgamation took place in 1889, and since that year the united properties have produced about £4,281,000 worth of copper. The entire yield from the date of first working is estimated at about £12,500,000. The mines just enumerated represent a very small proportion only of those opened on the copper-bearing areas of the State. Owing to the depression in the price of copper in 1908 many promising mines in South Australia suspended working and in others operations were much curtailed. Developmental and other work is proceeding at Yudnamutana, Mutooroo, Callington, and other places.

Copper is also obtained in the Northern Territory; the actual output of ore for the year, however, was only £3742 in value. This poor result was entirely due to the low prices and high cartage rates from outlying fields from which, in the main, copper is produced.

(v.) *Western Australia.* The inception of active mining operations in Western Australia dates from the year 1842, when lead and copper mines were discovered in the Northampton district, but working was carried on in a most perfunctory manner in the early days, sinking being discontinued as soon as the lodes shewed signs of contraction. Rich lodes of copper have been located at Whim Creek, in the Pilbara district, about fifty miles eastward of Roeburne, the copper ore being removed by quarrying. Promising lodes have also been struck at the Irwin mines, between Arrino Springs and the Irwin River. The Kimberley district is intersected in places by copper and lead deposits in association with gold, and a rich lode has been located at Mount Barren, about 120 miles to the eastward of Albany, while various quartz reefs in the Wongan Hills contain copper in association with gold and iron. The largest producers in 1909 were the Phillips River goldfield, the production being 7331 tons copper ore, valued at £29,815, and the West Pilbara field, which yielded 7136 tons of copper ore, valued at £62,447. Other fields producing this mineral were the Nannine district of the Murchison goldfield and the Ashburton goldfield.

(vi.) *Tasmania.* For a long time Tasmania was the largest producer of copper in the Commonwealth, but during the last four years Queensland has occupied the premier position. The cupriferous area in the island State stretches from Mount Lyell, Mount Tyndall, Mount Read, and Mount Murchison, in the western district, to some distance north of the Pieman River. Copper mining has also been started on the North-west Coast, notably in the Stowport and Blyth River districts, and some attention has been given to the deposits at Rocky Cape and Boat Harbour. In 1909 the output of the Mount Lyell Mining and Railway Co. Ltd. was 8638 tons of blister copper, which contained copper valued at £516,682, silver £69,736, and gold £56,993. This company during the year paid £315,000 in dividends. A new copper field at Mount Balfour is attracting considerable attention. A number of sections have been taken up and are being systematically prospected.

The output for the year 1909 was valued at £608,038, which was £1613 less than the previous year, and £261,628 less than that of 1907. Several of the mines which in past years were large producers remained closed down during the whole of 1909, while, taken generally, work at other mines throughout the Commonwealth was, for a variety of reasons, only conducted on a limited scale.

3. **Price of Copper.**—The great variation in price that the metal has undergone is shewn in the following table of prices realised for standard and best selected copper since 1897:—

FLUCTUATION IN THE VALUE OF COPPER, 1897 to 1908.

Year.	Average Price of Copper per Ton.						Year.	Average Price of Copper per Ton.					
	Standard.			Best Selected.				Standard.			Best Selected.		
	£	s.	d.	£	s.	d.		£	s.	d.	£	s.	d.
1897	49	2	6	52	5	6	1905—Jan. to June	67	2	1	71	3	9
1898	51	16	7	55	8	3	July to Dec.	72	1	11	77	7	11
1899	73	13	9	78	2	3	1906—Jan. to June	82	2	8	86	18	11
1900	73	2	5	78	9	1	July to Dec.	92	15	1	97	11	1
1901	66	19	1	73	8	2	1907—Jan. to June	103	4	4	111	8	4
1902	52	8	3	56	12	7	July to Dec.	70	18	10	76	0	6
1903	58	3	2	62	13	8	1908—Jan. to June	59	0	9	62	5	10
1904	59	0	7	62	13	0	July to Dec.	61	1	0	64	4	3

There is no doubt that the steady rise in the price of copper from the year 1902 onwards caused a large amount of overtrading with consequent unhealthy inflation of values, while the sudden drop in 1907 was directly due to the financial panic in America. It is believed, however, that the increasing demand for the metal in electrical

and other industries will, under ordinary circumstances, tend to establish prices on a sounder basis, and at higher rates than those quoted for the last twelve months in the table above.

4. **Relationship to World's Production.**—The world's production of copper in 1901 and during the last five years is estimated to have been as follows:—

WORLD'S PRODUCTION OF COPPER, 1901 to 1909.

Year	1901.	1905.	1906.	1907.	1908.	1909.
World's production (short tons) ...	583,517	770,221	788,492	796,366	744,600	844,100

5. **Employment in Copper Mining.**—The number of persons employed in copper mining during the last nine years was as follows:—

PERSONS ENGAGED IN COPPER MINING, 1901 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	No.	No.	No.	No.	No.	No.	No.
1901 ...	2,964	4	814	4,000	321	*	8,103†
1902 ...	1,699	...	666	4,000	113	*	6,478†
1903 ...	1,816	...	1,418	4,000	193	*	7,427†
1904 ...	1,850	...	1,094	4,000	169	925	8,038
1905 ...	2,171	...	1,435	4,500	125	2,269	10,500
1906 ...	3,047	3	2,598	5,000	296	2,391	13,335
1907 ...	3,764	10	3,941	5,254	611	2,614	16,194
1908 ...	2,745	9	3,540	4,558	283	2,076	13,211
1909 ...	2,024	2	3,241	4,504	497	2,038	12,306

* Included with silver miners. † Excluding Tasmania.

§ 6. Tin.

1. **Production of Tin.**—The development of tin mining is, of course, largely dependent on the price realised for the metal, and, as in the case of copper, the production has been subjected to somewhat violent fluctuations. The table below shews the production in each of the Commonwealth States during the years 1881, 1891, 1901, and 1905 to 1909:—

TIN PRODUCED IN AUSTRALIA, 1881 to 1909.

State.		1881.	1891.	1901.	1905.	1906.	1907.	1908.	1909.

* Dressed tin ore, about 70% tin. † Tin ingot and ore. ‡ Not available.

2. **History.**—(i.) *New South Wales.* The probable occurrence of tin in New South Wales was first referred to by the Rev. W. B. Clarke as early as 1849, while the same author notes having obtained a specimen in the Kosciusko district in 1851 and in the New England district in 1853. He also reported the discovery of stanniferous deposits at different localities in the Darling Downs, Queensland. In 1872 the Messrs. Fearby discovered tinstone near Inverell, and the present Elsmore mine was opened near the spot. The news of the discovery of tin in the New England district attracted a mild rush, and in March, 1872, valuable deposits of stream tin were found at Vegetable Creek. It is interesting to note that native tin, which is extremely rare, was discovered at Oban, in this district. At Cope's Creek stanniferous gravels occur in the channel of the stream and in the slopes adjacent to it. Post-tertiary deposits of tin-bearing ore have been found at Emmaville, where mining was commenced soon after the opening of the district. In the southern portion of the State deposits have been discovered at Dora Dora, near Albury, and Pulletop, near Wagga, in the central-western district at Burra Burra, near Parkes, and in the far west at Poolamacca and Euriowie. The bulk of the yield, however, still comes from the Tingha-Inverell district, the production last year being £127,935, out of a total for the whole State of £211,029. Of the total production in 1909, £146,842, or 70 per cent., represents the value obtained by dredging. In the yield from the Emmaville division an encouraging increase is shewn owing to the augmented returns from the dredges. The yield for 1909 is estimated at 675 tons, valued at £56,700, as compared with 547 tons, valued at £43,800, in the previous year. During the year the Sydney Smelting Company at Woolwich produced 1648 tons of tin, valued at £219,663, but included in this is the product of ores imported from other States.

(ii.) *Victoria.* In Victoria lode tin has been discovered at Mt. Wills, Beechworth, Eldorado, Chiltern, Stanley, and other places in the north-eastern district; and stream tin has been found in a large number of places, including those just mentioned in the north-eastern district. The bulk of the production last year was obtained by dredging and hydraulic sluicing at Toora and Beechworth.

(iii.) *Queensland.* The first notable discovery of the metal in Queensland occurred in 1872, when rich deposits of stream tin were found in the country to the south of Warwick and on the borders of New South Wales. This district proved to be surprisingly rich, the value of the metal raised there during the five years subsequent to its discovery being £715,000. The alluvial deposits, however, soon became exhausted, so far as ordinary mining is concerned, but some degree of success has attended dredging operations in the district. In 1879 important discoveries were made in the Herbert River district, and the rich Herberton, Walsh, and Tinaroo mineral fields were opened up, further discoveries being shortly after reported on the Russell, Mulgrave, Jordan, and Johnstone. At the Annan River tinfield, near Cooktown, alluvial mining has been carried on continuously since 1886. The production in 1909 amounted to 3326 tons, valued at £244,927, more than half of which was produced at the Herberton mineral field.

(iv.) *Northern Territory.* Valuable lodes of tin are found in the Northern Territory at Mount Wells, West Arm and Bynoe Harbour, and at Horseshoe Creek, south of Pine Creek, but the deposits have not yet been exploited to the extent they deserve. In 1909 there were 355 miners engaged in tin mining in the Northern Territory and the quantity of tin ores and concentrates exported was 427 tons. This production was largely due to the progress at the Mount Wells mine, where, it is stated, there are enormous bodies of payable material awaiting development.

The metal has also been discovered near Earea Dam in the province proper.

(v.) *Western Australia.* Tin was first discovered in Western Australia in the year 1888, and since that date has been found in several widely distant localities in the State —at the head of the Bow and Lennard Rivers, in the Kimberley district; on the Thomas River, Gascoyne goldfield; at Brockman's Soak and the Western Shaw, in the Pilbara district; and at Greenbushes, in the south-western portion of the State. The production of tin ore and ingot for the State during 1909 amounted to 698 tons, valued at £65,959, to which the Greenbushes field contributed 459 tons, valued at £34,786. The Pilbara

Goldfield (Marble Bar district) was the only other large contributor. Lode tin has been discovered at Wodgina, in the Pilbara field, and the deposits are being developed.

(vi.) *Tasmania.* Tin mining in Tasmania dates from the year 1871, when the celebrated Mount Bischoff mine was discovered by Mr. James Smith. This mine, which is probably the richest in existence, is worked as an open quarry, and a large proportion of the original hill has been removed in the course of developmental operations. Soon after 1871 deposits were located in the north-east district by Mr. G. B. Bell, while deposits of stream tin were discovered near St. Helens by Messrs. Wintle and Hunt. Further finds were reported from Flinders and Cape Barren Islands, and in 1875 the metal was discovered at Mount Heemskirk. The total production of Tasmania in 1909 was 4511 tons of ore, valued at £418,165, the largest producer being the Briseis Tin Mines Limited, in the North-east division, with a return of 966 tons. The Mount Bischoff mine paid dividends amounting to £36,000, making a total to the end of 1909 of £2,196,000.

3. **World's Production of Tin.**—According to "The Mineral Industry" the world's supplies of tin during each of the last five years were obtained as follows:—

THE WORLD' TIN SUPPLIES, 1905 to 1909.

Origin.	1905.	1906.	1907.	1908.	1909.
	Tons.	Tons.	Tons.	Tons.	Tons.
English production	4,468	4,522	4,407	5,052	5,200
Chinese exports	4,463	3,948	3,480	4,558	4,200
Straits to Europe and America ...	56,840	57,143	53,520	60,491	58,521
Straits to India and China	1,484	1,292	2,178	2,187	2,030
Australia to Europe and America ...	5,028	6,482	6,612	5,748	5,384
Banka sales in Holland	9,960	9,286	11,264	11,530	11,973
Billiton sales in Java and Holland ...	2,715	1,968	2,229	2,235	2,241
Bolivian arrivals in Europe	14,245	16,394	15,594	17,032	18,121
Total (long tons)	99,203	101,035	99,284	108,833	107,670

The main users of tin are the manufacturers of tin-plates, while it is also required in conjunction with other metals to produce bronze, brass, Britannia metal, pewter, printers' type, and solder. It is stated that the rising tendency of prices during recent years is due to the fact that production has not been commensurate with the demands for consumption, and also in some measure to the fact that for industrial purposes the metal can be replaced by others to a limited extent only.

4. **Prices of Tin.**—The average price of the metal in the London market for the year 1897 and from 1901 to 1909 was as follows:—

PRICE PER TON OF TIN, 1897 to 1909.

Year.	Price per Ton.	Year.	Price per Ton.
	£ s. d.		£ s. d.
1897	61 8 0	1905	143 1 8
1901	118 12 8	1906	180 12 11
1902	120 14 5	1907	172 12 9
1903	127 6 5	1908	133 2 6
1904	126 14 8	1909	134 15 6

According to "The Mineral Industry" the maximum price obtained for tin during the period 1897-1909 was reached in December, 1906, when the metal was quoted at £195 19s. 9d. per ton.

Recent advices shew that the price of tin has been steadily rising for some time, and it is expected that good values will be maintained sufficiently long to enable a number of new mines in Australia to be properly opened up.

5. **Employment in Tin Mining.**—The number of persons employed in tin mining during each of the years 1901 to 1909 is shewn below:—

PERSONS ENGAGED IN TIN MINING, COMMONWEALTH, 1901 to 1909.

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	Cwlth.
	No.	No.	No.	No.	No.	No.	No
1901	1,428	...	1,148	...	413	1,065	4,054
1902	1,288	...	1,467	...	249	1,260	4,264
1903	2,502	...	1,598	...	294	1,331	5,725
1904	2,745	50	2,237	...	284	1,304	6,620
1905	2,884	50	2,936	...	479	1,351	7,700
1906	3,795	95	2,872	...	890	1,659	9,311
1907	3,173	87	2,582	554	1,003	1,828	9,227
1908	2,456	53	2,140	384	614	1,588	7,235
1909	2,037	48	2,158	355	406	1,576	6,580

§ 7. Zinc.

1. **Production of Zinc.**—The production of spelter is practically confined to the Broken Hill district of New South Wales, where zinc blende forms one of the chief constituents in the enormous deposits of sulphide ores.

Gratifying results have been achieved in the work of the profitable extraction of the zinc contents of the large heaps of accumulated tailings on the Broken Hill field. The year 1909 witnessed the passing of this problem out of the experimental stage, and the practical solution of the difficulty which has confronted the mining companies for many years. In 1899 the exports of zinc amounted to 49,879 tons; in 1909 they totalled 373,906 tons, valued at £1,041,280. The plants on the field are being augmented, and under favourable market conditions, there should be a greatly enhanced production of zinc concentrates during the year 1910. The Broken Hill mines have long ranked among the world's cheap producers of lead, and they now promise to occupy a very important position among the contributors to the supply of spelter. The following table shews the production of zinc in New South Wales from 1889 to 1909.

NEW SOUTH WALES.—PRODUCTION OF ZINC, 1889 to 1909.

Year.	Quantity of Zinc (Spelter and Concentrates) Produced.	Value.	Year.	Quantity of Zinc (Spelter and Concentrates) Produced.	Value.
	Tons.	£		Tons.	£
1889	97	988	1907	237,219	536,620
1891	219	2,622	1908	276,720	600,883
1899	49,879	49,207	1909	373,906	1,041,280

The total quantity of zinc (spelter and concentrates) produced in New South Wales to the end of the year 1909 was 1,314,194 tons, valued at £3,069,057. The average price of spelter per ton in the London market during each of the last four years was £27 1s. 5d. in 1906, £23 16s. 9d. in 1907, £20 3s. 5½d. in 1908, and £22 3s. 8d. in 1909.

During the year 1909, 19 tons of zinc, valued at £244, were raised in Western Australia.

§ 8. Iron.

1. **General.**—The fact that iron-ore is widely distributed throughout the Commonwealth has long been known, and extensive deposits have been discovered from time to time at various places in New South Wales, Queensland, South Australia, Western Australia, and Tasmania. It will appear, however, from what is stated below that until quite recently little has been done in the way of converting these deposits into a marketable commodity.

(i.) *The Manufactures Encouragement Act 1908.* It is hoped that the passing by the Commonwealth Parliament of the Manufactures Encouragement Act, which came into force on the 1st January, 1909, will assist in firmly establishing the iron industry in Australia on a remunerative basis, both in the smelting of pig iron and in the production of bar iron and steel from Australian ore. Judging by the increased activity and output already manifested at the iron works at Lithgow, in New South Wales, it would appear that there are reasonable prospects of these hopes being realised in the near future. The Act referred to provides for the payment of a bounty up to the 30th June, 1914, of a total of £150,000 (not exceeding £30,000 per annum) on all pig iron, puddled bar iron and steel, made from Australian ore and pig iron respectively, and for the payment of bounties up to the 30th June, 1912, to a total of £30,000, on galvanised sheet or plate iron or steel, on wire and wire netting, and on iron or steel tubes or pipes, on the following basis :—

BOUNTIES PAYABLE ON AUSTRALIAN PIG IRON, BAR IRON, STEEL, etc.

Description of Goods.	Rate of Bounty.	Total Amount which may be authorised.	Date of Expiry of Bounty.
CLASS 1.			
Pig iron made from Australian ore	12s. per ton	£150,000	30th June, 1914
Puddled bar iron made from Australian pig iron	,,		
Steel made from Australian pig iron	,,		
CLASS 2.			
Galvanised sheet or plate iron or steel (whether corrugated or not) made from Australian ore	10 per cent. on value	£30,000	30th June, 1912
Wire netting, not being prison made and being made from Australian ore or from wire manufactured in the United Kingdom	10 per cent. on value		
Wire made from Australian ore			
Iron and steel tubes or pipes (except riveted or cast), not more than six inches internal diameter, made from Australian pig iron or steel	10 per cent. on value		

Particulars of the bounties paid under the above Act during the half-year ended the 30th June, 1909, and during the financial year 1909-10, are shewn in the following statement:—

PARTICULARS OF BOUNTIES PAID ON AUSTRALIAN PIG IRON, BAR IRON, STEEL, etc., 1909 and 1910.

Description of Goods.	Steel made from Australian Pig Iron.	Puddled Bar Iron made from Australian Pig Iron.	Pig Iron made from Australian Ore.	Galvanised Sheet Iron (plain) made from Australian Ore.	Galvanised Sheet Iron (corrugated) made from Australian Ore.	Wire netting made from wire manufactured in the United Kingdom.	Total.

2. **History.**—(i.) *New South Wales.* The existence of large deposits of iron ore in New South Wales has been known since the early years of the history of the State, but until quite recently little was accomplished in the way of utilising these deposits so as to produce any extensive supply of marketable metal. According to a report furnished by the Government Geologist in 1905, the total quantity of ore available for exploitation is 53,000,000 tons, the deposits at Cadia, near Orange, being computed to contain no less than 39,000,000 tons, of which a large proportion consists of ores capable of yielding a high-grade metal. The aluminous ores at Wingello are estimated to contain 3,000,000 tons, the titaniferous magnetic ores on the Williams and Karuah Rivers nearly 2,000,000 tons, the hematite and brown ores at Carcoar, 3,000,000 tons; while several other districts are capable of supplying over 1,000,000 tons. There are extensive supplies of coal and limestone within reasonable distance of some of the more extensive deposits. The increasing demand for iron and steel manufactures, and the enhanced price of the metal, will probably enable the State in the near future to take its place amongst the iron-producing countries of the world. Ironworks were established at Fitzroy, near Mittagong, as far back as 1852, and at Eskbank, near Lithgow, in 1875, but the production of pig iron and manufactures was in neither case considerable. In May, 1907, however, works on a much larger scale were opened at Lithgow, and in January, 1908, they were taken over by the firm of G. and C. Hoskins (Limited). Work was interrupted for some weeks in 1908 owing to a dispute with the men respecting wages, and during this period the opportunity was taken to make considerable additions and alterations to the plant, rolling mills, etc., with the object of increasing the output. The ironstone used in this establishment was obtained at Carcoar, where the deposit is calculated to yield 2000 tons of ore for a period of twenty-five years. During 1909 the ore raised amounted to 46,740 tons. The following materials were also received at the blast furnace:—Limestone, 21,649 tons; and coke, 34,785 tons. The output was 26,762 tons of pig iron, valued at £100,357. In addition the iron and steel, bars, castings, etc., made from scrap, were valued at £6000, while 4958 tons of steel ingots were also manufactured. The following table shews the quantity and value of finished iron, pig iron, etc., made in New South Wales during the last six years, chiefly from scrap iron, but partly from the smelting of iron ore:—

NEW SOUTH WALES—PRODUCTION OF IRON, 1904 to 1909.

Particulars.		1904.	1905.	1906.	1907.*	1908.†	1909 ‡
Quantity ...	Tons	6,803	4,447	8,000	29,902	40,207	29,762
Value	£	80,504	85,693	112,848	178,632	118,224	106,357

* Includes 18,631 tons pig iron, valued at £60,550, produced from 34,500 tons of iron ore raised within the State. † Includes 30,393 tons pig iron, valued at £98,777, from 51,206 tons of ore raised within the State. ‡ Includes 26,762 tons pig iron, valued at £100,357, from 46,740 tons of iron ore raised within the State.

A quantity of iron oxide is purchased by the various gasworks for use in purifying gas, the output in New South Wales being drawn from the deposits at Port Macquarie and Mittagong. During 1909 the quantity raised was 4900 tons, valued at £4958, while the total output to the end of that year was 17,002 tons, valued at £22,893. The quantity of ironstone disposed of for flux in New South Wales during 1909 exhibits a decrease, since the requirements of the smelting companies were diminished. In 1909 the quantity raised was 4339 tons, valued at £3471, as against 8087 tons, valued at £6199, in the preceding year.

(ii.) *Victoria.* Iron ore has been located at various places in Victoria, particularly at Nowa Nowa, in the Gippsland district, and at Dookie. In his report for 1905 the Secretary for Mines states that without special assistance to the industry there does not seem to be any prospect of the deposits being cheaply worked.

(iii.) *Queensland.* Queensland possesses some extensive deposits of iron ore, which is mined chiefly for fluxing purposes in connection with the reduction of gold and copper ores. During the year 1909, 48,636 tons of ironstone were raised, 47,185 tons of which were procured at Iron Island in the Rockhampton district, to be used as fluxes at the Mount Morgan mine.

(iv.) *South Australia.* In South Australia iron ore is raised for fluxing purposes only, although the State possesses some rich deposits capable of being mined for an indefinite period. The best known deposit is the Iron Knob, a veritable hill of iron of high percentage, situated about forty miles W.S.W. from Port Augusta. This property has been leased by the Broken Hill Proprietary Company, the ore being transported to the smelting works at Port Pirie. Extensive beds of limonite with a little hematite are found at Cutana, near Mingary, and it was from this district that the Broken Hill Company at one time obtained ore for fluxing purposes. At Mount Jagged, where a small quantity of pig iron was made about thirty-five years ago, there are large deposits of hematite. Ore beds of varying extent have been located at Peralilla, near Port Victor, at Oodla Wirra, at Donnelly's, near Quorn, and several other localities.

The estimated quantity of iron ore in sight at the Iron Knob and Iron Monarch has been set down at 21,000,000 tons.

(v.) *Western Australia.* This State has some very rich deposits of iron ore, but owing to their geographical position the most extensive fields at the present time are practically unexploited, the production in the State being confined chiefly to that needed for fluxing purposes. The Murchison field possesses some extensive deposits of high-grade ore. It is proposed to work the deposits on Koolan Island at Yampi Sound with a view to exporting the ore for fluxing purposes in connection with the Mount Morgan gold mines, Queensland.

(vi.) *Tasmania.* The existence of large quantities of iron ore in Tasmania was noted as far back as 1822, when Surveyor-General Evans alluded to the "surprising

abundance of iron within a few miles of Launceston." A company known as the Tasmanian Charcoal Iron Company was formed to work these deposits, and commenced operations in June, 1876. Unfortunately, however, the presence of chromium rendered the pig iron so hard and brittle that the works had to be abandoned. Extensive deposits of specular iron ore are also found in the neighbourhood of the Blythe and Gawler Rivers. The total production of iron ore in 1908 was 3600 tons, valued at £1600, and was all raised by the Tasmanian iron mine at Penguin, but owing to the closing down of that mine in 1909, no iron ore was obtained during that year.

(vii.) *World's Production of Iron 1909.* The quantity of iron produced in Australia is but a very small proportion of the world's production, which in 1909 amounted to 61,217,000 tons (pig iron). The leading position for magnitude of production is held by the United States, which in 1909 produced 26,108,000 tons, compared with Germany's 12,918,000 tons, and Great Britain's 9,819,000 tons. The position of the three countries named is similar to what it has been for several years past.

§ 9. Other Metals.

1. **Aluminium.**—The ores from which aluminium is chiefly made in other countries are widely distributed in great abundance in New South Wales in the form of hydrous silicate of alumina which occurs in all clays. In the form of bauxite or hydrous sesquioxide, it is found at Emmaville, Inverell, and Wingello, its existence being first recognised in the last named locality in 1889. The metal, however, has not been manufactured locally.

2. **Antimony.**—This metal is widely distributed in New South Wales, and has been found native at Lucknow, near Orange. Dyscrasite, a silver antimonide, has been found in masses up to one ton in weight in the Broken Hill lodes. It has also been found at various places in Victoria, chiefly in association with gold. In 1908 the export of antimony metal and ore from New South Wales amounted to £1141, and in 1909 to £711. The total quantity of antimony ore raised in New South Wales up to the end of 1909 was 16,329 tons, valued at £301,409. Comparatively little attention was given to mining for antimony in New South Wales during 1909 owing to the low price ruling. The output was drawn from the Hillgrove field, and was obtained principally in the course of mining for scheelite, with which mineral the antimony was found in association. No ore was despatched in 1909 from the mines in the Kempsey and Copmanhurst Divisions. The production of antimony ore in Victoria during 1909 amounted to 1750 tons, valued at £5000. The ore was raised by a syndicate operating at Costerfield. In Queensland extensive deposits were discovered at Neerdie, in the Wide Bay district, during 1872, also at Wolfram Camp on the Hodgkinson field, on the Palmer River, in the Ravenswood district, and on the Mitchell River in the Herberton district. It is stated that there is a prospect of increased production at the Mitchell River deposits, where an elaborate plant has recently been erected. The low price of antimony throughout the year 1908 to a large extent restrained further developmental work. In Western Australia good lodes of stibnite, carrying gold have been found in the Roeburne district.

3. **Arsenic.**—In the form of arsenopyrite, arsenic is of wide distribution in Victoria, but the deposits are worked to a limited extent only. At Ballarat a small quantity of the oxide is obtained from the flues of roasting furnaces. In New South Wales about two tons of arsenic were obtained in 1909 in connection with the treatment of small test parcels of ores from the Moruya mines by the oxy-hydro process. The same process is being operated at the Mount Conqueror mine at Peel.

4. **Barium.**—A valuable lode of barium sulphate has been discovered near Dalwin, on the North Lyell railway, in Tasmania, and the necessary plant is in course of erection

to develop the deposit. It is stated that the lode is from 2½ to 7 feet wide over a length of over 40 chains.

5. **Bismuth.**—This metal has been found in New South Wales, near Glen Innes, and also in the vicinity of Pambula, its discovery dating from 1877. About 8½ tons of metal and ore, valued at £1624, were exported from New South Wales during 1909; the total quantity exported to the end of that year was 521 tons, valued at £123,523. In Queensland the metal is found in the Hodgkinson and Herberton districts, at Ukalunda in the Ravenswood district, and at Biggenden in the Burnett district. The production in 1909, including wolfram, was valued at £63,667. It is stated that there are prospects of a substantial revival in mining affairs at Biggenden. In South Australia deposits are found at Balhannah, at Mount MacDonald, and at Winnininnie, on the shores of Spencer's Gulf. In Tasmania 3 tons, valued at £980, were raised in 1909 at Middlesex.

6. **Chromium.**—In New South Wales chromium is found at Bowling Alley Point, on the Peel River, and also near Coolac, but the quantity raised at present is insignificant. The total exports to the end of 1909 amounted to 30,663 tons, valued at £101,108. Chrome iron ore is found in Queensland in the Rockhampton district, 260 tons, valued at £190, being raised during the year 1909.

7. **Carnotite.**—A discovery of carnotite ore was made twenty miles from the Olary railway station in South Australia, and steps are being taken to test its value commercially. With this object in view, 30 tons of ore have been sent to Europe for assay.

8. **Cobalt.**—This metal was found at Carcoar in New South Wales in 1888, and subsequently at Bungonia, Port Macquarie, and various other places. The total quantity exported from New South Wales up to the end of 1909 was 875 tons, valued at £8010. Deposits have been noted in South Australia near Bimbourie, and South Blinman; in Western Australia at Norseman and Kanowna; and at various places in Victoria.

9. **Lead.**—This metal was first noted in New South Wales in 1849, when small specimens of native metal were found by the Rev. W. B. Clarke. At present lead mining *per se* is not practised to any extent in the Commonwealth, the supply of the metal being chiefly obtained in conjunction with silver. In New South Wales in addition to the lead contained in silver lead, ore, and concentrates, 15,475 tons of pig lead (including lead-carbonate and lead-chloride produced from the leaching plants at Broken Hill), valued at £186,073, were produced in 1909, as against 14,936 tons, valued at £186,746, in 1908. In Victoria oxides, sulphides, and carbonates of lead are found in the reefs of most of the goldfields. The deposits are not, however, of sufficient extent to repay the cost of working. In Queensland the deposits are worked chiefly for the silver contents of the ore. In 1909 the Lady Jane and Girofla mines at Mungana yielded 4659 tons of lead, valued at £59,768. The total quantity produced in Queensland in that year was 5240 tons, valued at £68,543. At one time South Australia produced a fair amount of lead, £22,303 being raised in 1902, but the production has rapidly decreased, and in 1909, only 7 tons, valued at £70 were obtained.

10. **Mercury.**—In New South Wales mercury was first recorded by the Rev. W. B. Clarke in 1843. Cinnabar has been found in lodes and impregnations at various places, such as Bingara, Clarence River, etc. Up to the present the production of quicksilver has been small, the total being only a little over 1000 lbs. Lodes of cinnabar have been found in Queensland at Kilkivan, and at Black Snake, in the Wide Bay district, about four tons were produced between 1874 and 1891. Small quantities have been found near Willunga in South Australia.

11. **Manganese.**—Ores of this metal occur in considerable quantity in widely separated districts in New South Wales, but the low price of the metal precludes mining to any great extent, and the production to date has been trifling. In Queensland there are extensive deposits at Mount Miller, at Gladstone, and Mount Nansen, near Gympie, the product being utilised chiefly by the Mount Morgan mine. The production from the Mount Miller mine amounted in 1909 to 435 tons of ore, valued at £1491, while that of the Mount Nansen mine was 168 tons, valued at £633. Large deposits of manganese have recently been discovered at Skyring's mine on Eel Creek. Extensive deposits of the ore were mined at Boolcunda in South Australia some years ago, but latterly the production has ceased. Deposits have also been noted at Kangaroo Island, Quorn, Tumby, and various other parts of the State. In Western Australia ores of the metal are found widely scattered, the black oxide being especially plentiful in the Kimberley district. In New Zealand deposits are found in various localities, but little has been done in the way of exploration.

12. **Molybdenum.**—In New South Wales molybdenite (associated with bismuth) is obtained at Kingsgate, near Glen Innes, the export in 1909 being 28 tons, valued at £3249, as compared with 8 tons, valued at £929 in the previous year. The production in Queensland for 1909 was 93 tons, valued at £9272, the bulk of which was contributed by the Hodgkinson field.

13. **Radium.**—It is reported that there have been several definite discoveries in Australia of the occurrence of minerals containing radium. The discovery at Olary, in South Australia, of carnotite, which is an alteration product of pitchblende, the compound from which radium is obtained, has already been referred to. In 1910 pitchblende was identified in portion of the workings at Olary and a specimen, exhibiting a high degree of radio-activity, was obtained. This is the first authentic discovery of the mineral pitchblende in Australia. In another case a monazite from Pilbara, Western Australia, has been shewn to give off radium emanations. This mineral has been called "pilbarite." Yet another specimen of mineral having the composition of a secondary pitchblende has been discovered by a prospector. The exact place where this specimen was found is uncertain, but it is believed that it came from the New England district of New South Wales. It is stated that its radio-activity is very marked, the mineral being 1 per cent. more active than the Bohemian variety, and that it contained only such elements as were readily separated from one another by the methods used to obtain pure uranium and radium from Bohemian pitchblende. Lastly, it is stated that the ores obtained at the Moonta mines, South Australia, contain from one-tenth to one-fifteenth of the amount of radium found in high-grade pitchblende, and that a product having a fairly high degree of radio-activity can be extracted therefrom with comparative ease.

14. **Tungsten.**—Wolfram and scheelite, the principal ores of tungsten, are both mined to a small extent in New South Wales. During 1909 the export of wolfram was 127 tons, valued at £11,249, and of scheelite 193 tons, valued at £14,618. Wolfram was mined chiefly in the Deepwater division, and scheelite at Hillgrove. A mine near Omeo, in Victoria, was developed during 1909, and 275 tons of ore, valued at £1432, were produced during the year. In Queensland it is obtained on the Hodgkinson, Etheridge, Rockhampton, and Herberton fields, at Kangaroo Hills, Star River, and at Mount Windsor, in the Cook district. The production in 1909, including bismuth, was valued at £63,667, contributed chiefly to by the mines on the Hodgkinson and Herberton fields. The Northern Territory of South Australia exported ore to the value of £4105 in 1909, as against £542 in 1908, and £11,450 in 1907. In Western Australia a deposit of wolfram has recently been discovered in the West Kimberley district about 70 miles to the north-east of Derby. Wolfram is mined in Tasmania at Ben Lomond and in the Middlesex district, the production for 1909 being 28 tons, valued at £2494. A rich lode of scheelite has been discovered on King Island in Bass Strait.

15. **Tantalum.**—Tantalite in small quantities has been found in the Greenbushes mineral field of Western Australia for some time past, but recently a lode of fairly extensive proportions was located at the Wodgina tinfield. Up to the end of 1905 the production of this mineral in Western Australia amounted to 73 tons, valued at about £10,000, but early in 1906 it was found that the supply exceeded the demand and production was temporarily stopped; in 1908 a small quantity valued at £400 was exported. About £327 worth was reported as having been raised in the Greenbushes and Pilbara fields during 1909, but none was exported owing to the entire absence of any market. Small quantities of the mineral are also produced in the Northern Territory.

In addition to the metals enumerated above there is a large number of others occurring in greater or less degree, while fresh discoveries are being constantly reported.

(B). NON-METALLIC MINERALS.

§ 10. Coal.

1. **Historical.**—Coal was discovered at a very early period in the history of Australia, the first mention of it dating from August, 1797, when its existence was noted in *New South Wales* by some survivors from the wreck of a vessel, who had walked from the southern portion of Australia up the coast to Sydney. The discovery was shortly afterwards confirmed by Surgeon Bass, who found coal in the cliffs southward of Point Solander, but the locality was at the time looked upon as so inaccessible that no attempt was made to utilise the deposits. During 1909, however, the South Coast district, in which the site of these discoveries occurs, produced over 1,619,675 tons of coal, valued at £485,300. In 1797 coal was also discovered at the mouth of the Hunter (or Coal) River by Lieutenant Shortland, and in this case, the deposits being more easily worked, it was not long before they were utilised, and a township sprang up which is now the port of one of the greatest coalfields in the world. The production for the northern district, of which Newcastle is the port, amounted in 1909 to 4,801,361 tons, valued at £1,990,217. A general strike of coal-miners took place on 8th November, 1909, and with the exception of the collieries in the western district (which resumed work on the 21st December), and one or two small mines in the northern and southern districts, the suspension of coal-getting operations continued until the close of the year. It is estimated that this strike was responsible for a reduction of over a million tons in the output for 1909.

The discovery of coal in *Victoria* dates from the year 1825, when the mineral is reported to have been found at Cape Patterson. There is no record of production in the earlier years, but it is stated that the first Victorian coal placed on the Melbourne market came from Kilcunda, in the vicinity of the original discovery. Up to 1889, with the exception of a little work by the companies at Moe and Narracan, the industry languished, the total production to the beginning of the year named being only about 25,000 tons. Early in 1889 the Government determined to come to the assistance of the industry, and the Coal Creek Company at Korumburra was registered, followed during next year by the Jumbunna Company, and the Outtrim, Howitt, and British Consolidated in 1894. The unfortunate strike of 1903 completely disorganised coal mining in Victoria, and the industry still suffers from its disastrous effects. In 1908 an extensive field of coal was discovered, through boring operations, in the Powlett River district. A seam of good, clean, hard coal, so far as proved, extends over an area of 3 miles by 2 miles, and averages 6 feet in thickness. The coal industry in Victoria received a great impetus from this discovery, and from the fact that a strike by the employees took place in the mines of New South Wales. During 1909, 128,673 tons of coal were raised, an increase of 14,711 tons on the previous year. A State coal mine was established at Powlett River towards the end of 1909, and within four months from the commencement of clearing the ground for mining operations, 20,000 tons of coal had been won from the mine. A railway, 27 miles in length, has been constructed from Nyora to the

coal-field. Five hundred and sixty-four acres of freehold land have been purchased by the Government for township and mining purposes, and arrangements are being made for the installation of an adequate water supply, and the erection of an electric-power station and brickworks, etc. It is estimated that by the end of 1910, an output of 2000 tons of coal per day will be maintained and that a population of several thousands will be settled in the locality. Other payable seams in this district outcrop about five miles away, near Cape Patterson, and it is believed that the coal-bearing area has an extent of from twelve to fifteen square miles.

The existence of coal in *Queensland* was known soon after the establishment of the first settlement at Moreton Bay, mines near Ipswich, on the banks of the Bremer Creek and Brisbane River, having been worked almost continuously since. Seams in the Wide Bay district have been operated on since 1870, while good coal was mined at Clermont shortly after the establishment of the copper mines in that locality. A seam of good coal has also been discovered at Mount Mulligan, 32 miles from Dimbulah Station, on the Chillagoe railway. A seam of coal has recently been discovered in the vicinity of the Cooktown district, and plans for boring have been projected. The number of collieries contributing to the output in 1909 was 34, and the quantity of coal raised was 756,577 tons, valued at £270,726, as against 696,332 tons, valued at £244,922 for the preceding year. The industry is at present in a very satisfactory position in the northern State, and owing to the wide area over which the deposits stretch, practically no limit can be set to its possibilities of extension.

In *South Australia* brown coal of fair quality was found in 1889 at Kuntha Hill, 110 miles north of Hergott, and at Leigh Creek, on the Great Northern railway line. The discovery of coal in *Western Australia* dates from 1846, when the mineral was found on the Murray River. Since that year coal has been met with in other localities, but production at the present time is confined to the deposits at the Collie River. Six collieries were in operation on this field during 1909, and the output for the year, viz., 214,302 tons, was the highest ever recorded in the State. In *Tasmania* coal was discovered between the Don and Mersey Rivers in 1850. The value of the deposits at Fingal was first proved in 1863, two tons of this coal producing nearly 14,000 cubic feet of gas.

2. **Production of Coal.**—The quantity and value of coal produced in each State and in the Commonwealth at various periods since 1881, are shewn in the following table:—

PRODUCTION OF COAL, AUSTRALIA, 1881 to 1909.

1907	2,922,419	79,706	222,135	...	55,158	23,556	3,302,974
1908	3,353,093	64,778	244,922	...	75,694	24,427	3,762,914
1909	2,618,596	76,945	270,726	...	90,965	26,464	3,083,696

In New South Wales there was a decrease in the output for 1909, as compared with the previous year, in each of the three coal-producing districts owing to the strike which took place during that year. (See page 525 hereinafter).

In Queensland nearly the whole of the increase in 1909 is accounted for by the larger output in the Ipswich and Darling Downs districts, which produced over 51,000 tons of coal more than in 1908.

3. **Distribution and Quantity of Coal in each State.**—(i.) *New South Wales.* Estimates have from time to time been made as to the total quantity of coal available for working in the deposits in New South Wales, and while these naturally differ to some extent, they agree in placing the amount at well over a thousand million tons, without taking into consideration the deposits existing below a depth of 4000 feet. According to Mr. E. F. Pittman, the coal-bearing rocks of New South Wales may be classified as follows :—

COAL-BEARING ROCKS OF NEW SOUTH WALES.

Geological Age.	Maximum Thickness of Coal-bearing Strata.	Locality.	Character of Coal.
I. Tertiary—Eocene to Pliocene ...	Approx. 100 ft.	Kiandra, Gulgong, and Chouta Bay	Brown coal or lignite.
II. Mesozoic—Triassic	2,500 ,,	Clarence and Richmond Rivers	Coal suitable for local use only.
III. Palæozoic—Permo-Carboniferous	13,000 ,,	Northern, Southern and Western Coalfields	Good coal, suitable for gas, household and steaming.
IV. Palæozoic—Carboniferous ...	10,000 ,,	Stroud	Very inferior.

No serious attempt has been made to use the deposits of brown coal or lignite as a source of fuel. The Triassic deposits in the Clarence and Richmond districts contain numerous seams, but the coal is largely intersected by bands, while its large percentage of ash renders it unfit for use as fuel for industrial purposes. Probably these beds extend under the great western plains, but the presence of artesian water precludes the possibility of their being worked. It is in the Permo-Carboniferous division that the great productive coal seams of the State are found, the area which they cover being estimated at about 25,000 square miles. The coal from the various districts embraced in this division differs considerably in quality—that from the Newcastle district being especially suitable for gas-making and household purposes, while the product of the Southern (Illawarra) and Western (Lithgow) is an excellent steaming coal. The Permo-Carboniferous measures have in various places been disturbed by intrusions of volcanic rocks, which in some instances have completely cindered the seams in close proximity to the intrusive masses, while in other instances the coal has been turned into a natural coke, some of which has realised good prices as fuel.

In 1909 there was a considerable decrease in production, due to a combination of causes, but principally to industrial troubles and lack of trade. A general strike of coal-miners began on the 8th November, 1909; it is estimated that the strike accounted for a reduction of a million tons in the output, as most of the collieries were closed during the remainder of the year. The quantity and value of the coal raised in each district during the years 1887, 1901, 1908, and 1909 will be seen in the following table :—

COAL RAISED IN NEW SOUTH WALES, 1887 to 1909.

District.	1887.		1901.		1908.		1909.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

Western ...	302,137	79,036	424,720	102,214	706,787	157,625	598,843	143,079
Total ...	2,922,497	1,346,440	5,968,426	2,178,929	9,147,025	3,353,093	7,019,879	2,618,596

So far back as 1847 the Rev. W. B. Clarke expressed the belief that workable coal would be found in the strata below Sydney, a belief that was also held by subsequent geologists, who based their contentions on stratigraphical and palæontological evidence. The later geologists urged that the Illawarra coal measures of the South Coast district were identical with the Newcastle measures of the Northern district, although it was agreed that the deposits in the neighbourhood of Sydney would probably be found at a considerable depth. Borings were made in several localities close to Sydney, and in 1891 a drill put down at Cremorne Point in Sydney Harbour passed through a seam of coal seven feet four inches thick and at a depth of 2801 feet. Unfortunately the site of the bore happened to be in the vicinity of a volcanic dyke, which had cindered the coal near the locality of its intrusion. A second bore was commenced in July, 1892, and in November, 1893, a seam of excellent coal, ten feet three inches thick, was reached at 2917 feet. The results attained led to the formation of a company which acquired land at Balmain, and expended a considerable sum of money in the purchase of plant suitable for working coal at such a great depth. Sinking operations were commenced in June, 1897, and coal was struck at a depth of 2880 feet on the 21st November, 1901. Up to the present developmental work has not sufficiently advanced to permit of any considerable production.

(ii.) *Victoria.* The deposits of black coal in Victoria occur in the Jurassic system, the workable seams, of a thickness ranging from two feet three inches to six feet, being all in the Southern Gippsland district. The coal is of excellent quality for steaming and household purposes. The full exploitation of the Victorian coal deposits has, however, been rather severely hindered by various obstacles. In the Report of the Royal Commission on the Coal Industry, 1906, these have been summarised as follows:—(*a*) Labour troubles. (*b*) Difficulties of working arising from faults, displacements, and thin seams. (*c*) Increased cost of production as the workings extend. (*d*) The low price ruling for coal.

Deposits of brown coal and lignite of immense extent occur in gravels, sands, and clays of the Cainozoic period throughout Gippsland, Mornington Peninsula, Werribee Plains, Gellibrand, and Barwon and Moorabool basins. In the Latrobe Valley the beds reach a thickness of over 800 feet. When dried, the material makes good fuel, but owing to its excessive combustibility and friability requires to be consumed in specially constructed grates. Attempts have been made to manufacture briquettes from the brown coal, but so far without any great measure of success. It is stated that a company has recently been formed to instal a modern plant at Morwell for the manufacture of briquettes and the recovery of the by-products. Reference has already been made to the establishment of a State coal mine in the Powlett River district. (See page 522 *ante*.)

The output of coal from the chief Victorian collieries during the last eight years was as follows:—

PRODUCTION OF COAL IN VICTORIA, 1902 to 1909.

Year.	Outtrim Howitt Company.	Jumbunna Coal Company.	Coal Creek Proprietary.	Silkstone Co-operative Company.	Other Companies.	Total Production	Value.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	£
1902	114,686	67,876	39,257	2,257	1,088	225,164	155,850
1903	20,602	18,517	20,727	4,354	5,661	69,861	43,645
1904	57,328	39,364	22,547	2,014	489	121,742	70,208
1905	71,989	49,009	27,710	1,624	4,804	155,136	79,060
1906	74,812	64,222	13,214	3,977	4,406	160,631	80,283
1907	64,083	61,755	3,762	7,565	1,470	138,635	79,706
1908	47,633	58,552	...	6,967	810	113,962	64,778
1909	44,156	65,945	3,265	...	15,307	128,673	76,945

The figures for 1909 include 500 tons of brown coal, valued at £75, which was obtained at Morwell.

The coal from Leigh's Creek in South Australia is subject to similar disabilities to the Victorian brown coal, and until some means are devised of overcoming these, production will probably languish.

(iii.) *Queensland.* In Queensland the coal-bearing strata are of vast extent and wide distribution, being noted under the greater portion of the South-eastern districts, within 200 miles of the sea, as far north as Cooktown, and under portions of the far western interior. The Ipswich beds are estimated to occupy about 12,000 square miles of country, while the Burrum fields occupy a considerably larger area. At Callide, fifty miles west of Gladstone, a seam of coal free from bands has been struck in a shaft only sixty feet deep, and borings have proved the deposit to be of considerable magnitude. The beds in the Cook district are estimated to comprise rather more than 1000 square miles, but coal measures extend to the south-west far beyond Laura and to the north of the railway. Extensive beds occur in the basin of the Fitzroy River, in the Broadsound district, and at the Bowen River. Amongst other places where the mineral is found may be enumerated Clermont, the Palmer River, Tambo, Winton, Mount Mulligan, and the Flinders River. A bituminous coal is yielded by the Ipswich seams, those of the Darling Downs yield a cannel, while anthracite of good quality is furnished by the Dawson River beds.

The quantity and value of coal raised in Queensland at various periods since 1861 were as shewn below :—

PRODUCTION OF COAL IN QUEENSLAND, 1861 to 1909.

Year	1861.	1871.	1881.	1891.	1901.	1908.	1909.
Quantity Tons	14,212	17,000	65,612	271,603	539,472	696,332	756,577
Value ... £	9,922	9,407	29,033	128,198	189,877	244,922	270,726

At present coal mining in Queensland is in a very satisfactory position, the increasing volume of the trade being chiefly due to the action of the Government in granting concessions to vessels coaling at local ports.

The distribution of production during the last two years was as follows:—

QUEENSLAND COLLIERIES, 1908 and 1909.

Collieries.	1908.		1909.	
	Tons Raised.	Average Value at Pit's Mouth.	Tons Raised.	Average Value at Pit's Mouth.
		s. d.		s. d.
Ipswich and Darling Downs	591,535	6 6¼	642,864	6 8½
Wide Bay	84,817	9 5¼	92,573	9 7¾
Rockhampton and Central District ...	18,480	11 7¾	21,007	11 6
Other (Brisbane)	1,500	...	133	...
Total	696,332	7 0½	756,577	7 1¾

A considerable proportion of the produce of the Ipswich district is supplied to vessels for bunker coal. The average value of coal was higher in 1909 than in 1908.

(iv.) *Western Australia.* The coal seams in Western Australia belong to the Carboniferous, Mesozoic, and Post-tertiary ages. Most of the coal contains a large proportion of moisture, and belongs partly to the hydrous bituminous and partly to the lignite class. The only coalfield at present worked is at Collie, in the Mesozoic beds of the south-west. The coal produced is bright and clean, but very fragile when free from moisture. The record output in 1909 is consequent on the establishment of a bunkering trade at Bunbury and Fremantle, which has developed very satisfactorily, and also, in a measure, to the coal-miners' strike in New South Wales. The production from this field since 1901 was as follows:—

PRODUCTION OF COAL IN WESTERN AUSTRALIA, 1901 to 1909.

Year	1901.	1903.	1904.	1905	1906.	1907.	1908.	1909.
Quantity Tons	117,836	133,427	138,550	127,364	149,755	142,373	175,248	214,302
Value £	68,561	69,128	67,174	55,312	57,998	55,158	75,694	90,965

(v.) *Tasmania.* In Tasmania coal occurs in the Carboniferous and Mesozoic systems, the product of the former class being, however, far inferior to that of the latter. Carboniferous seams occur at the Don, Tarleton, Latrobe, Port Cygnet, Tippagory Range, St. Mary's, and Adventure Bay, the seam at Port Cygnet having a thickness of two feet and being of fair quality. The Mesozoic coal measures are well developed in the Fingal basin, the Cornwall coal from this locality being excellent for household purposes. The chief production of recent years has been furnished by the Mt. Nicholas and Cornwall mines, the quantity raised by these mines in 1909 being 27,341 and 29,885 tons respectively. The quantity of coal raised during the years 1901 to 1909 in the various districts was as follows:—

PRODUCTION OF COAL IN TASMANIA, 1901 to 1909.

District.	1901.	1903.	1904.	1905.	1906.	1907.	1908.	1909.

4. **Production of Coal in Various Countries.**—The total known coal production of the world in 1909 amounted to about 1085 million tons (exclusive of brown coal or lignite), towards which the Commonwealth contributed 8 million tons, or less than 1 per cent. The following table shews the production of the British Empire and the chief foreign countries in units of 1000 tons during each year of the period 1901 to 1909:—

COAL PRODUCTION, BRITISH EMPIRE, 1901-9.

Year.	United Kingdom.	British India.	Canada.	Australian C'wealth.	New Zealand.	Transvaal.

* Not available.

Including New Zealand the production from Australasia takes second place amongst the possessions of the British Empire, British India coming first in order.

5. **Export of Coal.**—The exports of coal from the Commonwealth are practically confined to New South Wales.

The total quantity of coal of Australian production (exclusive of bunker coal) exported from the Commonwealth to other countries in 1909 was 1,580,986 tons, valued at £837,588, of which amount 1,580,564 tons, valued at £837,320, were exported from New South Wales. The quantity of bunker coal taken by oversea vessels was 1,233,277 tons, of which 998,334 tons were taken from New South Wales.

(i.) *New South Wales.* In the following table will be found the quantity and value of the exports at decennial intervals since 1881 and during the last five years. The figures for New South Wales are given on the authority of the Mines Department of that State, and include both bunker coal and coal exported from New South Wales to other States of the Commonwealth:—

EXPORTS OF NEW SOUTH WALES COAL, 1881 to 1909.

Year.	1881.	1891.	1901.	1905.	1906.	1907.	1908.	1909.
Quantity ... 1000 tons	1,030	2,514	3,471	3,718	4,962	5,744	6,099	4,394
Value ... £1000	417	1,307	1,682	1,484	2,081	2,662	3,021	2,234

The principal countries to which coal was exported from New South Wales during the year 1909 were as shewn hereunder. The quantity and value refer strictly to exports, and exclude bunker coal:—

DESTINATION OF NEW SOUTH WALES EXPORTS OF COAL, 1909.

Country.	Quantity.	Value.	Country.	Quantity.	Value.
	Tons.	£		Tons.	£
Victoria	941,247	535,760	New Zealand ...	240,346	119,973
South Australia ...	461,309	248,392	Peru	41,450	22,863

Philippine Islands...	224,671	121,668	United States ...	106,777	57,430
Straits Settlements	150,380	78,201	India	68,027	34,151
Western Australia ...	117,145	59,297	Tasmania ...	86,844	40,053

The quantity of bunker coal taken from New South Wales by oversea vessels was about 998,334 tons, valued at £561,071.

The distribution of the total output from New South Wales collieries during the last six years was as follows; the particulars given of amounts exported include coal shipped as bunker coal:—

DISTRIBUTION OF TOTAL OUTPUT OF NEW SOUTH WALES COAL,

1904 to 1909.

Year.	Exports to Australasian Ports.	Exports to other Ports.	Local Consumption.	Total.
	Tons.	Tons.	Tons.	Tons.
1904	1,880,545	1,292,322	2,846,942	6,019,809
1905	2,066,576	1,651,477	2,914,085	6,632,138
1906	2,260,090	2,701,450	2,664,822	7,626,362
1907	2,379,024	3,364,483	2,914,417	8,657,924
1908	2,715,310	3,383,366	3,048,349	9,147,025
1909	2,200,769	2,192,834	2,626,276	7,019,879

6. **Consumption of Coal in Australia.**—An estimate of the consumption of coal in the Commonwealth may be arrived at by adding the imports to the home production, and deducting the exports (including bunker coal taken by oversea vessels). The following table shews the consumption of coal in Australia, computed in the manner specified, for the last five years:—

CONSUMPTION OF COAL IN AUSTRALIA. 1905 to 1909.

Year.	Quantity of Coal Consumed.			
	Home Produce.	Produce of the United Kingdom.	Produce of Other Countries and Colonies.	Total.
	Tons.	Tons.	Tons.	Tons.
1905	5,468,000	...	8,000	5,476,000
1906	5,352,000	1,000	15,000	5,368,000
1907	5,954,000	3,000	12,000	5,969,000
1908	6,087,000	4,000	11,000	6,102,000
1909	5,361,000	2,000	14,000	5,377,000

7. **Price of Coal.**—(i.) *New South Wales.* The price of coal in New South Wales has been subject to considerable fluctuation since the date of first production. Up to the

end of 1857 the average value of the total output was 11s. 10d. per ton. Next year the value had risen to nearly 15s., declining thereafter until in 1871 the price realised was 7s. From 1872 to 1879 there was a rise in value to 12s. Between 1882 and 1891 the price ranged between 8s. and 10s. From 1891 onwards there was a steady decline until 1898, when the average was 5s. 4d. Henceforward prices rose again until 1902, when 7s. 5d. was the average. A decline then set in until 1905, when the price stood at a little over 6s., followed by a rise of one penny in 1906, and a further rise of eightpence in 1907. In 1908 the average was 7s. 4d. and in 1909, 7s. 5½d. per ton. The price of New South Wales coal depends on the district from which it is obtained, the northern (Newcastle) coal always realising a much higher rate than the southern or western product. The average rate in each district during the last five years was as follows:—

PRICE OF COAL IN NEW SOUTH WALES (PER TON), 1905 to 1909.

Year.	Northern District.	Southern District.	Western District.
	s. d.	s. d.	s. d.
1905	6 4.15	5 5.03	5 0.15
1906	6 5.28	5 6.60	4 10.81
1907	7 4.41	5 7.44	4 6.90
1908	8 0.78	5 10.91	4 5.52
1909	8 3.48	5 11.91	4 9.34

(ii.) *Victoria.* In Victoria the average price of coal up to the 31st December, 1890, was 19s. 3d. per ton. In 1895 the price was still as high as 12s. 2d., but in the following five years there was a serious decline, the value in 1900 being quoted at 9s. 7d. per ton. In 1901, however, there was an astonishing rise, the figure being as high as 14s. 7d. Since that year, however, the price again declined, the average for 1905 being 10s. 2d., for 1906, 10s., for 1907, 11s. 6d., for 1908, 11s. 5d., and for 1909, 12s.

(iii.) *Queensland.* The average price of coal at the pit's mouth in Queensland during the period 1900 to 1909 ranged from 5s. 8½d. in 1906 to 7s. 1¾d. in 1909. Prices in the principal coal-producing districts during the last four years were as follows:—

PRICE OF COAL, QUEENSLAND, 1906 to 1909.

District.	Value at Pit's Mouth.			
	1906.	1907.	1908.	1909.
	Per ton.	Per ton.	Per ton.	Per ton.
	s. d.	s. d.	s. d.	s. d.
Ipswich and Darling Downs	5 2½	6 1½	6 6½	6 8½
Wide Bay and Maryborough	8 0¾	8 4	9 5½	9 7¾
Rockhampton and Central ...	11 2½	11 6¾	11 7¾	11 6

(iv.) *Western Australia.* The average price of the Collie (Western Australia) coal up to the end of 1901 was 9s. 4d. per ton, the price in 1901 being 11s. 7d. In 1902 the average stood at 12s. 3d., and from that time the price fell steadily until 1906, when it was 7s. 7½d. per ton. In 1907 the average price was 7s. 8¾d., in 1908, 8s. 7½d., and in 1909, 8s. 5¾d. per ton.

(v.) *Tasmania.* The average price per ton of coal at the pit's mouth in Tasmania was 8s. in 1901. In 1902 it was 8s. 7d., in 1903, 8s. 9d., in 1904 and 1905, 9s. 8d., in 1906, 9s. 9d., and in 1907, 1908, and 1909, 8s.

8. **Price of Coal in other Countries.**—According to a report published by the Board of Trade the average value of coal at the pit's mouth in the five principal coal-producing countries of the world, for the six years ended 1909, was as follows:—

PRICES OF FOREIGN COAL, 1904 to 1909.

Year.	United Kingdom.	Germany.	France.	Belgium.	United States.
	Per ton.	Per ton.	Per ton.	Per ton.	Per ton.
	s. d.	s. d.	s. d.	s. d.	s. d.
1904 ...	7 2½	8 6½	10 10½	10 8	5 10¾
1905 ...	6 11½	8 7¾	10 6¾	10 2¾	5 8
1906 ...	7 3½	8 11	11 2½	12 2¼	5 9½

9. **Employment and Accidents in Coal Mining.**—The number of persons employed in coal mining in each of the States during the year 1909 is shewn below. The table also shews the number of persons killed and injured, with the proportion per 1000 employed, while further columns are added shewing the quantity of coal raised for each person killed and injured, this being a factor which must be reckoned with in any consideration of the degree of risk attending mining operations.

Returns published by the Board of Trade, England, give the total known number of persons engaged in mining and quarrying throughout the world as about 5⅔ millions, more than one-half of whom were employed in coal mining, the number in the United Kingdom being 966,000; the United States, 690,000; Germany, 591,000; France, 191,000; Belgium, 145,000; Austria, 72,000; and India, 129,000.

Recent returns shew the death rate in the United Kingdom in respect of deaths through accidents in coal mines as 1.31, and for the British Empire 1.33 per 1000 persons employed in coal mines. For France the rate is given as 1.10, for Germany 2.55, and the United States 4.66. For foreign countries generally the rate is stated at 3.04 per 1000.

EMPLOYMENT AND ACCIDENTS IN COAL MINING, 1909.

Commonwealth	21,082	16	147	0.75	6.84	511,599	55,684

§ 11. Coke.

1. **Production of Coke.**—Notwithstanding the large deposits of excellent coal in Australia there is at the present time a fairly considerable amount of coke imported from abroad, the oversea import during the year 1909 amounting to 43,962 tons, valued at £45,061, the bulk of which came from the United Kingdom and Germany, and was taken chiefly by South Australia and Western Australia. Various reasons were at one time adduced to account for the rejection of the local article, such as excessive friability in transport, lack of strength to sustain the weight of large ore bodies in reduction works, excessive amount of ash, etc. These disabilities have, however, been largely overcome, so that succeeding years should see continued expansion in local production. Extensive shipments of coke were obtained from Germany in 1909 for the Wallaroo and Moonta smelters, and for the Broken Hill Proprietary's works at Port Pirie. In explanation of this, it has been stated that while supplies in Australia were not sufficient to meet demands and ensure continuity in supply, there has been considerable over-production at German coke works. In New South Wales the industry has made considerable progress, as the figures hereunder will shew; the lessened production in 1909 is due chiefly to the cessation of work at the Broken Hill Proprietary Company's works at Bellambi for 36 weeks of the year, owing to labour troubles. In addition to this, all the coke works in the Northern district were stopped shortly after the strike of coal miners commenced in the early part of November, and operations were not resumed during the year. The Commonwealth Oil Corporation completed the erection of sixty additional beehive coke ovens at Wolgan, and the same were brought into operation. It is understood that arrangements are in progress to erect ovens of the by-products recovery type near Hexham, in the Newcastle district.

COKE MADE IN NEW SOUTH WALES, 1905 to 1909.

Year.	1905.	1906.	1907.	1908.	1909.
Quantity ... Tons	162,961	186,060	254,609	283,873	204,274
Value, total ... £	100,306	110,607	159,316	199,933	137,194
Value per ton	12s. 4d.	11s. 11d.	12s. 6d.	14s. 1d.	13s. 5d.

A small quantity of coke is made in Queensland, but the bulk of that used in ore reduction is imported, mainly from New South Wales. The following table shews the amount manufactured locally, and the amount imported during the last five years; the quantities imported include shipments landed from other States of the Commonwealth:—

QUEENSLAND—COKE MANUFACTURED LOCALLY AND IMPORTED, 1905 to 1909.

Year.	1905.	1906.	1907.	1908.	1909.
Manufactured locally ... tons	8,650	8,672	8,280	10,684	38,066
Imported ... ... „	9,823	22,661	34,013	58,079	5,588

The development in smelting operations in Queensland is reflected in the increased consumption of coke. It must be understood that the coke referred to above is the production of coke-making establishments only, and does not include the inferior article produced at gasworks.

§ 12. Oil Shale and Mineral Oils.

1. **Production of Shale.**—(i.) *New South Wales.* As pointed out by Mr. E. F. Pittman, the name kerosene shale has been rather inaptly applied to a variety of torbanite, cannel, or boghead mineral found at various geological horizons in New South Wales. The mineral does not, as a rule, split in parallel layers, the fracture being rather of a conchoidal type. Pure samples have been found to contain over 89 per cent. of volatile hydro-carbons and over 5 per cent. of fixed carbons. The discovery of the mineral in New South Wales dates probably from 1827, although the first authentic mention by a scientific observer dates from 1845, when its occurrence in the Hartley Vale district was noted by Count Strzelecki. The mineral has been found at several places in the Upper Coal Measures, and in at least two in the Lower Carboniferous. Production on anything like a large scale commenced in 1868, when about 17,000 tons, valued at £48,000, were raised. The production in 1909 amounted to 48,718 tons, valued at £23,617, as compared with 46,303 tons valued at £26,067 in 1908. With the exception of 209 tons obtained in the Greta Measures, the whole of the output for 1909 was won in the Western District. Up to the end of 1909 the entire production for the State amounted to 1,422,019 tons, valued at £2,217,185.

(ii.) *Victoria.* Up to the present no extensive deposit of oil shale has been located in Victoria.

(iii.) *Queensland.* Deposits of oil shale are known to exist at various localities in Queensland, and what is believed to be a payable oil-bearing area has been located near Roma. In 1907 a contract was let for sinking a bore at this place to search for artesian water, natural gas, or petroleum, to a depth of 4500 feet. In October, 1908, when the bore had reached a depth of 3702 feet, a flow of gas, estimated at over 1,000,000 cubic feet per day, was struck and became ignited accidentally. The fire was extinguished, and after an extra length of casing had been put down the gas was apparently shut off from below. It was then intended to continue the boring till the stipulated depth of 4500 feet was reached but it is understood that this work was temporarily discontinued towards the end of 1910.

(iv.) *South Australia.* In this State large areas of bituminous shale, of which the boundaries are only approximately known, occur at Leigh's Creek and Lake Phillipson. Reference to the mineral known as coorongite is made in sub-section 13.

(v.) *Western Australia.* A deposit of carbonaceous shale of considerable thickness is known to exist at Coolgardie, but the mineral has not yet been raised in any quantity.

(vi.) *Tasmania.* The deposits of oil shale (Tasmanite) in the Mersey district are not at present being worked. The known shale area extends over a strip of country about six miles long and two miles wide, but it is probable that the area in which the shale beds occur is more extensive than is at present known. Two companies have recently commenced operations in the vicinity of the Mersey, and about 14,000 acres of Crown Land have been applied for by investors and speculators. Kerosene shale of fine quality is found in the country between the Jessie and Flowerdale Rivers, but the extent of the beds has not been proved. The seams are in a series of sandstones and clays, approximately 250 feet thick; one of these seams is 20 inches in thickness.

2. **Export of Shale.**—In 1909 New South Wales exported 3920 tons of shale valued at £7970, of which 3352 tons were sent to the United Kingdom, and 542 tons to New Zealand.

3. **Shale Oils Bounties.**—The Shale Oils Bounties Act 1910 provides for the payment of bounties on certain goods manufactured in Australia from Australian shale on or after the 1st July, 1910, and before the 1st July, 1913. The total amount to be made available for bounties under this Act is £50,000. Particulars are given in the following tabular statement:—

COMMONWEALTH SHALE OILS BOUNTIES—AMOUNTS PAYABLE.

Description of Goods.	Rate of Bounty.	Maximum Amounts which may be paid during the Financial Year 1910-11.	Maximum Amounts which may be paid during each of the Financial Years 1911-12 and 1912-13	Date of Expiry of Bounty.
		£	£	
Kerosene*	2d. per gallon.	8,000	16,000	30th June, 1913.
Refined paraffin wax ...	2s. 6d. per cwt.	2,000	4,000	

* The product of shale, having a flashing point of not lower than 73 degrees Fahrenheit, as determined by the "Abel Pensky" test apparatus in manner prescribed.

§ 13. Other Non-Metallic Minerals.

1. **Alunite.**—Probably the most remarkable deposit of alunite in the world occurs at Bulladelah, in the county of Gloucester, New South Wales, a large proportion of a low range of mountains in the district being composed of this mineral. The deposits are worked by quarrying, and up to the end of 1909, 33,468 tons had been exported, valued at £99,208, the exports for the year 1909 being 3500 tons, valued at £8791. This quantity represents the shipment of accumulated stocks, the actual output for the year 1909 from the quarries having been on a restricted scale, owing to their having been closed temporarily on account of the dangerous condition of the workings. It is reported that large deposits of a high-class alunite have been discovered near Sunbury, Victoria.

2. **Asbestos.**—This substance has been found in various parts of Australia, but up to the present has not been produced in any considerable quantity. In New South Wales the deposits at Jones' Creek, in the Gundagai division, were opened up during the year 1909 and a trial parcel of 15 tons shipped to Germany. It is stated that if reports are satisfactory a plant will be erected and mining operations actively carried on. In Western Australia what may prove to be a valuable deposit of the fibrous chrysotile variety has been located at Tambourah, on the West Pilbara goldfield, and in 1909 £154 worth of

this mineral was raised. In 1899 Tasmania raised 200 tons, valued at £363, but there has been no production during the last ten years. Deposits of asbestos of the mountain leather and mountain cork varieties have recently been discovered at Oodlawirra in South Australia.

3. **Clays and Pigments.**—Valuable deposits of clays and pigments of various sorts are found throughout the Commonwealth. There is a considerable local production of earthenware, bricks, and tiles, but the finer clays have not as yet been extensively used. It is stated that kaolin of a high class has been discovered at Dunbible, near Murwillumbah, in New South Wales; during 1909 these deposits were being opened up, and parcels aggregating 30 tons realised £37 10s. From Tichborne, in the Parkes' division, some 50 tons of kaolin were despatched to Sydney for manufacturing purposes, while at Ulladulla about 50 tons of pottery clay were mined. Deposits of soapstone near Wallendbeen are being opened up. In Victoria 493 tons of kaolin of the finest quality, valued at £619, were raised during 1909, mostly at Egerton. There are also deposits of kaolin at Knowsley and Gordons, Victoria. In Queensland 3077 tons of fireclay, valued at £1366, were mined during the year 1909. On Kangaroo Island, South Australia, where, it is stated, the first pottery mill in the Commonwealth was erected, there are vast deposits of felspar, china stone, silica, and firebrick clay. There are also very extensive deposits of fireclay near Ardrossan on the Yorke Peninsula, and it is stated that a syndicate has recently been formed to work these deposits. Two deposits of yellow ochre have been opened up in New South Wales, one near Dubbo and the other at Webb's Creek on the Hawkesbury River. Good samples of umber have also been obtained in New South Wales, and water paints from materials raised in that State have achieved considerable success. A silicate paint has been placed on the market, and successful experiments of a preliminary nature have been carried out with the view of proving how far local materials can be used for the preparation of colours requiring chemical treatment, and siennas, greens, and other colours have been exhibited. Extensive deposits of iron oxide, giving a return of 80 per cent. ochre, have recently been discovered near Oodlawirra in South Australia.

4. **Coorongite.**—This peculiar indiarubber-like material was first noted many years ago near Salt Creek and in the vicinity of Coorong Inlet, in South Australia. It was thought that the substance owed its origin to subterranean oil-bearing strata, but so far the search for petroleum has not been attended with success.

5. **Graphite.**—Graphite is found in New South Wales near Undercliff Station, in the county of Buller, but the deposit is not sufficiently pure to prove remunerative. In Victoria the mineral occurs in Ordovician slates in several of the goldfields, but is not worked. In Queensland the mineral is raised by the Graphite Plumbago Company at Mt. Bopple, near Netherby, on the Maryborough-Gympie line. During the year 1908 this company was engaged in deepening the shaft of their mine, and in the course of these operations raised 20 tons of ore, valued, undressed at the mine, at £3 a ton. In 1907 the quantity produced was 65 tons, valued at £200. There is an extensive deposit of the mineral at Mt. Bopple, but the quality is rather inferior. In Western Australia a company has recently been formed to work deposits near Bunbury.

6. **Gypsum.**—This mineral is found at various places in the Commonwealth. There is a large quarry at Boort, Victoria, while in South Australia deposits are being worked at Lake Fowler and near Marion Bay, Yorke Peninsula.

7. **Tripolite, or Diatomaceous Earth.**—Although tripolite has been found at Barraba, Cooma, Wyrallah, and in the Warrumbungle Mountains in New South Wales, the deposits have not yet been worked commercially. The opening up of the Barraba railway has, however, led to the taking up for mining purposes of a deposit of diato-

maceous earth which has been recently localised. If, as seems likely, the material can be placed on the Sydney market at a reasonable price, a moderate output may be obtained. In Victoria there is a remarkably pure deposit at Lillicur, near Talbot, while beds of the mineral are also met with at Clunes and Portland. From the deposit at Talbot, 800 tons, valued at £2400, were obtained in 1909.

8. **Salt.**—Salt is obtained from salt lakes in the western and north-western districts of Victoria, and from salterns in the neighbourhood of Geelong. Large quantities are also obtained from the shallow salt lakes of South Australia, chiefly on Yorke Peninsula. Lake Hart, about sixty square miles in area, situated about 120 miles N.W. from Port Augusta, contains immense supplies of salt of good quality, which at present, however, owing to distance from market, possess no economic value. The salt is simply scraped from the beds of the lakes in summer time and carted to the refinery. It is stated that care must be taken not to leave too thin a crust of salt over the underlying mud, as the resultant "crop" after the winter rains will in that case be smaller than usual. A bore recently put down near Kingscote, on Kangaroo Island, revealed brine which can be profitably used by evaporation. The production of crude salt in South Australia during 1909 was 51,407 tons, valued at £25,594. In Western Australia supplies are obtained from dried-up shallow lakes and consumed locally or exported. The chief centres of production were formerly Rottnest Island, near Fremantle, and Middle Island, near Esperance, but the greater part of that now produced is obtained at Port Gregory.

9. **Natural Manures.**—In Victoria large quantities of "copi," an impure hydrous sulphate of lime, are obtained in the North-western district. South Australia possesses deposits of rock phosphate near Port Clinton and Ardrossan on Yorke Peninsula, at Belvedere near Kapunda, and at Kooringa, and also at many other places which have only been prospected to a small extent. The production in 1909 was valued at £3697. Although it can hardly be considered a mineral product, mention may be made here of the large accumulations of guano on the Abrolhos Islands, off the coast of Western Australia, in the neighbourhood of Geraldton. The deposits vary in thickness from four to twenty-seven inches. During the years 1876-80 over 36,000 tons were raised; no figures are available shewing the production of recent years.

§ 14. Gems and Gemstones.

1. **Diamonds.**—Diamonds were first noted in New South Wales by E. J. Hargraves in 1851, and in October of the same year by Geological Surveyor Stutchbury. The Cudgegong field was discovered in 1867, and shortly afterwards the Bingara diamantiferous deposits were located. None of the diamonds so far discovered have proved of any considerable size, the largest weighing about 6¼ carats. Stones of small size are also found at Cope's Creek and other places in the Inverell district. It is difficult to obtain accurate returns in connection with the production of precious stones, but the yield of diamonds in 1909 was estimated at 5474 carats, valued at £3959, while the total production to the end of 1909 is given as 167,354 carats, valued at £111,462. The yield in 1909 was contributed by miners working in the vicinity of Copeton, in the Tingha division, and it is estimated that twenty-five men were employed on an average during the year. Small quantities of diamonds are found in Victoria in the gravels of streams running through granite country in the Beechworth district; at Kongbool in the Western District; and near Benalla. The stones are generally small, and the production up to date has been trifling. A few small diamonds have been found in the Pilbara district in Western Australia. In South Australia diamonds have been found on the Echunga goldfield, the most notable gem being Glover's diamond, which was sold for £70.

2. **Sapphires.**—These gems were discovered in New South Wales in 1851, near Burrandong. The gems have also been found in small quantities near Inverell, and at a few other localities in the State. There is no record of production. Specimens of sapphire have been found in Victoria, but the stones of commercial size are generally of little value owing to flaws.

In Queensland sapphires are found in the gravel of creek beds, between Withersfield and Anakie on the Rockhampton-Winton railway line. The gems show excellent fire and lustre, but the colour is darker blue than the Oriental sapphire. Hyacinths are occasionally found in association with the gems. The production of sapphires in Queensland last year was valued at £23,116, and up to the end of 1909 the total was £140,593.

3. **Precious Opal.**—This stone was first discovered in New South Wales at Rocky Bridge Creek on the Abercrombie River, in the year 1877, and later a most important discovery was made at White Cliffs in the Wilcannia district, which is now the centre of production. The value of opal raised last year was estimated at £61,800, of which £21,800 worth was raised in the White Cliffs district, and the balance at the Wallangulla field in the Walgett division. Beautiful specimens of "black" opal, realising over £40 an ounce, have been obtained at the last-mentioned field. Since the year 1890 the total value of opal won is estimated at £1,171,699.

Small quantities of precious opal are also found in the Beechworth district in Victoria. In Queensland, the first recorded discovery of the gem dates from about 1875. The opaliferous district stretches over a considerable area of the western interior of the State, from Kynuna and Opalton as far down as Cunnamulla. The yield in 1909 was estimated at £2000, and up to the end of that year at £163,500. These figures are, however, merely approximations, as large quantities of opal are disposed of privately to buyers on the fields, no record of which is obtained.

4. **Other Gems.**—Emeralds were found in New South Wales in the year 1890, near the township of Emmaville, the largest specimen found in the district weighing twenty-three carats in the rough. Altogether 2225 carats were sent to London during that year, some of the gems bringing £4 a carat, but the production has since dwindled. The mine at The Glen in the Emmaville division was reopened and worked for a short period during 1908, when about 1000 carats of emeralds, valued at about £1650, were obtained. The largest stone in the rough weighed 60 carats. Amongst other gems found in New South Wales at various times may be mentioned *turquoises*, discovered in 1894, near Bodalla; *topazes*, fine specimens of which have been obtained in the New England district, and *zircons* and *garnets*. Turquoises are also found in thin veins in Victoria, but the deposit is not rich enough to pay for expenses of working. Fine *agates* are found in many places in Victoria, but have not been made use of to any extent. Garnets are found in Western Australia, and beautiful specimens of *crocidolite* have been obtained at Yarra Creek in the Murchison district. *Rubies* have been found at various places in New South Wales and Queensland. *Tourmaline* has been found on Kangaroo Island, in South Australia, and *beryls* near Williamstown, Victoria.

(C). GENERAL.

§ 15. Numbers Engaged, Wages Paid, and Accidents in Mining.

1. **Total Employment in Mining.**—The number of persons engaged in the mining industry in each State and in the Commonwealth is an index of the significance of the mineral wealth. During the year 1909 the number so employed was as follows:—

NUMBER OF PERSONS ENGAGED IN MINING, 1909.

State.	Number of Persons Engaged in Mining for						Total.
	Gold.	Silver, Lead, and Zinc.	Copper.	Tin.	Coal and Shale.	Other.	
New South Wales ...	5,585	6,207	2,024	2,037	18,569	1,983	36,405
Victoria	18,671	4	2	48	607	64	19,396
Queensland	7,150	354	3,241	2,158	1,715	589	15,207
South Australia	1,177	40	4,504	355	...	1,052	7,128
Western Australia ...	17,027	5	497	406	394	7	18,336
Tasmania	713	1,516	2,038	1,576	198	13	6,054
Commonwealth ...	50,323	8,126	12,306	6,580	21,483	3,708	102,526

The following table shews the number of persons engaged in mining in the Commonwealth during each of the years 1891, 1901, and 1909, together with the proportion of the total population so engaged:—

PROPORTION OF PERSONS ENGAGED IN MINING, AUSTRALIA, 1891, 1901, 1909.

State.	1891.		1901.		1909.	
	Miners Employed.	No. per 100,000 of Population.	Miners Employed.	No. per 100,000 of Population.	Miners Employed.	No. per 100,000 of Population.
New South Wales ...	30,604	2,700	36,615	2,685	36,405	2,155
Victoria	24,649	2,151	28,670	2,381	19,396	1,510
Queensland	11,627	2,934	13,352	2,664	15,207	2,691

2. **Wages Paid in Mining.**—In the next table will be found a statement of the average wages earned by employés in the chief branches of the mining industry in Australia. The value of the figures is rather prejudiced by the wide diversity of conditions, not only in the several States but in different districts of the same State.

The figures quoted for New South Wales in gold mining refer to the Hillgrove district. For copper the figures refer to the Cobar district, and represent rates as awarded by the Arbitration Court. The maximum is paid when copper is £115 per ton or over, and the minimum when the metal is £70 per ton or under, a graduated rate prevailing between the extremes. The rates for silver miners are those ruling at Broken Hill. As regards Queensland the rates for hewing in coal mines are for miners not doing their own wheeling. Where own wheeling is done the rate varies from 2s. 3d. to 5s. 6d. Generally speaking, the classification of the labour in the various States does not permit of very satisfactory comparisons.

WAGES PAID IN MINING INDUSTRY IN THE COMMONWEALTH, 1909-10.

* Included in "Other Minerals."

§ 16. State Aid to Mining.

1. **Introduction.**—The development of the mineral resources of the several States is fostered and encouraged by the respective Governments in various ways. It is proposed to deal below only with the more direct and special methods by which assistance is rendered for developmental or other purposes, and not to include herein particulars of certain general developmental works found in nearly all civilised countries, such as geological surveys and schools of mines; there is also, as a general rule in all States, some provision for free assays for prospectors. Particulars as to the total expenditure on mining development in each State from loan funds are given in the Section of this book dealing with the subject of *State Finance* (see Section XX. § 4); it should be noted, however, that in addition considerable sums have been spent in some of the States on Government aid to mining out of the consolidated revenue.

2. **New South Wales.**—Though there is no Act in force in this State specifically relating to the provision of loans in aid of mining development and prospecting, various arrangements have been made for rendering financial assistance to prospectors and others.

(i.) *Prospecting Votes.* Since the year 1887 annual appropriations have been made by Parliament "to promote prospecting for gold or other minerals, and to encourage the opening of new goldfields." The total amount expended under these votes to the 31st

December, 1909, was £404,935. During the year 1909 aid was granted by the Prospecting Board in 202 cases, and refused in 191, while the total amount expended from the vote during the year was £10,642. From the reports which were received by the Mining Department from the various mining divisions throughout the State, it is apparent that comparatively little attention was given to prospecting during the year 1909.

(ii.) *Boring Plants.* No special provision exists in New South Wales for the expenditure of funds on boring for minerals, though on several occasions, as, for instance, where the proving of the occurrence of coal in certain localities was considered to be a question of national importance, diamond drills have been provided from special votes.

(iii.) *Government Batteries.* An amount of £5000 was provided in the year 1907 for the establishment of crushing batteries on gold and mineral fields; as yet no expenditure has been made from this amount, which is still available during the financial year 1910-11.

3. **Victoria.**—State assistance to mining in Victoria is provided for by the Mining Development Acts, 1896 to 1908. The original Act provided for the advances and grants to be made out of the sum of £140,000 raised by the issue of Treasury bonds, but an amending Act of 1898 provided that they should be paid also out of any moneys authorised from time to time. Various Acts have been passed for the appropriation of money, generally out of surplus revenue, for mining development or for special purposes in connection therewith, such as the equipment of Schools of Mines, the purchase of cyanide patents, of a metallurgical laboratory, or of boring machinery. A considerable amount of boring for the purpose of locating mineral deposits is also carried out by the Government.

(i.) *Advances to Miners for Prospecting.* Any two or more persons in combination may apply for an advance not exceeding £250 for the purpose of assisting them to prospect for any minerals or metals, and, subject to the usual evidence as to *bona fides*, undertakings to secure repayment, and proof of previous expenditure of £1 for every £1 granted, the Minister may recommend the granting of the loan.

(ii.) *Advances to Companies for Development of Mining.* Under Part I. of the Act of 1896, a company may apply for a loan for the purpose of (*a*) carrying on pioneer mining, (*b*) procuring and erecting machinery, and (*c*) providing all works necessary for carrying on such pioneer mining. The loans to any one company may not exceed £10,000, and are subject to the same conditions as advances to miners (see (i.) above). Under the amending Act of 1908 a sum of not more than £50,000 is authorised to be advanced by way of loan to companies for development of deep alluvial or of deep quartz mining. Evidence and information must be furnished by an applicant for a loan as to the history of the company, the nature of the land upon which it is intended to carry on mining operations, the machinery and appliances which it is proposed to use, and as to the estimated cost of such machinery; and a statement must be provided shewing the period of time over which the advance is to extend. Applications are referred by the Minister to the Government Geologist for report and are then dealt with by the Executive Council. Interest on loans at the rate of $3\frac{1}{2}$ per cent. per annum must be paid half-yearly, and the payments to the Treasurer form a first charge on the profits and assets, except uncalled capital, of the company.

(iii.) *The Establishment of Plant for Testing Metalliferous Material.* Government testing plants may be established only in districts where there is no battery where ore is crushed or dealt with for payment. If the Minister be of opinion that there is a necessity in the interest of the mining industry for the establishment of a testing plant in any district, he may submit to the Treasurer such evidence as in his opinion is sufficient to justify the expenditure necessary to procure and erect the same, and the Treasurer may recommend the Governor to grant, and the Governor may grant, the necessary funds. The purchase, transport, erection, and removal of any testing plant, and the rates to be charged for its use must be in accordance with regulations made under the Act.

Of the twenty-three batteries which had been erected by the Government up to the end of the year 1909, fourteen have been managed by local committees, without expense to the Mines Department as far as the cost of working is concerned, while the remaining nine were worked directly under the supervision of departmental officers. The quantity of ore crushed during 1909 at the batteries owned by the Government was 3068 tons for a yield of 1566 ozs. of gold, shewing an average of 10 dwts. per ton. The total cost of working and maintenance during the year amounted to £2654, and the sum received from the public for crushing was £949, giving a net cost of £1706. From 1897, when the first battery was erected, to the end of 1909, a total of 33,247 tons, yielding 19,964 ozs., has been treated. A total sum of £22,490 has been spent on the erection of the twenty-three plants; the total received for crushing was £7064, and as the cost of maintenance was £27,030, the net cost amounted to £19,966.

Diamond drills are hired out by the Government under specified conditions to companies at a rental of from £2 to £4 per month according to size and kind of drill, £200 being lodged as security to cover breakages, and hand-boring plants are also hired under similar conditions at a rental of 10s. per month.

(iv.) *Construction of Roads and Tracks for Mining.* Under Part II. of the Act of 1896 the Minister may, subject to certain conditions, on the application of the council of any shire situated in an outlying or mountainous part of Victoria, construct a road suitable for the transport of mining machinery and appliances to any locality where mining is being carried on by more than one company, or by holders of miners' rights.

(v.) *Construction of Races and Dams.* Under Part IV. of the Act of 1896 the Minister is empowered, subject to the report of the Government Geologist and the Chief Engineer of Water Supply, and to the approval of the Treasurer and Governor in Council, to construct races and dams for working alluvial deposits for gold, to divert water for such uses subject to all existing rights, and to make regulations for the payment of rates for the use of the water.

(vi.) *Dissemination of Information.* Part VI. of the Act of 1896 provides that if the Minister be of opinion that it is advantageous to expend money for the purpose of disseminating information in Great Britain and other countries as to the mining resources of Victoria, and for holding in Victoria a public exhibition of mining machinery and appliances, he may recommend the Governor through the Treasurer to grant moneys necessary for the purpose.

(vii.) *Expenditure on Government Aid to Mining.* The following statement shews the total expenditure under the Mining Development and Surplus Revenue Acts up to the end of the year 1909 :—

VICTORIA.—EXPENDITURE ON GOVERNMENT AID TO MINING TO END OF YEAR 1909.

Particulars.		Advances to Mining Companies.	Advances to Prospectors.	Boring for Gold and Coal.	Roads and Tracks.	Erection of Testing Plants.	Miscellaneous.	Total.
Amount	£	124,915	57,364	59,231	69,156	22,490	47,673	380,829

In addition, the expenditure from votes from the 30th June, 1904, to the 30th June, 1909, was £62,393 on boring for gold and coal, and £12,492 on testing plants.

The repayments by companies of the loans advanced amounted on the same date to £17,800, and by parties of miners to £1916. A sum of £5210 has been repaid for part of the cost of boring, and also hire of plant and loss of diamonds. Several companies have discontinued operations, and their security in the way of plant was taken possession of and sold for a total of £10,106. The amount of loans was, however, £28,080, and thus a loss of £17,974 was incurred.

4. **Queensland.**—Special assistance granted to the mining industry in this State may be conveniently dealt with under the headings specified below:—

(i.) *Assistance to Prospectors.* Assistance is granted in connection with sinking wells and providing equipment or rations for small parties of miners, and in some cases for prospecting or developing lodes. Such assistance is granted directly by the Minister, sometimes to a local authority, sometimes through the warden, and sometimes to miners or progress associations.

(ii.) *Grants for Roads and Bridges to Gold and Mineral Fields.* These grants are made either for the purpose of repairing existing roads and bridges or of constructing new ones; they are made with Executive approval, generally to local authorities.

(iii.) *Loans in aid of Deep Sinking.* These loans are made with the approval of the Executive in order to prove lodes at a depth or for diamond drilling.

(iv.) *The Mining Machinery Advances Act 1906.* Under this Act loans may be made for (*a*) procuring and erecting machinery for carrying on mining operations, or (*b*) procuring, erecting, or removing and re-erecting plant for treating minerals. Loans are granted by the Minister on the approval of the Governor in Council, interest at a rate not exceeding 5 per cent. per annum being charged. There is no limit to the amount which may be advanced, but the borrower must contribute £1 for £1 towards the work for which the loan is granted. The borrower must also execute a bill of sale or mortgage over the machinery or property, but the moneys advanced are not recoverable against the borrower personally, but only against the secured property.

(v.) *Amounts Granted or Advanced, 1909.* The total amount granted or advanced under the several systems above mentioned to the end of 1909 was as follows:—

QUEENSLAND.—PARTICULARS OF AMOUNTS GRANTED OR ADVANCED, 1909.

Purposes for which Granted, etc.	Prior to 1909.	During 1909.	Total to end of 1909.
	£	£	£
Assistance to prospectors	28,405	1,993	30,398
Grants for roads and bridges	13,521	1,793	15,314
Loans in aid of deep sinking	49,449	8,601	58,050
Advances under Act of 1906	2,450	1,301	3,751
Total	93,825	13,688	107,513

In addition special sums are occasionally granted or advanced in certain cases; for example, in 1908 sums of £2460 and £306 were advanced for the purposes of oil boring and coal prospecting, respectively.

5. **South Australia.**—By regulations made in February, 1894, under Part VI. of the Mining Act of 1893, and amended in January, 1899, provision is made for State aid to mining by way of:—(i.) Rewards to discoverers, (ii.) subsidies, and (iii.) loan of boring plant.

(i.) *Rewards to Discoverers.* Rewards may be paid to the discoverer (being the holder of a miner's right) of any new mineral district, or of any new and valuable deposits of metals, minerals, coal, or oil. The amount of the reward depends upon the distance of the discovery from the nearest payable mineral deposits already worked, and upon the number of men employed on the new field within six months after the report of the discovery has been made; the reward may not in any case exceed £1000. No rewards have yet been granted.

(ii.) *Subsidies.* Applications for subsidies may be made by any person engaged in deep sinking, prospecting, or mining. No subsidy may exceed 100 per cent. on the

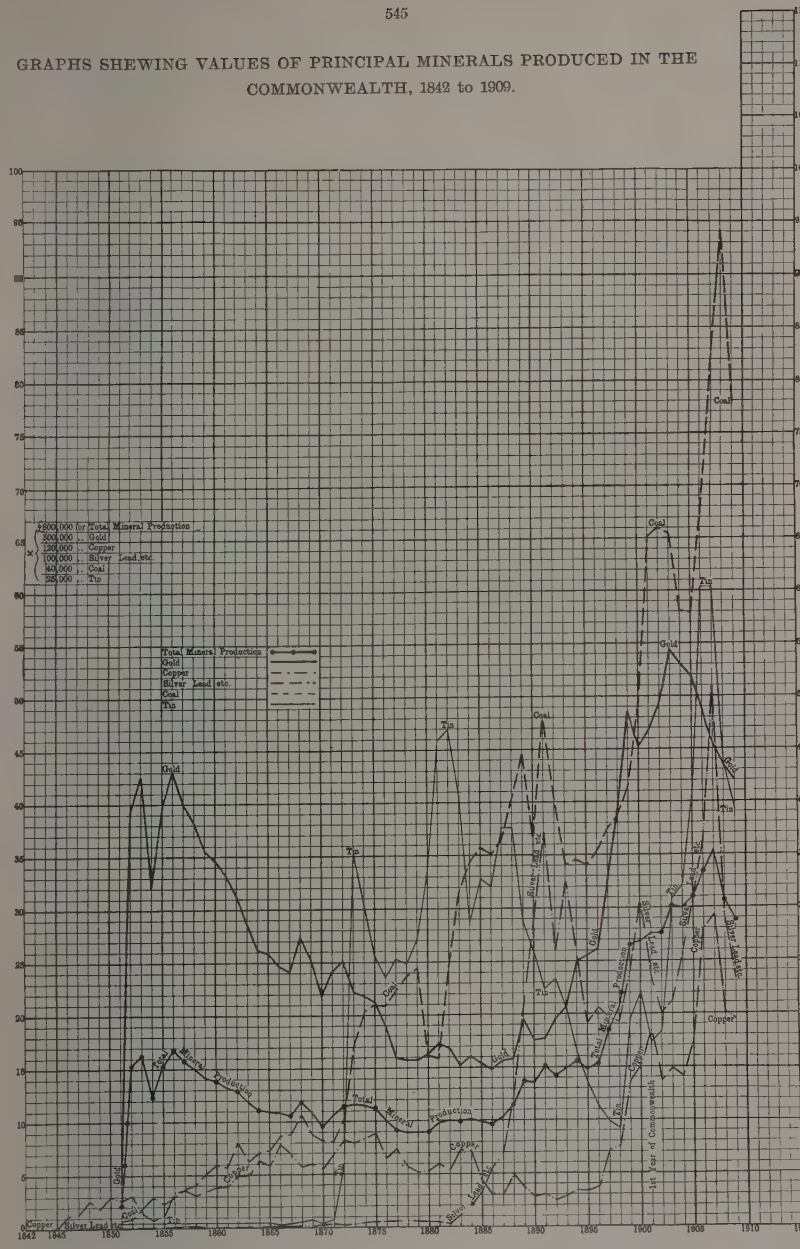
amount proposed to be expended by the applicant, and the total grant to any one person or company may not exceed £1000. Fifty per cent. of the net profits must be applied in payment of the subsidy, and a bill of sale of all chattels belonging to the applicant and used in connection with the mine must be executed. If an applicant for assistance is mining on private land, the granting of a subsidy is subject to additional conditions. The total amount advanced by subsidies up to the 30th June, 1909, was £49,244; the number of individual persons or companies to whom subsidies were granted was ninety-nine, while the total repayments to date amounted to £6092.

(iii.) *Loan of Boring Plant.* The regulations also provide for the loan of diamond drills. There are two Government boring plants in South Australia, the capital expenditure thereon up to the 30th June, 1909, amounting to £6057.

(iv.) *Government Batteries and Cyaniding Plants.* There are four Government batteries and cyanide works in South Australia, the capital cost thereof amounting to £14,319. Up to the end of the year 1909 the total quantity of ore treated by these plants amounted to 16,902 tons, from which 13,367 ounces of gold, valued at £48,748, were extracted.

6. **Northern Territory.**—In the Northern Territory, Government assistance in the form of free rations is granted to prospectors and free assays are made. There are three Government boring plants, and two batteries and cyanide plants (both the latter being situated in the Macdonnell Ranges). The total amount of ores treated at the batteries up to the end of 1909 was 10,342 tons, from which 12,877 ounces of gold, valued at £47,710, were recovered.

7. **Western Australia.**—In this State, Government aid to mining is provided both under the Mining Development Act 1902 and under a more general vote for developmental purposes. A large amount of general developmental work has been carried out by the Government, particularly in regard to water supply; particulars of the eastern goldfields water-supply scheme may be found in the section of this book dealing with *Water Conservation and Irrigation* (see Section XIV. § 1). The Act of 1902, referred to above, is in many respects similar to the Victorian Act of 1896; its chief provisions may conveniently be considered under the headings indicated below.



(i.) *Advances to Prospectors.* The Minister may, after obtaining a report from a professional officer, grant a loan not exceeding £300 to any miner who applies for assistance to enable him to prospect for gold or minerals. An applicant must furnish the necessary descriptions, statements, and information, verified by statutory declarations, and for every £1 advanced the borrower must expend £1 in work, labour, or material.

(ii.) *Advances for Pioneer Mining.* The purposes for which, and the conditions upon which, advances may be made are similar to those specified under Part 1 of the Victorian Act of 1896 (see 3 ii. above); the amount advanced to any one borrower is limited to £1000.

(iii.) *Establishment of Testing Plants.* Plant for crushing, ore-dressing, cyaniding, or smelting may either be established by the Minister or he may subsidise companies who are willing to erect and work such plant for the public at prescribed rates. Any such plant may only be erected in a district (*a*) in which large deposits of ore exist, (*b*) where existing plant for treating deposits in bulk at reasonable rates is not available, and (*c*) where the establishment of such plant is necessary for the development of mining.

In 1909 there were thirty-two State batteries and twenty-four cyanide plants in operation; there were also five slime plants and two tin-dressing plants. The total amount expended on the erection of State batteries up to the end of 1909 was £91,981 from revenue, and £183,339 from loan, giving a total of £275,320. The following statement shews the receipts and expenditure for the year 1909:—

GRAPHS SHEWING VALUES OF PRINCIPAL MINERALS PRODUCED IN THE COMMONWEALTH, 1842 to 1909.

(See pages—for total mineral production, 491; gold, 495; silver, 504; copper, 509; tin, 512; coal, 523.)

EXPLANATION OF GRAPHS.—The values shewn in the above diagrams are those of the total Commonwealth production of the most important minerals in successive years from 1842 to 1909.

The base of each small square represents an interval of one year, and the vertical height represents, in the case of gold £300,000; copper, £120,000; silver, lead, etc., £100,000; coal, £40,000; tin, £25,000; and total mineral production, £800,000.

The names of the various minerals are written on the graphs which respectively represent them, and the distinctive types of line used are exhibited in detail in the central portion of the diagram.

WESTERN AUSTRALIA.—RECEIPTS AND EXPENDITURE OF GOVERNMENT BATTERIES AND TESTING PLANTS, 1909.

Plant	Batteries.	Cyanide.	Slimes.	Tin.	Total.
	£	£	£	£	£
Receipts	44,927	26,883	8,052	915	80,777
Gross expenses	52,495	19,787	8,476	1,181	81,939

The total value of gold and tin produced to the end of 1909 at the State plants was £3,120,794, resulting from the treatment of 695,128 tons of gold ore and 41,723 tons of tin ore. The tonnage of stone milled during the year was 94,218 tons, producing 83,127 ozs. of gold; the tonnage of sands cyanided during the year was 61,032 for a yield of 12,957 ounces of gold; the slimes treated amounted to 16,848 tons, yielding 3258 ounces of gold. 5043 tons of tin ore were treated at a cost of £1181. At the commencement of 1908 a uniform charge of ten shillings per ton was instituted at gold ore plants, a reduction of nearly two shillings per ton on the average rates previously charged.

(iv.) *Assistance for Boring.* Subject to certain conditions the Minister may agree to pay not more than half the cost of boring either for gold, minerals, or water, and with the approval of the Governor and after receiving a report from the proper officer that such boring is in the general interest of the State, he may pay the whole cost.

(v.) *Miscellaneous.* The Minister may advance or himself expend moneys (*a*) to drain any area, (*b*) to assist mining by sinking or cross-cutting, (*c*) to sink shafts for minerals at great depths, and (*d*) to provide means of transport for miners to prospect unproved country.

vi.) *Particulars of Advances, 1909.* The following statement shews the sums advanced during the year 1909 under the provisions of the Mining Development Act:—

WESTERN AUSTRALIA.—ADVANCES MADE IN 1909 UNDER MINING DEVELOPMENT ACT, 1902.

Particulars.	Advances in aid of Mining Work and Equipment of Mines.	Advances in aid of Boring.	Subsidies to Crushing Plants.	Purchase of Boring Plants.	Providing Means of Transport.	Total.
Amount £	5,387	1,802	2,208	727	1,110	10,234

In addition to the above, amounts totalling £2661 were expended from the Mining Development Vote on various matters, such as water supply, roads, subsidies to assist cartage of ore, drainage, timber tramways, and subsidies for development work done below the 100 feet level in small mines. Subsidies to the extent of £2207 were paid to private crushing plants, the condition being that they crush for the public at fixed rates. The receipts under the Mining Development Act, exclusive of interest payments, amounted to £2263 for refunds of advances, and £166 for sales of plant, a total of £2429.

8. **Tasmania.**—The only provision made in Tasmania for State aid to mining is under the Deep-Sinking Encouragement Acts 1899, 1900, and 1901. Under these Acts sums of £5000, £2000, and £1000 respectively were provided for assisting persons and companies to sink shafts or to drive tunnels below a specified depth, the amount advanced in any particular case varying according to the amount expended by the borrower. The total amount advanced to October, 1909, was £6861, granted to five companies in sums ranging from £682 to £1452, leaving an unexpended balance of £1139. None of the companies to whom the advances were made have been successful, and consequently none of the sums advanced, which were to be repaid out of profits, has been refunded.

SECTION XIII.

MANUFACTURING INDUSTRIES.

§ 1. General.

1. **Industrial Progress.**—The statistics of manufactures in the Commonwealth during recent years shew that many industries have now been permanently established on a secure basis, and also indicate a fairly rapid, though in some cases a somewhat irregular, progress both in regard to the extension of existing industries and the establishment of new ones. The scale on which many manufactories are established in Australia, however, appears small in comparison with those established in older countries of the world; but it should be remembered that owing to the sparseness of its population Australia cannot at present maintain industries on a very extensive scale, and also that until the inauguration of the Commonwealth in 1901 the field was still further limited by intercolonial tariffs.

(i.) *The Gold Discoveries, 1851.* During the period prior to the gold discoveries (1851) little was done in regard to manufacturing industries in Australia. Such industries as had then been established were chiefly connected with the preparation of foodstuffs, and were to a large extent called into being by the isolated position of the country. It was found that, owing to the comparatively high prices which could be obtained for the products of the pastoral industry, those engaged in such pursuits in Australia could compete successfully in the world's markets. Owing to the sparseness of its population and to the distance of Australia from the world's centres of distribution, there was but little incentive towards any decided progress in agriculture, which was accordingly for many years almost entirely subsidiary to sheep and cattle raising. With the adoption of improved methods of agriculture, however, there were signs of an early extension in the cultivation of wheat, when the discovery of gold in 1851 completely changed the economic aspect in Australia and effected a revolution in all industrial relations. The large towns were practically depleted of their male able-bodied population, and the first effect of the gold rush upon manufacturing industries was disastrous. The supply of labour in many occupations was exhausted, and most branches of industry came to a standstill. There was, however, a rapid change. A decline in the activity of the goldfields threw many immigrants, whose early lives had been passed in English cities, out of employment. The surplus of labour thus engendered accumulated in Melbourne and a few other large towns, establishing incipient artisan communities. This no doubt intensified the early impulses towards industrial employment. In the State of Victoria, in particular, it was sought to encourage the investment of capital in manufacturing enterprises by the establishment of protective Customs duties. Manufacturing industries were revived on a larger scale than formerly, and the population attracted by the discovery of gold remained in Australia and furnished the labour necessary to operate the factories thus established.

(ii.) *Later Progress.* Soon after the discovery of gold the construction of the first railways (1854) and the re-establishment of regular steamship communication with Europe (1856) helped to encourage the industrial activity which commenced to appear. The States of New South Wales and Victoria, which had recently (1855) received the

benefits of responsible government, soon turned their attention to the settlement of an agricultural population on the land. The Acts which were passed (see Section VI., § 2) had a beneficial effect on the working classes, giving them opportunities for employment not previously open to them, and fostering the manufacturing industries by increasing the measure of primary production. During the following years the various manufacturing industries prospered. The statistics of the States are not sufficiently complete or uniform to enable a statement of the progress of these industries to be given. The following table, however, shewing, so far as returns are available, the number of factories and the number of employees in each State at decennial periods since 1861 and in 1909, will serve to indicate generally the progress which has been made:—

NUMBER OF FACTORIES AND EMPLOYEES IN EACH STATE, 1861 to 1909.

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
NUMBER OF FACTORIES.							
1861	601	531	...	...	...	...	...
1871	1,813	1,740	...	...	...	...	...
1881	2,961	2,488	571†	823†	...	...	...
1891	3,056	3,141	1,328†	996†	175	...	...
1901	3,367	4,003	2,110†	1,335†	662	420*	11,897‡
1909	4,581	4,755	1,420	1,265	632	544	13,197
NUMBER OF EMPLOYEES.							
1861	...	4,395	...	...	...	...	...
1871	13,583	19,569	...	5,629†	...	...	...
1881	31,191	43,209	...	10,995†	...	...	...
1891	50,879	53,525	...	14,099†	...	...	...
1901	66,135	73,063	26,172†	19,283†	12,198	7,466*	204,317‡
1909	91,702	97,355	29,504	25,709	12,813	9,322	266,405

* For 1902. † Not on same basis as other States. ‡ Not on same basis for some of States as in 1909.

Since the inauguration of the Commonwealth, the throwing open of the whole of the Australian markets to the industrial products of each State has facilitated the internal distribution of the products of Australian industry.

2. **Defects in Industrial Statistics.**—A complete statistical account of the growth of the manufacturing industries in Australia unfortunately cannot be given for any lengthy period, owing to the fact that the necessary statistics have not been collected in past years by the several States upon a definite and identical basis. Even in respect of either the definition of a "factory" or (so far as they might be included in related returns) the statistics of persons employed therein, there was formerly no common agreement. The relatively minor place that manufacturing industry held in relation to the total activity of Australia was, perhaps, responsible for the fact that the necessity for uniform method was not earlier recognised.

In 1896 it was agreed, as between Victoria and New South Wales, to adopt a common definition of the term "factory," viz., "any factory, workshop, or mill where four or more persons are employed or power is used." This agreement was adopted for the States generally at the Conference of State Statisticians in 1902, when it was decided, however, that the term "factory" should include also "all establishments, whether making for the trade, wholesale or retail, or for export." It was further agreed that

industries should be arranged, as far as possible, under a uniform classification. As a result of the conference of 1902 a higher degree of uniformity in the collection and presentation of industrial statistics was attained in the several States, so that returns upon which anything like a proper comparative study of the development and progress of various manufacturing industries in the Commonwealth may be based date back only as far as the year 1903, when the resolutions of the conference first came to be put into force. All the States did not, however, fall completely into line, and, as may be seen in the succeeding parts of this section, the comparisons afforded by the returns for the years 1903 to 1906 inclusive, are in some cases subject to various limitations. At the Conference of Statisticians held in Melbourne in 1906 special consideration was given to the methods to be adopted for the collection of statistical information regarding primary and secondary production and industry. A definite classification of industries was adopted, and a set of forms for the collection and compilation of industrial statistics on a definite and uniform basis in each State was agreed upon. The States have not, even yet, fallen entirely into line in collecting and classifying the returns. The particulars for the year 1909 are, however, in more complete co-ordination than those for previous years, and it is hoped that it will be possible to give particulars for future years for the several States in greater detail and on a perfectly uniform basis throughout.

3. **Classification of Manufacturing Industries.**—Under the classification adopted at the Conference of Statisticians held in 1906, factories were placed under nineteen different categories, according to the nature of the industry carried on therein; many of the categories were also subdivided. Where two or more industries are carried on by one proprietor in one building, each industry is, when possible, treated as a separate establishment. The statement given below shews the classification which has been adopted; it must be understood, however, that this classification does not pretend to be exhaustive, but merely serves as a guide for the collection and presentation of statistics in the several States on a definite and uniform basis:—

CLASSIFICATION OF MANUFACTURING INDUSTRIES.

CLASS I.—TREATING RAW MATERIALS, ETC.

Boiling-down, Tallow Refining, etc.
Tanneries
Woolscouring & Fellmong'ring
Chaff-cutting, etc.

CLASS II.—OILS AND FAT, ETC.

Oil and Grease
Soap and Candles

CLASS III.—STONE, CLAY, GLASS, ETC.

Bricks and Tiles
Glass (including Bottles)
Glass (Ornamental)
Lime, Plaster, Cement and Asphalt
Marble, Slate, etc.
Modelling, etc.
Pottery and Earthenware

CLASS IV.—WORKING IN WOOD.

Boxes and Cases
Cooperage
Joinery
Saw Mills
Wood-turning, etc.

CLASS V.—METAL WORKS, MACHINERY, ETC.

Agricultural Implements
Brass and Copper
Cutlery
Engineering
Galvanised Iron-working
Ironworks and Foundries
Lead Mills
Railway Carriages
Railway and Tramway Workshops
Smelting
Stoves and Ovens
Tinsmithing
Wireworking
Other Metal Works

CLASS VI.—FOOD AND DRINK, ETC.

Bacon Curing
Butter Factories
Butterine and Margarine
Cheese Factories
Condensed Milk
Meat and Fish Preserving
Biscuits
Confectionery
Corn-flour, Oatmeal, etc.
Flour Mills
Jam and Fruit Canning
Pickles, Sauces, and Vinegar
Sugar Mills
Sugar Refining
Aerated Waters, Cordials, etc.
Breweries
Condiments, Coffee, Spices, etc.
Distilleries
Ice and Refrigerating
Malting
Tobacco, Cigars, etc.

CLASS VII.—CLOTHING AND TEXTILE FABRICS.

Woollen and Tweed Mills
Boots and Shoes
Slop Clothing
Clothing (Tailoring)
Dressmaking and Millinery—
Makers' material
Customers' material
Dyeworks and Cleaning
Furriers
Hats and Caps
Waterproof and Oilskin
Shirts, Ties, and Scarfs
Rope and Cordage
Tents and Tarpaulins

CLASS VIII.—BOOKS, PAPER, PRINTING, ETC.

Electrotyping & Stereotyping
Paper-making, Paper Boxes, Bags, etc.
Photo-engraving
Printing and Binding

CLASS IX.—MUSICAL INSTRUMENTS, ETC.

Musical Instruments and Sewing Machines

CLASS X.—ARMS & EXPLOSIVES

Explosives

CLASSIFICATION OF MANUFACTURING INDUSTRIES.—Continued.

CLASS XI.—VEHICLES, SADDLERY, HARNESS, ETC.

Coach and Wagon Building
Cycles
Perambulators
Saddlery, Harness, etc.
Spokes, etc.

CLASS XII.—SHIP AND BOAT BUILDING AND REPAIRING.

Docks and Slips
Sailmaking
Ship and Boat Building and Repairing

CLASS XIII.—FURNITURE, BEDDING, ETC.

Bedding, Flock, & Upholstery
Billiard Tables
Furniture and Cabinet Making
Picture Frames
Window Blinds

CLASS XIV.—DRUGS AND CHEMICALS, ETC.

Chemicals, Drugs, and Medicines
Fertilisers
Paints, Varnishes, and By-products

CLASS XV.— SURGICAL AND OTHER SCIENTIFIC INSTRUMENTS.

Surgical, Optical, and other Scientific Instruments

CLASS XVI. — TIMEPIECES, JEWELLERY, & PLATED WARE.

Electro-plating
Manufacturing Jewellery, etc.

CLASS XVII.— HEAT, LIGHT, AND POWER.

Coke Works
Electric Apparatus
Electric Light and Power
Gas Works and Kerosene
Lamps and Fittings, etc.
Hydraulic Power

CLASS XVIII.—LEATHERWARE (N.E.I.)

Leather Belting, Fancy Leather, Portmanteaux & Bags

CLASS XIX.—MINOR WARES.

Basket and Wickerware, Matting, etc.
Brooms and Brushware
Rubber Goods
Toys
Umbrellas
Other Industries

§ 2. Number of Manufactories.

1. **General.**—In stating the number of factories in the States of the Commonwealth it is to be remembered that in the collection of statistics, for years prior to 1907, the same basis has not been adopted in each State. In 1906 in Queensland, for example, 689 factories would have been added under the system previously adopted in that State. This would bring the total up to 1993 on the former basis. The factories excluded, however, are those employing only two hands and no power, and the difference in other respects is not material.

In the following table shewing the total number of manufactories in the Commonwealth during the years 1903 to 1909, it should be noted that not only are the results affected by differences of classification, but also that the number of factories from year to year does not unequivocally indicate a change in the position of the industry, since amalgamations may account for part of the reduction of the numbers. Thus in Melbourne a number of breweries have been combined under a single company, and, of the number thus amalgamated, it is intended to keep only three breweries active.

MANUFACTORIES OF THE COMMONWEALTH, 1903 to 1909.

Year.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.
1903 ...	3,476	4,151	2,001*	906*†	586	431	11,551
1904 ...	3,632	4,208	1,909*	906*	672	444	11,771
1905 ...	3,700	4,264	1,911*	985	649	436	11,945
1906 ...	3,861	4,360	1,304	1,012	665	373	11,575
1907 ...	4,432	4,530	1,359	1,086	643	505	12,555
1908 ...	4,453	4,608	1,371	1,237	627	557	12,853
1909 ...	4,581	4,755	1,420	1,265	632	544	13,197

* Not on same basis as other States. † 1904 results repeated.

(i.) *Classification of Factories in Commonwealth, 1905 to 1909.* The following table shews the total number of factories in the Commonwealth at the end of each year from 1905 to 1909, classified on the basis indicated in § 1. 3 hereof:—

CLASSIFICATION OF FACTORIES IN THE COMMONWEALTH, 1905 to 1909.

Class of Industry.	1905.	1906.	1907.	1908.	1909.
I. Treating raw material, product of agricultural and pastoral pursuits, etc.	751	742	807	812	823
II. Treating oils and fats, animal, vegetable, etc.	112	99	92	97	94
III. Processes in stone, clay, glass, etc.	625	610	626	627	645
IV. Working in wood	1,126	1,119	1,215	1,322	1,411
V. Metal works, machinery, etc.	1,528	1,394	1,504	1,548	1,588
VI. Connected with food and drink, etc.	2,253	2,177	2,250	2,253	2,258
VII. Clothing and textile fabrics, etc.	2,315	2,335	2,661	2,681	2,774
VIII. Books, paper, printing and engraving	907	919	964	993	1,011
IX. Musical instruments, etc.	10	10	16	17	18
X. Arms and explosives	8	8	8	8	9
XI. Vehicles and fittings, saddlery and harness, etc	1,087	941	1,071	1,105	1,117
XII. Ship and boat building and repairing	95	83	70	76	84
XIII. Furniture, bedding, and upholstery	441	418	470	483	512
XIV. Drugs, chemicals, and by-products	150	156	144	153	164
XV. Surgical and other scientific instruments	23	26	26	28	30
XVI. Jewellery, timepieces, and platedware	110	121	142	153	150
XVII. Heat, light, and power	263	272	309	307	314
XVIII. Leatherware, n.e.i.	33	41	45	54	55
XIX. Minor wares, n.e.i.	108	104	135	136	140
Total	11,945	11,575	12,555	12,853	13,197

For the purpose of the returns in the above table the definition of a factory adopted at the Conference of Statisticians in 1902 (see § 1. 2 hereof) is used, viz., "Any factory, workshop or mill where four or more persons are employed or power is used." The total increase in the number of factories according to this table from 1905 to 1909 was 1252, or an average of 313 a year. The state of the manufacturing industries throughout Australia cannot, however, be gauged from a mere enumeration of the number of factories. Some of the factories concerned were practically in their infancy, employing but few hands, while others were developed on a large scale. Also, as pointed out previously, amalgamations may in some instances account for a reduction in the numbers.

(ii.) *Classification of Factories in each State, 1909.* The following table shews the number of factories in each State of the Commonwealth at the end of the year 1909, classified according to the nature of the industry. (See classification given in § 1. 3 hereof):—

CLASSIFICATION OF FACTORIES IN EACH STATE, 1909.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aus.	W. Aus.	Tas.	Cwlth.
I. Treating raw material, product of agricul. and pastoral pursuits, etc.	283	327	41	128	26	18	823
II. Treating oils and fats, animal, vegetable, etc.	35	22	18	14	3	2	94
III. Processes in stone, clay, glass, etc.	274	198	38	75	35	25	645
IV. Working in wood	574	329	241	92	62	113	1,411
V. Metal works, machinery, etc.	449	652	204	173	62	48	1,588
VI. Connected with food and drink, etc.	761	639	364	256	145	93	2,258
VII. Clothing and textile fabrics, etc.	899	1,299	124	217	121	114	2,774
VIII. Books, paper, printing & engraving	381	355	128	67	54	26	1,011
IX. Musical instruments, etc.	12	4	...	2	...	...	18
X. Arms and explosives	3	6	...	...	...	...	9
XI. Vehicles and fittings, saddlery and harness, etc.	344	404	130	139	43	57	1,117
XII. Ship and boat building & repairing	39	13	12	7	5	8	84
XIII. Furniture, bedding, and upholstery	160	209	64	40	27	12	512
XIV. Drugs, chemicals, and by-products	69	70	3	11	9	2	164
XV. Surgical and other scientific instruments	11	10	5	2	2	...	30
XVI. Jewellery, timepieces, & platedware	42	64	13	15	4	12	150
XVII. Heat, light, and power	175	72	24	9	24	10	314
XVIII. Leatherware, n.e.i.	16	31	2	4	2	...	55
XIX. Minor wares, n.e.i.	54	51	9	14	8	4	140
Total	4,581	4,755	1,420	1,265	632	544	13,197

2. **Use of Mechanical Power.** — The principal motive power is steam, but the chief towns possess electric power stations owned either by the Government, or by public bodies or private companies. From these many manufactories find it convenient to derive their motive power. The distinction between factories employing steam, gas, oil, or electric machinery, and those employing either other power or none at all, affords an opportunity of ascertaining how many factories there are in the ordinary sense of the word, that is, establishments which are not merely workshops. For instance, in the Victorian clothing trade, out of 374 factories only 66 employ mechanical power, the balance may consequently be regarded merely as workshops.

The following table shews the number of factories in which machinery was worked by steam, gas, oil, or electricity, and the horse-power of engines or motors used, in each State and in the Commonwealth, during the year 1909 :—

UTILISATION OF MECHANICAL POWER IN FACTORIES IN EACH STATE, 1909.

State.	Number of Establishments.			Actual Horse-power of Engines Used.				
	Using Machinery worked by Steam Gas, Oil, or Electricity	Others.	Total.	Steam.	Gas.	Oil.	Electricity.	Total.
	No.	No.	No.	H.P.	H.P.	H.P.	H.P.	H.P.
New South Wales	3,089	1,492	4,581	89,917	8,658	543	11,773	110,891
Victoria	2,959	1,796	4,755	47,403	8,446	1,166	6,746	63,761
Queensland ...	1,015	405	1,420	28,230	2,283	526	1,401	32,440
South Australia ...	863	402	1,265	17,126	3,445	1,525	2,317	24,413
Western Australia	459	173	632	20,364	713	702	2,588	24,367
Tasmania	321	223	544	15,784	204	68	5,036	21,092
Commonwealth	8,706	4,491	13,197	218,824	23,749	4,530	29,861	276,96

A comparison of the above table with that immediately preceding will explain th preponderance of horse-power employed in the New South Wales factories, this State possessing by far the largest number of industries connected with heat, light, and power, wood-working, &c., viz., industries demanding a considerable amount of power.

The percentage for the Commonwealth of the number of establishments using machinery worked by steam, gas, oil, or electricity on the total number of establishments was 65.97. The total average horse-power in use was 276,964, of which engines in which the motive power was steam formed 79.01 per cent. ; gas, 8.57 per cent.; oil, 1.64 per cent.; and electricity, 10.78 per cent.

§ 3. Number Employed in Australian Factories.

1. **Total Number Employed.**—Each person employed in and about a factory, in whatever capacity, is now included as a factory employee, consequently every proprietor who works in his business is counted as an employee, and all "outworkers" (see paragraph 6 hereinafter) are also included. The individuals embraced may be classed under the following heads, viz. :—(i.) Working proprietors; (ii.) managers and overseers; (iii.) accountants and clerks; (iv.) enginedrivers and firemen; (v.) skilled and unskilled workers in the factories, mills, or workshops; (vi.) carters and messengers; and (vii.) others.

(i.) *Average Numbers Employed, 1904 to 1909.* The following table shews, for each year from 1904 to 1909 inclusive, (*a*) the average numbers of persons (including both sexes and all ages) employed in manufacturing industries in each State; (*b*) the percentage of the numbers employed in each State on the total numbers employed in the Commonwealth; and (*c*) the numbers employed per ten thousand of the mean population in each State and the Commonwealth :—

AVERAGE NUMBER OF PERSONS EMPLOYED IN MANUFACTURING INDUSTRIES, 1904 TO 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
AVERAGE NUMBER.							
1904 ...	68,036	76,287	20,058	18,049	12,685	8,224	203,339
1905 ...	72,175	80,235	21,705	19,273	12,733	8,468	214,589
1906 ...	77,822	85,229	23,961	20,153	12,897	8,498	228,560

1908 ...	563	745	531	609	469	480	608
1909 ...	571	758	513	626	473	506	616

* Inclusive of factories with two persons.

(ii.) *Rates of Increase, 1904 to 1909.* From the preceding table it may be seen that, except in Western Australia, there has been a general increase in the average number of persons employed in manufacturing industries during the period referred to. The following table shews the percentage of increase during each year on the average number for the preceding year:—

PERCENTAGES OF INCREASE IN AVERAGE NUMBER EMPLOYED, 1904 to 1909.

Years.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1903-4 ...	3.66	4.18	4.15	...	7.24	5.64	3.84
1904-5 ...	6.08	5.18	8.21	6.67	0.38	3.61	5.52
1905-6 ...	7.82	6.22	10.38	4.70	1.29	0.45	6.52
1906-7 ...	11.11	6.66	16.67	11.80	— 2.25	— 3.49	8.80
1907-8 ...	3.04	2.75	4.46	6.90	— 1.44	6.31	3.49
1908-9 ...	2.92	3.78	1.04	5.94	3.12	6.82	3.45

Note.— (—) signifies a decrease.

2. **Classification of Numbers Employed in Factories in the Commonwealth, 1905 to 1909.**—The following table gives a classification of the average numbers of persons employed in factories of different descriptions in the Commonwealth during the years 1905 to 1909 inclusive :—

AVERAGE NUMBER OF PERSONS EMPLOYED IN VARIOUS FACTORIES IN COMMONWEALTH, 1905 to 1909.

Class of Industry.	1905.	1906.*	1907.	1908.	1909.
I. Treating raw material, product of agricultural and pastoral pursuits, etc.	7,460	7,809	8,956	9,042	9,306
II. Treating oils and fats, animal, vegetable, etc.	1,717	1,760	1,727	1,735	1,812
III. Processes in stone, clay, glass, etc.	8,285	8,779	8,909	9,420	9,605
IV. Working in wood	16,938	18,347	19,457	21,310	22,487
V. Metal works, machinery, etc.	40,061	43,331	47,060	48,505	49,753
VI. Connected with food and drink, etc.	35,026	36,720	40,228	40,652	41,006
VII. Clothing and textile fabrics, etc.	59,095	62,594	68,373	70,075	73,554
VIII. Books, paper, printing and engraving	18,441	19,565	20,733	21,448	21,943
IX. Musical instruments, etc.	384	386	430	444	433
X. Arms and explosives	280	347	323	339	377
XI. Vehicles and fittings, saddlery and harness, etc.	8,780	9,027	10,288	10,784	11,366
XII. Ship and boat building and repairing	1,964	2,124	2,049	2,278	2,220
XIII. Furniture, bedding and upholstery	5,422	5,890	6,819	7,117	7,638
XIV. Drugs, chemicals and by-products	2,373	2,600	2,895	3,086	3,391
XV. Surgical and other scientific instruments	146	178	170	176	173
XVI. Jewellery, timepieces, and platedware	1,237	1,397	1,700	1,771	1,800
XVII. Heat, light, and power	4,443	4,834	5,372	5,754	5,986
XVIII. Leatherware, n.e.i.	592	731	788	893	924
XIX. Minor wares, n.e.i.	1,945	2,041	2,564	2,665	2,631
Total	214,589	228,560	248,841	257,494	266,405

* Excluding Queensland Government Railways. For preceding years the Queensland statistics include all establishments where two or more hands were employed except Government Railway workshops.

The total increase in the average number of hands employed from 1905 to 1909 was 51,816, or an annual average of 12,954. The increase was general throughout all the various classes of industry. The greatest development took place in Classes VII. and V., the increases being 14,459 and 9692 respectively.

3. **Classification of Numbers Employed in each State, according to Class of Industry, 1909.**—The following table shews a similar classification of employees in manufacturing industries in each State for the year 1909:—

AVERAGE NUMBER OF PERSONS EMPLOYED IN VARIOUS FACTORIES IN EACH STATE, 1909.

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aus.	W. Aus.	Tas.	C'wlth.
I. Treating raw material, product of agricul. and pastoral pursuits, etc.	3,800	3,329	692	1,103	256	126	9,306
II. Treating oils and fats, animal, vegetable, etc.	694	612	174	243	50	39	1,812
III. Processes in stone, clay, glass, etc.	4,135	3,308	484	1,094	377	207	9,605
IV. Working in wood	6,690	5,320	3,633	1,524	3,872	1,448	22,487
V. Metal works, machinery, etc.	18,755	14,153	5,220	6,927	2,180	2,518	49,753
VI. Connected with food and drink, etc.	12,331	13,333	8,915	3,461	1,424	1,542	41,006
VII. Clothing and textile fabrics, etc.	23,161	36,176	4,880	5,384	2,285	1,668	73,554
VIII. Books, paper, printing & engraving	8,045	7,983	2,479	1,739	1,026	671	21,943
IX. Musical instruments, etc.	370	40	...	23	...	...	433
X. Arms and explosives	31	346	...	...	...	...	377
XI. Vehicles and fittings, saddlery, and harness, etc.	3,683	3,998	1,145	1,656	473	411	11,366
XII. Ship and boat building & repairing	1,796	128	104	104	41	47	2,220
XIII. Furniture, bedding, and upholstery	2,846	2,462	887	884	293	266	7,638
XIV. Drugs, chemicals, and by-products	1,202	1,427	54	621	71	16	3,391
XV. Surgical and other scientific instruments	84	50	22	8	9	...	173
XVI. Jewellery, timepieces, & platedware	608	797	137	168	39	51	1,800
XVII. Heat, light, and power	2,332	2,076	470	513	303	292	5,986
XVIII. Leatherware, n.e.i.	322	497	59	30	16	...	924
XIX. Minor wares, n.e.i.	817	1,320	149	227	98	20	2,631
Total	91,702	97,355	29,504	25,709	12,813	9,322	266,405

The largest number employed in any particular class in the Commonwealth was in Class VII., in which there were 73,554 employees, or 27.69 per cent. on the whole number. The class affording employment to the smallest number of hands was Class XV., in which there were 173 hands, or 0.06 per cent. on the total number of employees. Classes VI., VII., and VIII. comprise those industries in which female labour is largely employed. (See § 4 hereof.)

4. **Classification of Numbers Employed in each State according to Nature of Employment, 1909.**—In the following table the average numbers of persons employed in each State during the year 1909 are classified according to the nature of their employment:—

AVERAGE NUMBER OF PERSONS EMPLOYED IN EACH STATE, CLASSIFIED ACCORDING TO NATURE OF EMPLOYMENT, 1909.

State.	Average Number of Persons Employed.						
	Working Proprietors.	Managers and Overseers	Accountants and Clerks.	Engine-drivers and Firemen.	Workers, Skilled & Unskilled in Factory Mill or Workshop	Carters, Messengers and Others.	Total.
New South Wales ...	3,868	3,043	3,218	2,390	77,235	1,948	91,702
Victoria	4,815	2,744	3,071	1,560	81,244	3,921	97,355
Queensland ...	1,194	985	1,178	1,235	23,009	1,903	29,504
South Australia ...	1,291	584	902	504	21,352	1,076	25,709
Western Australia ...	487	477	480	380	9,894	1,095	12,813
Tasmania	511*	342*	364	359	7,341	405	9,322
Commonwealth ...	12,166	8,175	9,213	6,428	220,075	10,348	266,405

* Estimated.

5. **Classification of Factories according to Number of Hands Employed, 1909.**—The number of factories in each State classified according to the number of hands employed, and the total number of hands employed in each class of factory, are shewn in the following table:—

CLASSIFICATION OF FACTORIES ACCORDING TO NUMBER OF HANDS EMPLOYED, 1909.

No. of Persons Employed in each Factory.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	NUMBER OF FACTORIES.						
Under 4 ...	712	689	180	140	107	143	1,971

Over 100 ...	33,251	37,997	9,896	9,132	4,522	3,578	98,376
Total ...	91,702	97,355	29,504	25,709	12,813	9,322	266,405

6. **Outworkers.**—The term "outworker" or "homeworker" has acquired a special meaning in connection with manufacturing industries, and technically embraces only those to whom work is given out by factory owners to be wrought upon in their own homes. Individuals working for themselves are not included. The following table gives particulars, so far as available, of the average number of outworkers connected with factories in each State during each year from 1904 to 1909 inclusive :—

NUMBER OF OUTWORKERS CONNECTED WITH FACTORIES, 1904 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1904 ...	439	991	*	*	*	42	*
1905 ...	374	1,186	*	*	*	86	*
1906 ...	501	1,431	*	*	*	57	*
1907 ...	592	1,429	264	66	18	60	2,429
1908 ...	596	1,457	171	74	11	11	2,320
1909 ...	630	1,695	144	65	13	...	2,547

* Not available.

Although the figures from 1904 to 1909, for the States of New South Wales and Victoria, shew generally a fairly steady increase in the number of outworkers, they are considerably smaller than the figures for early years. For example, in 1897 there were 2382 outworkers registered in Victoria in the clothing trades, while the number of employees in factories for those trades was 14,293. The corresponding figures for the same year in New South Wales were 546 outworkers and 8602 factory employees. Thus it will be seen that the number of employees in factories has largely increased, while the increase in the number of outworkers has been relatively small.

The Factories Acts in each State contain provisions regulating the employment of outworkers. Generally records of out-work must be kept by factory proprietors, specifying the names and remuneration of workers, and stating the places where the work is done. Further particulars are given in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*)

§ 4. Sex Distribution in Factories.

1. **Employment of Females in Factories.**—In all the States the employment of female labour in factories is now regulated by Act of Parliament. In Victoria the first Act dealing with the subject was passed in the year 1873, and provided that no female should be employed for more than eight hours a day without the permission of the Chief

Secretary. The number of working hours for women is now limited to forty-eight per week in all the States except Tasmania, where the maximum number of working hours is ten per day. The maximum periods of continuous labour, and the intervals of cessation therefrom, are also prescribed by the several Acts. Further reference is made to the restrictions regarding the employment of females in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*)

2. **Distribution of Employees according to Sex, 1905 to 1909.**—In New South Wales the ratio of the number of females employed in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and is now rather lower than one to three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one woman to three men, and at present is about one to two. The employment of women is, however, largely confined to a few trades.

The great prosperity in clothing and textile industries is one of the main causes of increase in female employment. Large numbers are occupied in tailoring and dress making, in wholesale manufactories, in tobacco factories, and preserving works. Certain trades are specifically known as women's trades, such as clothing and textile trades, preparation of food, book-binding, and lighter work connected with the drug trade, as for example wrapping. In common with commercial establishments, a considerable number of women are also employed as clerks and typewriters in factories.

(i.) *Average Number of Males and Females Employed, 1905 to 1909.* The following table shews the average number of male and female employees, so far as available, in factories in each State from 1905 to 1909:—

AVERAGE NUMBER OF MALES AND FEMALES EMPLOYED IN MANUFACTURING INDUSTRIES, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
			MALES.		
New South Wales	56,111	59,979	65,953	67,616	69,184
Victoria	52,925	56,339	59,691	60,873	62,822
Queensland	*18,105	*19,961	23,191	24,639	24,877
South Australia	15,832	16,451	18,423	19,640	20,753
Western Australia	11,091	11,015	10,671	10,453	10,701
Tasmania	7,105	7,220	6,972	7,334	7,889
Commonwealth	161,169	170,965	184,901	190,555	196,226
			FEMALES.

Queensland	*3,600	*4,000	4,763	4,561	4,627
South Australia	3,441	3,702	4,278	4,596	4,956
Western Australia	1,642	1,882	1,954	1,972	2,112
Tasmania	1,363	1,278	1,237	1,393	1,433
Commonwealth	53,420	57,595	63,958	66,939	70,179

* Estimated.

It will be seen that during the years specified there has been for the whole Commonwealth a total increase in the number of male employees of 35,057, or an annual average of 8764, and in the number of female employees a total increase of 16,759, or an annual average of 4190.

(ii.) *Average Number of Males and Females Employed per 10,000 of Mean Population, 1905 to 1909.* The following table shews the average number of male and female employees per 10,000 of the mean male and female population respectively in each State from 1905 to 1909 :—

AVERAGE NUMBER OF MALE AND FEMALE FACTORY EMPLOYEES PER 10,000 OF MEAN MALE AND FEMALE POPULATION RESPECTIVELY, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.
MALES.					
New South Wales	717	746	796	801	809
Victoria	871	919	963	969	976

South Australia	210	213	235	246	259
Western Australia	162	177	179	177	185
Tasmania	158	146	143	157	160
Commonwealth	278	296	326	334	343

* Estimated.

3. **Rate of Increase for each Sex.**—The percentages of annual increase during the years 1905 to 1909 in the average number of males and females employed in manufacturing industries, are shewn below for the whole Commonwealth.

PERCENTAGES OF ANNUAL INCREASE IN NUMBERS OF MALE AND FEMALE EMPLOYEES, COMMONWEALTH, 1905 to 1909.

Particulars.	1904-5.	1905-6.	1906-7.	1907-8.	1908-9.
Males ... ... %	5.25	6.08	8.15	3.06	2.98
Females ... %	6.40	7.81	11.05	4.66	4.84

The above table shews that there has been relatively a larger increase in the number of female than in the number of male employees. This matter is referred to further in the following paragraph hereof. The subjoined statement shews the percentages of annual increase in each State during the last year (1908-9) :—

PERCENTAGES OF INCREASE IN AVERAGE NUMBER OF MALE AND FEMALE EMPLOYEES, 1908-9.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Males ... %	2.32	3.20	0.97	5.67	2.37	7.57	2.98
Females ... %	4.82	4.85	1.45	7.83	7.10	2.87	4.84

4. **Increasing Ratio of Female Employment in Factories.**—The increasing extent to which females are employed in the factories of the Commonwealth may perhaps be best shewn by giving the number of females to every 100 male employees for each State for each year and from 1904 to 1909, inclusive:—

NUMBER OF FEMALES PER 100 MALES IN AUSTRALIAN FACTORIES, 1904 to 1909.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
1904	27.27	50.90	*19.89	26.07	14.51	19.53	32.78
1905	28.63	51.60	*19.89	22.35	14.80	19.46	33.15
1906	29.75	51.28	*20.04	23.31	17.09	17.68	33.69
1907	31.10	52.29	20.53	23.22	18.19	17.74	34.58
1908	31.77	54.10	18.51	23.36	18.86	18.99	35.12
1909	32.55	54.97	18.60	23.88	19.74	18.16	35.76

* Estimated.

Although this table shews that from 1904 to 1909 there has been an increase in the percentage specified from 32.78 to 35.76, the tables given in the next succeeding paragraph shew that this increase has not been due so much to the incursion of female labour into what may be termed men's trades, as to the activity in those trades in which women are ordinarily engaged, more especially in dressmaking, millinery, etc.

5. **Employment of Females in Particular Industries, 1909.**—The employment of women in manufacturing industries in Australia is largely confined to a few trades, of which the more important are comprised in Classes VI., VII., and VIII. (see § 1. 3 above), viz., in connection with food, drink, etc., clothing and textile fabrics, and books, paper, printing, etc. The following table shews the average number of females employed in each of these classes during the year 1909 in each State, and also shews the percentages of the average number so employed on the total average number of females employed in all classes of factories :—

AVERAGE NUMBER OF FEMALES EMPLOYED IN PARTICULAR INDUSTRIES AND PERCENTAGES ON AVERAGE TOTAL EMPLOYED, 1909.

Class.	N.S.W.	Vict.	Q'land.	S. Aust.	W.Aust.	Tas.	Cwlth.
AVERAGE NUMBER.							
VI. Food, drink, etc.	2,831	3,731	511	474	121	261	7,929
VII. Clothing and textile fabrics ...	16,169	26,984	3,446	3,837	1,768	1,059	53,263
VIII. Books, paper, printing, etc. ...	1,909	2,083	417	461	151	66	5,087
Total	20,909	32,798	4,374	4,772	2,040	1,386	66,279
PERCENTAGES ON TOTAL AVERAGE FEMALE EMPLOYEES.							
VI. Food, drink, etc.	12.57	10 80	11.04	9.56	5.73	18.21	11.30
VII. Clothing and textile fabrics ...	71.80	78.14	74.48	77.42	83.71	73.90	75.89
VIII. Books, paper, printing, etc. ...	8.48	6.03	9.01	9.30	7.15	4.61	7.25
Total	92.85	94.97	94.53	96.28	96.59	96.72	94.44

It will be seen that by far the greater part of the total number of females employed in factories work in one or other of the three classes of industry indicated, Class VII. being the most important.

The classification of the employment of women in Class VII. in the two States of largest population is of interest. The following table shews, also, for the sake of comparison, the number of males employed:—

NEW SOUTH WALES AND VICTORIA.—EMPLOYMENT IN CLASS VII., 1909.

Class VII.	New South Wales.		Victoria.	
	Males.	Females.	Males.	Females.
Woollen and tweed mills	283	345	794	923
Boots and shoes	2,854	1,606	4,423	2,471
Slop clothing ... ... } Clothing (tailoring) ... ... }	2,868	7,175	2,083	6,833
Dressmaking and millinery	56	4,399	230	9,092
Dyeworks and cleaning	36	25	51	75
Furriers	16	22	28	74
Hats and caps	398	951	642	1,046
Waterproof and oilskin	28	124	43	134

§ 5. Child Labour in Factories.

1. **Conditions of Child Labour.**—The employment of young persons in factories in each State of the Commonwealth is regulated by Acts of Parliament in a similar manner to the employment of female labour. Excepting under special circumstances, children under a certain age may not be employed in factories. The minimum age in New South Wales, Queensland, and Western Australia is fourteen, and in the other States is thirteen years. Other restrictions on the employment of young persons in factories are more particularly referred to in a later part of this book. (See Section XXVII. *Industrial Unionism and Industrial Legislation.*) The general object of the restrictions imposed is to assure that a proper period shall be devoted to primary education, and that the early years of toil shall not exhaust the worker before the attainment of full growth.

2. **Average Number of Children Employed in Factories, 1905 to 1909.**—In the statistical compilations of the various States the term "child" may be taken to denote any person under sixteen years of age, excepting in New South Wales, where it denoted, for years prior to 1907, any person under fifteen. The following table shews the average number of children of each sex employed in manufacturing industries in each State during the years 1905 to 1909. It will be seen that the Commonwealth figures for years prior to 1907 are incomplete. There have been increases in the average number employed in New South Wales and Western Australia during the period under review; Victoria, South Australia and Tasmania, however, shew slight decreases; this also obtains in the case of Queensland for the years for which information is available.

AVERAGE NUMBER OF CHILDREN EMPLOYED IN FACTORIES, 1905 to 1909.

State.	1905.	1906.	1907.	1908.	1909.

Commonwealth	†9,812	†9,915	14,622	14,726	13,863

* Not available. † Incomplete.

The relatively large increase in the figures for the Commonwealth for the year 1907 is accounted for largely by the fact that in New South Wales, the term "child" denoted any person under the age of fifteen years, which, in 1907, was raised to sixteen years in order to come into line with the other States of the Commonwealth. It should be noted also that the Commonwealth figures for the years 1905 and 1906 are exclusive of returns for Queensland.

3. **Industries Employing Child Labour, 1909.**—The employment of children is largely confined to a limited number of industries, the most important of which are specified in the table below, which shews the average number of children of each sex, employed in the several industries indicated, in each State during the year 1909:—

NUMBER OF CHILDREN ENGAGED IN VARIOUS INDUSTRIES, 1909.

4. **Apprenticeship.**—The apprenticeship systems of the several States may be summarised as follows :—

In New South Wales, no child may be apprenticed until the attainment of the age of fourteen years, in Victoria and Queensland, twelve years. There is no limitation in the case of the other States, nor any regulating Acts except as applying to charity apprentices. The statutes limiting the age at which children may begin to work may be regarded as applicable by way of preventing too early apprenticeship, so also may those directing that education be continued up to a certain age or standard.

Indentures must be entered into specifying the conditions of the employment. Apprenticeships may not exceed seven years in duration, and become inoperative at twenty-one years of age, or in the case of women, on marriage.

The Arbitration Courts and Wages Boards have power to limit the number of apprentices which may be taken into a factory. No general statistics of the number of apprentices in Australia have been collected up to the present time. Other enactments relating to child labour are referred to elsewhere.

§ 6. Amount of Wages Paid and Value of Production.

1. **Introduction.**—The importance of the manufacturing industries of the Commonwealth is indicated by the fact that the total value of the output for 1909 was £107,409,733, of which amount the sum of £65,193,240 represents the value of the raw materials used. The difference between these two amounts, viz., £42,216,493, represents the amount by which the value of the raw materials was enhanced in the process of manufacture. The total amount of salaries and wages paid in factories during 1909 was £21,105,456.

2. **Amounts of Salaries and Wages Paid, 1909.**—The total amounts of salaries and wages paid during the year 1909 in various classes of factories in the Commonwealth (excluding all sums drawn by working proprietors) are shewn in the following table.

It has been found that it is not practicable to shew satisfactorily in this book the rates of wages paid to employees in various classes of manufacturing industries in Australia, owing to the facts—firstly that the rates in many industries vary very considerably in different parts of the country; and secondly that the necessary particulars are not collected by the several States on a uniform basis, while for some of the States the information given is meagre and unsatisfactory.

AMOUNT OF SALARIES AND WAGES PAID IN FACTORIES IN COMMONWEALTH, 1909.*

Class of Industry.	N.S.W.	Vict.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.

XIX. Minor wares, n.e.i.... ...	53,483	94,651	7,173	11,607	5,887	1,270	174,071
Total	7,665,125	6,807,851	2,324,005	2,028,691	1,506,360	773,424	21,105,456

* Excluding all amounts drawn by working proprietors.

The maximum amount of salaries and wages paid in any particular class was in Class V., the amount being £5,194,376, or 24.61 per cent. on the total amount; the minimum amount was in Class XV., £14,447, or 0.07 per cent. on the total amount. The State in which the largest amount was paid was New South Wales, where the amount paid was nearly ten times as much as was paid in Tasmania. The following statement shews the average amount paid per employee in each State respectively; the figures are exclusive of working proprietors :—

AVERAGE AMOUNT OF SALARIES AND WAGES PAID PER EMPLOYEE, 1909.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Amount paid ... £	87.27	73.57	82.09	83.08	122.21	87.78	83.01

In comparing the figures in the above table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others (see § 2 hereof). In Victoria, for instance, where the average is lowest, there are a large

number of factories and hands employed in Class VII., and in that class wages are low, a great many women and children being employed. The position occupied by Western Australia is no doubt partly due to the higher cost of living in that State.

From information now collected for the first time, it is estimated that of the total amounts paid in salaries and wages in each State during 1909—the males in New South Wales factories received £6,823,732, or 89.02 per cent., and the females £841,393, or 10.98 per cent.; while in Victoria the former were paid £5,607,703, or 82.37 per cent., and the latter £1,200,148, or 17.63 per cent. Similar information for the other States is not available.

3. **Value of Raw Materials used in Factories, 1909.**—The total value of raw materials worked up (*i.e.*, exclusive of fuel, lubricants, etc.) in factories in the Commonwealth during 1909, was £65,193,240, which represents 60.70 per cent. of the total value of the finished products. (See next paragraph hereof.) The following table shews the value of the raw materials worked up in various factories in each State during the year 1909:—

VALUE OF RAW MATERIALS WORKED UP IN FACTORIES IN COMMONWEALTH. 1909.

Class of Industry.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Cwlth.
	£	£	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	3,547,598	1,908,334	1,263,230	505,289	146,338	67,950	7,438,739

XIV. Drugs, chemicals, and by-products	403,539	597,720	11,176	228,231	21,555	4,660	1,266,881
XV. Surgical and other scientific instruments ...	6,155	2,910	2,536	500	94	...	12,195
XVI. Jewellery, timepieces, and plated ware	69,666	132,490	17,742	19,292	5,752	8,440	253,382
XVII. Heat, light, and power ...	369,221	247,553	22,141	42,222	15,120	19,560	715,817
XVIII. Leatherware, n.e.i. ...	82,783	146,420	8,300	3,059	2,770	...	243,332
XIX. Minor wares, n.e.i. ...	132,708	343,047	9,429	14,992	7,168	3,920	511,264
Total	27,314,486	19,706,530	7,658,195	6,004,459	1,529,211	2,980,359	65,193,240

The class in which the maximum value of raw materials was used was Class VI., "Connected with Food and Drink, etc.," the value being £28,864,395, or nearly three times the value of any other class. The next important class in order of value was Class V., "Metal Works, Machinery, etc.," in which raw materials to the value of £10,566,604 were used. The class in which the minimum value appears is Class XV., "Surgical and other Scientific Instruments," the value being only £12,195.

4. **Total Value of Output of Manufacturing Industries, 1909.**—The value of the output of new goods manufactured and repairs effected in factories of various classes in each State during the year 1909 is shewn in the following table. The figures given represent not only the increased value due to the process of manufacture, but also

include the value of the raw materials used. The difference between the value of the materials used and the total output (see paragraph 5 hereof) is the real value of production from manufactories.

TOTAL VALUE OF OUTPUT OF FACTORIES IN COMMONWEALTH, 1909.

Class of Industry.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	Cwth.
	£	£		£	£	£	£
I. Treating raw material, product of agricultural & pastoral pursuits, etc.	4,230,922	2,402,171	1,698,794	638,345	201,329	87,350	9,258,911
II. Treating oils and fats, animal, vegetable, etc. ...	754,982	522,282	93,674	167,022	68,443	28,660	1,635,063

XI. Vehicles and fittings, saddlery and harness, etc.	794,487	763,979	228,352	393,157	119,319	76,680	2,375,974
XII. Ship and boat building and repairing	391,437	26,375	18,644	27,732	5,868	9,590	479,646
XIII. Furniture, bedding, and upholstery	740,502	630,213	161,718	174,426	74,602	54,850	1,836,311
XIV. Drugs, chemicals, and by-products	733,685	961,657	20,640	328,525	34,970	10,270	2,089,747
XV. Surgical and other scientific instruments ...	22,609	9,292	6,772	2,050	1,242	...	41,965
XVI. Jewellery, timepieces, and platedware	157,762	266,706	33,478	47,637	12,811	16,410	534,804
XVII. Heat, light, and power ...	1,614,430	992,737	206,253	175,455	241,453	131,700	3,362,428
XVIII. Leatherware, n.e.i. ...	126,545	202,072	13,561	6,035	4,677	...	352,890
XIX. Minor wares, n.e.i. ...	240,967	502,722	17,754	31,982	14,492	6,280	814,147
Total	42,960,689	32,898,235	12,823,695	9,928,105	4,008,604	4,790,405	107 409 733

It may be seen that the State of New South Wales far outstrips the other States in the total value of the output of her factories, the value being £42,960,689, or 40.00 per cent. on the total value for the Commonwealth. The next State in order of value is Victoria, which produced 30.63 per cent.; the value of the output of Queensland was 11.94 per cent.; of South Australia 9.24 per cent.; of Western Australia 3.73 per cent.; and of Tasmania 4.46 per cent. The two most important classes in order of value of output (Classes VI. and V.) are the same as in order of value of raw materials used. As regards output the next class is Class VII., and as regards raw materials used Class I. The following statement shews the value of output per head of mean population during 1909:—

VALUE OF OUTPUT OF FACTORIES PER HEAD OF MEAN POPULATION, 1909.

Particulars.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	Cwlth.
Amount per head ... £	26.75	25.61	22.69	24.17	14.79	26.01	24.85

5. **Value of Production of Manufacturing Industries, 1909.**—The difference between the figures given in paragraph 4 and the corresponding figures in paragraph 3 hereof represents the amount added to the value of the raw materials by the process of manufacture. This is the real measure of the value of production from manufacturing industries. The following table shews the value added in this manner in each State during the year 1909 for the various classes of factories:—

VALUE OF PRODUCTION FROM MANUFACTURING INDUSTRIES IN COMMONWEALTH, 1909.

Class of Industry.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	Cwlth.
	£	£	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	683,324	493,837	435,564	133,056	54,991	19,400	1,820,172
II. Treating oils and fats, animal, vegetable, etc. ...	248,001	164,563	48,682	65,054	14,029	9,200	549,529
III. Processes in stone, clay, glass, etc.	796,312	582,167	73,580	160,708	64,889	36,910	1,714,566
IV. Working in wood... ...	913,128	698,796	509,915	199,902	723,619	211,620	3,256,980
V. Metal works, machinery, etc.	3,775,735	2,219,696	762,577	1,326,045	306,232	735,656	9,125,941
VI. Connected with food and drink, etc.	3,043,350	2,752,167	2,064,389	799,561	497,035	316,200	9,472,702
VII. Clothing and textile fabrics, etc.	1,978,142	2,647,480	369,934	421,411	208,510	136,750	5,762,227
VIII. Books, paper, printing, and engraving	1,222,007	1,349,468	429,845	197,994	243,243	138,900	3,581,457
IX. Musical instruments, etc.	63,008	5,232	...	2,703	...	...	70,943
X. Arms and explosives ...	2,837	50,476	...	...	...	...	53,313
XI. Vehicles and fittings, saddlery and harness, etc....	452,222	441,364	136,852	202,518	68,420	43,600	1,344,976
XII. Ship and boat building and repairing	264,889	19,846	13,325	19,009	2,993	5,780	325,792
XIII. Furniture, bedding, and upholstery	371,372	301,567	93,703	111,897	38,246	28,000	944,785
XIV. Drugs, chemicals, and by-products	330,146	363,937	9,464	100,294	13,415	5,610	822,866
XV. Surgical and other scientific instruments ...	16,454	6,382	4,236	1,550	1,148	...	29,770
XVI. Jewellery, timepieces, and platedware	88,096	134,216	15,736	28,345	7,059	7,970	281,422
XVII. Heat, light, and power ...	1,245,209	745,184	184,112	133,633	226,333	112,140	2,646,611
XVIII. Leatherware, n.e.i. ...	43,762	55,652	5,261	2,976	1,907	...	109,558
XIX. Minor wares, n.e.i. ...	108,259	159,675	8,325	16,990	7,324	2,310	302,883
Total	15,646,203	13,191,705	5,165,500	3,923,646	2,479,393	1,810,046	42,216,493

It may be seen that as regards the amount of the value added the classes are approximately in the same order as in the case of value of output, and that the States are also in the same order, except that the positions of Western Australia and Tasmania are reversed. The value added to raw material by process of manufacture per head of mean population is shewn in the following statement :—

VALUE OF PRODUCTION OF MANUFACTURING INDUSTRIES PER HEAD OF MEAN POPULATION, 1909.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
Value ... £	9.74	10.27	9.14	9.55	9.15	9.83	9.77

It may thus be seen that the positions of the two leading States, New South Wales and Victoria, as also of that of Queensland and Western Australia, in regard to total value of output of factories per head of mean population, are reversed in regard to value added per head. The other two States retain their relative positions.

As the total value of the output for the Commonwealth was estimated at £107,409,733, there remained, after payment of £65,193,240, the value of the raw materials used, of £21,105,456 for salaries and wages, and of £2,227,505 for fuel, the sum of £18,883,532 to provide for all other expenditure and profits. The following table gives corresponding

particulars for each State, expressed absolutely and as percentages of the total value of the output:—

VALUE OF OUTPUT AND COST OF PRODUCTION IN COMMONWEALTH FACTORIES, 1909.

State.	Raw Materials Used.	Fuel.	Salaries and Wages.	All other Expenditure Interest, and Profits.	Total Value of Output.
	VALUE AND COST, ETC.				
	£	£	£	£	£
New South Wales	27,314,486	940,840	7,665,125	7,040,238	42,960,689
Victoria	19,706,530	566,768	6,807,851	5,817,086	32,898,235
Queensland	7,658,195	194,776	2,324,005	2,646,719	12,823,695
South Australia	6,004,459	269,646	2,028,691	1,625,309	9,928,105
Western Australia	1,529,211	140,111	1,506,360	832,922	4,008,604
Tasmania	2,980,359	115,364	773,424	921,258	4,790,405
Commonwealth	65,193,240	2,227,505	21,105,456	18,883,532	107409,733
	PERCENTAGE OF COSTS, ETC., ON TOTAL VALUE.				
	%	%	%	%	%
New South Wales	63.58	2.19	17.84	16.39	100.00
Victoria	59.90	1.72	20.70	17.68	100.00
Queensland	59.72	1.52	18.12	20.64	100.00
South Australia	60.48	2.72	20.43	16.37	100.00
Western Australia	38.15	3.49	37.58	20.78	100.00
Tasmania	62.22	2.41	16.14	19.23	100.00
Commonwealth	60.70	2.07	19.65	17.58	100.00

For every hundred pounds worth of goods manufactured in each State and in the Commonwealth the percentages given in the above table represent the proportions of the various elements included in the price of the goods as they left the factories.

§ 7. Land, Buildings, Plant and Machinery.

1. **General.**—As an indication of the permanent character and stability of the industries which have been established in the Commonwealth, it may be noted that the values of both land and buildings and of plant and machinery used in the factories are rapidly increasing. Thus, for the whole Commonwealth the total value of land and buildings and plant and machinery has increased from 1905 to 1909 by £8,557,439, from £45,997,398 to £54,554,837, that is, at the rate of £2,139,360 per annum.

The following statement shews for the year 1909 the values of land and buildings and of plant and machinery used in connection with manufacturing industries in each State:—

VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY IN CONNECTION WITH MANUFACTURING INDUSTRIES, 1909.

Value of—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Cwlth.
	£	£	£	£	£	£	£
Land and buildings ...	11,014,362	8,642,344	2,888,923	2,432,655	1,522,692	1,176,619	27,677,595
Plant and machinery ...	10,330,724	7,140,304	4,457,314	2,185,203	1,728,207	1,035,490	26,877,242
Total	21,345,086	15,782,648	7,346,237	4,617,858	3,250,899	2,212,109	54,554,837

It may be seen from the above table that the total capital invested in land, buildings, plant, and machinery in the manufacturing industry in the Commonwealth during the year 1909 was approximately £54,554,837, or £12.62 per head of mean population; of that sum £27,677,595 was invested in land and buildings occupied as manufactories, the remaining £26,877,242 being the value of the plant and machinery used in connection therewith.

2. **Value of Land and Buildings.**—The value of the land and buildings occupied in connection with manufacturing industries may be conveniently classified according to the nature of the industry conducted therein.

(i.) *Total Value in Commonwealth, 1905 to 1909.* The following table shews for the whole Commonwealth the approximate values of land and buildings occupied in connection with manufacturing industries of various classes during each year from 1905 to 1909 inclusive:—

VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN COMMONWEALTH, 1905 TO 1909.

Class of Industry.	1905.	1906.	1907.	1908.	1909.
	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	791,535	777,871	781,733	847,113	869,488
II. Treating oils & fats, animal, vegetable, etc.	375,097	363,622	343,424	359,624	376,681
III. Processes in stone, clay, glass, etc. ...	741,110	728,995	820,332	937,753	956,733
IV. Working in wood	1,132,615	1,219,155	1,090,551	1,195,581	1,285,267
V. Metal works, machinery, etc.	3,231,594	3,313,200	3,709,314	4,378,755	4,415,525
VI. Connected with food and drink, etc. ...	6,956,539	6,638,474	6,708,611	7,161,845	7,191,976
VII. Clothing and textile fabrics, etc.... ...	2,931,080	2,919,301	3,396,599	3,377,905	3,809,148
VIII. Books, paper, printing, and engraving ...	2,155,476	2,134,021	2,357,799	2,483,693	2,642,029
IX. Musical instruments, etc.	26,041	27,741	27,405	31,054	33,314
X. Arms and explosives	29,233	30,314	31,152	34,586	33,016
XI. Vehicles & fittings, saddlery & harness, etc.	980,989	951,288	1,079,859	1,172,556	1,186,750
XII. Ship and boat building and repairing ...	1,102,918	1,111,752	991,907	988,141	1,033,513
XIII. Furniture, bedding, and upholstery ...	652,976	618,422	633,237	666,289	697,273
XIV. Drugs, chemicals, and by-products ...	307,593	335,393	444,060	531,765	543,507
XV. Surgical and other scientific instruments	32,736	37,197	31,779	33,054	56,378
XVI. Jewellery, timepieces, and platedware ...	140,535	159,356	204,734	226,352	232,483
XVII. Heat, light, and power	1,511,504	1,510,520	1,855,438	1,928,734	2,026,611
XVIII. Leatherware, n.e.i.	61,472	60,365	57,043	91,036	83,578
XIX. Minor wares, n.e.i.	139,666	143,204	193,797	218,840	210,325
Total	23,300,709	23,080,191	24,758,774	26,664,676	27,677,595

The figures in the above table for the years 1905 and 1906 are subject to the limitations that the actual returns for these years for the States of New South Wales and South Australia are not available. In order to present an approximate total for the Commonwealth, however, 1901 figures for New South Wales, and 1907 figures for South Australia are included for the years specified. It may be seen that the total net increase was £4,376,886, or an annual average of £1,094,221. In two classes, viz., Classes II. and XII., there were comparatively small decreases, the total of which amounted to £73,821. The largest increases were in Classes V. and VII., and amounted to 1,183,931 and £878,068 respectively.

(ii.) *Value in each State, 1909.* The following table gives similar information for each State up to the 31st December, 1909 :—

VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN EACH STATE, 1909.

Class of Industry.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	Cwlth.
	£	£	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	348,114	342,488	49,471	86,293	28,040	15,082	869,488
II. Treating oils and fats, animal, vegetable, etc. ...	166,072	110,874	28,385	55,680	5,670	4,000	370,681
III. Processes in stone, clay, glass, etc.	480,668	323,029	31,177	61,571	39,418	20,870	956,733

XI. Vehicles and fittings, saddlery and harness, etc....	420,160	360,469	123,108	170,056	64,710	48,247	1,186,750
XII. Ship and boat building and repairing	590,631	417,246	8,876	11,000	2,860	2,900	1,033,513
XIII. Furniture, bedding and upholstery	254,219	243,698	73,403	69,633	36,245	20,075	697,273
XIV. Drugs, chemicals, and by-products	165,985	266,843	10,250	83,717	16,537	175	543,507
XV. Surgical and other scientific instruments ...	27,909	8,257	11,752	4,270	4,190	...	56,378
XVI. Jewellery, timepieces, and platedware	66,186	97,615	22,312	23,540	3,620	19,210	232,483
XVII. Heat, light, and power ...	934,044	674,818	141,638	41,760	91,726	142,625	2,026,611
XVIII. Leatherware, n.e.i. ...	32,286	41,717	675	6,620	2,280	...	83,578
XIX. Minor wares, n.e.i. ...	92,132	78,967	4,382	24,255	7,839	2,750	210,325
Total	11,014,362	8,642,344	2,888,923	2,432,655	1,522,692	1,176,619	27,677,595

The maximum value for the Commonwealth of land and buildings in any particular class was in Class VI., amounting to £7,191,976, or 25.98 per cent. on the total value. The next classes in importance were Classes V., VII., VIII., and XVII., in which the values were £4,415,525, £3,809,148, £2,642,029, and £2,026,611 respectively. The sum of the values for the five classes mentioned amounted to £20,085,289, or 72.57 per cent. on the total value for all classes.

(iii.) *Total Value in each State, 1904 to 1909.* The following table shews the total value, so far as returns are available, of land and buildings occupied as manufactories in each State at the end of each year from 1904 to 1909 inclusive:—

TOTAL VALUE OF LAND AND BUILDINGS OCCUPIED AS FACTORIES IN EACH STATE, 1904 to 1909.

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1904	*8,029,890	7,641,051	2,699,191	2,140,516†	1,731,233	1,000,481	23,242,362
1905	*8,029,890	7,771,238	2,709,951	2,140,516†	1,685,597	963,517	23,300,709
1906	*8,029,890	8,062,110	2,405,559	2,140,516†	1,775,279	666,837	23,080,191
1907	9,508,259	8,376,642	2,261,539	2,140,516	1,637,207	834,611	24,758,774
1908	10,390,260	8,589,027	2,763,085	2,311,650	1,565,756	1,044,898	26,664,676
1909	11,014,362	8,642,344	2,888,923	2,432,655	1,522,692	1,176,619	27,677,595

* 1901 figures. † 1907 figures, those for previous years not being available.

It may be seen that, so far as returns are available, there has been a general though irregular increase in all the States with the exception of Western Australia, which State shews a decided fall; this is probably due to a general reduction in values of real estate in that State during the past few years. The irregularities in some of the States are probably due partly to the returns having been made on different bases for the succeeding years in carrying into effect the resolutions passed at the Conferences of Statisticians (see § 1. 2 hereof).

3. **Value of Plant and Machinery.**—The following table shews for the whole Commonwealth the approximate value of plant and machinery used in connection with factories at the end of each year from 1905 to 1909 inclusive. The figures, however, are subject to certain limitations, inasmuch as returns for South Australia for the years 1905 and 1906 are not available; South Australian figures for 1907 have therefore been taken for these years.

VALUE OF PLANT AND MACHINERY USED IN FACTORIES IN COMMONWEALTH, 1905 TO 1909.

Class of Industry.	1905.	1906.	1907.	1908.	1909.
	£	£	£	£	£
I. Treating raw material, product of agricultural and pastoral pursuits, etc. ...	578,382	618,891	644,597	671,015	726,786

XIV. Drugs, chemicals, and by-products ...	282,293	306,285	332,349	398,028	435,019
XV. Surgical and other scientific instruments	5,013	7,329	6,340	8,144	9,215
XVI. Jewellery, timepieces, and platedware ...	32,972	38,796	45,927	46,160	43,980
XVII. Heat, light, and power	4,871,562	5,242,509	5,555,544	5,481,759	5,611,333
XVIII. Leatherware, n.e.i.	11,867	15,489	16,523	18,989	19,555
XIX. Minor wares, n.e.i.	65,407	68,831	82,435	98,503	116,097
Total	22,696,689	23,744,298	24,686,108	25,927,763	26,877,242

It may be seen that during the period in question there has been a steady and substantial net increase amounting in all to £4,180,553, or an annual average of £1,045,138. The increase has occurred in all classes of industry, the largest increase being in Class V., "Metal Works, Machinery, etc.," amounting to £1,283,696, while the next largest was in Class XVII., "Heat, Light, and Power," and amounted to £739,771.

(i.) *Total Value in each State, 1904 to 1909.* The classified figures in the preceding table for the whole Commonwealth are shewn below for each State. It will be seen that the increase in value referred to is general throughout the States, with the exception of Western Australia, where there is a small decrease. New South Wales shews by far the largest increase, viz., £2,681,821; while Victoria comes next with £1,113,170.

VALUE OF PLANT AND MACHINERY IN FACTORIES, 1904 to 1909.

Year.	N.S.W.	Victoria.	Queensland.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1904	7,648,903	6,027,134	4,200,303	1,900,744*	1,776,481	753,967	22,307,532

XIII. Furniture, bedding, and upholstery	37,382	43,585	17,944	17,543	5,646	3,900	126,000
XIV. Drugs, chemicals, and by-products	165,329	164,283	3,950	91,286	9,321	850	435,019
XV. Surgical and other scientific instruments ...	3,931	2,001	1,288	900	1,095	...	9,215
XVI. Jewellery, timepieces, and platedware	16,513	19,159	2,809	3,814	900	785	43,980
XVII. Heat, light, and power ...	1,895,991	1,869,320	470,479	635,399	511,308	228,836	5,611,333
XVIII. Leatherware, n.e.i. ...	6,604	11,560	711	380	300	...	19,555
XIX. Minor wares, n.e.i. ...	48,955	61,980	951	3,045	1,156	10	116,097
Total	10,330,724	7,140,304	4,457,314	2,185,203	1,728,207	1,035,490	26,877,242

The greatest value for any particular class of industry is for Class VI., "Connected with Food and Drink, etc.," and amounts to £7,772,770, or 28.92 per cent. on the total value for all classes. The next greatest value is for Class XVII., "Heat, Light, and Power," and amounts to £5,611,333, or 20.88 per cent. on the total. The next greatest is for Class V., "Metal Works, Machinery, etc.," amounting to £4,941,632, or 18.38 per cent. on the total value. The total for the three classes just specified amounts to £18,325,735, or 68.18 per cent. on the total value for all classes.

§ 8. Individual Industries.

1. **General.**—The preceding remarks and tables furnish a general view of the recent development of particular classes of industries in Australia treated under the nineteen categories referred to in § 1. 3 hereof. In order to made the information complete, it must necessarily be supplemented by details exhibiting the development of individual industries. This alone will furnish adequate information as to the channels into which the main efforts of Australian manufacture flow. While it is not possible, within the limits of this article, to give anything like a detailed account of the manufacturing industries of the Commonwealth, it is proposed to deal herein with such particular industries as are of special importance by reason either of the number of persons employed, the number of factories, the amount of capital invested therein, the value of the production, or other features of special interest. In cases where there are only either one or two establishments of a particular class in any State, returns relative to output are not published, in order to avoid disclosing information as to the operations of individual factories.

2. **Tanning Industry.**—In Class I. (see § 1. 3 hereof) the most important industry is tanning. Until recent years the production of tanneries in Australia was confined to the coarser class of leathers, but lately the tanning of the finer leathers has been undertaken with satisfactory results. The position of the industry in the several States in 1909 was as follows :—

TANNERIES, 1909.

(i.) *Progress of Tanning, etc., Industries, 1906 to 1909.* For years prior to 1908 returns for tanneries are not generally available separately, but are grouped with the wool-scouring and fellmongering industries. The development of the tanning, fellmongering, and wool-scouring industries during the period 1906 to 1909 is shewn in the following table, from which it will be seen that though the number of factories is almost stationary, the number of employees shews a satisfactory increase, amounting to 11.40 per cent. during the period under consideration.

DEVELOPMENT OF TANNING, ETC., INDUSTRIES, 1906 to 1909.

3. **Soap and Candle Factories.**—In Class II. (See § 1. 3 hereof) the manufactures of soap and candles are the most important industries. These two manufactures are frequently carried on in the same establishments, so that separate returns cannot be obtained; it may, however, be said generally that the manufacture of soap is the more important of the two. The following table gives particulars of soap and candle factories in each State during the year 1909:—

SOAP AND CANDLE FACTORIES, 1909.

Items.		N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	Cwlth.
Number of factories		26	17	18	7	3	2	73

* Information not available. † Exclusive of South Australia.

(ii.) *Production of Soap and Candles, 1906 to 1909.* The subjoined statement shews that there has been a considerable increase in the output of both of these products. As regards the production of soap an increase is shewn in all the States with the exception of New South Wales, which shews a slight decrease. The returns as to the production of candles are incomplete for 1906 and 1907; it may be seen, however, that there has been a considerable increase in New South Wales during the four years, and that the production in the whole of the Commonwealth during 1909 shews an increase of 1,765,051 lbs. over that for 1908.

5. **Agricultural Implement Factories.**—The manufacture of agricultural implements is an important industry in Australia, and is of particular interest owing to the fact that it is one of the first industries to which what has been called the "New Protection" system was sought to be applied (see Section XXVII. hereof). The nature of the machines manufactured may be gathered from the machines scheduled in the Customs tariff, 1906-7, which includes stripper harvesters, strippers, stump-jump ploughs, disc cultivators, winnowers, corn-shellers and baggers, drills, and other implements usually employed in agriculture. The stripper-harvester, which combines the stripper with a mechanism for winnowing and bagging grain, is an Australian invention, and is exported to many countries.

The following table gives particulars of the agricultural implement works of Australia for the year 1909 :—

AGRICULTURAL IMPLEMENT WORKS, 1909.

* Not available. † Exclusive of South Australia.

6. **Engineering, Ironworks, and Foundries.**—The classification in these industries is not very satisfactory. Generally, engineering shops, ironworks, and foundries are included, as also are factories for making nails, safes, patterns, meters, and springs. Railway workshops, agricultural implement factories, cyanide, smelting, pyrites, and metallurgical works, galvanised iron, stoves and ovens, and wire working establishments are not included. The combination of industries is rendered necessary by the limited classification still adopted by some of the States.

ENGINEERING, IRONWORKS, AND FOUNDRIES, 1909.

Items.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Cwlth.

In addition to engineering works which supply local domestic requirements, there are now a number of large and important establishments which engage in the manufacture of special classes of machinery and implements. The manufacture of mining and smelting machinery and apparatus forms an important section of this industry, and many Australian mines have been locally equipped.

7. **Railway Carriages and Rolling Stock, Railway and Tramway Workshops.**—The railway workshops of Australia form an important item in the metal and machinery class, and are chiefly State Institutions. The following table gives the details concerning them, but includes also private establishments manufacturing rolling stock :—

RAILWAY CARRIAGES AND ROLLING STOCK, RAILWAY AND TRAMWAY WORKSHOPS, 1909.

8. **Smelting Works.**—The subjoined table gives particulars of metal smelting, cyanide, pyrites, and metallurgical works. The classification of these works does not appear to be carried out on an uniform basis in the several States, and the combination of industries is somewhat unsatisfactory. The returns do not include particulars of plants used on mines.

SMELTING, CYANIDE, PYRITES, ETC., WORKS, 1909.

Value added in process of manufact're £	1,528,285	138,816	149,894	584,460	...	592,246	2,993,701

In New South Wales and Queensland the above figures represent smelting works; those in Victoria—ninety cyanide works and five, four, and two for metallurgical, pyrites, and smelting respectively; South Australia five cyanide and two smelting; while those in Tasmania represent four cyanide and three smelting works.

The largest output for the year under review was in New South Wales, viz., £4,521,463, or 54.15 per cent. on the total output for the Commonwealth. Tasmania came second with £1,997,085, or 23.92 per cent.; this amount is made up of £1,233,300 smelting and £763,785 pyrites. Of the total for South Australia the output of smelting was £1,099,010, the balance £9427 representing that obtained from cyanide works. The output in Victoria was £142,966, £24,106, £62,229, and £33,057 from cyanide, metallurgical, pyrites, and smelting works in the order named.

In Western Australia all the plants are worked on the mines and are therefore not collected. Further reference to this industry is made in Section XII. of this book (see page 518).

9. **Bacon-curing Factories.**—The following table gives particulars of factories engaged in bacon-curing in each State during the year 1909:—

BACON-CURING FACTORIES, 1909.

Items.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Cwth.

11. **Meat and Fish Preserving, Ice and Refrigerating Works.**—These industries are now of considerable importance in Australia. The freezing of various kinds of produce for export has long been an established industry. Large freezing works have now been installed at many ports in the Commonwealth for the purpose of freezing produce chiefly for export, and insulated space for the carriage of frozen produce is provided by a number of steamship companies trading between Australia and other parts of the world. Particulars regarding the export of frozen beef and mutton may be found on pages 345 and 349 hereof respectively. Special terms have been made by the Commonwealth Government in its English mail contract for the provision by the contractors of ample cold-storage facilities. The export of frozen produce is stated to be capable of considerable expansion. The particulars given in the subjoined table include ice-making and freezing works, and also meat-canning factories, separate particulars for each item for all the States not being available.

MEAT AND FISH-PRESERVING, ICE AND REFRIGERATING WORKS, 1909.

13. **Jam and Fruit Preserving, Pickles, Sauces, and Vinegar Manufactories.**—The jam and fruit-preserving industry has increased in importance of late years with the extension of orcharding and fruit-growing. As an exporting industry it is comparatively young, but is of increasing value, and is stated to be capable of considerable expansion. The subjoined table gives particulars of factories at which these industries were carried on in each State during the year 1909. Separate returns for the individual industries are not available for most of the States.

* Tons of 2000 lbs. † Exclusive of South Australia. ‡ Not available.

The total production of flour for the Commonwealth for 1909, viz., 603,688 tons, was valued at £5,979,157; in addition 259,646 tons of bran and pollard, valued at £1,277,102, were made. The total quantity of wheat ground in 1909 was 29,537,348 bushels.

16. **Sugar Mills.**—The following table shews the position of the cane-crushing branch of the sugar-making industry in 1909. This industry is carried on in Queensland and New South Wales, the only States of the Commonwealth in which the sugar-cane is grown. Reference to the other States is therefore omitted from the table.

SUGAR MILLS, 1909.

Value added in course of manufacture	£	101,743	631,477	733,220

The first crushing of sugar for commercial use is said to have taken place in New South Wales about 1850 on the plantation of Mr. Thomas Scott; the planting-out of cane was not, however, taken up by settlers, notwithstanding Mr. Scott's earnest advocacy of the industry, until 1862, when a small growth resulted in the establishment of a mill in Queensland; the appliances were rude, but the result satisfactory. In April, 1864, a mill with a modern crushing and boiling plant was opened at Cleveland (Q.) by Hon. Lionel Hope, but his success was only partial, and he closed down his works till 1867. In 1866 the Pampania Company opened a small factory in Queensland, and in the following year two other mills started work. Two factories were erected in the Maryborough district, and in 1868 others were working in the Mackay, Bowen and other districts. The industry was by the end of 1870 firmly established.

An unfortunate feature of the industry is that large quantities of molasses have been and still are allowed to run to waste. Part of the molasses produced is used in distillation, part is turned into food cake for cattle, and part is used for manuring land, but the greatest part produced is put to no use whatever.

The product of the sugar mill is raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. The following tables shew the progress of this industry from the dates at which information is first obtainable:—

SUGAR MILLS, NEW SOUTH WALES, 1870 to 1909.

Items.	1870.	1877.	1886.	1891.	1896.	1901.	1908.	1909.

During the year 1909, 131,083 tons of cane were crushed in sugar mills in New South Wales. The reduction in the number of New South Wales mills is due chiefly to the tendency towards concentration of cane-crushing in mills fitted with modern machinery, and the consequent closing of the small home mill. On the north coast of New South Wales some land formerly devoted to sugar-growing has been turned into pastures in connection with the dairying industry.

Information regarding the cultivation of sugar-cane and the bounties payable on cane grown by white labour may be found in the section of this book dealing with *Agricultural Production*. (See pages 396 to 401.)

17. **Sugar Refineries.**—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated upon being originally brought chiefly from Mauritius and the East. In 1909 there were two sugar refineries in Queensland; and one in each of the States of New South Wales, Victoria and South Australia; but there were none in either of the other States. The returns for the individual States cannot be disclosed.

In the five refineries in the Commonwealth an average number of 1470 hands were employed during the year 1909. The approximate value of land and buildings was £252,479; of plant and machinery, £860,793; and the total amount of wages paid during the year was £155,602.

As regards production, the amount of crude sugar used was 185,487 tons, and of refined sugar produced 178,135 tons, valued at £2,519,984, both these amounts being exclusive of the two refineries in Queensland, for which returns are not available.

18. **Breweries.**—Established at an early date in Australia, the main feature of the history of the brewing industry has been the change from the small local brewery in every township of moderate size to the large centralised city brewery. A recent amalgamation in Melbourne resulted in the closing of several large breweries. A workmen's co-operative brewery has been opened in Sydney and a co-operative brewery has been opened in Melbourne by a number of "free" hotelkeepers.

The following table gives particulars of breweries in each State during the year 1909:—

BREWERIES, 1909.

(i.) *Production of Spirits and Materials Used, 1909.* The total quantity of brandy distilled in 1909 was 208,380 proof gallons, and of other spirits was 2,156,577 proof gallons. The materials used comprised 348,411 cwt. of molasses and 2,199,326 gallons of wine. Particulars for the separate States are not available for publication.

20. **Tobacco, Cigars and Cigarettes.**—During the year 1909 there were thirty-seven establishments in which the manufacture of tobacco, cigars, and cigarettes was carried on. In Queensland there were only two such establishments, and particulars as to output etc. are therefore not disclosed. In Tasmania there were no factories engaged in this industry.

TOBACCO, CIGAR, AND CIGARETTE FACTORIES, 1909.

Items.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Cwlth.

* As there are only two factories in this State, particulars of output etc. are not disclosed.
† Exclusive of Queensland.

(i.) *Development of Industry.* This industry was early established in Australia, and the figures given in the subjoined table shew its progress during recent years. In 1896 there were in New South Wales eight establishments employing 641 persons, of whom 471 were males and 170 females. The plant and machinery employed were valued at £55,700. In Victoria, in this same year, there were twelve establishments employing 650 persons, of whom 424 were males and 226 were females. The value of the plant and machinery employed was £42,410. The Australian market is now largely supplied with local manufactures.

* Including one cotton ginning establishment. † Not available.

(ii.) *Quantity and Value of Production, 1909.* The production of the woollen mills of Australia consists chiefly of tweed cloths, flannels, and blankets, all of which have acquired a reputation for purity and durability. Detailed particulars for the several States are not generally available for publication. The total length of tweed and cloth manufactured was about 1,700,000 yards, valued at about £190,000. In New South Wales 594,512 yards of tweed and cloth, in Victoria 949,674 yards, and in Tasmania 57,010 yards were manufactured. The production of flannel in the Commonwealth in 1909 amounted to about 5,135,000 yards, valued at £650,000, and of blankets, shawls, and rugs to 650,000, valued at £150,000.

No cotton spinning or weaving or linen weaving is carried on in Australia. Cotton ginning has been carried on at periods far apart in the northern States, and a mill was lately reopened at Ipswich in Queensland.

22. **Boots and Shoes.**—Among the manufactories of Australia the boot and shoe industry holds an important place both in respect to the employment afforded by it and the range of its output. The following table shews particulars of this industry for each State during the year 1909:—

BOOT AND SHOE FACTORIES, 1909.

SECTION XIV.

WATER CONSERVATION AND IRRIGATION.

§ 1. Water Supply Works.

1. **General.**—In every country in which droughts are recurrent, there are few problems of greater importance to be solved than that of an adequate system of water conservation. Much has been done in the Commonwealth so far as the supply of water to centres of population is concerned, and a description of several of the metropolitan water works will be found herein, viz., in the section dealing with "Local Government."

2. **The Goldfields Water Supply of Western Australia.**—The scheme by which the Government of Western Australia undertook to provide a permanent supply of water for the population on the eastern goldfields of that State comes properly under the heading of "Water Supply Works."

The Act under which the works were constructed was introduced in Parliament by Sir John Forrest, G.C.M.G., then Premier of Western Australia, in September, 1896, and provided for an expenditure of £2,500,000 and a daily supply of 5,000,000 gallons. The works, designed by the late Mr. C. Y. O'Connor, Engineer-in-Chief of the State, were originally known as the "Coolgardie Water Scheme," but are now officially called the "Goldfields Water Supply." The first construction work in connection with the scheme was commenced early in 1898, and the water was delivered in Kalgoorlie in January, 1903. The source of supply is the Helena River, in the Darling Ranges, where, at about 18 miles from Perth, an impounding reservoir, 760 acres in extent, with a catchment area of 569 square miles, has been constructed. From the impounding reservoir the water is pumped through a steel main of the locking-bar type, 30 inches in internal diameter, by a series of eight pumping stations located at intervals along the main. Each pumping station, except No. 1, which draws direct from the reservoir, is provided with a suction tank which receives the water pumped by the preceding station. The last pumping station delivers the water into a main service reservoir of 12 million gallons capacity, situated at Bulla Bulling at a height of 1290 feet above the lowest off-take from the Helena Reservoir, and distant 307½ miles therefrom. From the main service reservoir the water flows by gravity to Kalgoorlie, a further distance of 44 miles; the total length of the 30 in. main being 351½ miles. The water is distributed to the various townships and to the mining centres from service reservoirs, and a considerable area of agricultural country is also supplied by branch pipe lines from the main conduct. The area of operations embraces 16,000 square miles, the total length of the water area being approximately 380 miles. The total cost of the original works, including expenses of raising loans, was £2,866,454, and of supplementary works £371,042, making a total of £3,237,496. The Mundaring reservoir cost £249,000. Its capacity is 4600 million gallons. The height of the wall above the river bed is 100 ft.; length of wall, 757 ft.; width of wall at bottom, 85 ft.; at top, 11 ft.; and when the reservoir is full the water runs back for a distance of seven miles. From the 1st October, 1909, the price for trading supplies was raised from 5s. 3d. to 7s. 3d. per 1000 gallons; the following are the rates per 1000 gallons for ordinary mining supplies:—Where Mundaring water

is exclusively used for all purposes of the mine, 7s.; where Mundaring water is supplemented by supplies from the lease on which the mine is situated, 10s.; no restriction, 15s. During the financial year 1909-10 the total consumption amounted to 1,001,739,000 gallons, an increase on the previous year of 32,193,000 gallons. The gross revenue was £221,406, and the working expenses £72,118, leaving a surplus available towards interest and sinking fund of £149,288. The outlay for interest and sinking fund charges in respect of supplementary capital borrowed on debentures absorbed £21,085, leaving £128,203 payable to the State Treasury. During the financial year the State Treasury paid £171,050 interest and sinking fund on State loans in respect of these works, leaving a net deficiency of £42,847.

3. **The Mines Water Supply Branch.**—Prior to the commencement of the Goldfields Water Supply Scheme, works of different kinds were carried out by Government in order to afford temporary relief to the population on the goldfields. These works comprised shallow and artesian boring, conservation and protection of water in natural and artificial reservoirs, sinking of wells, erection of condensers, etc. About 2000 shallow bores have found fresh water, and a few hundred, salt water, which, however, is serviceable for battery purposes. Administratively, the goldfields area is divided into three water supply districts—Coolgardie, Murchison, and Pilbara. It has been the policy of the department charged with the supervision of water supply works, viz., the Mines Department, to lease watering stations wherever that could be done to advantage, and from twenty to thirty leases are generally executed in the course of a year. The tanks which have been constructed by the department vary in size from 200,000 gallons to 37,500,000 gallons (at Niagara).

§ 2. Artesian Wells.

1. **General.** (i.) *The Great Australian Artesian Basin.* Although there are some artesian wells outside this area, yet, in speaking of the "Great Australian Artesian Basin," the area is understood which includes (*a*) considerably more than one-half of Queensland, taking in practically all that State lying west of the Great Dividing Range, with the exception of an area in the north-west contiguous to the Northern Territory; (*b*) a considerable strip of New South Wales along its northern boundary and west of the Great Dividing Range; and (*c*) the north-eastern part of South Australia proper, together with the extreme south-eastern corner of the Northern Territory. This basin (shewn approximately by map in Section XXVI., Local Government), is said to be the largest yet discovered, and is about 569,000 square miles, of which 376,000 square miles are in Queensland, 110,000 square miles in South Australia, and 83,000 square miles in New South Wales. The area of the intake beds is estimated at 60,010 square miles, viz., 50,000 square miles in Queensland and 10,010 square miles in New South Wales. The basin is what is technically known as a one-sided or half-basin, the intake beds outcropping along its eastern and north-eastern sides only, while the remainder of the water-bearing formation is hidden under the superficial deposits forming the plains of the interior of the States. Although it has not been definitely decided whether the basin has outlets towards the Gulf of Carpentaria in the north, and towards the Great Australian Bight or towards Lake Eyre in the south, there is a preponderance of opinion and strong evidence in favour of the existence of such outlets, an opinion which receives strong support from the maps published by the Geological Department of Queensland, which shew an apparent dip in the water-bearing strata towards the Gulf of Carpentaria in the north and towards Lake Eyre and the Great Australian Bight in the south. It is estimated that at present there are about 1650 bores tapping the basin in the three States.

(ii.) *The Western Australian Basin.* The Recent and Tertiary strata which enter Western Australia at its eastern border, and which have a prevailing dip towards the

Great Australian Bight, form an artesian water area. But where boring operations have been undertaken the water has been found to be salt or brackish, and there are other conditions affecting the supply, such as local variations in the thickness of the beds, their relative porosity, and the unevenness of the floor upon which they rest, which so far have not been examined with sufficient thoroughness to enable many particulars to be given in regard to this basin.

In the coastal area to the west of the Darling Range artesian boring has, on the other hand, been carried on successfully for many years.

(iii.) *The South Australian-Victorian Basin.* In August, 1910, a report was issued by the Government Geologist of South Australia on the geology of the country south and east of the Murray River, with special reference to subterranean water supply in wells and bores along the Pinnaroo and Bordertown railways. The tertiary formation in the district under consideration, occupies the western portion of a vast basin or depression of which the greater part extends eastward into Victoria and northward into New South Wales. This basin is bounded on the west by the azoic and palæozoic rocks of the Mount Lofty and other ranges, extending northwards from near the mouth of the Murray to the Barrier Ranges, and on the east and north-east by the ranges of Victoria and New South Wales. This tertiary water-basin is occupied by a succession of sedimentary formations, both porous and impervious. It is of interest to note that the waters of the Murray River are partly supplied by influx from the water-bearing beds of this basin ; this is proved by the fact that, at low water, springs are observed at certain places flowing into it from beneath the limestone cliffs from Pyap Bend downwards. Similar springs must exist along the courses of other branches of the River Murray system, where they cut through the tertiary formation.

(iv.) *Plutonic or Meteoric Water.* While it has long been held that the Australian artesian basin is a typically-formed one, and that its intake beds are as described above, a theory has been recently advanced (viz., by Professor Gregory,[1] formerly of Melbourne, but now of Glasgow University), that the water, although called artesian, is not impounded rain-water, or *meteoric* water at all, but is derived from the older rocks, *i.e.*, that it is *plutonic* in character. If this were so, and if the water contained in the basin were merely such as occurs in the molten lava from volcanoes or imprisoned in the solidified quartz of granites, we should, of course, be rapidly exhausting our supply. He founds his main arguments on (*a*) the amount of friction caused by the flow of water through the minute interstices between the sand grains, *i.e.*, on the loss of its hydrostatic head before the bores are reached; (*b*) on anomalies in temperature and pressure; (*c*) on the chemical analyses of some of the waters; and (*d*) on evaporation measurements in Central Australia. He suggests the pressure of overlying rock, and gas pressure caused by the internal heat of the earth, as causes of the flow from the bores.

This new theory has recently been replied to at length by the Government Geologist of New South Wales.[2] While this Year Book is hardly the place to enter at length upon arguments of a purely scientific nature, it may be said that Mr. Pittman avers that "many of Professor Gregory's statements appear to be in opposition to observed facts." In regard to the loss of hydrostatic head, he quotes the opinion of the United States Geological Survey in regard to bores in Kentucky, and the experience in connection with the Grenelle bore in Paris. So far as temperature is concerned, he shews that it would be illogical to contend that, because some Australian bores give higher rates of increase than the average results of a number of ascertained bores and tunnels in other parts of the world, the water must be plutonic and not meteoric. In regard to pressure, stress is laid on the more accurate results obtained with the dumpy level than with the aneroid, and it is shewn how accurately the height to which the water would rise has been

1. See *J. W. Gregory, F.R.S., D.Sc.*: "The Dead Heart of Australia"; London, John Murray, 1906.

2. *E. F. Pittman, A.R.S.M., Government Geologist of New South Wales:* "Problems of the Artesian Water Supply of Australia, with special reference to Professor Gregory's Theory." (Clarke Memorial Lecture, delivered before the Royal Society of New South Wales, 31st October, 1907.)

predicted in many localities. It is also pointed out that the isopotential lines as laid down are tentative, as information in regard to many private wells is unreliable. The question of the chemical constituents of artesian water is dealt with at length, and it appears that instead of decreasing from east to west, as stated by Professor Gregory, the salinity of the water actually increases, and that some of the wells in the eastern district mentioned by the latter as being particularly rich in saline matter are actually outside the artesian basin altogether.

In regard to evaporation measurements in Central Australia, Mr. Pittman shews also that these do not affect the question at issue at all, as the water does not enter the porous beds in Central Australia, but on the flanks of the Dividing Range, where the rainfall is copious. The theories of the pressure of overlying rock and of gas pressure are also utterly repudiated.

The strength of the argument seems to be unquestionably in favour of the older theory of meteoric water, as upheld by Mr. Pittman, and in his reply he appears to have disposed of every feature in Professor Gregory's argument to which weight might have been attached.

(v.) *Particulars of Artesian and Sub-artesian Bores, 1909.* The following table gives particulars of artesian and sub-artesian bores in each State and in the Commonwealth up to the end of the year 1909:—

COMMONWEALTH AND STATES.—PARTICULARS OF ARTESIAN AND SUB-ARTESIAN BORES, 1909.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.†	W. Aust.	Tas.	C'wlth.

* Not available. † Government bores only. ‡ Flowing bores only. § Not including the flows of some of the bores to the west of the Darling and Warrego Rivers. ‖ Incomplete.

2. **New South Wales.**—Artesian boring in New South Wales dates from 1879, when a private bore was put down on the Kallara pastoral holding, between Bourke and Wilcannia. The first Government bore was that at Goonery, on the Bourke-Wanaaring road, completed in 1884. At the end of 1910, out of 480 known artesian bores in New South Wales, 155 were Government bores.

The distribution of these bores was as follows:—

NEW SOUTH WALES ARTESIAN BORES ON 31st DECEMBER, 1909.

Particulars.	State.	Private.	Total.
Bores existing ... ... No.	155	325	480

* Not including the flows of some of the bores to the west of the Darling and Warrego Rivers which give a comparatively small total discharge. Accurate meter gaugings are being extended throughout this part of the State.

Of the wells at the end of 1910, the depth is stated in 474 cases, and it appears that only 21 wells were less than 500 feet deep; while 87 ranged from 500 to 1000 feet; 235 from 1000 to 2000 feet; 100 from 2000 to 3000 feet; and 31 over 3000 feet. There is a preponderance of wells from 1000 to 2000 feet in depth, but neither the shallow wells under 500 feet, nor the very deep wells over 3000 feet are so numerous in proportion as in Queensland. The two deepest wells in New South Wales are those at Boronga, in the County of Stapylton, with a depth of 4341 feet and a daily outflow of 1,062,133 gallons; and at Dolgelly, in the Parish of Careunga, in County Stapylton, with a depth of 4086 feet, and an outflow of 637,124 gallons per day. The largest outflow is stated to be that at the Boobora bore, in the County of Stapylton, which yields 1,168,710 gallons a day, and has a depth of 2197 feet.

The water of a large number of wells has been analysed by Mr. J. C. H. Mingaye, F.C.S., etc., of the New South Wales Mines Department, and it may be of interest to give a list of those containing, among all the wells examined, the maximum quantities of particular salts in solution :—

NEW SOUTH WALES ARTESIAN BORES.—CHEMICAL ANALYSIS.

Name of Bore.	County.	Salt found in greater quantity than in any other bore.[1]	Grains per Imperial Gallon.
Tunderbrine No. 1 ...	Gowen	Sodium carbonate ($Na_2 CO_3$)	124.7
Sibraas	Gunderbooka ...	Potassium carbonate ($K_2 CO_3$)	8.3
Coonamble No. 2 ...	Leichhardt ...	Calcium carbonate ($Ca CO_3$)	11.7
Bancanya	Mootwingee ...	Magnesium carbonate ($Mg CO_3$)	10.7
Cuttaburra	Irrara	Sodium chloride ($Na Cl$)	349.0
Warratta	Evelyn	Potassium chloride ($K Cl$)	22.1
Momba	Killara	Magnesium chloride ($Mg Cl_2$)	28.0
Sandy Creek	Mootwingee ...	Sodium sulphate ($Na_2 SO_4$)	28.1
Moomba	Killara	Potassium sulphate ($K_2 SO_4$)	12.8
Calga No. 1	Leichhardt ...	Iron oxide ($Fe_2 O_3$) and alumina ($Al_2 O_3$)	0.8
Wallon	Stapylton ...	Silica ($Si O_2$)	2.9
Momba	Killara	Calcium chloride ($Ca Cl_2$) and calcium sulphate ($Ca SO_4$)	22.2 & 12.0
Curraburra	Irrara	Total solid matter	396.9

1. This is, of course, not necessarily the salt found in greatest quantity.

The Zetz Spa, much used as a mineral water in New South Wales, comes from Ballimore, near Dubbo.

It may be said that the cost of artesian wells works out at an average of about 20s. per lineal foot; it depends, of course, upon the depth to which boring operations have to be extended, and on the accessibility of the bore to a railway station. Contracts have recently been let for boring and the use of six-inch casing at the following rates:—To 1000 feet, 16s. 6d. per foot; 1000 to 1500 feet, 18s. 3d.; 1500 to 2000 feet, 18s. 9d.; 2000 to 2500 feet, 19s. 9d.; 2500 to 3000 feet, 22s.; 3000 to 3500 feet, 25s.; 3500 to 4000 feet, 31s. To these prices must be added the cost of cartage and of finishing off the work.

3. **Victoria.**—Victoria lies altogether outside the great Australian artesian basin, and as water is obtainable in most parts of the State at shallow depths, there has not been much occasion for artesian boring. As early as 1884, however, an artesian well was bored at Sale, which for a number of years gave a supply of about 100,000 gallons per day until, either through corrosion of the casing or by choking up with sand from below, the flow ceased. In 1905 a new bore was therefore put down, which at a depth of 277 feet yielded sufficient water to fill Lake Guthridge, a local depression. But as the water was impure and contained too much sulphuretted hydrogen boring operations were continued to 520 feet, when the lowering of the casing shut off the supply of water. A second bore was then put down at some distance from the first, and this, at a depth of 238 feet, yielded fresh and clear water. The supply at present is stated to be about 145,000 gallons per day.

In 1906 eight bores were put down on the Overnewton Estate, Maribyrnong, to depths varying from 147 to 272 feet; small supplies of good and medium water for stock purposes were obtained, but only one of the wells yielded water fit for drinking purposes.

A supply of good underground water has recently been discovered in the Mallee country, opposite Pinnaroo, in South Australia, and a line of bores from the border to Kow Plains has proved the existence of a large sheet of underground water. The southernmost bore struck water at a depth of 190 feet, and the water rose to within 120 feet of the surface. Information as to the geological formation of this district is given on page 593 preceding.

4. **Queensland.**—The publication of the reports issued annually by the Hydraulic Engineer of Queensland has been suspended during the last eight years, and these reports are only available to 30th June, 1902. At that date the following bores were in existence :—

QUEENSLAND ARTESIAN BORES ON 30th JUNE, 1902.

Sunk by—	Artesian Flows.	Sub-Artesian Flows.	Pumped Supplies.	In Progress, Abandoned, Uncertain.	Total.
Water Supply Department (trial borings)	22	...	3	24	49
Railway Department	2	...	2	13	17
Local governing authorities	10	...	15	5	30
Private owners	530	9	131	168	838
Total ...	564	9	151	210	934

The depth of 850 of these wells is given, and it appears that there were 229 less than 500 feet deep, 200 from 500 to 1000 feet, 231 from 1000 to 2000 feet, 124 from 2000 to 3000 feet, and 66 over 3000 feet. The deepest well was one known as Bimerah Run No. 3, Whitewood, lying between the Barcoo and Thomson Rivers; this had a depth of 5045 feet, and was stated to yield 70,000 gallons daily. This flow is, of course, a comparatively small one, many wells yielding, when uncontrolled, from one to three million gallons a day. A well at Cunnamulla is stated to have a daily flow, when uncontrolled, of no less than 4,500,000 gallons. The waters of many of the wells have been analysed, and some found suitable for wool-scouring only, others are suitable for watering stock but not for irrigation, owing to the presence of alkali; others again serve for both stock and irrigation, while some, such as those containing sulphuretted hydrogen, are not of any use. Water fit for stock may generally be said to be "safe" for domestic purposes in spite of its slightly mineral taste. The wells yielding the mineral water known as "Helidon Spa," which is much in use in Queensland and New South Wales, are shallow wells from 60 to 200 feet in depth.

The following table shews particulars as to Queensland bores at the end of June, 1910 :—

QUEENSLAND ARTESIAN BORES ON 30th JUNE, 1910.

Bores Sunk by—	Artesian Flows.	Pumped Supplies.	In Progress, Abandoned or Uncertain.	Total.
Government	35	24	90	149
Local governing authorities ...	17	8	18	43
Private owners	706	330	352	1,388
Total	758	362	460	1,580

The total depth bored is stated at 1,644,400 feet, and the estimated continuous flow of water at 520,300,000 gallons per day. Of the 758 flowing bores 52 were yielding less than 10,000 gallons per day; 157 from 100,001 to 150,000 gallons; 312 from 150,001 to 750,000 gallons; 135 from 750,001 to 1,500,000 gallons; 63 from 1,500,001 to 2,500,000 gallons; and 39 from 2,500,001 to 4,000,000 gallons.

The maximum depth for Government wells is given as 4270 feet, and of private wells as 5045 feet, while the minimum depths were 250 feet and 60 feet respectively. The maximum and minimum temperatures of Government wells were 198° and 70° Fahrenheit, and of private wells 202° and 60° Fahrenheit.

5. **South Australia.**—The information about artesian wells is very defective. Early in 1908 a list of twenty-five of the principal Government bores was published, of which four were under 1000 feet in depth, twelve from 1000 to 2000 feet, two from 2000 to 3000 feet, and seven over 3000 feet. The deepest flowing well was at Goyder's Lagoon, on the Hergott to Birdsville route, measuring 4580 feet, and yielding 600,000 gallons per day. A bore at Patchawarra, 35 miles north of Innamincka, was in September, 1909, down to 4863 feet, but had not at that depth struck the subterranean water. As the temperature of the flow at Goyder's Lagoon is 208° Fahr., it is expected that the Patchawarra bore will yield water within a degree of boiling point. The maximum flows, viz., 1,250,000 gallons and 1,000,000 gallons daily, occurred at Coward Springs and Dulkaninna respectively. Information up to the end of the year 1909 is given, so far as available, in paragraph 1 (v.) hereof.

(i.) *Bores along Bordertown Railway.* The sinking of bores across the Ninety-mile Desert between the Murray and the Victorian boundary was commenced in 1886 at Coonalpyn; with the exception, however, of salt water at 55 ft., none was reported to have been struck. Ki Ki bore was sunk in 1887 and at 361 ft. a good supply of water fit for stock was struck. Tintinarra bore was sunk in 1887; it was artesian when first tapped. The water was found to be fit for locomotive engines and is still used for that purpose. The bore at Emu Flat was also sunk in 1887.

The following table gives particulars relating to bores along the Bordertown railway. In all these bores water was found in porous beds of Eocene (Tertiary) age.

SOUTH AUSTRALIA.—PARTICULARS OF BORES ALONG BORDERTOWN RAILWAY, 1910.

Bore.	Elevation of Surface above Sea-level	Depth of Water.	Depth of Water-level from Surface.	Quality; Salts and Matter per Gallon.	Supply per diem.	Remarks.
	Ft.	Ft.	Ft.		Gallons.	
Cooke's Plains	17	15	...	Salt	...	Bottomed granite, 218 feet.

Emu Flat ...	100	52	28	Fresh (98 grs.)	8,500	At 60 ft. from surface 312,000 gals. per diem.
Keith		166 264				

(ii.) *Bores along and near Pinnaroo Railway Line.* The subjoined table gives particulars of some of the principal bores in the Pinnaroo country. In 1904 the first bore was sunk in this district at Cotton; numerous successful bores have since been put down by the Department, and subsequently by the residents of the district. Several wells, ranging in depth from 55 ft. to 221 ft., have also been sunk in this district:—

SOUTH AUSTRALIA.—PARTICULARS OF PRINCIPAL BORES NEAR PINNAROO RAILWAY LINE, 1910.

Bore.	Elevation of Surface above Sea Level.	Depth of Water.	Depth of Water Level from Surface.	Quality.	Salts per Gallon.	Supply per diem where ascertained.

* Bottomed on granite at 839 feet.

The latest Government bore is situated 7½ miles south of Brown's well, near the terminus of the proposed railway from Tailem Bend. The depth of this bore is 220 ft., and the water, which is in large supply, rises to within 52 ft. of the surface. The water is fresh, containing ¼ oz. salts and other solid matter per gallon.

6. **Western Australia.**—As already stated, no artesian water has been found east of the Darling Range, although a large number of shallow bores yield either fresh or salt water.

At the end of the year 1909 the total number of bores west of the Darling Range was 80, of which 49 were Government bores. The total depth bored is given as 57,370 feet in Government and 30,896 feet in private bores. The total cost of State bores was about £94,000, of which amount £20,226 was spent in 1909. The total daily flow of the Government bores is stated as 15,437,028 gallons, and of private bores as 11,067,800 gallons. The maximum and minimum depths of State bores were 3011 feet and 56 feet respectively, and the maximum and minimum temperatures 140° and 60° Fahrenheit. The maximum outflow, 1,167,000 gallons per day, is said to be obtained from a well at Guildford.

§ 3. Irrigation Plants.

1. **General.**—Various causes have combined to keep proposals for irrigation works on a large scale before the Parliaments of several of the States for a number of years without any very tangible results, except in the case of New South Wales, Victoria, and South Australia. The absence of the example of any country which has constructed such works under similar climatic and labor conditions, the very partial success of some of the smaller works undertaken in Australia, and the abundant supply of artesian water obtained during the last twenty years in parts of the continent most liable to droughts, have all tended to delay the undertaking of large works.

2. **New South Wales.**—(i.) *Irrigation Trusts.* The first action by the Government of this State for the establishment of irrigation settlements was taken under Acts of Parliament, which set apart and authorised the formation of irrigation trusts in the vicinity of Wentworth in 1890, Hay in 1892, and Balranald in 1893. The Wentworth Trust controlled an area of 10,600 acres, but has been dissolved and its powers assumed

by Government. A pumping plant has been provided and channels laid out for the irrigation of an area of 1500 acres, of which 1000 acres are at the present time under successful occupation, largely for the production of horticultural crops and a small amount of lucerne. The original area under the Hay Trust was 12,847 acres, but in 1896 this was reduced to 3000 acres. The pumping plant and channels provide for the irrigation of 900 acres, which are under occupation, principally in connection with the growth of fodder crops for dairying, a small area being under horticultural crops. No works for the supply of water have yet been carried out by the Balranald Trust, which controls an area of 1000 acres. It is improbable that any irrigation will be provided in this area in the near future.

(ii.) *Private Irrigation Works.* The most extensive private irrigation works in the State are those at North Yanko, which take their water from Cudgell Creek, a tributary of the Murrumbidgee.

(iii.) *The Murrumbidgee Northern Irrigation Scheme.* This scheme provides for the utilisation of a large proportion of the waters flowing from the Murrumbidgee catchment area in normal seasons. The works which are necessary to provide for the conservation of these waters consist in the first place of a large storage reservoir in which the water is to be retained by a weir known as the "Barren Jack Dam." This dam is being constructed across the channel of the Murrumbidgee River, about three miles below the confluence of the Goodradigbee River. The catchment area above this point is 5000 square miles.

The retaining wall will have a total height of 240 feet from its crest to the deepest foundation level; the total length will be 784 feet curved in plan to a radius of 1200 feet; the thickness at the crest will be 18 feet and at the base 170 feet. The maximum depth of the water stored will be 224 feet, the total volume being 33,630 million cubic feet. The wall itself will contain about 600,000 tons of material, and will require about 50,000 tons of cement for its construction. The work is now partially completed and it is estimated that it will be finished in 1913. The object of constructing this weir is to regulate the supply of water, so that the large volumes which are afforded by the winter rains and the melting snows of the spring may be retained and made available to supplement the natural flow of the river in the dry months of the summer, when irrigation water is most required. The volumes of water thus made available for irrigation requirements will be conveyed in the channel of the Murrumbidgee River for a distance of 200 miles from the storage to a point above the town of Narrandera at Berembed, where a reservoir known as the Berembed Weir is in course of construction with the object of diverting supplies by gravitation into the irrigation lands. A main canal, capable of carrying 1000 cubic feet per second, is being constructed from the Berembed weir for the purpose of conveying the waters to the irrigable lands situated along the base of the hills to the west of the town of Narrandera.

It is proposed that the State Government shall acquire and sub-divide for the purposes of intense culture the whole of these irrigable areas, which consist of about 200,000 acres of first-class and 360,000 acres of second-class land. The main canal will be capable of carrying to these areas only about one half of the water which will be made available for irrigation by the construction of the Barren Jack dam. No determination has yet been arrived at as to whether the additional available volumes will be utilised for irrigating further areas of these same lands on the northern side of the river, or whether a separate canal will be constructed for the purpose of carrying supplies to lands on the southern side.

It is stated that the conditions as regards water-supply, soil, and climate are such as to ensure the success of the scheme, and it is anticipated that when the whole of the lands are settled there will be an addition of at least 50,000 people to the population within the district. It is expected that, in addition to the horticultural crops which will be grown, the supplies of fodder which will be afforded by the irrigation settlement will be sufficient to obviate the evil effects of droughts in the surrounding pastoral districts and will thus largely increase their stock-carrying capacity and productiveness.

(iv). *Other Irrigation Schemes.* The following proposals are under investigation by the State Irrigation Department :—

(*a*) *Lachlan River.* The construction of a storage reservoir on this river at a place known as Wyangala, below the confluence of the Abercrombie River, for the purpose of affording water in the river channel for pastoral purposes and for the irrigation of small areas along the river banks by pumping.

(*b*) *Macquarie River.* The construction of a storage reservoir on this river at Burrendong below the confluence of the Cudgegong River, for the purpose of affording water by gravitation for the irrigation of certain lands to the west of Narromine.

(*c*) *Murray River.* The construction of a storage reservoir across the Murray River at Camberoona, above Albury, in order to supply water by gravitation through a canal which will be taken off at Bungowannah, below Albury, for the irrigation of high-class lands lying between the Murray and the Billabong Creek near the town of Berrigan.

(*d*) *Hunter River.* The construction of storage reservoirs on the Upper Hunter and Goulburn Rivers with a view to supplying water by pumping from the Hunter River to the adjoining lands. It is stated that the valley of this river is one of the most fertile districts in the State and that it is capable of carrying a dense population under the conditions of intense culture by irrigation.

(*e*) *Darling River.* The conversion of Lake Menindie into a large permanent storage by means of a diversion weir across the Darling River and of a canal through Lake Pamamaroo, the water so stored to be utilised in the irrigation of the bed of Lake Carondilla and of certain lands to the south-west.

(*f*) *Warragamba River.* A scheme has been prepared for the construction of a large storage dam on the Warragamba River, so as to retain a depth of 225 feet and a volume of 103,000 million gallons of water. This would be available for the supply of 80 million gallons daily for the domestic services of Sydney, 30 million gallons daily for trade purposes, and 80 million gallons daily for irrigation purposes in the county of Cumberland.

It is proposed that the water for domestic purposes should be conveyed and delivered at Potts Hill through 48 miles of open concrete channel and pipes; that the supplies for trade purposes should be delivered in the vicinity of the Great Western Railway, between St. Mary's and Penrith; and that the lands situated along the banks of the Nepean River and in the valley of South Creek should be irrigated.

3. **Victoria.**—(i.) *Classification of Works.* The Water Conservation Works in Victoria naturally divide themselves into those providing mainly a domestic supply, such as the Yan Yean works, controlled by the Melbourne and Metropolitan Board of Works; the Coliban, Broken River, Kerang Lakes, and Mallee Supply Works, which, although now administered by the State Rivers and Water Supply Commission, are properly local government works; other works for domestic supply controlled by Water Works Trusts or Municipal Corporations; and irrigation works proper. With the exception of the last named class particulars as to these works will be found in the section on "Local Government" of this book.

(ii.) *Works Controlled by the Commission.* With the exception of the First Mildura Irrigation and Water Supply Trust, all of the irrigation schemes and the more important domestic and stock water-supply works in rural districts are vested in and controlled by

the State Rivers and Water Supply Commission, which was created by the Water Act 1905, in force since 1st May, 1906. The works under the control of this body, which is composed of three members, may be classified as follows:—(*a*) Town supplies. (*b*) Irrigation schemes, and (*c*) Domestic and stock schemes. The following statement shews the capital cost of each class of works under the control of the commission:—

VICTORIA.—COST OF WORKS UNDER CONTROL OF STATE RIVERS AND WATER SUPPLY COMMISSION, 1909.

Particulars.	Town Supplies.	Irrigation Schemes.	Domestic and Stock Schemes.	Miscellaneous.	Total.
Capital cost ... £	2,100,000	2,830,000	790,000	64,000	5,784,000

(*a*) *Town Supplies.* This division embraces the Coliban (Bendigo and several other towns) supply which has cost £1,200,000, and the Ballarat scheme installed at a cost of £351,000. The balance of the amount specified above has been expended on schemes for the supply of about 122 provincial and country towns. The Melbourne and Geelong works were also originally constructed or partly constructed by the State, but the schemes have been purchased from the Government by the local Boards which now control them. The Coliban system, in addition to the schemes for about twelve other towns, is administered by the State Rivers and Water Supply Commission. The remaining town supplies are managed by local Trusts which have obtained the necessary moneys therefor on loan from the State.
